It does not seem amiss here to recall the words of some of our most profound jurists, our most exalted patriots, upon this subject. Chief Justice Marshall, in one of his great opinions, said: "No political dreamer was ever wild enough to think of breaking down the lines which separate the States and of compounding the American people into one common mass." I do not know whether the great jurist would be safe in saying at this time that no political dreamer was ever wild enough to think of breaking down the lines of the States—certainly their tendency is that way.

Mr. Lincoln said: "To maintain inviolate the rights of the States to order and control under the Constitution their own affairs by their own judgment exclusively is essential for the preservation of that balance of power on which our institutions rest."

Justice Miller, one of our greatest jurists, gave expression to the following view: "While the pendulum of public opinion has swung with force away from the extreme point of the State rights doctrine, there may be danger of its reaching an extreme point on the other side. In my opinion, the just and equal observance of the rights of the States and of the General Government as defined by the Constitution is as necessary to the permanent prosperity of our country and to its existence for another century as it has been for the one whose close we are now celebrating." That magnificent defender of the Constitution, our great Justice Harlan, one of the greatest men who has ever graced that great court, said: "A national government for national affairs and State government for State affairs is the foundation rock upon which our institutions rest, and any serious departure from that principle would bring disaster upon the American system of free government."

The makers of the Constitution did not grant to the General Government any powers which it is dangerous to exercise to the fullest constitutional limit. Moreover, I have a profound admiration for the men who would exercise those powers fully and completely in the interest of the Nation. But while extending and developing and building at the top, I would keep sound and safe and sure the foundation upon which the whole structure rests. For what shall it profit to enact laws, create commissions, and unfold the ambitious schemes of men who dream of international prestige and power unless we know what the electorate yonder in the field, factory, and mine is doing or is willing to do; unless we know the measure of its ability, the worth of its patriotism. Responsibility alone gives strength and initiative to citizenship, contact with Government fosters public spirit and local rule is the great university in which is reared and trained and equipped the kind of statesmen who take care that no harm comes to the Republic.

A Government from Washington by commission, reduced to its last analysis, is no different from a Government by satrapies from Rome. And simply because the people of the States do not see fit at any particular time to exercise the powers reserved for them, that is in itself no justification for the General Government to exercise those powers. Such a doctrine is rank heresy. The wisdom of the people may be as fully manifested in the failure to exercise the powers of the State in a particular way or at a particular time as in the exercise of that power. Action is not always statesmanship. Legislation is not always an evidence of sound judgment. The belief so prevalent that every evil of the body politic can be eradicated by an act of Congress, every virtue restored or augmented by the creation of a commission, is the refined and codified creed of official egotism.

THE DIVIDING LINE.

Our richly rewarded experience of a hundred years and more, a greater distribution of justice and happiness among the people and a greater capacity of self-rule than are elsewhere to be found, will convince our people that we can afford to travel on in the same old way, holding fast and fighting true to that line of demarcation so wisely marked out by the greatest group of statesmen time ever assembled on one occasion. If there is anything now well settled, worked out through centuries of test and trial, it is that each member of the Federal Government must have complete and independent control of all matters domestic and internal and which relate alone to the individual members. That in turn all must be united and subject to a common power which is to deal with all matters affecting the members as a whole. It is a further teaching of experience and of history coming down to us through the shattered arches and broken columns of the splendid civilizations which have passed that, without the spirit, the life, the interest, the training, the responsibility, born alone of local self-rule, free government is an impossibility—simply the dream of an enthusiast.

I do not mean to say that industrial development may not affect the question of distribution of political power. Our industrial growth and our economic development, changes wrought in our social life, may necessarily require a redistribution of power between the State and the National Government. That which was wholly local a hundred years ago may have become national. That which was within the competency of a State may now require national administration. Nevertheless, that which is essentially local should be governed by the State. Under no circumstances should the National Government undertake to deal with those things which are essentially local. While I am by no means an advocate of no change in Government—for a government without the power of change is without the means of preservation—yet I do believe in keeping inviolate the principle of local government for local affairs and National Government for national affairs. And as we move on, assuming new duties and confronting new problems, we will bear in mind the words of wisdom given to us by the Father of our Country in his ripened years: "If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by amendment in the way in which the Constitution designates. But let there be no change by usurpation, for though this in one instance may be the instrument for good it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit which the use can at any time yield."

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The question is on agreeing to the committee amendment, which will be stated.

The READING CLERK. In paragraph 754, page 110, line 13, before the word cents, it is proposed to strike out "12" and insert "15," so as to make the paragraph read:

PAR. 754. Almonds, not shelled, 5 cents per pound; shelled, 15 cents per pound.

Mr. LENROOT. Mr. President, I am opposed to the pending committee amendment because I do not believe that it can be

justified from any standpoint. I voted against the amendment of the Senator from Massachusetts [Mr. WALSH] which proposed to restore the old Payne-Aldrich rate of 6 cents a pound on shelled almonds because I believe the almond growers in California are entitled to a higher rate than was imposed by the Payne-Aldrich law; but, Mr. President, I submit that the distinguished senior Senator from California [Mr. JOHNSON] and his colleague, the junior Senator from California [Mr. SHORTRIDGE], have not made out a case for the increase of duty which is now proposed by the committee—which is an increase of 275 per cent over the existing rate and an increase of 150 per cent over the Payne-Aldrich rate. I submit they have not made out their case upon their own showing, because in the speech of the senior Senator from California upon Monday he demonstrated that under the existing rate of the Underwood law the acreage planted in almonds in 1921, at the very lowest ebb of the industry, so far as the market was concerned, had increased almost 12½ per cent.

Mr. President, in the face of the growth of this industry during the existence of the present Underwood law, an increase of 275 per cent in the tariff duty can not, I submit, be justified by anybody. As is true in the case of so many of the articles covered by the pending bill, the proponents of the increased duty prove too much. In the brief of the Almond Growers' Association of California they undertake to set out the difference in the cost of production between the imported almond and the domestic almond grown in California, and, including interest upon the investment, they attempt to show that the foreign cost is just under 5 cents a pound, while the cost of production of the almond in California for 1920, the year for which the comparison was made, was just under 20 cents a pound, or a difference in cost of production of 15 cents a pound upon the unshelled almond. That, Mr. President, applied to the shelled almond, the item now before the Senate, according to their figures, must be multiplied by 3, and, therefore, the difference in the cost of production, based upon their own figures, between the imported shelled almond and the shelled almond produced in California would be 45 cents a pound.

If that be true, will 15 cents a pound protect the almond growers of California? If those figures are correct, will the proposed increase of duty give the market to the almond growers of California? If that be true, Mr. President, then I want to ask this question: If there is a commodity produced in the United States that permanently and through all the years will cost three times as much to produce as that article can be imported for, can such a rate be justified by any protectionist?

If we are to have any market, Mr. President, for our own surplus products we must permit some imports to come in. We can not raise a tariff wall that will keep out all imports if we desire any foreign trade, if we desire any market for our surplus crop of wheat and corn and other cereals and products of the soil. So that, from that standpoint, if these figures are correct, I submit that a protective rate equaling the difference in cost of production of the two articles can not be justified.

But what are the facts as to the present condition of the industry under the present law, the rate of duty of which is asked to be increased by 275 per cent? I read from the survey prepared by the Tariff Commission as follows:

> The number of bearing and nonbearing trees, therefore, affords the best indication of the expansion of the industry. Prior to 1912 the number of bearing trees remained fairly constant, old orchards being discontinued as rapidly as new plantings replaced them. In the last nine years, however, the acreage has been rapidly increased. The first of these recent plantings have only begun to bear in the last few years. The census of 1909 reported 1,166,730 bearing trees, compared with 2,408,040 in 1919. In the number of trees not of bearing age there has been an increase of 400 per cent during this 10-year period—from 365,961 in 1909 to 1,407,901 in 1919.

Thus, Mr. President, there has been an increase of 400 per cent under a tariff rate from 1909 to 1914 of 6 cents a pound and since 1914 of 4 cents a pound.

Mr. President, could any protectionist ask for a better showing of growth under any tariff rate than has been exhibited by this industry under the Payne-Aldrich law and the present Underwood law? Furthermore, unlike most agricultural products, if the tariff wall in this instance be put up to the height now proposed competition within the country will not bring the price down; the cost of production will not be lowered, for the brief of the Almond Growers' Association of California shows that the difference in the cost of production which they set out is not due to war conditions, is not a temporary situation, but is a permanent one, and that the difference will rather increase than decrease because of the increased value from year to year of the land upon which the almonds are grown.

I said that this competition that we normally have between producers of agricultural products will not apply if this tariff rate be placed so high, because the Tariff Commission also reports that the Almond Growers' Association of California today market 75 per cent of the almonds grown in the United States. They set the minimum price each year, and, therefore, it is sure to follow that the Almond Growers' Association of California, like the Raisin Growers' Association of California, if they have the market to themselves, will be able to increase their own prices to the level of the tariff rate that is imposed by Congress.

Mr. President, I am heartily in sympathy with these cooperative organizations throughout the country. The Raisin Growers' Association of California, the Almond Growers' Association of California, the Walnut Growers' Association of California, and other associations there have done wonderfully well for the growers of California, but if we are to raise this duty to the extent that is proposed by this amendment the Almond Growers' Association of California will be able to add the difference between 4 cents and 15 cents—or, in other words, 11 cents a pound—to the price that they receive for their product in California.

It is no doubt true that the almond growers of California have suffered during 1921, just the same as every other farmer in America has suffered, and it would not be surprising if the almond growers and the walnut growers of California had suffered in a greater degree than other farmers, because to a certain extent nuts for the table are a luxury; and yet they ought not to be considered such a luxury that they can not be occasionally found upon the poor man's table, and that is exactly what will happen if this rate be imposed.

California has a practical monopoly of almonds in the shell, because a better table nut is produced in that State than any nut that is imported; and when prosperity revives, the consumption will increase as it did increase, by leaps and bounds, during the war prosperity, and the almond growers again will have a market at a reasonable price for their products; but if this 11 cents a pound increase shall be voted into this bill, it will enter into the price of every 5-cent cake of almond bar—nutritious, cheap—but they will not be again sold for 5 cents if this duty be voted into the bill.

I submit that if we give the almond growers of California an increase of 100 per cent over the duty given by the Payne-Aldrich law, as the House bill does, they have no right to ask for any more and we have no right to give them anything more.

Now, Mr. President, just a word generally.

I have not made up my mind as to whether, when we come to a final vote upon this bill, I shall vote for it or not. I want to do so if I can. I want to resolve all doubts in favor of the bill; but if such rates as this are to be voted into this bill to any considerable extent, I want to say very frankly that I shall not support the bill when it comes to final passage. I want to stand for a reasonable protective rate. I want to stand for protection—I do stand for protection—to American industries; but, Mr. President, I have no sympathy with this system which seems to prevail here, that if the interests of a Senator in his State demand exorbitant duties, that Senator can go and ask and receive, and then, because of the interrelationship of the duties throughout this bill, that Senator will vote with the committee for every increase that may be proposed.

Mr. President, I do not propose to do that. I would not ask for a duty upon any product of my State that I could not show was fully justified, and I would not ask for a 150 per cent increase in duty upon any commodity produced within my State where the production of that commodity had doubled under the present Underwood law.

Mr. President, I hope that I shall be able to support this bill when it does come to a final vote. The vote upon this amendment, of course, will not be the deciding factor, but it will be one of them; and if many such are voted into the bill, I repeat that—giving credit to every other Senator for the same high purpose and motives in voting for the bill that I believe actuate me—I shall reserve the right to vote against it unless some of these duties be brought down somewhere within reason.

Mr. POMERENE. Mr. President, I want to say just a word on this subject.

In examining the RECORD for Monday, I find that a number of communications protesting against these high duties on almonds and other nuts were introduced into the RECORD. I have before me a letter containing a copy of the preamble and resolutions adopted by the National Confectioners' Association under date of June 2, 1922; and I am going to ask, without reading, the privilege of introducing the preamble and resolutions into the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. POMERENE subsequently said:

Mr. President, a moment ago I asked the privilege of introducing in the RECORD certain preambles and resolutions of the National Confectioners' Association. At that moment I was

not aware that the same had been introduced in the RECORD on July 3. I therefore withdraw the request for the reintroduction of those preambles and resolutions.

Mr. President, apparently these people believe that there ought to be some protective duty so far as almonds and nuts are concerned, but they protest against the enormous increase. They say—and I think this is correct—that the import duties on almonds and nuts which are being insisted upon are as follows:

Almonds, not shelled, 5 cents a pound.
Shelled almonds, 15 cents a pound.
Walnuts, not shelled, 4 cents a pound.
Shelled walnuts, 12 cents a pound.

They suggest unanimously that the following rates be recommended for substitution in place of the rates proposed in the pending tariff bill:

Almonds, not shelled, 4 cents a pound.
Shelled almonds, 6 cents a pound.
Walnuts, not shelled, 3 cents a pound.
Shelled walnuts, 6 cents a pound.

And they say that in their judgment these rates would be just and fair and would meet all requirements, both as protection and as revenue.

Mr. President, I have here a number of other telegrams and letters coming from confectioners in Ohio, everyone of them protesting against these exorbitant rates. I should like to know upon what theory all of these confectioners can be burdened in their business for the sake of some of these almond and nut growers in southern California and elsewhere. I am not finding fault because a certain amount of protection is asked; but when the Senator from Wisconsin [Mr. LENROOT] has demonstrated, as he has, that this industry has advanced in the far west under the present protective duties, why should they be increased now? It may be said that I perhaps take one view of this tariff question and some of my friends on the other side take another view. We do differ in part. I am not a free-trader and I am not a rank protectionist. I do not believe in duties which are going to operate practically as an embargo.

Mr. President, in order that I may not be misunderstood as to this situation, I am going to read a part of a letter which comes to me from B. H. Kroger, of the Kroger Grocery & Baking Co., of Cincinnati. He is not a Democrat. He is a Republican, and at different times he has been invited to help finance Republican campaigns; and he was here, so I see by the newspapers, at one of the recent conferences which was held in Washington to raise funds to pay off the debt of the Republican committee incurred during the last campaign.

I am going to omit one or two paragraphs of this letter which refer to the activities of the distinguished senior Senator from California with respect to the duties on nuts. There is nothing in it to which he could take exception at all; it simply states the fact as I understand it; but the writer says with regard to these nuts:

The average quality of foreign nuts will satisfy the medium class of consumers, who should not be penalized by increase of duties because they simply can not afford to pay the prohibitive prices asked for nuts, as you can see by the following range of prices:

	1912 opening.	1921
California walnuts, soft shell.....per pound..	$0.14	$0.24½

Our objection is only in the interest of the consumer, and in the furtherance, quote you the following comparison of prices, which we believe you are interested in for the same cause:

	1912 opening.	1921 opening.	To-day's price.
Peaches, choice.....per pound..	$0.5½	$0.11	$0.17
Apricots, extra choice.....do....	.9	.19	.30
Prunes, bulk—average basis.....do....	.4½	.08½	.10½
Raisins, fancy, 16-ounce, seeded.....do....	.6	.14½	.15½

This letter is dated April 29, 1922.

I want Senators to note the following paragraphs, which demonstrate in part what is being done by some of these associations:

The Raisin Association alone is responsible for holding up the present price of raisins, in spite of the heaviest stocks on hand at this season in many years, and never before in history has such a condition existed, without causing lowering of prices, but not this year. The association is holding up the price and the public is paying the penalty in spite of the tremendous crop that the Almighty has given to supply the American housewife at reasonable cost.

Nuts are distributed by the California Nut Growers' Association on an allotment basis, meaning, each city gets its proportion. This leaves within the hands of such distributors the allotment according to their judgment, which favoritism means excess, and if not in good grace with the broker, a small proportion, or none at all. At Columbus, Ohio, last year we secured no walnuts from the association for the above reason.

It may be said that this firm has had some unpleasant experiences, and possibly it has. I know Mr. Kroger personally, and I know that a fairer-minded man exists nowhere, either in California, Ohio, or elsewhere. He is a big man, conducting an enormous business, trying to do it upon margins which will be just to himself and just to the consumers. There is no man in Ohio who stands better than he, and there is no Republican who stands better than he. That is a Republican view, and I am in sympathy with his moderate expression upon this subject.

I have here some other telegrams, one from a very large confectioner at Mansfield, Ohio, Voegele & Dinning Co.; another from the Puritan Chocolate Co., of Cincinnati, Ohio; and another from the Dolly Varden Chocolate Co., of Cincinnati, Ohio, which I ask the privilege of introducing in the RECORD without reading.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MANSFIELD, OHIO, *June 29, 1922.*

Senator ATLEE POMERENE,
United States Senate, Washington, D. C.:

We protest vigorously proposed import duty on almonds and walnut meats; being a food product, if passed will mean unjust prices to the consumer and injury to our business.

VOEGELE & DINNING CO.

—

MANSFIELD, OHIO, *June 29, 1922.*

Senator ATLEE POMERENE,
Care of Senate Office Building, Washington, D. C.

MY DEAR SENATOR: To-day we sent you the following telegram, which we now confirm:

"We protest vigorously proposed import duty on almond and walnut meats; being a food product, if passed will mean unjust price to the consumer and injury to our business."

Anything that you can do toward helping our industry out on this proposition will be duly appreciated.

I wish to thank you very much in advance for courtesies extended.

Respectfully yours,

THE VOEGELE & DINNING CO.,
C. H. VOEGELE, *President.*

—

CINCINNATI, OHIO, *June 29, 1922.*

Senator ATLEE POMERENE,
Senate Office Building, Washington, D. C.:

We respectfully protest against import duties on almonds and walnuts. This tax would impose an unjustified penalty on American business interests. It would mean an increase of 300 per cent over present duty without benefit to any American growers.

THE PURITAN CHOCOLATE CO.

—

CINCINNATI, OHIO, *June 29, 1922.*

Hon. ATLEE POMERENE,
United States Senate Office Building, Washington, D. C.:

We vigorously protest proposed import duties on almonds and walnuts. Domestic nuts can not be used by many confectioners. Growers domestic nuts unable to take care of demand for many years to come. Entire almond crop of California will not supply three large manufacturers of candy. Imported nuts essential.

DOLLY VARDEN CHOCOLATE CO.

Mr. POMERENE. There are many other communications here, some from outside the State, bearing upon the same subject. I do think these increases are very unfair.

Mr. McCUMBER. Mr. President, between 1909 and 1914, when the Payne-Aldrich law was in effect, the acreage of almonds, I think, was about doubled. That acreage was increased under an expectation that probably the same protection would be continued.

The Senator from Wisconsin [Mr. LENROOT] seems to think that because the trees which were planted from 1910 to 1914, which kept on growing notwithstanding the Underwood-Simmons tariff law, and which kept on producing almonds notwithstanding that law, were afforded adequate protection by that law. The law did not blight the trees. It did not stop the increase in the number of bushels and pounds of almonds. That is why the production increased; it was not by reason of their having sufficient protection under the Underwood-Simmons law.

Mr. LENROOT. Mr. President, is the Senator aware that on Monday the Senator from California [Mr. JOHNSON] stated that in 1921 the acreage planted increased 9,003 acres? That surely was under the Underwood law. That surely was under a depressed market. It is not the increased bearing of old trees, but the Senator from California stated that there were 9,003 additional acres planted in 1921 out of a total of only 78,000 acres altogether.

Mr. McCUMBER. Mr. President, there may be some acreage adapted to the raising of this kind of nuts and fruits which is not adapted, possibly, to anything else. The Senator must remember, however, that in 1920 the prices generally prevailing over the country were higher than any we have had in any season of any year. Let him also remember that in 1914 the labor

cost of production was not to exceed one-half what it was during 1920 and 1921. Therefore there must have been a very considerable increase in the cost of production.

I understand that most of the crop which is raised in any year is marketed the same year. The product ripening in August, September, or early October is generally disposed of before the 1st of January. If the producers could have raised the crop of 1920 at a good profit, why is it that they still have a great portion of the 1920 crop on hand? They say that it is because they could not sell the product for the cost of production.

So, as I stated the other day, we have the confectioners and the bakers on the one side making a very good profit, and it is admitted on the other side, and there is no denial of it, that for the last two years, even with the enhanced price of 1920, the producers made no profit. The whole question resolves itself into this: Are the bakers and the confectioners, who are still making very nice profits, willing to live and let live? Are they willing to allow the producers to continue to live? That is about all I can see in the proposition.

I have telegrams here from both sides of this question. I ask the Secretary to read one from Portland, Oreg., against the tariff duties we have reported.

The PRESIDING OFFICER (Mr. GOODING in the chair). The Secretary will read the telegram.

The Assistant Secretary read as follows:

PORTLAND, OREG., *July 3, 1922.*

PORTER J. MCCUMBER,
Senate Office Building, Washington, D. C.:

Proposed import duties on almonds and walnuts are unreasonable and unjustifiable and would impose onerous burden on our industry. Hope you will oppose these schedules.

PACIFIC COAST BISCUIT CO.

Mr. MCCUMBER. Mr. President, here is another telegram, from the California Almond Growers' Exchange, which I ask to have read.

The Assistant Secretary read as follows:

SAN FRANCISCO, CALIF., *July 3, 1922.*

PORTER J. MCCUMBER,
Senate Office Building, Washington, D. C.:

Understand confectioners and others opposed to tariff on almonds claim quality will not permit use of American almonds in confections and other purposes, and that America can not supply any large part of domestic demand. The quality of American almonds, produced by diligent tilling of soil, care of trees, and scientific selection of varieties, equals and excels that of Europe, where almonds are produced mainly without care and under most primitive conditions possible. We know our quality is splendid, and we know it to the extent of nearly $50,000,000. As for ability to supply American demand, our best reference is the United States Department of Agriculture, whose conservative statistics show at least 70,000 acres planted, which, under minimum production, can supply present consumption of the United States. Our desire is a tariff to save our industry from ruin, as we can not compete with the pauper labor of Europe. We fear confectioners are unduly concerned over our plans to engage in manufacturing of almond products to permit distribution through economical channels of trade to consumers. As 3,000 growers, most of us with lifelong savings invested in this American almond industry, we appeal to you now in a just cause to save us by keeping the American market for American producers without cost to the consumers, with revenue to the Government, and at a loss of profit to the speculators and importers only.

CALIFORNIA ALMOND GROWERS' EXCHANGE.

Mr. JOHNSON. Mr. President, I desire to occupy just a moment or two in responding to the distinguished Senator from Wisconsin. I am not concerned with the motives which actuate the Senator from Wisconsin in reference to his activities concerning this bill, nor am I concerned with whether he votes for it or whether he votes against it. I take it that he will reach his decision concerning the bill in exactly the same fashion that every other Senator will reach his decision and that he will render that decision according to his judgment and as he believes he ought to act under his conscience and under his oath as a Senator.

There is no need for asseverations concerning his virtue or that of any of us respecting this measure—none at all. I shall vote as I please regarding it—favorably, of course, because I believe it is a measure which meets the requirements of the United States of America to-day. I shall vote for this duty, not because it concerns a locality which I love and in which I am interested, but I shall vote for it because it is a just duty, and as between the objurgations of the confectioners on the one hand, with the 300 per cent profit which they make in their business, and the prayers of the farmers and the almond growers on the other, selling their product at a loss, I am very glad, either as a Californian, as a representative of those who grow almonds, as a United States Senator, or a Republican in this body, to cast my vote with the almond growers, now selling at a loss, rather than to respond to any opposing class who are making inordinate profits. So much for that, Mr. President.

Oh, Mr. President, the Senator from Wisconsin cries, "These terrible duties!" Two hundred and seventy-five per cent is the increase, he says, in this duty. The statement conveys an erroneous impression. What is it in ad valorem equivalent? I have seen the Senator from Wisconsin sit here day after day and vote for ad valorem duties greater than the ad valorem duty that is fixed upon this product of the soil, for men who have their all at stake, who have their whole lifetime imperiled, and who are asking only an ad valorem duty which, under the highest computation of their opponents, equals 48 per cent and under the computation which they themselves make equals 32 per cent.

Why, Mr. President, talk to me of an extravagant duty when in the bill constantly and continuously the ad valorem duties are far in excess of this. It is absurd, sir, to pretend that on this item, this item which means so much to those who are engaged in the almond culture of California, we are doing something extraordinary and that we should stop and hesitate and pretend it is far in excess of other items or other duties which are imposed by the measure. The ad valorem duty, the real test after all, is not as great as many, many duties imposed by the bill and for which the Senator has voted.

Of course the confectioners will give us a ratio of 4 to 6 or 5 to 8. Of course the confectioners are not opposed to a rate really of 5 cents on shelled almonds. What they do not want and what this fight is for is to prevent the real ratio between the unshelled and the shelled almonds, so that they will be able to purchase cheaply the shelled almonds of Europe. What they wish is to buy cheaply the shelled product. They do not care anything about the unshelled product.

They know that we can not, without a duty that is proportionate as between shelled and unshelled almonds, meet the labor situation abroad. They know that it is impossible, with women in California receiving a minimum wage of $16 a week under the law, for the almond growers to meet those who shell almonds abroad and who receive practically no stipend for the work they perform. They know that we can not, in shelling almonds, meet that which has to be met if we come into the market with the shelled product of this country, because of conditions obtaining abroad. They are willing that we should have the ratio suggested by them, of course—rates by which what they use, the shelled product, they may import from Europe and buy at ruinous and impossible prices, so far as American production is concerned. We heard the Senator from Massachusetts [Mr. WALSH] say the other day that the importers are willing that we should have a shelled rate if they can only keep down the ratio so it will not be 3 to 1 as determined by the Department of Agriculture and as the Tariff Commission say the ratio exists.

It is true there have been great plantings of almond orchards in the State of California during the last few years. It is true that they were planted in great measure under the Underwood bill. But it is equally true that during the time the Underwood bill has been in force, for a great period of that time there have been conditions existing that rendered that planting not at all a matter of surprise or incredible under the circumstances, but the result of the sequence of events then transpiring—the World War, the lack of transportation, the disorganization of business conditions generally. It was believed that the land there was adapted to the purpose of almond planting. Now the conditions are entirely changed.

I have before me on my desk now a letter from Texas, for instance, saying that they can not use our almonds, although they are superior in quality, because they can ship from the Mediterranean into Texas ports more cheaply than we can transport them by railroad from California into the same Texas ports.

The condition now obtaining abroad, not with reference to unshelled products but with the shelled products, shelled after nightfall by women and children without compensation practically at all for their labor, is a condition that we must meet by a protective tariff, a protective tariff that gives an ad valorem such as the proposed duty gives to us, a protective tariff simply that will possibly enable us to live, not to gouge or to reap an undue profit, not to obtain a 300 per cent profit, like the confectioners, who oppose the rate, are reaping and have been reaping, but to enable our people simply to live. That is all we are asking. That is all the proposed tariff duty does.

Mr. LENROOT. Mr. President, I expressly stated, in giving my own position upon the pending matter, that I do not question the motive of any other Senator in voting for this high rate. I simply undertook to say, as I have the right to say, that while I feel an obligation to go with my party upon a party measure to a certain extent, there is a point beyond which that obligation does not extend. If rates like this are to be written in the bill in any great number, sir, I shall be

relieved of any obligation to support it. That was merely a statement of fact, a statement that I have a right to make, a statement that I shall take the liberty to repeat from time to time if occasion shall arise.

Now, Mr. President, with reference to the situation of the almond growers in California, the Senator from California does not deny, the Senator can not deny, that the increased planting has been under the Underwood law. The Senator can not deny that the almond growers of California never had a market for and never sold a single pound of shelled almonds; they never had the market which they are now demanding be given to them by this rate. The almond growers of California will still have their market for unshelled almonds, and when prosperity returns they will have their market; but when the planters of California planted these additional acres, sir, they had no right to assume that Congress would at any time give them a higher rate than was imposed by the Payne-Aldrich law.

When I say, Mr. President, that I am willing to give them a rate 100 per cent higher than the Payne-Aldrich law provides, but object to 150 per cent, as the Senator insists upon, is there anything unreasonable in that position? Am I less of a protectionist because of the position that I take? The industry has grown by leaps and bounds, and yet asks for an increase of 275 per cent over the existing law and 150 per cent over the Payne-Aldrich law. Mr. President, I repeat that this is one of the instances which to my mind the Republican Party can not justify if it shall be written into the law.

The Senator's plea of the profits of the candy manufacturers being 300 per cent I deny. He has no proof of it. It is not true, although he thinks it is; but he has some old figures of a time when they were making, no doubt, exorbitant profits during the war, as nearly everybody else was making exorbitant profits if they had the opportunity to do it. I do not doubt that the almond growers of California in 1919 and 1920 would have taken 25 or 30 cents a pound for their product if they could have secured it. But the candy manufacturers to-day are not making 300 per cent profit. If the Senator would make a little inquiry, he would find that the candy manufacturers have deflated as well as others, although they are not making the losses, I freely admit, that the farmers generally in America have been sustaining during the past two years. But, Mr. President, that is no reason for imposing such a duty as is now imposed to allow the almond growers of California to get into a market which they have never had, which they never expected to have, at the expense of the American people, at too great an expense to the American people.

Mr. JOHNSON. Mr. President, will the Senator yield?

Mr. LENROOT. I yield.

Mr. JOHNSON. The Senator has challenged what I said about the profits of the candy makers. What are their profits, may I ask the Senator?

Mr. LENROOT. At the time we had the internal-revenue law before us, when we had up the question of an excise duty upon candy, I took occasion to inquire into the profits of the candy makers. That was last year, 1921, and their profits then were not over 10 per cent.

Mr. JOHNSON. I have the statement which has been printed and which has been quoted here from one of the biggest candy men in the country to the effect that their profits were 300 per cent. That statement was made about six months ago, or at least during the last year.

Mr. LENROOT. Three hundred per cent in 1921?

Mr. JOHNSON. I do not remember the exact period. I will ascertain just the time when he said those profits were being made.

Mr. LENROOT. I happen to have some very prominent and reputable candy manufacturers in my State.

Mr. WALSH of Massachusetts. Mr. President——

Mr. LENROOT. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. If the candy manufacturers are making 300 per cent profit, how can any Senator on the other side of the Chamber justify an increase of tariff duty from 30 per cent to 40 per cent upon candy?

Mr. LENROOT. I will ask the Senator from California to answer that question. I can not undertake to do it myself.

Mr. WALSH of Massachusetts. You ought to be cutting down tariff rates instead of increasing them on candy.

Mr. JOHNSON. I have before me the article to which I referred, an article from the New York Times of Monday, August 1, 1921, quoting Mr. Miller, of the Miller Candy Co., in which he said that the confectionery stores generally had been making a profit of 300 per cent on their goods, which are classed as luxuries. He believed that he could cut his price in two, and he was going to do it, because they had been making 300 per cent profit.

Mr. LENROOT. Undoubtedly that refers back to a time when they were doing it, but the Senator must know——

Mr. JOHNSON. That was August 1, 1921.

Mr. LENROOT. The Senator must know that in 1921 the prices of candy were very greatly reduced.

Mr. JOHNSON. I confess to the Senator I am not an expert as to prices of candy, and I am unable to say whether they were greatly reduced or greatly enhanced.

Mr. LENROOT. Does the Senator believe the candy manufacturers to-day are making a profit of 300 per cent?

Mr. JOHNSON. I have not the slightest conception what they are making.

Mr. LENROOT. But the Senator has stated that.

Mr. JOHNSON. I gave the Senator my authority for the statement.

Mr. LENROOT. Does the Senator think it is true?

Mr. JOHNSON. I think the statement was true that I have quoted, and that they are making exorbitant profits to-day without any doubt.

Mr. LENROOT. Then may I ask the Senator if he is going to vote for a duty upon candy?

Mr. JOHNSON. I think we have already voted a duty on candy.

Mr. LENROOT. Did the Senator vote for the duty on candy?

Mr. JOHNSON. I think I did, and I think the Senator from Wisconsin did also.

Mr. LENROOT. Oh, I did, because I do not agree with the Senator from California that there is any such profit being made; but if I had believed that there was a 300 per cent profit made upon candy, I assure the Senator from California that I would not have voted for a 40 per cent duty on candy.

Mr. JOHNSON. Let us go back and reconsider the vote whereby the duty on candy was imposed. I should be delighted to do so, in view of the fight of the candy makers on the tariff on almonds.

Mr. LENROOT. The Senator from Califorina will have the opportunity, if he desires, to make the motion to reconsider the vote by which the duty was imposed.

Mr. JOHNSON. Will the Senator from Wisconsin join me in it?

Mr. LENROOT. No; because I do not believe the statement the Senator from California has made; that is why I will not do so.

Mr. JOHNSON. The Senator means he does not believe the facts set forth in the statement?

Mr. LENROOT. I do not, of course, mean to question the Senator's own integrity.

Mr. JOHNSON. I realize that, but I do not want the RECORD to indicate anything to the contrary.

Mr. LENROOT. That is understood. The Senator makes his statement on what he considers good authority, of course.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from North Carolina?

Mr. LENROOT. I yield.

Mr. SIMMONS. In view of the facts which have been developed here, especially those which have been stated by the senior Senator from California [Mr. JOHNSON], I hope that he will move to reconsider the vote by which we imposed the duty on candy.

Mr. JOHNSON. Is the Senator from North Carolina addressing a query to me? I did not follow him if he was doing so.

Mr. SIMMONS. I am not addressing a query to the Senator. I am simply making a suggestion. The suggestion is that, in view of the statement made by the Senator from California as to the enormous profits which are being made by the candy manufacturers, I hope the Senator from California might see fit to move to reconsider the vote by which we gave the candy manufacturers the high protective rate on their product.

Mr. WALSH of Massachusetts. If the Senator from Wisconsin will yield to me for a moment, I desire to quote to him the prices of almonds and walnuts.

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Wisconsin yield to the Senator from Massachusetts?

Mr. LENROOT. I yield.

Mr. WALSH of Massachusetts. I hold in my hand a letter from the Lovell & Covel Co., confectioners in the city of Boston, which refers to the high price of almonds and walnuts. The letter is dated April 27, 1922, and it is addressed to myself and, in part, reads as follows:

> The price of walnuts and almonds is now so high that we are not using anywhere near the quantity we would use if prices were nearer normal. The normal price on walnuts is 30 cents; the price to-day is about 60 cents.

In our small business here we thought nothing of buying 100 cases of walnuts when the price was around 30 cents; to-day we buy them in 5 and 10 case lots.

Mr. LENROOT. May I ask the Senator what is the date of the letter which he has read?

Mr. WALSH of Massachusetts. The letter is dated April 27, 1922, and is addressed to myself by this very reputable candy firm in the city of Boston.

I might add for the Senator's benefit that when we come to discuss walnuts I expect to show that the production of California walnuts was sold within one month after harvest.

Mr. LENROOT. Mr. President, if this were a case where the imports were crowding out the market of our domestic producer, if it were a case where the industry was decaying, I would be satisfied, of course, to vote for any duty that was necessary; but the imports have decreased, and the acreage has increased, under the existing rates; and at this time, when there is no obligation of any kind upon the part of Congress to the almond growers of California to impose a very high rate of duty in order to give them a market which they never have had and never had any reason to expect to have, I say that this committee amendment is not justified. I want also to repeat that if the amendment is voted down, the almond growers of California will still have an increase of 100 per cent over the rate imposed by the Payne-Aldrich law.

Mr. SHORTRIDGE. Mr. President, because of the great principle which is involved, and a great industry which is imperilled, I crave the indulgence of the Senate to add a few words to the discussion which has already engaged our attention for many hours. I venture to repeat, in effect, the statement made by a great man, one, however, under whose banner I never walked, but whose reputation grows with the years. We are dealing here and now "with a condition and not a theory." If this great and growing industry is to survive, the protective duties which we ask must be granted.

It would be piling Ossa on Pelion, it would be to indulge in cumulative evidence, to proceed further to establish the facts which we are here to consider in applying a principle. Over and against the views of the distinguished Senator from Wisconsin, over and against the views of the equally distinguished Senator from Massachusetts, I place the knowledge of the people of my State, the men, the women, the practical growers; I place the opinions of chambers of commerce, of all kinds of farm organizations, of many individuals, of those who know the facts and bear witness to them in numerous, almost innumerable, telegrams, letters, and formal resolutions setting forth the true condition.

I make this statement not in a spirit of dogmatic assertion, but I make it to the Senate and to the country that under the present rates the growing and the marketing of almonds, shelled and unshelled, will perish, and that the rate which we ask and which the Senate committee has accorded and reported in this bill are not theoretically but absolutely necessary; and not to the end that the growers of almonds shall reap an exorbitant profit, not to the end that they shall extort from the consumers; not at all; but to the legitimate and just end that they may reap a fair and a reasonable profit on the capital invested and on the labor expended in this industry.

My distinguished colleague and I come here from California. We speak for that State and for certain other Western States whose climate and soil are adapted to the cultivation of the almond, and we tell Senators from New England and we remind the Senator from Wisconsin [Mr. LENROOT] of facts existing, of conditions prevailing, and we bring here evidence of those facts and those conditions.

What an ungracious task has been set before the junior Senator from Massachusetts [Mr. WALSH]. Upon what does the prosperity of New England rest? Upon her soil? Hardly. Upon her climate? Scarcely. It rests, in large measure, upon the intelligence of her people; but, in the final analysis, the prosperity of New England rests upon the great American protective tariff doctrine, and I and we of the West stand up for New England. Why? Because we love her? Yes. Yes, we remember New England. We know what she has contributed to this Republic. We do not forget Concord or Lexington or Bunker Hill or Fanueil Hall. We do not forget her great men who have contributed so much to the grandeur and the glory of this Republic. To every industry of New England which has asked for protection we give it gladly because she needs it and because we wish to give it to her for her sake and for our own. The prosperity of New England adds to the prosperity of California.

Mr. WALSH of Massachusetts. Mr. President, does the Senator believe in giving protection to everybody who asks for it?

Mr. SHORTRIDGE. Certainly not; but we could sweep away the prosperity of New England in a season; we could impoverish the cities of New England until grass would grow on the pavements of Boston. The protective tariff doctrine has made New England what she is—a pride and a glory to the Nation as a nation. Never will there be a time so long as I am here, never will there be a time so long as a thoroughbred Californian is here, when a friendly voice will not be raised in behalf of protection to every legitimate industry in Massachusetts which can show it is entitled to it.

Answering further the question of the Senator, of course we would not grant protection to everybody who asks it, but when it is shown to be needed in order to sustain a given industry whereby American men and women may be employed and whereby the American standard of life and living may be maintained, we will give protection to Massachusetts, and, if Wisconsin needs it, to Wisconsin, too. If I dwell upon this theme unduly, if I trespass on the indulgence of the Senate, it is because I feel very deeply on this question as applied immediately to this item and as applied to each and every one of the items set out in this voluminous tariff bill.

In one sense General Hancock was right; in a qualified sense he uttered a truth. The tariff question is local in the sense that it immediately affects a given State or a given industry; but in the larger sense, in the statesmanlike sense, one great industry of Ohio is a national industry. Here let me turn aside for a moment to observe a truth which is so often overlooked and so often forgotten—that no State, no nation, can be permanently great or prosperous when its prosperity or greatness rests upon one industry exclusively. Changing trade currents, the lightnings from heaven, a summer's drought may wipe out its prosperity in a moment or in a season. Wherefore the legislator whose vision takes in America seeks to multiply and to diversify industries, to the end that our people may find profitable and steady employment, so that in the exchange of the products of labor there may be a general prosperity smiling upon the whole Republic. According to my doctrine and, though not claiming to be its oracle, the doctrine of the Republican Party—with which, however, I am very familiar—an industry in Florida would rouse my interest as keenly as an industry in California. An industry in Utah will challenge my championship; an industry in Arizona will have my unqualified support. And why? First, because they are American States and fellow countrymen. If I put it upon the broad ground of patriotic devotion to each and every foot of soil in America and every man and woman in America, it would be sufficient unto me; but if I wanted to indulge in a justifiable motive of selfishness, I would support a great industry in Ohio or Massachusetts or Arizona or Utah or any other of the 48 States of this Union, because I know it is economically true that if New England, for example, prospers the West will prosper, and, conversely, if the West prospers New England will share in that prosperity.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield, please?

Mr. SHORTRIDGE. Certainly.

Mr. WALSH of Massachusetts. I think I understand the Senator's position on protection. I think the Senator believes in high tariff duties and has voted for every motion made to increase the duties named in this bill. Am I correct?

Mr. SHORTRIDGE. I have voted for adequate protective tariff duties whether they be high or low. Those are purely relative terms. They mean nothing.

Mr. WALSH of Massachusetts. The Senator from Louisiana is in favor of increasing the duty upon sugar. He is also in favor of increasing the duty upon rice.

Mr. SHORTRIDGE. So am I.

Mr. WALSH of Massachusetts. And the Senator from California is in favor of both those increases.

Mr. SHORTRIDGE. Yes.

Mr. WALSH of Massachusetts. Does the Senator believe that any duty proposed by any Senator from a State where there is an industry seeking protection should receive his vote?

Mr. SHORTRIDGE. Why, if I may directly reply, I have said that the mere asking is not sufficient, but if you ask me for a rate and follow the request by facts, figures, and conditions which show that the rate you ask is necessary to sustain and encourage that industry I respond gladly, "I am with you and will vote for a rate which is adequate for those purposes."

Mr. WALSH of Massachusetts. The Senator will not get many suggestions from this side of the Chamber in favor of increasing these rates.

Mr. SHORTRIDGE. No; but the American people know what has happened when Democratic suicidal, theoretic, tariff bills have become law. You have forgotten the Wilson tariff bill, have you not? There was another Wilson, and the Wilson tariff bill bankrupted this country.

Mr. POMERENE. Mr. President, if the distinguished Senator from California thinks that this tariff bill is meeting the approval of Ohio Republicans, I suggest that he go to Ohio and confer with Ohio Republicans. He will find that he is very, very sadly mistaken.

The Senator is so very specific when he tells us that he favors "adequate protection." That is a most interesting expression and it covers a multitude of sins. It is just about as explanatory as was the position of the southern Congressman who, when his opponent asked him where he stood on the tariff question, said: "When I get to Washington, and I find that the tariff is too high, I will lower it; and when I find that it is too low, I will higher it."

Mr. SHORTRIDGE. I had the honor of going over to the imperial State of Ohio, the mother of Presidents, and I had the great pleasure, as it was a privilege, of addressing a magnificent audience in the city of Dayton, the home of one who thought he was running for President. He is still standing in his tracks, and with the same League of Nations flag fluttering above him.

Mr. POMERENE. Mr. President, any Ohio audience is a magnificent audience.

Mr. SHORTRIDGE. I admit that. I admit it cheerfully. I was going to say that Ohio has been in the habit of giving birth to Presidents and great Senators, and I can not look into the future, but I am very sure—as sure as I know that the sun will gild this Dome to-morrow morning—that Ohio will have a son in the presidential chair for a good many years to come.

Mr. KING. The Senator from Ohio [Mr. POMERENE] is in good health.

Mr. SHORTRIDGE. And I think I know who that son will be. He will be the broad-minded, luminous-minded, great-hearted, thoroughbred Republican American—Warren G. Harding.

Mr. WALSH of Massachusetts. Great applause.

Mr. SHORTRIDGE. Well, they applauded that until the roof almost came off when I uttered those sentiments in Dayton, Ohio.

Mr. WALSH of Massachusetts. That is what I thought.

Mr. SHORTRIDGE. I wait for applause from the other side, which will come later on, I have no doubt.

Mr. ASHURST. Mr. President, will the Senator yield to me?

Mr. SHORTRIDGE. Certainly.

Mr. ASHURST. The modesty of my friend, the senior Senator from Ohio [Mr. POMERENE], precludes him from replying. I am sure that all on this side join with the Senator in the idea that the next President will be from Ohio. We are not sure, however, that the distinguished Senator from California has not confused the names.

Mr. SHORTRIDGE. I wish the senior Senator from Ohio good health, happiness, and individual prosperity.

Mr. WALSH of Massachusetts. Not even reelection to the Senate?

Mr. SHORTRIDGE. Politically, I walk under the banner of another party. I could say more, but, as Hamlet says:

The rest is silence.

If I may return from this digression to repeat, perhaps, a thought, we are dealing with a condition, and as to the condition we bring here to the Senate what might be regarded in a court as conclusive evidence, and the legal mind would say we have introduced cumulative evidence. If the Presiding Officer here were judge of a high court, and we were here introducing evidence, the court, sua sponte, would check us and say, "You need not introduce further evidence. It would be but cumulative, and unnecessarily consume the time of the court." So the facts being as they are, as so clearly made manifest by my colleague [Mr. JOHNSON], and as the written testimony here further establishes, I come to this proposition, and rap at the very bosom of Democratic Senators, and I propound this question, Is it desirable, is it to be desired, that this industry should languish and perish? Is it desirable, is it to be desired by anybody—confectioner, baker, individual consumer—that this great American industry of almond growing should languish and perish?

That brings me, of course, to the next question: What is the rate which is sufficient or necessary—to indulge in synonyms—to give adequate protection to this industry?

You can very easily destroy this industry, even as many other American industries can be destroyed; but is there a Senator, no matter under which banner he walks, who wishes to destroy any legitimate American industry? Is it wise to do so? Is it just to do so?

I have said, and I beg to repeat—for others may be concerned with what occurs to-day—that the prosperity of California will overflow and be shared in by other sections of the country, and immediately by those States which are here, through their spokesmen, opposing the rates which we ask. Under present conditions this industry is not prosperous. To repeat that statement again and again would add nothing to the argument.

I can only express my surprise that the usually well-informed Senator from Wisconsin [Mr. LENROOT] should reach the conclusions he has announced here in respect to conditions prevailing in California, and perhaps I ought to express my regret that he foreshadows an abandonment of the Republican reservation. It is to be hoped, of course, that we will survive his departure; but I venture here and now to predict that he will not carry out his prophecy of abandoning this tariff bill or leave the old, familiar reservation. Certainly he ought not to because of this item—and I am for the moment confining my thoughts to this item.

I said a moment ago, Mr. President, that in one sense the tariff question involved local issues. That must be understood, of course. A given industry may be limited to a given State. The soil, the climate, of Louisiana or Mississippi may bring about certain industries, and in the sense that the industry is limited in its territorial extent it is local. But the very fact that it is local entitles it to the protecting principles for which we stand. I have very little intellectual respect for a man, wheresoever he may be, who limits his vision to the horizon that surrounds him. I know there are those who, standing in a village, think that village is the center of the universe because the horizon does seem to settle down in a circle round about. I have very little intellectual respect for the man who holds an idea so close to his eye as to shut out all other ideas or principles, even as the miser who holds a small penny so close to his eye as to shut out all the glories of God's universe.

What I would call upon the Senate and the American people to do is this, to regard this Republic as one great, united family, every member of which is entitled to the love and the assistance of all the others; and as for myself, I have mapped out this course, that I will stand for any legitimate industry which gives work and wages to the American.

In this industry we can not compete with the foreigner, and the facts are before us. The cost of production at home and the cost of production abroad—both those items—have been spread upon the record. The quantity we are producing has been set forth. The increasing acreage, in amount, has been stated, and the reason therefor. As to the quality of the article raised, the record abundantly proves that the quality is equal if not in certain brands superior to the foreign.

As to the ratio which obtains between the unshelled and the shelled almond, there remains no further doubt as to that. That ratio is as 1 to 3. I repeat, and would emphasize, that the evidence upon all these points is conclusive.

In looking over the RECORD of Monday, I find that the distinguished, the learned, and the consistent Senator from North Carolina [Mr. SIMMONS] spread upon the RECORD approaching a hundred letters or telegrams addressed to him by those who oppose the rates which we ask. The adjectives I use in referring to the Senator from North Carolina properly and justly describe his long and distinguished career. For him I have the very highest regard. He holds to a theory, and he hews to the line. He is not, as there are some abroad in the land, a political maverick or a political paranoiac. He is an upstanding Democratic statesman, and maintains with great ability the position he takes.

To offset, however, in point of written evidence the evidence which he introduced in this discussion, and which appears of record, I beg to offer letters addressed to me, and doubtless to my colleague, from chambers of commerce of the State of California and from men who have to do with the business affairs of that State. I will not trouble the Senate to read them, but ask permission that they may appear in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CHAMBERS OF COMMERCE.

BAKERSFIELD, CALIF., *August 1, 1921.*

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.

MY DEAR SENATOR: I desire to call your attention to the appeal made by the almond growers of our State in order to save the 100,000 acres of almond orchards, representing an investment of $65,000,000. It is not necessary for me to tell you how vital this matter is to one of our greatest California industries.

Believing, as you do, that one of the great policies of the Republican Party is the protection of American industries, therefore I would say if there was ever a time when an industry in our great State needed protection, which industry is now completely at the mercy of the peasant growers of southern Europe, with their cheap labor and wretched living, it is now.

The fate of this industry is now in the hands of the Senate, and we of California look earnestly to you to assist us in every way possible

to save to us this great industry. This industry will be worth $15,000,000 annually within the next three years if the proper tariff is placed on it.

Recognizing your power in the Senate and thanking you for the many courtesies we have received at your hands, I am,

Sincerely yours,

KERN COUNTY CHAMBER OF COMMERCE,
C. F. JOHNSON, *Secretary.*

—

CHAMBER OF COMMERCE AND
CIVIC ASSOCIATION OF PASADENA, CALIF.,
August 11, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: This organization is strongly in favor of the application of the California Almonds Growers' Exchange for a 5-cent and 15-cent tariff on unshelled and shelled almonds, respectively, and will greatly appreciate your support thereof.

Yours very truly,

WM. DUNKERLEY, *Secretary.*

—

ROSEVILLE, CALIF., *August 3, 1921.*

Senator S. M. SHORTRIDGE,
Washington, D. C.:

This organization stands squarely behind you in your able fight for a 5 and 15 cent tariff on almonds and feels sure you are doing all that can be done to get it.

BOARD OF DIRECTORS,
Placer County Chamber of Commerce.

—

SANTA ROSA, CALIF., *July 31, 1921.*

Senator SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

Your vigorous effort required to save California almond industry by insisting on 5 and 15 cent tariff protection on unshelled and shelled almonds, respectively. We have wired Chairman Penrose and urge you use personal influence with committee.

SANTA ROSA CHAMBER OF COMMERCE,
H. P. HILLIARD, *President.*
JAMES G. STAFFORD, *Secretary.*

—

JULY 30, 1921.

HON. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Failure of the Ways and Means Committee of the House of Representatives to recommend tariff duty of 5 cents and 15 cents on unshelled and shelled almonds, respectively, means that 4,000 almond growers of the State of California face the prospect of financial ruin and loss to their 100,000 acres of orchards, and decades of work, representing an investment of $65,000,000 in almond orchards in California.

The schedule of 4 and 12 cents reported upon by the House Ways and Means Committee, while recognizing the contention of the almond growers of California that tariff protection for shelled almonds should be at least three times as great as for unshelled, due to the natural shelling ratio, is utterly inadequate to meet the cheap labor and low production cost of the peasant growers of southern Europe with their pauper labor and wretched living standards.

This tariff protection is utterly inadequate to give our California almond growers the share of our American markets for shelled almonds that our investment, our labor, and our years of effort entitle us to. While the confession of a three to one shelling ratio is a recognition of the principle, the rates of 4 cents and 12 cents proposed in the House Ways and Means schedule are utterly inadequate.

We are respectfully requesting that the schedule be revised in the Senate to meet the actual living conditions and producing costs in America of this essential food product, $15,000,000 of which is produced annually in California.

You are respectfully requested to insist on a revision of this House Ways and Means Committee schedule and the adoption of a schedule of 5 cents and 15 cents on unshelled and shelled almonds, respectively, thus saving to the United States an industry that has been made possible only through years of labor, sacrifice, and effort on the part of American growers in this State.

Yours very truly,

SANTA ROSA CHAMBER OF COMMERCE,
By H. P. HILLIARD, *President.*

Attest: JAMES G. STAFFORD, *Secretary.*

—

SANTA ROSA, CALIF., *July 30, 1921.*

Senator BOIES PENROSE,
Chairman Senate Finance Committee,
Washington, D. C.:

California's $65,000,000 almond industry in which 4,000 growers, 100,000 acres, and decades of arduous work are involved faces absolute ruin, and an annual income of $15,000,000 to California will be cut off unless almonds are given a tariff protection of 5 and 15 cents on unshelled and shelled, respectively. Our growers are Americans, with American living standards, employing American help at American wages, and can not compete with peasant growers and pauper labor of southern Europe unless granted adequate tariff protection.

SANTA ROSA CHAMBER OF COMMERCE.

—

COLUSA, CALIF., *July 30, 1921.*

Senator SAMUEL SHORTRIDGE,
Washington, D. C.:

This chamber at a special meeting to-day passed a set of strong resolutions demanding and imploring a tariff of 5 and 15 cents. A copy of this second set of resolutions along with a telegram has this day been sent to Senator Boies Penrose as chairman of the Finance Committee. This chamber has gone on record as sincerely appreciating your efforts in our behalf and again implore you to employ your strongest arguments to secure the necessary tariff rate before the Finance Committee.

COLUSA COUNTY CHAMBER OF COMMERCE,
Per W. O. HYRUP, *Secretary-Manager.*

CHICO, CALIF., *July 28, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.:

Appreciate your continued support of almond tariff fight for rate of 5 cents and 15 cents. Have wired Penrose urging Senate committee give matter consideration.

CHICO CHAMBER OF COMMERCE.

—

REDLANDS, CALIF., *July 27, 1921.*

SAMUEL SHORTRIDGE, *Senator,*
Washington, D. C.:

To protect and save almond industry California must have ratio 3 to 1 and tariff rate no less than 5 cents on unshelled almonds and 15 cents on the shelled. We urge you stand out for above in Senate hearing, as it is vital to every almond district of State.

REDLANDS CHAMBER OF COMMERCE.

—

WILLOWS CHAMBER OF COMMERCE,
Willows, Calif., July 26, 1921.

Mr. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

MY DEAR SENATOR: In this part of California we are very much interested in the tariff on unshelled and shelled almonds. Our people are very much worked up over this matter, and we want you to give your attention to the bill that has passed the House and is now before the Senate, and ask you to give it grave consideration on behalf of the 4,000 almond growers of the State.

It is the consensus of opinion of all the almond growers that nothing but 5 and 15 cents will pay the almond growers and their orchards, and we therefore urge upon you to stand for this, if you can see your way clear to.

We are not asking any United States Senator to violate his conscience in any way, but we are perfectly sure that once giving this matter the consideration it deserves that you will be with us to the very best of your ability.

Yours sincerely, F. W. LEAVITT, *Secretary.*

—

SACRAMENTO CHAMBER OF COMMERCE,
July 21, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

MY DEAR MR. SHORTRIDGE: Your fine action as set forth in your telegram of July 20 with reference to the bean situation is sincerely appreciated.

We hope that you will keep the fine work going, and particularly on the floor of the Senate, exerting every possible effort within your power to the end that the 15 cents per pound tariff on almonds will be put into effect, for this is vital to the industry, as I am sure you are well aware.

Very truly yours,

A. S. DUDLEY, *Secretary-Manager.*

—

SAN BENITO COUNTY CHAMBER OF COMMERCE,
Hollister, Calif., July 14, 1921.

Hon. SAMUEL SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR MR. SHORTRIDGE: There is now I believe before the House of Representatives the question of a tariff of 5 cents per pound on almonds not shelled, and 15 cents per pound on shelled almonds. San Benito County and its adjoining counties are vitally interested in this tariff, and our organization feels that the almond industry in our country should be protected, and to the end that a tariff should be imposed on foreign shipments.

Therefore it is the desire of this organization that you give same your consideration with the aim of protecting the industry in California.

Very truly yours,

W. M. JONES,
Secretary San Benito County Chamber of Commerce.

—

CHAMBER OF COMMERCE,
Live Oak, Calif., July 14, 1921.

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.

DEAR SENATOR: I have been requested by the above organization to write you in regard to the proposed duty on almonds and respectfully urge you to use your best efforts to obtain the following:

	Cents per pound.
On shelled almonds	15
On unshelled almonds	5

As you know this district is a considerable producer in this line, and at the present time needs assistance in the above manner if we are to continue.

Thanking you for whatever you may be able to accomplish, I am,

Yours very truly,

T. C. SMITH.

—

ESPARTO, CALIF., *July 14, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Tariff 5 and 15 will save our almond industry. Your earnest support will be appreciated.

WESTERN YOLO CHAMBER OF COMMERCE,
FRED B. WYATT, *President.*

—

FRESNO, CALIF., *July 14, 1921.*

Senator SHORTRIDGE,
Washington, D. C.:

The present tariff on almonds has been recommended by the Ways and Means Committee; entirely inadequate to afford any protection. The tariff of 4 cents on almonds not shelled and 8 cents on shelled almonds is disproportionate. The tariff should be three times as great for shelled almonds. The almond industry is to-day faced with immediate extinction unless relief is given in the tariff measure. This is an industry that affects the entire State. Can we count on your support?

FRESNO COUNTY CHAMBER OF COMMERCE.

ANTIOCH, CALIF., *July 14, 1921.*

SAMUEL M. SHORTRIDGE,
Senate, Washington, D. C.:

The Antioch Chamber of Commerce earnestly request that you work for a tariff of 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds. The tariff of 4 cents and 8 cents, as recommended by the Ways and Means Committee, would be ruinous to the almond industry of California.

Yours for prosperity,

ANTIOCH CHAMBER OF COMMERCE.
R. V. DAVIS, *President.*

—

WINTERS, CALIF., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

The almond growers of Yolo County, representing approximately one-sixth of the State production, make urgent appeal for tariff on almonds 5 cents in shell, 15 cents shelled. Tariff bill, as recommended by committee, 4 and 8 cents, insufficient, and ratio is not correctly computed, since the shelling is three to one. California almonds are being carried one season to another on account of importations from Europe, which we can not compete with. Tonnage increasing yearly. Must have some relief or one of California's big industries will be ruined, affecting 5,000 growers and $50,000,000 orchard property. We ask that you make every endeavor to get action on tariff asked by the California Almond Growers' Exchange of 5 cents for the unshelled and 15 cents for the shelled almonds.

WINTERS CHAMBER OF COMMERCE.

—

RIVERSIDE, CALIF., *July 11, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

California almond industry has 100,000 acres and fifty millions invested. We favor at least 5 cents per pound tariff on unshelled and 15 cents on shelled almonds imported. Respectfully urge your favorable support for this great industry.

RIVERSIDE CHAMBER OF COMMERCE,
IRWIN HAYDEN, *Secretary.*

—

COLUSA, CALIF., *July 10, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

Colusa County being vitally interested in the almond industry, with an investment representing $4,000,000, the county chamber of commerce has passed strong resolutions requesting Congress to give us a necessary tariff protection, said tariff to be placed at a ratio of three times as much on shelled as on unshelled almonds. Unless an adequate tariff such as this is placed on imported almonds, both shelled and unshelled, the entire almond industry in the State of California faces ruin and destruction. We therefore implore you to use your best endeavor to secure a tariff of 5 cents on unshelled and 15 cents on shelled almonds per pound. Copy of resolutions above referred to is being mailed to you to-day.

W. O. HYRUP,
Secretary-Manager Colusa County Chamber of Commerce.

—

REDLANDS, CALIF., *July 9, 1921.*

Senator SHORTRIDGE,
Washington, D. C.:

Urge protection almond industry with tariff suggested by growers' organization.

CHAMBER OF COMMERCE.

—

STOCKTON, CALIF., *July 9, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

This organization, speaking in the name of the people of San Joaquin County, earnestly urges that you support the effort of the California almond growers to secure needful protection in the pending tariff bill. The tariff on shelled almonds should be at least three times as great as almonds in the shell. Please give this request your usual attentive consideration.

STOCKTON CHAMBER OF COMMERCE,
A. C. OULLAHAN, *Managing Secretary.*

—

PASO ROBLES, CALIF., *July 9, 1921.*

Senator SAMUEL SHORTRIDGE,
Washington, D. C.:

Producers of almonds in California can not, under existing labor and transportation conditions, compete with foreign labor and low water rates. The existence of the industry demands a tariff fair to producer and consumer. Rate should be on a basis of 3 pounds of unshelled to 1 pound of shelled almonds. Your influence is necessary at this time to save the most important industry in this section.

SAN MIGUEL DISTRICT CHAMBER OF COMMERCE.

—

CHICO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate, Washington, D. C.:

On behalf of almond growers of Butte County, one of two most important almond-producing counties of California, Chico Chamber of Commerce appeals to you to support and make every effort to secure tariff on almonds of 5 cents per pound unshelled and 15 cents per pound shelled almonds. This is vital if growing almond business of California is to be protected from European competition.

CHICO CHAMBER OF COMMERCE,
C. M. COFFING, *President.*

—

OAKDALE, CALIF., *July 8, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

Oakdale is vitally interested in the almond industry and desires that you make every possible effort to have tariff on almonds 5 cents for unshelled and 15 for shelled. Thousands of acres planted to almonds around Oakdale will be rendered unprofitable unless proper duties are imposed on imports.

OAKDALE CHAMBER OF COMMERCE,

ATASCADERO, CALIF., *July 8, 1921.*

Senator S. M. SHORTRIDGE,
Washington, D. C.:

The Atascadero Chamber of Commerce urgently begs that you will support the tariff on almonds, which is now being brought up for your deliberation. It is the opinion of this chamber that the almond growers of this country should be protected in every way possible, and this measure is vital to the rapidly developing industry.

ATASCADERO CHAMBER OF COMMERCE,
J. T. EDWARDS, *Managing Director.*

—

PASO ROBLES, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.:

Twelve million dollars' worth of almond orchards in Paso Robles district will be unable to survive proposed tariff of 4 and 8 cents. Absolutely necessary that proportion shelled and unshelled almonds be 3 to 1, and should be 5 and 15 cents if almond industry is to be continued in California. We beg you to use your influence to establish a tariff which will protect and not disable one of California's important industries.

PASO ROBLES CHAMBER OF COMMERCE,
JOSEPH W. TANNER, *Secretary.*

—

HAMILTON CITY CHAMBER OF COMMERCE,
Hamilton City, Calif., July 7, 1921.

Hon. HIRAM W. JOHNSON, *United States Senator,*
Hon. SAMUEL M. SHORTRIDGE, *United States Senator,*
Hon. CLARENCE F. LEA, *Congressman,*
Washington, D. C.

GENTLEMEN: The Ways and Means Committee have recommended to Congress a tariff on almonds, not shelled, of 4 cents, and on shelled almonds 8 cents per pound.

Since European almonds shell out 4 to 1 and California almonds 3 to 1, we are entitled to a tariff on shelled almonds at least three times as great as almonds in the shell.

Unless we get a readjustment of tariff on shelled almonds of at least 3 to 1 it will mean the disintegration of the almond industry of California. Our only future market is for shelled almonds, which represents 80 per cent of the demand of the United States. This is a serious situation confronting the industry. Only with proper protection on shelled almonds can we bring to California the millions that are going to the shores of the Mediterranean.

A Congressman recently told a group of farmers that when agricultural interests talk loud enough they can get anything within the power of our Government. "If you will let us know what you want, the rest is easy," said the Congressman.

Speaking for myself, I have 100 acres in almonds. This 100 acres has cost me $500 per acre, or a total of $50,000, to put my orchard where it is to-day—seven years old—and all in bearing. If we do not get the proper protection under the tariff, you can easily see what it means to me, and not only myself but to hundreds of others in the almond-growing industry in the State of California.

As one of the many growers in this State I pray that you may do all in your power to give us protection under the tariff as above outlined. I am, gentlemen,

Yours very respectfully, H. L. WEST.

—

SACRAMENTO, CALIF., *July 7, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senator, Washington, D. C.:

Almond industry threatened unless 15 cents per pound tariff on shelled almonds requested by California almond growers be granted. California almond investment exceeds $50,000,000. Ten million dollars coming to California annually for shelled almonds will be practically lost if suggested legislation fails. Please support legislation.

SACRAMENTO CHAMBER OF COMMERCE.

—

OTHER ORGANIZATIONS—CLEARING HOUSES—NEWSPAPERS.

CALIFORNIA ALMOND GROWERS' EXCHANGE,
San Francisco, Calif., May 29, 1922.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: We appreciate your telegram of May 26. Indeed we know that our cause has had your earnest attention and still continues to hold it at the present time.

We are asking Professor Taylor to furnish you with any data that he may have to dispute the groundless charge that California almonds are not equal in quality and fitness to foreign almonds. This is one of those sweeping generalities which are not supported by the facts.

Professor Jaffa has analyzed the various varieties of both California and foreign almonds, and his investigations prove conclusively that there is no truth in the charge made by the confectioners that the California almonds are not equal to the Mediterranean almonds for confectioners' use.

We feel that the Senate will not be willing to disturb the recommendations of the Finance Committee, as the question is a technical one, and the Senate will agree that the Finance Committee's recommendations, based as they are on the facts of the case, should be followed. I know that you will do everything possible to support our schedule if it is attacked on the floor of the Senate.

With kindest personal regards,

Very truly yours, T. C. TUCKER, *Manager.*

—

CALIFORNIA ALMOND GROWERS' EXCHANGE,
San Francisco, Calif., January 31, 1922.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We attach hereto for your information copy of a letter sent by William M. Regan, president of Regan Bros., wholesale bakers, of Minneapolis, Minn., to the New York Dried Fruit Association.

The letter needs no comment other than that it is one of many similar refusals by reputable American bakers and confectioners to lend themselves to a cut-and-dried, printed-circular propaganda campaign to defeat the honest pleas of our farmers for that modicum of protection which our almond growers, for instance, are asking in a 5 and 15 cent schedule of import duties on the peasant-raised almonds of southern Europe.

Very truly yours,

T. B. WATERS,
Assistant to Manager.

REGAN BROS. CO.,
Minneapolis, Minn., January 10, 1922.

DRIED FRUIT ASSOCIATION,
New York Tariff Committee,
No. 6 Harrison Street, New York, N. Y.

GENTLEMEN: We have received, through Messrs. Birdsong Bros., a copy of your circular letter of January 3, 1922, and printed protest against the proposed increased import duties on shelled almonds, shelled walnuts, and shelled filberts in tariff bill (H. R. 7456), paragraphs 754, 755, 758.

The writer does not agree with your arguments at all. Personally, I am heartily in favor of higher rates of duty on the articles mentioned. I believe absolutely in the principle of protection of American industries, and believe that ultimately all the people of the United States will be very much benefited by a high protective tariff.

If Congress imposes a duty on the articles named above, it will have a tendency to justify the people in the States that can grow American almonds, walnuts, and filberts to invest in lands and build up the orchards and enable us to produce in our own country goods that we use here.

Almonds, walnuts, filberts, etc., are just the kind of articles that should carry a high tariff. They are luxuries, and the people who care to buy them can afford to pay the price.

I also believe firmly in a high tariff on eggs imported into this country. If there should be a fair profit, even if just a little bit higher than just a living profit, for the American farmer on his eggs, it will have a natural tendency to induce more people to go into the poultry business, and in time we will produce enough eggs and poultry in this country to supply our own wants; and we will keep our money here, instead of sending it to China and other foreign countries.

Last year, when the markets in the Eastern and Central States were flooded with lemons imported from southern Europe, millions of dozens of lemons rotted on the ground and on the trees in California because our own growers could not afford to pick, pack, and pay high freight rates on them. If we had had a high enough tariff on lemons, the foreign growers who wanted the American market would have had to pay the United States Government a reasonable amount of money for the privilege of doing business here, or our local markets would have been supplied with our home-grown fruit.

Yours truly,

(Signed) WM. M. REGAN.

FIRE ASSOCIATION OF PHILADELPHIA,
San Francisco, Calif., August 12, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SIR: We desire to express to you our thanks and appreciation for the manner in which you have assisted the almond growers of our State in the tariff on almonds. This, as you no doubt know, is one of the very best industries in our State, and a high tariff is of vital importance to the continuance of this class of agriculture.

Trusting the tariff will be increased so that our growers will have no further apprehension along these lines, with best wishes to you, beg to remain,

Yours very truly,

F. M. AVERY, *Manager.*

LOS ANGELES, CALIF., *August 8, 1921.*

Senator S. M. SHORTRIDGE,
Washington, D. C.:

Tariff of 5 cents pound on unshelled almonds and 15 cents on shelled is essential to save California growers. Our members of Merced County planting about 2,200 acres to almonds, which represents their life savings. We appeal for your influence to pass above tariff.

Directors.

SACRAMENTO, CALIF., *August 2, 1921.*

Hon. S. M. SHORTRIDGE,
Capitol Building, Washington, D. C.:

We desire to advise you that it is of vital interest to the California almond industry that they have adequate tariff protection. We would ask your utmost support in behalf of a tariff of at least 5 cents on unshelled almonds and 15 cents on shelled almonds. The situation is critical and unless this industry is properly protected the growers will be unable to continue under present conditions.

SACRAMENTO CLEARING HOUSE,
Representing entire banking interest of Sacramento.

CONCORD, CALIF., *July 31, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

These resolutions unanimously passed to-day:

Whereas the almond industry of this country is in danger of being destroyed for want of an adequate tariff on foreign almonds, especially on shelled almonds, the ratio of which is 1 pound shelled to 3 unshelled: Therefore be it

Resolved, That we request the Senate of the United States to impose a tariff of 15 cents on shelled and 5 cents per pound on unshelled almonds.

CONCORD ALMOND GROWERS' ASSOCIATION,
A. C. GEHRINGER, *President.*
PERCY DOUGLAS, *Secretary.*

SEBASTOPOL, CALIF., *July 31, 1921.*

Hon. SAMUEL M. SHORTRIDGE.
United States Senate, Washington, D. C.:

After thorough investigation we are convinced that a duty of 5 cents on almonds in the shell and 15 cents on shelled almonds is necessary to save our growers from serious loss. We therefore earnestly urge you to use your influence to amend tariff bill as passed by House.

SEBASTOPOL APPLE GROWERS' UNION.

BANNING, CALIF., *July 31, 1921.*

Hon. SAM. SHORTRIDGE.
Senate Office Building, Washington, D. C.:

Ninety-four almond growers of Banning, representing very important orchard industry here, urge tariff not less than 5 cents on unshelled and 15 cents on shelled, this rate being lowest possible consistent with conditions of almond industry, due to foreign competition. Passage of 4 cents and 12 cents tariff would be equivalent to surgeon cutting out part only of cancer leaving portion of malignant growth to kill patient. Ratio must be 1 to 3 to offer protection most urgently needed by California growers, whose industry under present rates literally faces ruin.

BANNING ALMOND GROWERS' ASSOCIATION.

LOS ANGELES, CALIF.,
July 29, 1921.

Hon. SAMUEL SHORTRIDGE,
United States Senator from California, Washington, D. C.

HONORABLE SIR: It is the plain duty of Congress to see to it that our industries, operated along good business lines, are protected against importations from foreign countries, and particularly is this applicable where products of the soil are involved. The prosperity, welfare, and happiness of our people are entitled to and must be shown such consideration. We Americans are too intelligent and too progressive to ever submit to the peasantry conditions existing in many European countries, where the standard of living, through the imposition of starvation wages, is the very lowest.

California is the center of the almond industry, and the well-being of thousands of our people, and as well the interests of our State, are seriously menaced in consequence of the failure of Congress up to this time to provide an adequate protective tariff. The total investment in the almond industry of California is substantially more than $50,000,000, and unless a duty is levied on importations to enable the growers of almonds to market their crops at a fair margin of profit over cost of production and harvesting, the ruin of this important industry is a certainty.

The House of Representatives has voted a tariff of 4 cents per pound on almonds not shelled and 12 cents per pound on shelled almonds. It has been conservatively estimated by men who have made a close study of the situation in all its phases that the minimum protection required by American growers is 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds. Unless this protection is afforded we are assured by almond growers of California that they will be forced to discontinue producing, as the European competition under present conditions can not be successfully overcome. This would result in throwing thousands of people out of employment, in depreciating land values, and inevitably numerous bankruptcies.

We feel confident you appreciate the importance, for the preservation of the almond industry of California, of a protective tariff on this commodity which will really mean adequate protection, and through the medium of which this industry may be enabled to expand and prosper. This would very naturally result in utilization of land now lying idle or of little value, and of increasing the population and prosperity of our great State. May we not hope for your active and vigorous support for a tariff of 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds?

Yours very truly,

CALIFORNIA VEGETABLE UNION,
A. J. HOGAN, *Traffic Manager.*

ARBUCKLE, CALIF., *July 29, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

—

SACRAMENTO, CALIF., *July 25, 1921.*

Senator SAM SHORTRIDGE,
United States Senate, Washington, D. C.:

Almond growers need tariff based on natural shelling ratio. Almond growers must be protected if their industry is to continue.

NORTHERN CALIFORNIA MILK PRODUCERS' ASSOCIATION.

—

FRESNO, CALIF., *July 24, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.:

Understand tariff bill will be taken up by Senate Finance Committee Tuesday. Please give careful consideration to California almond growers' request, as they have approximately $50,000,000 invested, and unless adequate protection is afforded this great industry will suffer serious loss, as they can not compete with cheap labor from southern Europe. Kindly use your best efforts to provide the protection requested by them.

CALIFORNIA PEACH AND FIG GROWERS.

—

NEWCASTLE, CALIF., *July 23, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SENATOR SHORTRIDGE: The almond industry in America, which is chiefly centered in California, is very severely threatened by the lack of a protective tariff.

Foreign cheap labor has undermined this industry in California, and the growers are not able to compete.

We would ask you to do everything in your power to get a tariff of 5 cents per pound on almonds, not shelled, and 15 cents per pound on shelled almonds. These figures will give the California growers a chance to develop this industry.

Thanking you for anything that you can do to help the almond industry,

Yours very truly,

PLACER COUNTY FRUIT GROWERS.
By H. M. ELLIS.

THE RIVERSIDE ENTERPRISE,
Riverside, Calif., July 21, 1921.

United States Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

MY DEAR SENATOR SHORTRIDGE: We are all greatly pleased with your success in securing the return of the Indian office to Riverside and other developments.

I also desire to express my personal appreciation of the manner in which you have fought for proper tariff for California products. There is still a feeling on the part of the California growers that 5 cents for unshelled and 15 cents for shelled almonds is essential to protect the California growers from cheap importations. I am sure that you have done, and always are doing, all in your power in this regard.

Thanking you again for the prompt responses you have always made to any request or suggestion from our community, I am,

Very truly yours, J. R. GABBERT.

—

YUBA CITY, CALIF., *July, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

HONORABLE SIR: We, the undersigned officers of the Sutter Peach Growers, and representing the cling-peach industry of California, do hereby respectfully ask that you aid in every way the California Almond Growers' Exchange in their fight for an amendment to the tariff-rate recommendations of the Ways and Means Committee, as we believe that they are entitled to a 5-cent and 15-cent tariff rate. This judgment we base upon extensive research of past and present cost of production.

Believing in the protection of our California industries and the help of our legislators, we submit this entreaty.

Sutter Peach Growers; Edward S. Moulton, president; J. L. Ames, secretary; J. W. Eager, director; J. G. Kussenberger, director; S. W. Walton, director; Geo. T. Boyd, director; G. C. Galbraith, director; M. D. McLeod, manager.

Los Angeles, Calif., July 15, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: The Los Angeles County Farm Bureau, an organization of some 2,000 farmers in Los Angeles County, is desirous of calling your attention to the urgent necessity for adequate tariff protection to the California almond industry. From the published reports concerning the permanent tariff bill, it is apparent that this important industry, which represents a long-time investment of some $50,000,000, is not being provided with adequate tariff protection.

Your attention is called to the fact that the main competition which the California almond industry suffers from is that occurring in southern Europe, where costs of production are much lower than those in California, largely due to the lower standard of living.

No doubt you are familiar with the brief prepared by the California Almond Growers' Exchange for presentation to the Tariff Commission. It is apparent to those familiar with the California almond industry that a tariff protection of approximately 15 cents per pound is absolutely necessary if the industry is not to suffer seriously. It is also apparent that the ratio of protection accorded the shelled product and the unshelled product should be at least three to one. Average market prices for shelled almonds over a long period of years are fully three times those quoted for unshelled almonds. This, together with the fact that on an average 100 pounds of unshelled almonds will yield about 30 pounds of the shelled article will make it apparent that the ratio must be not less than three to one.

You are therefore urged to do all that you can to see that this important industry receives the full measure of tariff protection which it must have if it is to endure.

Very sincerely yours, J. B. VAILE,
Chairman Legislative Committee,
Los Angeles County Farm Bureau.

—

MARYSVILLE, CALIF., *July 14, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.:

An extremely serious situation confronts all who have developed one of California's natural characteristics to produce almonds with practically entire demand for meats. We are denied this market, due to lack of protection, in spite of the fact we have at Sacramento the largest, most modern almond-shelling plant in world. Please help us secure 15-cent protection.

C. L. MOSELEY,
President Buttes Almond Orchards (Inc.).

—

BAKERSFIELD, CALIF., *July 13, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

We favor and urge your support on tariff as proposed by California Almond Growers' Exchange, thereby protecting our almond industry.

BAKERSFIELD CLEARING HOUSE ASSOCIATION.

—

MODESTO, CALIF., *July 12, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

The California almond industry is threatened with destruction unless tariff on shelled almonds is placed at 15 cents pound. Fifty million dollars invested here in the industry. Congress seriously considering adjournment and we insist on remaining in session until agricultural bills are passed.

STANISLAUS COUNTY FARM BUREAU
(Fifteen hundred farmers).

—

ANTIOCH, CALIF., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We earnestly urge your best endeavor to change almond tariff to 5 cents in the shell and 15 cents on shelled almonds, as 4 cents in shell and 8 cents shelled is ruinous to almond industry of California.

Respectfully,

ARTHUR W. BIGELO,
Vice President Eastern Contra Costa County
Almond Growers' Association, Oakley, Calif.

CHICO, CALIF.

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Proposed duty on almonds especially shelled insufficient to protect domestic industry, as almonds shell about three or four to one; the protection on unshelled almonds is therefore twice that of shelled. The duty on shelled almonds should be three times the duty on unshelled. We wish 5 and 15. Situation threatens industry.

CHICO ALMOND GROWERS' ASSOCIATION
(Two hundred growers).
B. F. HUDSPETH, *Secretary.*

—

ROSEVILLE, CALIF., *July 11, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

We as officials of Antelope Almond Growers' Association, representing growers of Sacramento and Placer Counties, ask you use your utmost efforts to have the tariff on almonds increased and the ratio of shelled and unshelled made 3 to 1; otherwise part of the crop will not be harvested.

G. P. DEKAY,
J. F. GLADNEY,
R. D. GOULD,
A. T. MCBRIDE,
A. VANMAREN,
Directors.

—

STOCKTON, CALIF., *July 11.*

Senator S. M. SHORTRIDGE,
Washington, D. C.:

San Joaquin County farm bureau urges passage of tariff measure. Recommends increasing almond tariff to 5 cents in shell and 15 cents shelled.

GILBERT KEITLE, *Secretary.*

—

LAKEPORT, CALIF., *July 11, 1921.*

Senator SAMUEL SHORTRIDGE,
Senate Office Building, Washington, D. C.:

We ask tariff 5 cents unshelled, 15 cents shelled, almonds.

LAKE COUNTY ALMOND GROWERS' ASSOCIATION.

—

SAN FRANCISCO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

California Development Board and California Industries Association merged and representing transportation agricultural business and manufacturing interests entire State insist upon amendment of House tariff bill to provide adequate tariff duties on almonds on 3 to 1 ratio between shelled and unshelled. This is absolutely vital to State as whole and to 4,000 working almond farmers, some of whose crops for 1919 and 1920 have not been sold, because American shelled almond market controlled by southern European growers. Three to one ratio vital also to entire State, because it means diversion of $15,000,000 annually from European growers and foreign bankers to California.

CALIFORNIA DEVELOPMENT BOARD,
CALIFORNIA INDUSTRIES ASSOCIATION,
N. H. SLOAN, *Manager.*

—

PASO ROBLES, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.:

The directors of Paso Robles Almond Growers' Association, representing 20,000 acres almond orchards, appeal to you for tariff 5 cents on unshelled and 15 cents on shelled almonds. This ratio of 3 to 1 is fair and necessary to success of almond industry.

C. BUTTERWORTH,
FRED IVERSON,
JOHN H. VANWORMER,
Directors.

—

ORLAND, CALIF., *July 9, 1921.*

SAMUEL M. SHORTRIDGE.
Senate Office Building, Washington, D. C.:

Inasmuch as this association still has a portion of its 1919 and 1920 crop of almonds unsold and, further, that to date we have received for our 1920 crop of almonds but 7 cents for Drakes and 10 cents for IXL almonds, and these are the leading varieties produced, and we know that these conditions are caused by too low a tariff on foreign almonds: Be it

Resolved, That this association petition Congress for a tariff of not less than 5 cents on almonds in the shell and 15 cents for shelled almonds. After a thorough investigation we find that it costs us from 10 to 12 cents per pound to produce almonds. We therefore petition you to give us a tariff that will enable us to get a living return for our labor. Unless we get adequate protection on California-grown almonds thousands of farmers will be ruined.

ORLAND ALMOND GROWERS' ASSOCIATION,
GEORGE W. STURM, *Secretary.*

—

BANNING, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Understand an 8-cent tariff has been set on shelled almonds. Altogether too low. We growers will be forced out of business unless tariff is raised. Favor tariff of 15 cents advocated by California Almond Growers' Exchange.

GILMAN HOME CO.,
C. MABEL GILMAN,
Secretary.

—

ESCALON, CALIF., *July 8, 1921.*

SAMUEL SHORTRIDGE,
Washington, D. C.:

California wants you to vote at least 5 cents on almonds not shelled and 15 cents on shelled.

P. D. FITZPATRICK,
Almond Grower and Locomotive Engineer on Santa Fe.

JULY 8, 1921.

CALIFORNIA ALMOND GROWERS' EXCHANGE,
San Francisco, Calif.:

Thanks for telegram. Will put forth every effort to secure adequate tariff on almonds.

SAMUEL M. SHORTRIDGE.

—

NEW YORK UNDERWRITERS' AGENCY,
Los Angeles, July 7, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

HONORABLE SIR: Many (writer included) in California are interested in the growing and marketing of almonds, but we can not bring this business to a successful issue unless a sufficiently high tariff is placed on almonds imported from foreign countries.

Knowing that you have the interest of California at heart, we feel sure that you will use your best endeavor to have foreign almonds placed behind a tariff wall so high that it will insure your State of California growers a fair price for their product.

Very sincerely yours,
A. C. ANDERSON.

—

WOODLAND, CALIF., *July 5, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

Almond growers of Yolo County, where nearly one-sixth of all almonds grown in United States are produced, urge California delegation to exert every possible effort for increased tariff protection. Growers insist industry representing millions of dollars invested interests would be ruined under present tariff schedule. Advise us as to what we might do to assist in any and every way. The situation is indeed critical for the industry.

FRED SHAFFER,
Secretary Yolo County Board of Trade.

—

SAN FRANCISCO, CALIF., *June 29, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Understand committee recommends 4 cents in shell and 8 cents shelled. We are bitterly disappointed in recommendation, especially on our showing that European almonds shell four to one. We feel we are entitled to at least three to one, and we know that our request for 5 cents per pound on unshelled and 15 cents per pound on shelled is exceedingly reasonable and merited by all facts. We know you will help us fight.

CALIFORNIA ALMOND GROWERS' EXCHANGE.

Mr. SHORTRIDGE. I wish also to call the attention of the Senate to certain letters and telegrams addressed to me by distinguished men in California, men of affairs, not directly in all cases engaged in this industry but men who are familiar with the conditions and the facts, for it is upon the conditions and the facts we are here to-day standing. I will consume the time of the Senate to read a telegram addressed to me by the mayor of San Francisco, as follows:

SAN FRANCISCO, CALIF., *July 27, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

A leading California industry is languishing and is threatened with extinction. The almond industry, representing an investment of $65,000,000, is being forced to the wall. Rehabilitation of the industry of prime importance not alone to our State but to our Nation. Imported products of pauper labor are absorbing our markets, bankrupting our industry, and rendering us dependent. Forty thousand people rely, in whole or in part, for livelihood on California almond culture.

Substantial import duties, tending to equalize relative costs of production, can alone check this destructive avalanche. I fully indorse minimum effective tariff, as asked by our growers, and urge strenuous employment of all reasonable means to secure tariff of 5 cents per pound on all almonds imported in shell and 15 cents on shelled goods.

JAMES ROLPH, Jr.,
Mayor of San Francisco.

I have here a telegram addressed to me setting forth in substance the facts as stated by Mayor Rolph, which telegram I would beg Senators to note is signed by the California Almond Growers' Exchange, the California Lima Bean Growers' Association, the California Peach and Fig Growers, the California Cattlemens' Association, the California Fruit Growers' Exchange, the Poultry Producers of Central California, Sebastopol Apple Growers' Union, California Associated Raisin Co., Associated Dairymen of California, Cooperative Seed Growers' Association, Central California Berry Growers' Association, California Prune and Apricot Growers, and many, many other legitimate farm associations and producers in California. I ask that this be inserted in the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF., *July 7, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.:

At a meeting of the principal producing interests of California, representing 60,000 growers, held in the office of the California State market director to-day a resolution was unanimously passed that the proposed tariff legislation contained in House tariff bill would not give the justifiable protection vitally needed. We view with the greatest concern the reported tariff schedules announced when we had been positively assured of schedules that would protect our basic agricultural industries which the reported rates fail to do. You are earnestly requested to secure the enactment of a tariff at least equal to the vari-

ous schedules asked for in the briefs and hearings before the Ways and Means Committee based on the details. Data already on file.

California Almond Growers' Exchange; California Lima Bean Growers' Association; California Peach and Fig Growers; California Cattlemen's Association; California Fruit Growers' Exchange; Poultry Producers of Central California; Sebastopol Apple Growers' Union; California Associated Raisin Co.; Associated Dairymen of California; Cooperative Seed Growers' Association; Central California Berry Growers' Association; California Prune and Apricot Growers; California Fruit Distributors; California Growers' Association; Pacific Rice Growers' Association; Poultry Producers of Southern California; Fruit Growers of California; Mutual Orange Distributors; Associated Olive Growers of California; California Fruit Exchange; California Pear Growers' Association; Nurserymen's Bud Selection Association; California Walnut Growers' Association; Poultry Producers of San Diego, Calif.; Bean Growers' Association of California; Wool Growers' Association; Alfalfa Growers of California (Inc.); Sweet Potato Growers' Association.

Mr. SHORTRIDGE. My immediate purpose is to show to the Senate that all these organizations realize the situation in respect to the almond industry. I here submit to the Senate a telegram from the Long Beach Chamber of Commerce, a city in Los Angeles County, Calif., and ask that it be spread upon the RECORD without taking the time of the Senate to read it.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

LONG BEACH, CALIF., *July 7, 1921.*

Senator SAMUEL SHORTRIDGE,
Washington, D. C.:

We believe tariff legislation should fully protect all American industries. California is developing large almond industry. Without tariff protection, our growers and investors will be ruined. Fifteen cents per pound shelled 5 unshelled none too much. We ureg your active support. Matter urgent.

LONG BEACH CHAMBER OF COMMERCE,
L. W. BALLARD, *Secretary.*

Mr. SHORTRIDGE. I also offer a telegram from the president of the Merchants National Bank, of San Francisco, in which he, Mr. Summers, states the conditions prevailing in California.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF., *July 7, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

This bank, which has financed the almond growers in the past year to a large extent views with grave alarm the proposed tariff on almonds. Growers have quantities, and we hold as security 1919 and 1920 almonds not sold. Growers could not sell sucessfully entire 1919 crop under most prosperous marketing conditions. California growers have been unable to have any part of the shelled-almond demand of this country, which represents 80 per cent of the almonds consumed. Unless tariff on shelled almonds is at least three times as great as on almonds in the shell, can not see possibility of American growers undertaking development of shelled-almond market. Respectfully request in the interests of almond growers a tariff of not less than 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds.

W. T. SUMMERS,
President Merchants National Bank,
San Francisco, Calif.

Mr. SHORTRIDGE. I hold in my hand a telegram from Mr. William H. Crocker, president of the Crocker National Bank, of San Francisco, which sets forth the facts and conditions. I also have here a telegram addressed to me by Mr. Fred J. Hart, the managing editor of the Farm Bureau Federation Monthly, a publication which is concerned immediately with practically one-half of the counties of my State, not the southern counties, but practically all the northern counties, in which the almond industry is situated.

I have here also a very considerable number of what I choose to call thoughtful, earnest letters and telegrams setting forth facts and conditions, and taking note of the revolving clock I ask that they may appear in the RECORD.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF., *July 7, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Am convinced committee has erred in recommending 4-cent tariff on unshelled almonds and 8 cents on shelled. Ratio should be three to one, which is natural shelling ratio of almonds. If allowed to stand, proposed schedules will work serious harm to California financial interests, not to mention virtual destruction of industry. Three hundred thousand dollar shelling plant in Sacramento now closed. Won't you stretch point and revise almond schedules on three to one basis at this late hour? One hundred thousand acres of California soil, on which are planted 7,000,000 trees, are at stake. California growers simply can not touch American market, for shell almonds representing 80 per cent of demand now in hands of European growers with 8-cent schedule.

WILLIAM H. CROCKER,
President Crocker National Bank, San Francisco.

SAN FRANCISCO, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Have investigated necessity almond growers secure tariff on basis 5 cents not shelled and 15 cents shelled. Shelled almonds must be at least three times as great as almonds in the shell. Failure to secure above tariff spells ruin to almond industry. Orchards, unlike field crops, can not quit business without tremendous loss. Important, therefore, tariff give proper protection now.

FRED J. HART,
Managing Editor of Farm Bureau Federation Monthly of Humboldt, Glenn, Tehama, Placer, Solano, Merced, Madera, Tulare, Alameda, Santa Cruz, San Benito, Monterey, Ventura, Sutter, Orange Counties.

—

DURHAM, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: At a meeting of the directors of the Durham Almond Growers' Association, representing an investment of $2,000,000 in this immediate vicinity, a resolution was passed demanding a tariff on almonds in the shell of 5 cents per pound, and not less than three times this amount on shelled almonds.

We have never been able to compete with Europe on the shelled product.

The tariff recommendations of the tariff committee now before the House means ruin to our industry.

Respectfully yours,

G. W. JONES,
Secretary Durham Almond Growers' Association.

—

ARBUCKLE, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We are herewith inclosing a copy of a set of resolutions which this association has just adopted, and sincerely hope that it may assist you in your fight for us to gain proper protection for our industry.

Very respectfully yours,
ARBUCKLE-COLLEGE CITY ALMOND GROWERS' ASSOCIATION,
By D. S. NELSON,
Secretary-Manager.

Whereas the increase in production of almonds in the State of California has been about 500 per cent during the past eight years; and

Whereas the State is now able to supply all the almonds consumed in the United States; and

Whereas about 80 per cent of the almonds consumed in the United States are shelled almonds; and

Whereas it requires 3 pounds of unshelled almonds to make 1 pound of meats; and

Whereas the investment in this district now represents over $3,000,000 and comprises over 10,000 acres of orchards; and

Whereas this industry is threatened with complete destruction unless an adequate tariff is placed on imported almonds, both shelled and unshelled; and

Whereas California has never been able to share in any of the shelled-almond business on account of inadequate tariff on imported almond meats: Therefore be it

Resolved, That this association, the Arbuckle-College City Almond Growers' Association, go on record as demanding that the Congress give us necessary protection by proper tariff, and, further, that said tariff be placed at the ratio of three times as much on shelled almonds as on unshelled, and, further, that we respectfully ask the Congress to make this tariff 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds.

Respectfully submitted.

ARBUCKLE-COLLEGE CITY ALMOND GROWERS' ASSOCIATION,
By D. S. NELSON,
Secretary-Manager.

—

BANNING, CALIF., *July 10, 1921.*

Senator SAM. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Whereas almond growers of California can not compete successfully against enormous production in Europe without an adequate tariff; and

Whereas if adequate tariff readjustment is not granted by Congress so that American growers can have a fair chance to compete with Europeans much of the hundred thousand acres of almond orchards in the State will be rendered worthless and an investment of over $50,000,000 ruined; and

Whereas the Ways and Means Committee has recommended to Congress the establishment of tariff rates at 4 cents per pound on unshelled and only 8 cents per pound on shelled almonds in spite of the fact that searching investigation has proved a fair tariff would be 5 cents per pound unshelled and 15 cents per pound shelled almonds as recommended by the California Almond Growers' Exchange: Now, therefore, be it

Resolved, That the Banning Almond Growers' Association, representing 94 growers, or 98 per cent of local almond growers, with a total of about 900 acres, making up one of the chief industries of Banning, respectfully urge the passage of an adequate tariff bill fixing the rate on unshelled almonds at not less than 5 cents and on shelled almonds not less than 15 cents per pound: And be it further

Resolved, That a copy of these resolutions be sent to the Senators and to the Congressman representing this district with the urgent request that they leave nothing undone to bring about the desired result, namely the saving of one of the principal industries of Banning and one of the important investments of California ranchers.

BANNING ALMOND GROWERS' ASSOCIATION.

—

SUTTER, CALIF., *July 9, 1921.*

SAMUEL M. SHORTRIDGE,
Senator, Senate Office Building, Washington, D. C.:

Whereas the almond growers of California have almond orchards planted on valuable land and are compelled to wait six or seven years for such almond orchards to come into commercial bearing; and

Whereas the acreage planted to almonds in California when in full bearing is sufficient to supply the markets of the United States; and

Whereas a greater part of these nuts is consumed in the shelled state and the relative quantity of shelled to unshelled is one to three; and

Whereas the Ways and Means Committee of Congress has recommended a tariff of 4 cents per pound on unshelled and 8 cents a pound on shelled almonds; and

Whereas shelled almonds are imported in great quantities because of the relatively low tariff on the shelled nuts thus injuring our present trade and destroying a business that has cost so much in time and money to over 4,000 American citizens and their dependents: Therefore be it

Resolved, That the South Butte Almond Growers' Association beg, pray, entreat, and demand of Congress for its continued existence a tariff in keeping with its need—that of at least 5 cents per pound on unshelled and 15 cents per pound on shelled nuts.

W. K. NORRIS,
R. F. HAVENS,
M. G. DEWITT,
F. E. FORDERHASE,
E. S. NORTON,
Directors of South Butte Almond Growers' Association.

—

ARBUCKLE, CALIF., *July 11, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR AND FRIEND: The almond industry of California needs your earnest and speedy help at this time.

We must have tariff enough on our almonds or make a sacrifice again that means a ruinous loss, from which we can not recover.

Work for a tariff of 5 cents on unshelled almonds and at least 15 cents per pound on shelled almonds.

I feel that you will realize this danger at this time and give us your earnest help.

Respectfully,

H. L. NICKELS.

—

ORLAND, CALIF., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

MY DEAR SIR: Your telegram regarding the duty on almonds received and wish at this time to thank you for your message and endeavor to try and get us the protection that we need for the good of the almond industry of this State. As a matter of fact, I wish to state briefly the condition of the almond industry as it appears to this association. We still have a portion of our 1919 crop of almonds unsold. And we still have about 30 per cent of our 1920 crop unsold and have to date received but 7 cents for our drakes and 10 cents for the IXL almonds.

We believe that the above conditions are the outcome of too low a duty on foreign almonds. The reason that I mention drakes and IXL almonds is that they are the leading variety planted, at least in this locality. The last two years have been especially hard on the almond grower of this State. Further, that if it was not for the war making it amost impossible to find bottoms to ship foreign almonds we would have been in the same fix all through the war.

The reason that I am writing you a personal letter is that I fear some of the eastern Senators do not understand the almond situation as you do, and it might be well to explain to the Ways and Means Committee that we can not in this State stick a tree in the ground and have nature come along and irrigate the same for us. But we must irrigate the orchard two and three times each season, and then we have to cultivate after each irrigation. Then, too, we have to spray one to two times for the red spider each summer. Then there is the frost and other pests that we have to fight, and the almond grower has his troubles also.

The money that is sent out of the country each year amounts to an enormous sum, and this money should remain here to build up home industries. We do not feel that a tariff of 5 cents on almonds in the shell and 15 cents for shelled almonds is unreasonable, as the American grower can not begin to live on the same level that those people live in along the shores of the Mediterranean Sea and should receive a protection that they can get a fair return for their investment and labor.

As you know there are thousands of acres of almonds in this State, a good deal of which has not come into bearing and it has cost us considerable to bring the same to this stage. We further believe that whether an acre is bought outright or the land is bought level and planted to almonds it will cost that much per acre before it is brought to the stage of full bearing.

We do not wish to be unreasonable but after full discussion of the question we think that our request is but reasonable and will just give us a fair living out of the almonds, and every one should at least feel that they can expect to make a living out of an investment providing there is no bad luck like frost or some other thing that could happen to an orchard any one year. If we get fair price we tide over a bad year.

Further, if the rancher got a fair price for his almonds he could afford to put all of his time in on an orchard and keep the same in good state of cultivation, but as it is now some of the growers are discouraged and have not plowed the same as they should and there are weeds in many orchards, and they say they can not afford to spend the money keeping it clean as the revenue will not permit spending too much time or money in the orchard.

These thousands and thousands of dollars that are sent abroad every year should remain right at home and build homes for Americans and also help this country as a whole. It should help build the little red schoolhouses in this State and make this country a better place to live in.

It costs us from 10 to 12 cents per pound to grow almonds, and I assure you that there has not been much money in the almond game for the grower. Therefore we appreciate what you have done for us and hope that you can make the Ways and Means Committee see it in the light that we do; that is, that it is better to give the American grower a chance to make a fair living out of this industry. If we do not get a fair protection this industry will be forced to the wall.

Thanking you for any favor that you do us, we are,

Yours very truly,

ORLAND ALMOND GROWERS' ASSOCIATION,
GEO. W. STURM, *Secretary.*

—

ORLAND, CALIF., *July 9, 1921.*

SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: Would you please do your utmost and fight for a tariff of 5 cents on unshelled almonds and 15 cents on shelled product?

It is absolutely necessary to have this tariff or else the American farmers and growers will have to stoop and kneel to the foreigners forever. The foreigner can produce these nuts and send them across the ocean for less than we can even grow them.

Last year we had to accept 10 and 7 cents a pound for our nuts and it should have been three times as much.

As we Americans come first in the minds and hearts of our Congress we will expect desperate fighting on your part.

Hoping you will meet with success, I remain,

Your friend,

CHARLES A. TEMPLETON.

—

SAN FRANCISCO, *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

MY DEAR SENATOR: May I not at this time take the liberty of specially directing your attention, as our Senator, to the paramount question, the tariff, in which the farmers and almond growers of California are so vitally interested at the present time, and upon this question to call your special attention to the amount of tariff that should be placed upon the importation of almonds grown in European countries sufficient in amount to protect adequately this great industry built up here in California by the farmers and almond growers in California? The facts upon which we almond growers base our contention for an increase of tariff duties on almonds grown in foreign countries are these:

It requires seven years after the almond orchard has been planted before it comes into bearing in sufficient quantities in production of nuts to commence to pay anything on the capital invested. During all of these seven years the cost of plowing, disking, harrowing, cultivating, pruning, spraying, and taxes on the land so planted requires an enormous expenditure of money before any returns are received from the almond orchard. This expenditure continues every year thereafter, and the almond crop in California is very uncertain, and many years almost a total failure of a crop. The now present excessive freight rates to be paid in shipping the almonds to market more than double what it used to be. We pay here in California $3.50 per day to men working in the orchards, including their board, eight hours per day, which is equivalent to $5 per day, and 2½ cents per pound for hulling the almonds. Then they are placed on trays and dried, and when ready for market the shrinkage brings the actual cost of hulling the almonds to 4 and 5 cents per pound. Two and one-half cents per pound for commission to sell the almonds. In addition to this, the cost of sulphuring and bleaching the almonds, warehouse charges, hauling to market, sacks to hold the nuts, the heavy freight charges, brings the actual cost of production of each pound of almonds produced here in California, by the time it reaches the market, at from 14 to 16 cents per pound. I find this to be true from actual experience as an almond grower in the Sacramento Valley. This comes very close to the estimated cost made by our Government, which is 16 cents per pound, and these statistics so made are very near correct. We are compelled to pay high wages and to give the laboring classes good accommodations, and by so doing they are thereby enabled to live as human beings should live in this great American Republic. When the almonds are thus harvested they are then delivered to the California Almond Growers' Exchange, a corporation, as selling agent.

Bearing these facts in mind, if you will please be so kind as to do so, we will endeavor to point out to you as our Senator and representative from the State of California why there should be a revision of the present tariff on almonds.

And upon that question we present the following facts to you for your kind consideration on behalf of the American almond grower:

The European countries last year shipped right into the heart of the American markets for almonds 45,000,000 pounds of almonds, grown and produced with cheap labor and with the benefit of cheap water transportation. These almonds came in direct competition with the almonds produced and grown in the State of California, with high cost of labor and freight rates nearly three times as great, with the result that the almond growers here in California and elsewhere in the United States could not compete with prices for which these millions of pounds of foreign almonds were sold here in American markets. The American markets offer a lucrative field for the foreign-grown almonds, produced upon cheap land with cheap labor and cheap water transportation. The result of this large shipment of foreign-grown almonds here into the American markets at such cheap prices, with cheap production and cheap freight rates, completely shuts out the American almond growers, operating under high cost of labor, high freight rates, high rates of interest on the capital invested, high rates of taxes paid to our State and Government to support and maintain this great American Republic, resulted in the fact that a part of the 1919 crop of almonds and a large part of the 1920 crop of almonds remain unsold by reason of this gigantic competition. The merchants and consumers buy these almonds from foreign countries for less money than we California almond growers can lay them down in the American markets. The answer to this question is not hard to find. We pay high wages, high taxes, and high freight rates and high operating expenses, and, not least of all, high rates of interest for money to operate the almond industry in California.

The farmers have labored hard to develop this great industry here in the great State of California. The State and counties have levied a large and heavy assessment on the real property used for growing almonds. Last year the taxes on my farm in the Sacramento Valley—that is, upon the land in almonds alone—was increased an additional $100.

The price of almonds has depreciated nearly 50 per cent; I mean the selling price of almonds. We find that the future market for about 80 per cent of the almonds to be sold will be shelled almonds as against about 20 per cent of almonds to be sold in the shell. It takes 3 pounds of almonds in the shell to produce 1 pound of shelled almonds, a ratio of 3 to 1. The almond growers of California have erected at Sacramento a shelling plant, at a cost of about $300,000, for the purpose of producing shelled almonds to meet the market demands. We ask you to bear these facts in mind, and we hope that you will be able to reach the conclusion that the present tariff on almonds, either shelled or unshelled, is wholly inadequate to protect the American almond growers against this cheap foreign competition. That the almond growers, to have simply a fair and just protection under the tariff, should have a tariff of 5 cents on each pound of almonds in the shell and 15 cents a pound on the shelled almonds. Please remember, it takes 3 to 1. If such a tariff is given to the American almond grower, then the competition would be fair and equitable; it would in no instance of the almond industry be prohibitive.

If the present tariff as now proposed should be fixed on the almond industry, then the California almond growers must of necessity dig up their almond orchards and try something else on the land. They can not pay such enormous taxes on the almond lands to the Government, county, and State; high wages, high freight rates; and excessive operating expenses necessitated in growing and producing almonds.

It is, I take it, a case where sufficient tariff protection must be given to the almond growers here in America, and if not given them, then this great industry, built up and developed here in America by the farmers, will be absolutely destroyed. It means the destruction of an industry in which millions of dollars are invested, and which investment furnishes employment to thousands of people. You know work for the American people means happiness; lack of employment and idleness means but one thing—discontentment.

If this great industry is destroyed then this State, county, and the United States Government must lose thousands of dollars in taxes, as the almond lands are taxed far and beyond the land used for grain cultivation.

I feel and know that you now stand for the protection of American interests in America, and I have noted with great pleasure that you have adhered to that strictly during your short time in the Senate and feel that you stand for America and for protection to American interests as a true, loyal American.

We almond growers appeal to you now for your kind assistance as our representative in the United States Senate (our Senator) in conjunction with your colleague, Hon. HIRAM W. JOHNSON, to all that you can conscientiously and justly do for us in securing sufficient protection for this great industry here in the State of California, and thereby save the almond-growing industry from absolute destruction to the great loss and detriment of the farmers in the State of California. Your best efforts along this line are needed now in order to make the slogan "back to the land" a reality and not a farce.

I trust that I have not intruded too much on your valuable time in this matter, and if I have I beg your kind indulgence, as the matter is a serious question to me and all other almond growers in California.

Yours most sincerely,

W. C. CAVITT.

—

SACRAMENTO VALLEY DEVELOPMENT ASSOCIATION,
Sacramento, Calif., July 12, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SIR: Herewith I hand you copy of a resolution by this association which is self-explanatory. We are very much interested in this almond matter, this valley being a large producer of almonds, with extensive areas planted and yet to come into bearing. We have a very vital concern in the matter and will greatly appreciate any efforts you may make to secure adequate tariff protection for the California almond growers.

Yours very truly,

W. A. BEARD,
Vice President and General Manager.

—

Whereas the almond industry of the State of California is seriously threatened by cheap almonds imported from Europe; and

Whereas this State has a great acreage devoted to almonds, much of which is recent planting and not yet come into full bearing, and there is certain to be a rapid increase in production of this crop in this State within the next few years; and

Whereas, on account of the high cost of labor and other commodities entering into the production and preparation for market of the almond crop, and because of the high standard of living prevailing in California and other States of this Union, California almonds can not compete in the markets with almonds imported from Spain and other European countries unless there be applied to such imported almonds rates of tariff sufficiently large to represent the difference in production costs; and

Whereas the State of California has extensive areas suited to the production of the almond and is capable of furnishing all the almonds required or to be required in the United States: Now, therefore, be it

Resolved by the Sacramento Valley Development Association, That we respectfully request and urge that the Congress of the United States afford protection to this important California industry by placing a duty on imported almonds of not less than 15 cents per pound for shelled and 5 cents per pound for unshelled; and be it further

Resolved, That copies of this resolution be forwarded to California Senators and Representatives in Congress.

—

CHICO, CALIF., *July 12, 1921.*

The Hon. SAMUEL SHORTRIDGE,
Senator, Washington, D. C.:

From 20 years' experience handling almonds for growers this locality can truthfully say the life of this industry depends on protection. A ratio of three to one of shelled almonds as against unshelled is fair, and a minimum tariff of 5 cents per pound should be given the unshelled. I personally know of sales of shelled almonds in San Francisco last season that were made by foreign markets that were 25 per cent below cost of production even if based on present cost of labor. It has taken many years of care to bring these orchards to production, and the investment now depends upon prompt and fair action. Trust that we will have your help in holding this industry in America.

S. A. REYNOLDS,
Mayor, City of Chico.

—

CHICO, CALIF., *July 12, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington City, D. C.

DEAR SIR: As one of your constituents I want to appeal to Congress through you on behalf of the thousands of almond growers of California, who, like myself, are threatened with financial ruin if the tariff as reported by the Ways and Means Committee to Congress goes through. I have 60 acres of almonds just coming into bearing this year. I have spent five years of labor and all my money developing this orchard, and now to be knocked in the head and told by Congress that my line of farming is not worth the consideration of Congress to the extent of giving us a tariff of 5 cents on unshelled and 15 on shelled almonds, which would only give us an even break with our foreign competitors, is not encouraging to the farmer. The Government from the President down has been long on promises of relief to the farmers, and now at the first showdown we, the almond growers, get a direct knockout blow, which will give us the relief of the dead. I trust you will do your utmost to see that this crime against the almond growers is not committed.

Yours truly,

E. E. FIX,
Route 1, Box 22a, Chico, Calif.

CALIFORNIA ALMOND GROWERS' EXCHANGE,
San Francisco, Calif., July 13, 1921.

In the city of Sacramento stands an establishment unlike anything in the world. The citizens of Sacramento may well be proud of it. We know you will if you see it.

It is California Almond Growers' Exchange shelling and manufacturing plant at the corner of Eighteenth and C Streets. We want you to visit it, and therefore extend to you this invitation to call at the plant any day this week between 9 and 5 o'clock or on Sunday afternoon.

This plant was built by 4,000 California almond growers after original plans of machinery and equipment. We mean what we say literally—there is nothing else like it in the world.

The 4,000 almond growers of this association built this great manufacturing plant expecting that Congress would readjust the tariff on almonds so that when their acreage was bearing they could have a part of the American demand for almonds. As it is now, the foreigners of Europe have monopolized the entire market for shelled almonds in America and they are to-day supplying shelled almonds produced by pauper labor and under living conditions which we hope we shall never be forced to experience.

This great plant in the city of Sacramento will remain idle and can not turn a wheel unless the almond growers are placed in a position where they can compete with the cheaply produced and inferior almond of Europe, by means of a protective tariff. The almond growers' fight for protection is vital to Sacramento and to you.

See for yourself the plans that have been made for shelling almonds and for the manufacture of products from shelled almonds. If a protective tariff is granted, the growers will install additional machinery, and Sacramento will become the world's most famous almond center.

Visit us and see what we have in your city. Then you will fight with us for American markets for American farmers.

Yours very truly,

T. C. TUCKER, *Manager.*

—

CHICO, CALIF., *July 13, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Go ahead, Sam, do your best. I have 150 acres of 8-year old almonds, and if you don't get a decent tariff on them, out they come; hundreds of others in the same boat.

Yours truly,

H. C. COMPTON.

—

CHICAGO, ILL., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

I earnestly ask your unending support of a tariff of 5 cents on unshelled and particularly 15 cents on shelled almonds as the means of keeping the American almond grower alive, instead of foreign cheap labor. On adequate protection for the shelled product rests the life of the industry.

M. S. SCOVILL.

—

AUBURN, CALIF., *July 10, 1921.*

Senator SAMUEL SHORTRIDGE,
Washington, D. C.

DEAR SIR: As an almond grower among hundreds of similarly minded almond growers of California, I wish to say that present Congress must enact 15-cent tariff on shelled and 5-cent tariff on unshelled almonds or the industry is practically doomed in this State.

Personally, I am about ready to pull up my trees unless something of real value is done soon. I have stood a loss each year since my trees came into bearing.

Very truly yours,

E. W. LOCHER.

—

BUTTEVIEW FARM,
Yuba City, Calif., July 10, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: What did Spain ever do for the United States of America? What did Spain do for the Allies? What did Spain do for the *Maine*? Why feed Spanish almonds to the American people? Why not give California almond growers a chance to live right? We pay living wages and do not work 14 to 16 hours a day in the fields. Give us a 15-cent tariff on shelled almonds and we will live and let live. Refuse and we can not exist.

The consumer pays the same for California almonds as those grown elsewhere. The middleman pockets the difference.

Yours truly, for right and justice to all,

CHAS. L. WILBUR,
Member Farm Bureau and Deputy Sheriff, Sutter County.

—

THE CITIZENS NATIONAL BANK OF LOS ANGELES,
Los Angeles, Calif., July 11, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

SIR: We desire to urge your consideration of proper tariff upon almonds, both shelled and not shelled. It is our understanding that the shelled almond business requires more protection on account of foreign competition, and also due to the fact that 80 per cent of the almonds consumed are shelled almonds.

Please give the industry every consideration possible, and oblige,

Very truly yours,

A. J. WATERS, *President.*

—

LOS ANGELES, *July 11, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SENATOR: Am writing you regarding the almond industry, which is very seriously threatened by lack of tariff protection. Unless the almond industry receives proper consideration this American industry will be ruined.

The Ways and Means Committee recommended a tariff of 4 cents per pound on almonds not shelled and 8 cents per pound on shelled almonds. The California almond growers have petitioned Congress for a tariff of 5 cents per pound on unshelled and 15 cents per pound

on shelled almonds. This differential between shelled and unshelled is in proportion with the tariff on almonds in the shell, as it takes about 3 pounds of unshelled to make 1 pound shelled almonds, and unless protection is granted California can not compete with Europe.

The interests of the American almond industry appeal to you for your earnest help.

With assurance of our very high regard, we are,

Yours truly,

SIMON LEVI CO.,
J. B. JACOBS, *President.*

SIMON, MINERAL COUNTY, NEV.,
July 11, 1921.

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: For the past 15 years I have been living close and putting all my savings in an almond orchard situated in Citrus Heights addition, near Fairoaks, Calif. I have an orchard of 30 acres almond trees coming 6 years old.

I still owe $4,000 on my property. Mr. J. J. Stenuff cares for my orchard, and I pay him $44 a month. My sixty-fourth birthday is near at hand, and my wife is 10 years younger.

I do hope you will do all you can to get us a tariff of 5 cents on unshelled almonds and 15 cents on shelled almonds, so we will be able to soon get to California to live. I have all my money at stake, and unless we have a protective tariff California almond industry will suffer.

Very truly yours,

C. H. LASKAMP.

COLUSA COUNTY CHAMBER OF COMMERCE,
Colusa, Calif., July 14, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

HONORABLE SIR: Your telegram in reference to the tariff on imported almonds received.

I want you to accept the sincere thanks not only of this county chamber but of the entire populace of the county for your prompt reply and your untiring efforts in our behalf.

The almond industry, especially in and around the Arbuckle district, is one of our important industries and with proper tariff protection will grow to an immense magnitude.

The benefit the consumer derives from foreign competition of this kind is only very short lived, for the reason that as soon as our own industry has been effectually throttled by the underselling of our product by the foreign product, just that soon will the price of the foreign product advance, and the consumer will be compelled to pay in most cases a higher price than our product could have been sold for had our industry been allowed to exist. In addition to this, the thousands of American citizens that were employed in this industry have had their means of livelihood taken away from them in favor of the foreigner, with whose standard of living our American citizens can not and should not be asked to compete.

Thanking you again in behalf of all good American citizens, I am,

Respectfully yours,

W. O. HYRUP.

N. B.—Inclosed please find copy of resolution as mentioned in the telegram.

Whereas the almond industry represents an investment of $4,000,000 in the county of Colusa, and covering approximately 11,000 acres, and $50,000,000, covering approximately 100,000 acres in the entire State; and

Whereas the industry is increasing, and will continue to increase if given the proper tariff protection; and

Whereas the entire consumption of almonds in the United States of America can now be supplied by the State of California; and

Whereas about 80 per cent of the almonds consumed in the United States of America are shelled almonds; and

Whereas it requires 3 pounds of unshelled almonds to make 1 pound of shelled almonds; and

Whereas California has not been able in the past to share in any of the shelled-almond business on account of the inadequate tariff on imported shelled almonds; and

Whereas the entire almond industry in the State of California, representing an investment of $50,000,000, is threatened with ruin and destruction unless an adequate tariff is placed on imported almonds, both shelled and unshelled; and

Whereas the destruction of this industry will cause a tremendous loss and work great hardship on the great number of people now employed in the cultivation, harvesting, handling, and packing of this product: Therefore be it

Resolved, That this Colusa County Chamber of Commerce go on record as demanding and praying that the present Congress of the United States of America enact proper tariff laws governing almonds, both shelled and unshelled, thereby giving this industry the necessary protection so vital to its existence, and, furthermore, that the tariff so placed be 5 cents on unshelled almonds and 15 cents on shelled almonds per pound.

COLUSA COUNTY CHAMBER OF COMMERCE,
Per W. O. HYRUP, *Secretary-Manager.*

COLUSA, CALIF., *July 9, 1921.*

LODI, CALIF., *August 3, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Chamber, Washington, D. C.:

As president San Joaquin County Almond Growers' Association, representing over 600 of 4,000 California almond growers, I express the pleasure and renewed courage we have, knowing you have stripped for a fight to a finish in our behalf for 5 and 15 cent tariff on almonds. As an ex-service man, who when over 50 years old left wife to care for orchard, joined our Navy as lieutenant engineer, and helped preserve those very peasants whose cheap labor in producing almonds now threatens our very existence as almond growers, I appeal to you in interest of ex-service men, California almond growers, to preserve their right as Americans to earn living in accordance with American conditions. Tariff of 5 cents on unshelled, 15 cents on shelled almonds is the lowest on which we can stay on our orchards. We know you as a fighter in a just cause. This gives us great encouragement in our fight against speculators and middlemen who are trying to swamp California orchards.

Lieut. A. R. STEPHEN.

ANTELOPE, CALIF., *August 3, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senator from California, Washington, D. C., U. S. A.

DEAR SIR: In regard to the almond situation I would like to present my own case:

After teaching school for 20 years, I managed to save enough money to buy 10 acres of land in Antelope, a favored almond spot about 14 miles north of Sacramento.

Friends of mine, with whom I had boarded while teaching in the country, planted my trees for me and cared for them till I married. I was fortunate enough to have honest friends, good soil, and good trees, which have made me a fine orchard, of which I am, as you can understand, very proud. It almost took my life's blood to save the money to get it. A one-time pupil of mine asked me how I ever did it, and I told her the exact truth when I answered: "By giving up nearly everything in the world that I ever wanted."

Now, that those trees could repay me in part for my sacrifice, I feel sure that if our own lawmakers, elected by us, the people, could understand the situation they would give us the 5-cent tariff on unshelled and the 15-cent tariff on shelled nuts, which will keep my orchard from becoming worthless. I am only one of many. People who have small places are struggling hard to live. Why, if you kill the industry, think of the despair and discouragement!

My husband's family are also interested in almonds; in fact, it is the only crop we have. What are we going to do this year? In one week the harvest begins. My husband, who is 60 years old, will work with the men, and I shall do the cooking. All we can hope to do under present conditions is to pole only the trees that are loaded with nuts and let the others go; and if we can come out even, after paying taxes, plowing, and cultivation, pruning, and the men's food bill and wages, we shall be doing well. The wages will count up too high to pole any but the fullest trees. Is not that an awful predicament? How about it for an encouragement to the young to go back to the soil? Hoping and believing we shall get justice,

Sincerely,

ELIZABETH WINN GLADNEY.

Mr. SHORTRIDGE. My friends on the other side will now realize why I suggested that this testimony was cumulative, but I justify myself in offering it because I want the decision to rest upon facts established. The distinguished Senator from Massachusetts concedes protection. Our difference would seem to be as to rates; wherefore, as I ventured to say the other day, I hoped to convince him that conditions were as we claimed, and that the rates we ask are the necessary rates. It is for that purpose that I am attempting here to establish without controversy the facts involved.

I have here quite a number of communications from other organizations in California—clearing houses, boards of trade, associations of farmers, and so forth. I wish to call particular attention to an editorial which appeared in the San Francisco Chronicle, a great newspaper, a great protective-tariff newspaper, owned and published by Hon. M. H. de Young. Mr. John P. Young, author of works on political economy, was managing editor of that great paper for many years, and I think it is largely due to the advocacy of protection by the San Francisco Chronicle that California is a thorough protective-tariff State. I ask that this editorial be incorporated in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DUTY ON ALMONDS—5 CENTS A POUND AND 15 CENTS ON SHELLED IS ACTUALLY NEEDED.

In the tariff bill as passed by the House of Representatives the duty on almonds stands at 4 cents a pound on the natural nuts and 12 cents a pound on the shelled product. It requires 3 pounds of the natural nut to get 1 pound of shelled almonds.

The shelled product is the main product. There is a rather lively sale of the unshelled almonds at the holiday season, but 90 per cent of the crop is shelled and sold to the confectionery and other trades using them.

The principal trade being in shelled almonds, that is the principal duty to be considered, and 12 cents a pound is not a sufficient duty.

At the present time there are very large stocks of imported shelled almonds, which have been rushed in under the advantage of the present exchange rates and which are offered at rates which are ruinous to California growers, who have an actual investment of between $60,000,000 and $70,000,000 in orchards and plants for carrying on this industry. The almond growers have a strong association, excellently managed, which never speculates with its members' crops. It always sets reasonable prices acceptable to the trade and moves its crop promptly.

But as conditions are now it can not compete with the combination of importers who bring over the cheap products bought with money of trifling value at home, which they sell at gold value in this country and get rich.

Our almond growers need and must have a duty of 5 cents on unshelled almonds and 15 cents on the shelled product.

Mr SHORTIDGE. I have here an editorial which appeared in another great California newspaper, the San Francisco Examiner. It is entitled "Almond men need tariff" and sets forth the conditions prevailing in California. I also have an editorial from the San Francisco Call and Post, a very extensively circulated evening newspaper, the editorial being upon the same subject and corroborating and fortifying what I have ventured to state and what all these various telegrams have made known to us. I ask that they may be printed in the RECORD without reading.

The PRESIDING OFFICER. Without objection it is so ordered.

The editorials referred to are as follows:

[From the San Francisco Examiner].

ALMOND MEN NEED TARIFF.

California almond growers are in danger, their orchards menaced by a sinister and greedy force that would destroy a State industry with an investment of $50,000,000. A blight, as destructive to the welfare of the 100,000 acres of almond groves as would be an insect pest, is facing the California almond men in Washington.

The situation is this:

The Fordney tariff bill, now before the United States Senate, sets an impost of 4 cents a pound on unshelled almonds and of 12 cents a pound on shelled almonds.

Under California farming conditions such a tariff does not protect the almond crop of this State against foreign-grown almonds, which come chiefly from Spain into the eastern market. A tariff of 5 cents a pound on unshelled and 15 cents a pound on shelled almonds is essential to save the California growers. Anything less—that is, the proposed Fordney tariff of 4 and 12 cents—is below the margin of protection for these orchardists.

The California Senators, JOHNSON and SHORTRIDGE, are prepared to put up their strongest fight to give the California growers the protection which is essential. Combating them is the rich lobby of eastern speculators and their allied interests who are determined the California growers shall be helpless before the importations from abroad. A great fund is said to have been raised by these speculators to defeat California's growers.

The proposed and essential duty of 5 and 15 cents a pound on almonds does not mean that California almond growers will be able to monopolize the American market. Experience can dispute that claim. But it means that California growers, after having paid the high farm wages current in this State and the freight rates from California to the eastern markets, will be able to put their product on the eastern markets on a parity with the imported nut.

The tariffs of 5 and 15 cents a pound simply represent the difference in the standard of living between California and south European farming communities.

California interests, California citizens, must support Senator JOHNSON and Senator SHORTRIDGE in the fight they are making to save the California almond orchards.

The speculators' lobby may be large and resourceful and rich, but it can not have the power behind it that California can wield if it is united.

California industries, particularly the farming groups, know they must stand together against any invasion of their property. They must unite behind the almond growers in this fight to save the orchards.

The California Senators must be able to show this is not a fight of one group of orchardists, but a State movement to protect a developing industry, to maintain American living conditions in the orchards, and to give these California growers a chance to improve their product, to the end of making the almond cheaper and more common for the American consumer.

The tariff will not raise the price of almonds in America. It will take the market out of the hands of speculators who consider only manipulation that will bring them the most profit.

—

[From the San Francisco Call and Post.]

SAVE THE ALMOND INDUSTRY.

The House of Representatives seemed to think that when the California almond growers requested a tariff of 5 cents a pound on unshelled almonds and 15 cents a pound on the shelled they didn't mean what they said. They acted as if they thought California was haggling for a profit—asking for a high tariff in the expectation of receiving a slightly lower one.

But that isn't the case. The California almond industry depends absolutely for its existence on the tariff that the growers request. They asked for a 5–15 tariff because they had to have it to save them from the cheap-labor, cheap-transportation competition of European almond growers. And without that tariff they will lose the battle and California will lose an industry in which $65,000,000 is invested.

The old tariff on almonds was 4 cents on the unshelled and 8 cents on the shelled. The House of Representatives amended the bill to raise the tariff on the shelled from 8 to 12 cents, but left the tariff on the unshelled unchanged. It paid no attention to California's pleading for tariffs of 5 and 15 cents.

But California must have this protective tariff. Three thousand tons of almonds from the 1919 and 1920 crops are still unsold, and one of the heaviest crops in history is now ripening. If there is no protection from the annual flood of European almonds and if the Senate does not amend the bill properly, 100,000 California acres will be ironically unproductive.

Mr. T. C. Tucker, representative of the California almond growers, wires from Washington that a tremendous combination of important speculators and allied interests are lobbying against California's interests in behalf of European growers. If they succeed a California industry goes into bankruptcy. California must have that tariff.

Mr. SHORTRIDGE. I have certain individual letters, some brief, some a little elaborate, but all coming from men or women actively engaged in this languishing and threatened industry. They are respectful in tone, they are earnest, and many of them are tearful. I ask that they may appear in the RECORD also.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letters referred to are as follows:

BANNING, CALIF., *August 4, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SENATOR: We have elected you to the Senate to secure for us a tariff which would be a protective tariff in every sense and form. Please do not disappoint us. Do not allow anything less than 5 and 15 cents on almonds to pass. We should have 7 and 21 cents to stop the stump puller, which has already started in Banning almonds, and to make almonds pay somewhere near what other fruits are paying in this locality. Very few, if any, people have their harvesting expenses paid out of last year's crop. Please do not stand for the importers in New York State to ruin the resources of California. I remain,

Yours truly, L. W. WILLMAN.

SACRAMENTO, CALIF., *August 2, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

MY DEAR SENATOR: The members of the Senate Finance Committee hold the salvation of the almond growers of America in their hands, and as one of the 4,000 growers of California I want to appeal to you to assist in securing adequate tariff protection.

I urge that you use every effort in your power to the end that a 5-cent-a-pound tariff be placed on unshelled almonds and 15 cents a pound on shelled almonds. This represents the minimum under which the almond growers can compete with the growers of the Mediterranean States. The unbalanced competition which exists to-day has made it impossible for the entire amount of the 1920 crop to be marketed, while there is also some of the 1919 product remaining unsold in the California warehouses. The situation is critical, and unless the growers receive immediate protection to the end that they may be able to market the crop which is now in the warehouses the $50,000,000 investment in orchards in California will have to be abandoned.

Again I appeal to you to use your utmost efforts to have the 5 and 15 cent rate made a part of the tariff measure which is now before the committee.

Yours very truly, JOHN DONAHUE.

—

FAIR OAKS, CALIF., *August 1, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Capitol Building, Washington, D. C.

MY DEAR SENATOR: As one of the 4,000 almond growers of California, I feel that the members of the Senate Finance Committee hold the last hope for saving the California almond industry by adequate tariff protection.

Knowing that every Californian will appreciate it, I am asking you to use your utmost influence to get at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on shelled almonds, which represents the minimum under which we can operate and live. We could not sell all of our crop of 1919 and have yet unsold approximately 10 per cent, and of the crop of 1920 we have on hand nearly 40 per cent, having received only 10 cents per pound for 30 per cent of the 1920 crop and 7 cents per pound on the balance, which does not pay for harvesting to-day, to say nothing of other costs of production.

I am, like yourself, all for America, and ask nothing beyond a fair return for my efforts. It is my opinion that the California almond grower can not continue under present conditions.

Respectfully yours,

HARRY DEWEY.

—

MINNEAPOLIS, MINN., *August 2, 1921.*

United States Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.:

We have almond orchard of 208 acres in Merced County, Calif., and unless a tariff of 5 cents per pound on unshelled and 15 cents on shelled it will be impossible to compete with imported product with labor at 50 cents per day. We can't more than break even with cost of land, plus high-priced labor for intensive cultivation, spraying, pruning, irrigation, gathering, marketing, and taxes are not figuring. Interest on the investment and the upkeep alone amounts to $5,500 per year. Have to operate two tractors, which requires efficient mechanics. Can't continue this outlay, and must ask you to conscientiously recommend this protection. Thank you.

J. & W. C. SHULL.

—

GRIDLEY, CALIF., *August 1, 1921.*

Senator SAMUEL SHORTRIDGE,
Senate Office Building, Washington, D. C.:

You are doing a noble work for us almond growers, and I am sure you will continue to let me impress on you that we must have 5 and 15 cent tariff to continue, as we only received 10 cents for our almonds last year. Your effort before the Finance Committee will be appreciated.

W. E. SIMPSON.

—

SAN FRANCISCO, CALIF., *July 30, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Have been selling California almonds in the shell in the San Francisco market for the past 12 years. Have been urging growers to shell almonds, since demand is mostly for shelled almonds. Growers gave me opportunity this year to sell few shelled almonds, and I found that the price on imported article was depressed to such an extent that shelled almonds would have to be sold here approximately at value of certain grades of almonds in the shell, and that California growers could not shell in face of this competition. Shelled almonds were brought into San Francisco this year and sold at extremely low prices. Understand that many of inferior imported shelled almonds were mixed with the higher grades of California, and this mixture sold to trade. I am absolutely convinced as a broker in almonds that the future of industry in America depends wholly upon proper protective tariff.

WM. G. GOLDBERG.

—

SAN FRANCISCO, CALIF., *July 27, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

California almond industry earnestly appeals to you for much-needed assistance. House tariff ratio 3 to 1. Recommended base of 4 cents too low; 5–15 minimum duty that should be considered. Underwood tariff putting us down and out, and is a losing game for our Government. Present contest actually between importers of pauper-labor products and California producers.

GEO. W. PIERCE, *311 California Street.*

—

LOS ANGELES, CALIF., *July 26, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.:

In the interest of the American almond industry we seriously urge you to use all your influence to get a tariff rate which will fully protect this industry. It is of vital importance that we get a 5-cent duty on almonds in the shell and 15 cents on shelled almonds.

RIVERS BROS. CO. (INC.).

SAN FRANCISCO, CALIF., *July 25, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.:

In view of the fact that despite the return of last year's almond crop failing to realize cost of harvest, there still remains unsold some 3,000 tons of 1919 and 1920 almond crops. It seems imperative, in order to save this important industry of California, that the 5 and 15 cents a pound duties on unshelled and shelled almonds should prevail. You will render California an invaluable service if you can secure these protective tariffs through and with the aid of the Senate committee. I bespeak for such efforts your usual earnest activity and your influential aid in this grave situation, affecting as it does the welfare of the State and the economic life of thousands of its farm producers.

HARRIS WEINSTOCK.

—

NEWCASTLE, CALIF., *July 25, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SIR: I am addressing you on behalf of the almond industry in California. The past three years, the average annual production of almonds in California totaled a valuation of approximately $3,500,000 to $4,000,000. On account of the heavy importation of the foreign shelled almond in the past year the present values of the California product have been depreciated approximately 40 to 50 per cent.

With 3,000 tons of last year's crop unsold in the warehouses, the probability is that this year's increased tonnage of the California product will be marketed at a total income of less than one-half of the past three years' income from this product—a basis of valuation that not alone seriously jeopardize the producer but eventually means bankruptcy.

The almond-growing industry in California is in its infancy. The number of trees planted the past five years is three times the number of almond trees that five years ago were in orchard. In one district alone, in San Luis Obispo County, there were more nonbearing almond trees planted within the last four years than the entire bearing acreage of the State preceding that period.

In the almond-growing districts of such counties as San Luis Obispo, Monterey, some of the southern counties, both the west and east side bench lands of the Sacramento, and San Joaquin Valleys there are many tens of thousands of acres of land adapted to the production of almonds that can not be equally profitably employed in the production of any other crop.

This industry having averaged an income to the State, in its infancy, of approximately $4,000,000 annually, which, with the trees now planted, will within the next five years be increased threefold, with unlimited potential possibilities for future development, to a degree that will enable California to supply the entire United States with this splendid nut food—this industry is now being seriously injured by the importation of foreign shelled almonds, grown under present European conditions and standards of life, and, under the proposed 4-cent rate for unshelled almonds and 12-cent rate for shelled almonds, will not be adequately protected.

This industry in the present situation is seriously jeopardized; yet, under a protective tariff of 15 cents for shelled and 5 cents for unshelled almonds, sufficient to offset the difference between European standards of life and labor and American, with this adequate protection, this industry can be made to grow and prosper to a degree that will not alone be an asset to the State but to the Nation.

The demand for a tariff of 15 cents on the shelled and 5 cents on the unshelled nut on the part of the almond industry is conservative and absolutely necessary to its continued life and growth, and to that extent, as a fruit grower, fruit shipper, and nurseryman, and one largely interested in the horticultural interests of the State, I bespeak your hearty support of this contention of the industry.

Very truly yours,

J. E. BERGTHOLDT.

—

CHICAGO, *July 24, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senator, Washington, D. C.

MY DEAR SENATOR: I am endeavoring through this communication to approach you on the subject of the duty on imported almonds, particularly the shelled ones.

You may remember me and you may not. I performed on the ball fields of California for a great many years in the late eighties and early nineties and I make my home during the winter in Oakland. Many a day in the days gone by I have parked with your brother at the lunch table and listened to his vocabulary, which you no doubt know was quite extensive.

For the past three years I have been coming East earning my living here, and the money that I have been able to get ahead I have been putting into 240 acres of almond land. Now, when that land is about to give me its first production, which will be very slight, it is no more than natural for me to look for protection from you and other representatives of California in our Halls at Washington.

From the information that I picked up last winter during my stay in Oakland and what I have learned during the summer out here it seems as if it is absolutely imperative that we should be protected with a 15-cent duty on shelled almonds coming from the cheap labor centers of Europe. Most likely you have been approached by men a great deal higher advanced in financial technic of what is necessary for the protection of the California almond growers, but I thought that it would not be of any harm for me to add my mite to the others, who, like myself, are interested in the development of California.

Thanking you very kindly for any attention that you might show this communication, and maybe some day I might run across you on the shores of the golden State, I beg to remain, as ever,

Sincerely yours,

W. L. O'NEILL.

—

MERCHANTS' NATIONAL BANK OF SAN FRANCISCO,
San Francisco, July 22, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senator from California, Washington, D. C.

MY DEAR SENATOR: I have pleasure in acknowledging your letter of the 14th instant, and note with satisfaction that you will offer and support an amendment to the tariff bill giving 5 and 15 cents, respectively, on unshelled and shelled almonds.

This is most encouraging news and will be thoroughly appreciated by the large army of almond growers in this State. Our delegation in Congress from this State has cooperated most heartily in this matter, and we feel a full sense of gratitude to them.

Faithfully yours,

W. T. SUMMERS, *President.*

—

LOS ANGELES, CALIF., *July 21, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

My life's savings invested in almond orchard. Last year and part of previous crops still unsold. Imperative we have tariff of 5 cents on unshelled and 15 on shelled almonds to save us from utter ruin. Lowest possible rate under which we can exist. Use every effort to have the above tariff passed; also do all you can for walnut growers.

J. E. PETZ.

—

LOS ANGELES, CALIF., *July 21, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

Almond industry of California seriously threatened unless relief is forthcoming. Strongly urge your good offices in supporting the almond men in the increased tariff asked.

TOM A. NERNEY,
San Francisco.

—

LOS ANGELES, CALIF., *July 20, 1921.*

To the honorable the SENATOR FROM CALIFORNIA,
Washington, D. C.

SIR: As an owner of an almond orchard in the State of California I would respectfully request that you use your utmost influence in behalf of the almond industry of the State toward the passage of a bill which will give the protection requested by the California almond growers and necessary to save the said industry; namely, a tariff of 15 cents a pound on shelled and 5 cents per pound on unshelled nuts.

Although not financially interested, I would also urge proper protection for the walnut industry.

Thanking you for your efforts,

Yours respectfully,

C. P. OPPERMAN,
Post Office Box No. 978.

—

LOS ANGELES, CALIF., *July 20, 1921.*

Mr. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: Being interested in almond growing in California, would like to see you give the bill for 5 and 15 cents tariff on almonds due consideration.

Yours truly,

MATT POLL,
415 South Gates Street, Los Angeles, Calif.

—

SACRAMENTO, CALIF., *July 20, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SENATOR: The people of this district are very vitally interested in a tariff of at least 5 cents on unshelled almonds and at least 15 cents on shelled almonds, and would greatly appreciate every effort you can make to secure a tariff to this effect.

Very truly yours,

ROBERT A. WARING.

—

THE CARMICHAEL CO.,
Sacramento, Calif., July 18, 1921.

The Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

HONORABLE SIR: I am the owner of 100 acres of almonds, and it is important first to myself and secondly to the other hundreds of almond owners in California, practically the only place in the United States that almonds can be successfully grown, to have a tariff of at least 5 cents on unshelled almonds and 15 cents on shelled almonds.

Without this we can not compete with our eastern competitors; and I earnestly ask, not alone for myself but the other farmers in our State, that you give this matter your attention to see that we have the protection we are entitled to.

Thanking you, I am

Respectfully yours,

R. J. MORRISSEY.

—

SACRAMENTO, CALIF., *July 14, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SENATOR: In the behalf of an industry in which our State, as you well know, is greatly interested, we respectfully ask that you use your best efforts toward having the tariff on almonds increased to 5 and 15 cents per pound, respectively.

The differential between the shelled and unshelled nut as fixed by the Ways and Means Committee is not great enough, figuring on the result after the nut is taken from the shell. A ratio of at least 3 to 1 should be the basis to work upon in naming the duty.

Your cooperation will be very much appreciated and remembered by,

Yours respectfully,

ENNIS-BROWN CO.

—

SAN FRANCISCO, *July 14, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

HONORABLE SIR: We would like to call your attention to the fact that California needs protection in the almond industry. There is probably over $50,000,000 invested in this industry, and it is quite necessary at this time to have a protective tariff on almonds.

It is recommended that a tariff of 5 cents per pound on not shelled almonds and 15 cents per pound on shelled almonds be put into effect. We believe it is justifiable to increase the tariff three times as much on shelled almonds, as they are being largely imported.

We sincerely trust that you will give this matter your due consideration, and we assure you that your efforts will certainly be appreciated.

Yours very truly,

JACOBS, MALCOLM & BURTT,
A. P. JACOBS.

BUFFALO, N. Y., *July 14, 1921.*

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: I take this liberty of writing to you in regard to that section of the Fordney tariff bill pertaining to the almond industry of this country. I therefore ask that you do all within your power to have a fair and just tariff placed upon shelled and unshelled almonds, so that the grower may receive a just and fair return upon their investment and labor, so that the American grower can live and raise their families as true and loyal Americans should live and be educated.

I earnestly believe that in order to save the almond industry of California that there should be a tariff of 5 cents a pound on unshelled and 15 cents a pound on shelled almonds, which would not in any way place an additional cost per pound to the consumer.

Hoping that you will do all within your power to have this just and reasonable tariff placed upon imported almonds, and thanking you for the same,

I remain, yours,

R. J. MILLS,
315 Riley Street, Buffalo, N. Y.

WINTERS, CALIF., *July 13, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Ask your best consideration increase tariff shelled almonds. Growers desperate.

E. C. SNAVELY.

SAN FRANCISCO, CALIF., *July 13, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Have been selling California almonds in the shell in the San Francisco market for the past 12 years. Have been urging growers to shell almonds, since demand is mostly for shelled almonds. Growers gave me opportunity this year to sell few shelled almonds, and I found that the price on imported article was depressed to such an extent that shelled almonds would have to be sold here approximately at value of certain grades of almonds in the shell, and that California growers could not shell in face of this competition. Shelled almonds from Europe were brought into San Francisco this year and sold at extremely low prices. Understand that many of inferior imported shelled almonds were mixed with the higher grades of California and this mixture sold to trade. I am absolutely convinced as a broker in almonds that the future of industry in America depends wholly upon proper protective tariff.

WM. G. GOLDBERG.

MARSHUTZ OPTICAL CO.,
Los Angeles, July 12, 1921.

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Senate Office Building,
Washington, D. C.

HONORABLE SIR: I am interested in the almond industry of California. I have about $25,000 invested in an orchard near Paso Robles. Owing to the strong European competition, particularly on shelled almonds, the growers have made a failure of that industry so far, because the cost of the production is greater than the earnings of the almonds at the price at which both unshelled and shelled almonds had to be sold to compete with the imported article.

To save the almond industry in this State, in which $50,000,000 have been invested, it is absolutely necessary that the new tariff will provide 5 cents a pound on imported not shelled almonds and 15 cents per pound on imported shelled almonds. European almonds shell at the ratio of four to one, and California almonds at the ratio of three to one, which means, of course, that it will take three pounds of California almonds in the shell to produce one pound of unshelled almonds. Therefore I strongly believe that almond growers are justified and entitled to a tariff protection on shelled almonds at least three times as great as the almonds which are not shelled. Inasmuch as the shelled almonds represent 80 per cent of the consumption of the almonds in the United States, the California almond industry would disintegrate if Congress would not protect us at the ratio of three to one, as above outlined for shelled almonds, making the basic rate of 5 cents per pound on almonds not shelled and 15 cents per pound on shelled almonds.

I believe it has been the policy of the United States Government to protect the farmers and ranchers to the fullest extent against foreign competition, and while an increase in tariff increases the cost of our products to the people, is that increase on the other hand not returned to the people by the higher wages which we are paying in California for farm labor and all other work required in connection with the tilling of the soil?

I hope that you will see fit to use your great and good influence in behalf of this important industry and demand a tariff of 5 cents per pound on almonds not shelled and 15 cents per pound on almonds shelled.

I am a resident of California for 40 years, and of Los Angeles 34 years. I would appreciate and thank you for a reply to this letter in which you would tell me your position in this matter.

Yours respectfully,

S. G. MARSHUTZ.

LIVE OAK, CALIF., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR MR. SHORTRIDGE: As an almond grower of California I wish to call your attention to the extreme need of your help to save the almond industry of this State.

Some 5,000 families depend on this alone for a living, and have millions of dollars invested. We only ask for a fair return, and can get this only from a tariff of at least 5 cents per pound on not shelled and 15 cents on shelled.

We have faith in our representatives in Congress, and am sure that they will realize that this industry should be saved.

Thanking you for past favors.

W. E. MCMURTRY.

BANNING, CALIF., *July 12, 1921.*

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: Please use your influence to secure for us a tariff of 5 cents on the pound for almonds in the shell and 15 cents on the pound for shelled almonds. We do not ask freedom from competition, but competition on a fair basis with European almonds. We can not duplicate European labor conditions, and the industry will die unless protected.

Yours truly,

CARRIE W. EGAN.

LOWER LAKE, CALIF., *July 12, 1921.*

Senator SAM SHORTRIDGE,
Washington, D. C.

HONORABLE SENATOR: Considering it to be your duty to protect the almond industry of California, I kindly beg of you to help the almond growers of this State in getting the tariff of at least 5 cents on unshelled and a 15-cent tariff on shelled almonds.

This is an urgent request of an almond grower.

Respectfully your grateful

L. E. BETZ,
Orchardist, Lower Lake, Calif., Box 134.

SAN FRANCISCO, CALIF., *July 12, 1921.*

SAM SHORTRIDGE, Senator,
Senate Office Building, Washington, D. C.:

To prevent the uprooting of our trees and to save the industry from complete ruin it will be necessary to have a tariff of 5 cents a pound on almonds in the shell and 15 cents on shelled almonds. Our demands are just. From grower and constituent.

F. M. METZGAR.

ANTIOCH, CALIF., *July 12, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Whereas under present conditions high cost of labor, heavy transportation charges, and low tariff prevailing on almonds California almond growers will be forced to dig up their almond orchards, being unable to compete with foreign-grown almonds grown under cheap labor and un-American conditions. This would mean a loss of millions of dollars to the almond growers of California; therefore the directors of the Eastern Contra Costa Almond Growers' Association ask that you work for the passage of a tariff on almonds of 5 cents in the shell and 15 cents on shelled almonds, therefore saving for us our homes and business.

MRS. NELLIE PARCHINI.
MRS. J. B. BLISS.
S. B. L. NORCROSS.
B. B. HORR.
A. W. BIELOW.
W. J. O'HARA.
JOHN TREMBATH, *Secretary.*

PASADENA, CALIF., *July 12, 1921.*

SAMUEL M. SHORTRIDGE.
Senate Office Building, Washington, D. C.:

California wants and should have at least 5-cent tariff on unshelled almonds and 15 cents tariff on the shelled product. We own 40 acres of bearing almonds at Paso Robles. Do all possible to accomplish same.

Yours truly,

L. S. AND R. H. FEY.

DURHAM, CALIF., *July 12, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I write to ask you to urge that the tariff on almonds be increased to at least 5 cents per pound on almonds in the shell and 15 cents per pound on shelled almonds.

The future of our almond industry in California depends upon such aid, and I thank you for your efforts to assist us.

Very truly yours,

ANNETTA WELDIN.

DURHAM, CALIF., *July 11, 1921.*

Senator S. M. SHORTRIDGE.

DEAR SIR: I own a 140-acre almond orchard at Durham, Calif. It has cost 12 years' time and expense to bring it to full bearing, and is practically valueless without a protective tariff.

In particular, we require a duty of 15 cents on shelled almonds.

It would be quite unnecessary to repeat all the arguments, as you must be familiar with them. I will merely make an earnest appeal for myself and neighbors.

Very respectfully,

C. M. WINGATE.

MARYSVILLE, CALIF., *July 12, 1921.*

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.:

Properly safeguarded we can supply United States with almonds, thereby keeping American dollars in America. Difference in standards of living compared to foreigners cost us more to produce and to harvest almonds. We need a higher protective tariff.

LLOYD C. HOENIG,
Sutter, Calif.

SACRAMENTO, CALIF., *July 12, 1921.*

Senator SAM. M. SHORTRIDGE,
Washington, D. C.:

As an almond grower in Orland, Calif., I am looking to you for protection against European almonds that are being shipped into United States by a just tariff of 5 cents on unshelled and 15 cents on shelled almonds per pound.

A. I. ELLIS.
534 Battery Street, San Francisco, Calif.

LODI, CALIF., *July 12, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

If the recommendation of Ways and Means Committee of 4 cents tariff on unshelled almonds and 8 cents on shelled almonds should be passed, our almond industry in California will be ruined. We must have tariff of 5 cents on unshelled and 15 cents on shelled almonds to enable us to compete against European imports. All California growers are looking to you to save our industry from ruination.

LEWIS WALKER.

1221 MARENGO AVENUE, SOUTH PASADENA.

Senator SAMUEL SHORTRIDGE,
Washington, D. C.

HONORABLE SIR: California depends on you to support a tariff of 5 cents on unshelled almonds and 15 cents tariff on the shelled product.

This is very important, as to many of us it means our all—our means of support. We have not yet sold all of our last year's crop for lack of a tariff that will enable us to compete with the Spanish product.

Kindly give this your most serious consideration and give your best endeavor to save the almond product to this State and the means of livelihood to hundreds of orchardists who have this as the only means of support.

My almond orchard is in Chico, Butte County.

Very truly yours,
J. H. SWANN.

—

CHICO, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We beg Congress to not place less than 5 cents on almonds not shelled and 15 cents on almonds shelled. Unless there is a readjustment immediately we growers will not make expenses this season. A tariff on almonds in no way affects the living standards of the poor. For future prosperity do what you can in justice for the producer.

Yours truly,
H. C. COMPTON.

—

WINTERS, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Please use utmost influence to increase tariff on shelled almonds. Growers desperate.

GEORGE H. CALDWELL.

—

GILROY, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Unless we get a readjustment of tariff on shelled almonds of at least 3 to 1 of unshelled it will mean the deterioration of the almond industry of California. Our only future market is for shelled almonds. This situation is serious. I am an almond grower of California and appeal to you to lend your aid to adjust this tariff.

W. L. COTTMIRE.

—

ROSEVILLE, CALIF., *July 11, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: This note is sent you hoping that it will help California get at least a 5-cent tariff on the unshelled almonds and a 15-cent tariff on the shelled almonds.

Thanking you and hoping you will use your efforts to help the almond growers, I remain,

Yours truly,
J. V. MACIEL,
Almond Grower.

—

VALLEY HOME, *July 11, 1921.*

Hon. SAMUEL SHORTRIDGE.

DEAR SIR: As an almond grower of California it is my duty to ask of you and your colleagues to get a tariff of 5 cents per pound on unshelled almonds and 15 cents on shelled almonds. If we do not get this tariff, the almond industry in this country is doomed.

We appreciate what you have done for the farmers in the past, and trust to you to use your influence now on a higher almond tariff. Thanking you,

Yours very truly,
HERBERT KLEENE,
Valley Home, Calif.

—

SPENCERVILLE, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I earnestly request that you do your utmost to have the tariff placed on unshelled at least at 5 cents per pound and on shelled almonds at 15 cents per pound.

To pay the prices asked for manufactured articles, especially farming implements, the farmer must be as fully protected as the manufacturer.

Myself and family can not compete with the pauper labor of Europe and live like an American.

The farmer has always stood by the Government and should be treated fairly.

Again asking you to do your utmost,

I am, very truly, yours,
J. H. EICKHOFF.

—

LE GRAND, CALIF., *July 11, 1921.*

Hon. SENATOR SAMUEL M. SHORTRIDGE.

DEAR SIR: Would greatly appreciate your help toward the levying of a tariff on shelled of 15 cents and unshelled 5 cents in order that we growers make a success of the almond industry.

Thanking you for the best help you can give.

Truly yours,
J. SOUTHWARD.

—

GEORGE H. HOYT CO.,
Berkeley, Calif., July 11, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: I am an almond grower and a member of the California Almond Growers' Exchange. I have made considerable study of the almond situation and am absolutely convinced that the position taken by our exchange is sound. The full tariff on the shelled almonds is vital for the life of this industry, as only a small percentage of almonds can be sold in the shell. Your efforts in behalf of the almond growers of California will be greatly appreciated by the undersigned.

Very truly yours,
GEORGE H. HOYT.

SAN FRANCISCO, *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

FRIEND SAM: Of course, I appreciate you know all about conditions, but write you nevertheless.

Want higher tariff on shelled and unshelled almonds. Can not pay American wages and compete with Europe. Have not cultivated my 5-acre Guinda, Yolo County, place this year. Cost of production too great.

Respectfully,
J. W. HUDSON,
159 Sutter Street.

—

TEMPLETON, CALIF., *July 11, 1921.*

Mr. SAMUEL M. SHORTRIDGE,
Washington, D. C.:

I am appealing to you to save the almond industry of California and our homes. In order to do so we must have a duty on foreign almonds of at least 5 cents a pound on almonds in the shell and 15 cents a pound on meats. We hope you will see that it is right and just that we should have it, and that you will help us in this matter. Thanking you, I remain,

Respectfully yours,
C. J. LAMB,
An Almond Grower.

—

CORNING, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I am an almond grower at this place, and if we do not get a tariff on unshelled almonds of 5 cents and 15 cents on shelled almonds it looks to me that the almond industry is doomed; and you know very well yourself what that means to us growers in California.

Sincerely,
H. E. HORTING.

—

GRIDLEY, CALIF., *July 11, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: May I as an almond grower ask you as a Senator from this State to use your best endeavor to secure a tariff of 5 cents on unshelled and 15 cents on shelled almonds. I am sure this is not asking anything unreasonable. And I am sure you are quite well informed on the situation as it now exists as to the almond industry in California.

Thanking you in advance, I remain,

Yours truly,
W. E. SIMPSON.

—

TEMPLETON, SAN LUIS OBISPO COUNTY, CALIF., *July 10, 1921.*

Senators H. W. JOHNSON and S. M. SHORTRIDGE.

DEAR SIRS: California wants at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled product.

Yours faithfully,
B. W. CORDEAL.

—

BANNING, CALIF., *July 10, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Please use all your influence to secure 5-cent tariff on unshelled and 15 cents on shelled almonds. Tariff recommended by Ways and Means Committee of 8 cents on shelled almonds is pitifully inadequate and spells bankruptcy for every almond grower of California. Must have 15 cents tariff on shelled almonds to compete with Italy and Spain.

JOHN GREPPLIER.

—

SAN JOSE, CALIF., *July 10, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We the undersigned citizens and almond growers of California respectfully request that you use your influence toward the passage of the tariff on almonds as set forth by the California Almond Growers' Exchange, to wit, 5 cents per pound on unshelled and 15 cents per pound on shelled almonds.

Yours respectfully,
B. S. KEATON,
T. C. KEATON,
C. L. KEATON,
H. V. KEATON,
R. T. KEATON,
E. M. KEATON.

—

MARYSVILLE, CALIF., *July 10, 1921.*

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.:

Owing to high prices of almond land, time required to raise orchards to commercial age, and high cost of harvesting and uncertainty of crop, excessive freight rate, large tonnage of unsold crop, financial distress of almond growers, we need tariff on almonds 5 cents on unshelled, 15 cents shelled nuts per pound.

S. W. MUDGETT.

—

GLENDALE, CALIF., *July 10, 1921.*

Hon. SAMUEL SHORTRIDGE,
Senate Office Building, Washington, D. C.:

California almond growers must have a tariff of 5 and 15 cents or stand another loss of thousands of dollars on crops and much more on acreage. We look to the California delegation to go to the bat for us.

RALPH W. BROWN.

—

MANTECA, CALIF., *July 10, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: We beg respectfully to call your attention to the fact that as growers of almonds in California we need and earnestly desire a tariff that will save our industry from ruin by competition of the imports from the Mediterranean countries.

A tariff of 5 cents on unshelled almonds and 15 cents on shelled almonds is the least that would be considered at all adequate.

Very truly,
A. E. LACY,
R. F. D. Box 200.

ORLAND, CALIF., *July 10, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As an almond grower I appeal to you to use your best efforts toward securing an adequate tariff on almonds and save the industry in California. The tariff as recommended by the Ways and Means Committee will not do this, and anything less than the tariff as sought by the California Almond Growers' Exchange will not let us operate at a profit.

Very truly yours,

C. E. CHRISTLEY.

LODI, CALIF., *July 9, 1921.*

Senator SAMUEL SHORTRIDGE.

DEAR SIR: We are asking you to help to protect the almond industry of our State. We want your aid in placing a tariff of 5 cents on almonds not shelled and 15 cents on shelled almonds.

Yours respectfully,

J. H. TECKLENBURG,
H. TECKLENBURG, Sr.,
Almond Growers.

MARYSVILLE, CALIF., *July 9, 1921.*

Senator SAMUEL SHORTRIDGE,
Washington, D. C.:

California wants at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled product.

This means a great deal to the almond growers of California, if they stay in the business.

Yours truly,

GEO. M. GRAVES,
Owner Almond Orchard.

CORNING, *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As we are trying to get part of our living raising almonds here in California, we request that the tariff on unshelled almonds be 5 cents per pound and 15 cents per pound on shelled almonds or meats. As the freight and taxes are so high, we don't like to work for nothing and board ourselves for the benefit of foreigners and middlemen. Hope you can get the tariff for us and help the growers of California.

Yours respectfully,

W. W. HANCHETT,
Member Tehama County Almond Growers.

CORNING, CALIF., *July 9, 1921*

SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I understand that the Ways and Means Committee have recommended to Congress a tariff on almonds not shelled of 4 cents, and on shelled almonds 8 cents per pound. We almond growers feel that this tariff would not give us sufficient protection. It ought to be at least 5 cents on almonds not shelled and 15 cents on shelled almonds per pound. We are asking this that we may be able to compete with the almond growers of foreign countries where labor may be secured much cheaper than here. Please do what you can for the almond growers of your State.

Yours truly,

WALTER G. MAYNARD.

SAN FRANCISCO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: Please help us. We must have a tariff on shelled almonds of 15 cents per pound—proposed 8 cents won't help.

European almonds shell out four to one; ours, three to one. We can't market our last year's crop and our almonds are better than the imported ones. I can't stand another year's loss and my savings of five years is gone unless you help by this tariff on shelled almonds of 15 cents pound.

Your friend always,

MRS. MARY M. JASON,
2806 Jackson Street.

Eighty per cent of the demand of the United States is for shelled almonds.

SAN FRANCISCO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: Please help us get a tariff of 15 cents on shelled almonds. Recommended 8 cents is far too low, as European almonds shell out four to one and ours three to one. Must have three times as great as on almonds in the shell, for shelled almonds represent 80 per cent of the demand of the United States.

This big California industry will be lost unless we get 15 cents on shelled almonds; your State that you have worked for heart and soul. We can depend on you to help us, I know.

Very truly yours,

THOM. DOWD,
33 Java Street.

NELSON REALTY CO.,
Arbuckle, Calif., July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: Eleven years ago it dawned on the people in this locality that they had an ideal condition for producing almonds. At that time about 150 acres were under production. Since then the planting of almonds has increased until we now have over 10,000 acres planted and under cultivation, with our territory about one-half covered.

About two years ago the almond growers began to realize that although they could produce almonds it was another thing to market them. This fact has been most forcibly brought home to them by there still remaining unsold a portion of their 1919 and 1920 crops, all the while a large amount of almonds are still pouring in from the southern European countries.

California looked upon the almond, 10 to 15 years ago, as a side issue with farmers, but in recent years districts which are favored with frost protection, which the almond as an early bloomer requires, have capitalized their asset by specializing on almonds until to-day the State of California, with a normal crop, will produce enough almonds to take care of the entire consumption of the United States.

This of course means that the industry has developed into one of immense magnitude. And now we are threatened with complete destruction unless, through your good offices and that of California's other honorable Members in the Congress, you can save us.

We feel that we should have a tariff of 5 cents on unshelled and 15 cents on shelled almonds. Our State Almond Growers' Exchange office has gone into this matter very thoroughly and has supplied you with all the data; therefore it is unnecessary to reiterate it here. But we do wish to impress upon you that these are serious times for us, and the destruction we see ahead of us causes us to burden you with our problems.

If you can succeed in securing us proper tariff protection, and we know you will if it is possible to do so, you will have earned your reward, and you will be blessed by 5,000 most serious and earnest almond producers of this State.

Very truly yours,

D. S. NELSON.

W. T. MCFIE SUPPLY CO.,
Arbuckle, Calif., July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: Your cooperation is requested in adjusting the present tariff on almonds, viz:

Five cents on almonds in the shell.

Fifteen cents on almond meats.

As one of the 5,000 almond growers in the State of California I must draw your attention to the hazardous condition which we find our industry in, as we are unable to participate in the almond-meat business due to vast importations of the south European almonds produced under cheap labor conditions.

California almonds shell out 3 to 1. Therefore the above ratio is necessary to secure at least a portion of the almond-meat business.

Thanking you in anticipation of your hearty support in our behalf, I am,

Very respectfully yours,

L. M. BLOOM.

ARBUCKLE, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As one of the 5,000 almond growers of the State of California I respectfully request your cooperation and support in the matter of adjusting present tariff on almonds, viz:

Five cents on unshelled almonds.

Fifteen cents on almond meats.

The above ratio of 3 to 1 is necessary on account of California almonds shelling out 3 pounds of almonds in the shell to 1 pound of meats.

Statistics show that the almond growers of California are now producing enough almonds under normal crop conditions to supply the needs of the entire United States, and since the bulk of consumption consists of almond meats, and the same are now being imported into the United States from the southern European countries at such low prices that the California producers are unable to shell out their almonds to compete with these foreign meats, in consequence of which they still have a portion of their 1919 and 1920 crops on hand unsold, your hearty support in our behalf will help save an industry that represents many millions of dollars invested, not to mention the great amount of study, labor, and risk involved in bringing an almond orchard up to bearing age.

Thanking you in anticipation, I am,

Yours very respectfully,

J. M. DRACK.

PASO ROBLES, CALIF., *July 9, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: In the proposed new tariff the committee has recommended to Congress a rate of 4 cents per pound on unshelled almonds and 8 cents on shelled. This is too low in the first case and no protection in the second, as it would amount to only 2⅔ cents on almonds. We should have 5 cents and 15 cents, respectively.

It takes 3 pounds of California almonds to shell out 1 pound, and 80 per cent of the consumption of almonds in the United States is of those shelled, so at the proposed 8 cents it would in reality be only 2⅔ cents per pound, which, when you consider our higher labor charge, our more sanitary handling, and higher shipping charge, it amounts to so little that we can not live under this low rate.

The rate should be 5 and 15, respectively, but I urge you to do your best to get it, but, if impossible, stick until the last ditch for 12 cents, or at the consistent rate of 3 to 1.

Yours truly,

W. J. STONE.

OAKLEY, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As an almond grower of California I most emphatically urge that you give your support to the increase of the tariff on almonds to at least 5 cents on the unshelled and 15 cents on the shelled product, for without such a tariff our orchards, which we have spent years in developing, are practically doomed in competition with the European almonds. I do not think that any right-minded American citizen, if he knew the facts, would desire that our splendid almond industry, with its superior product, should be allowed to wither in favor of the almond industry of Europe, with its cheap labor and inferior grade.

California almonds shell out at the ratio of 3 to 1, hence the common sense of a 3 to 1 tariff as compared with the shelled and unshelled product, and also the extreme necessity of such a tariff, for our future market lies mostly in the sale of shelled nuts. Hoping for your support of this matter, I am,

Very truly yours,

J. A. HOBBS.

OAKLEY, *July 9, 1921.*

Senator SAM. SHORTRIDGE,
Washington, D. C.

DEAR SIR: Please do all in your power to get a readjustment of tariff on almonds. At least 5 cents on almonds not shelled and shelled almonds 15 cents.

—

GOODWIN & GOODWIN,
Ripon, Calif., July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: I have been informed that the Ways and Means Committee of the House has recommended a tariff on almonds not shelled at 4 cents per pound and on shelled almonds 8 cents per pound. Our exchange has asked for a tariff of 5 cents on the former and 15 cents on the latter. As I am a practical grower, I know that the amount recommended by the committee is not enough, and the amount requested by our exchange is none too much. We all know the expense which almond growers and other farmers in this State are under for labor and supplies, and that our industry, which is a big one in this State, can not survive without adequate protection.

Shelled almonds should have a tariff of at least three times as much per pound as unshelled ones, for the simple reason that almonds shell out in the ratio of at least three to one. The ratio recommended by the committee is only two to one, and the shelled almond market is by far the more important of the two.

I know that you have the prosperity of the California farmer at heart and ask you to do what you can to save the almond growers from that complete ruin which the low tariff recommended would permit.

Yours very truly, B. A. GOODWIN.

—

ORLAND, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: The House Ways and Means Committee have recommended a tariff of only 8 cents per pound on shelled almonds. This is only about half what we need to compete with European almonds. As an almond grower I hope you will do all you can to give us adequate protection.

I am also in favor of the adjusted compensation bill for ex-service men and hope you will boost it along.

Yours respectfully,

RALPH W. TROWBRIDGE.

—

OAKLAND, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: The tariff of 4 cents on almonds, not shelled, and 8 cents on shelled almonds is out of proportion and will not protect our shelled-almond industry. The almond-shelling plants in California will not open this season to compete with foreign-shelled almonds, and will be the cause of keeping hundreds of employees in that line of business out of work. They have petitioned you for a tariff of 5 cents on almonds not shelled and 15 cents on shelled almonds, which is in proportion and is as small a duty as will protect the industry.

In the interest of California we wish you would do your utmost to have the tariff placed on the above basis.

Yours very truly,

DIABLO STOCK FARM,
G. W. EMMONS, *President.*

—

WINTERS, CALIF., *July 9, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As an almond grower, will say it is absolutely necessary that we have a tariff of 5 cents on almonds in shell and 15 cents shelled to be able to meet running expenses of my almond orchard.

Sincerely yours,

W. H. UNDERWOOD.

—

OAKDALE, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: Please give California at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled almonds. If we don't get this much, the almond industry will fail.

Truly yours,

M. E. RINEHART.

—

BOX 33, CORNING, CALIF., *June 9, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

SIR: I recently purchased land in Corning, Calif., and put part of acreage in almond orchard, hoping that in a few years I would be able to make a comfortable living from the produce, but find that the almond grower is out of business unless he is protected by a strong tariff.

I am writing to you, hoping that you will use your influence to protect the orchardist in general (as a rule they are past middle age and do not want to become a burden to any State or person).

I am, dear sir,

Yours respectfully, L. HACKER,

—

1660 LYON STREET,
San Francisco, July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

MY DEAR MR. SHORTRIDGE: It has been called to my attention that the committee reporting the tariff bill has recommended, no doubt by oversight, a duty on almonds which would be absolutely ruinous to the almond industry of this State.

You are no doubt aware that the almond industry of this State has been laboriously built up in spite of drought, unseasonable frosts, grasshoppers, and other obstacles.

I know that you will make a great effort to protect this industry with a tariff commensurate with the needs of the almond growers.

We ask a tariff of 5 cents on unshelled and 15 cents on shelled almonds.

As you know, the almond growers of this State are well organized and will watch with vital interest your fight in Congress for the tariff we ask.

I am an owner of a small almond orchard in the Pennington district of Sutter County. I derive the major part of my livelihood from this source. The officials of the Almond Growers' Exchange have thoroughly convinced me that I shall be deprived of all income from this orchard should you fail in your efforts on our behalf.

Very truly yours,

Mrs. S. A. BEEBEE,
Member California Almond Growers' Exchange.

—

1907 LEAVENWORTH STREET,
San Francisco, July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate of the United States, Washington, D. C.

MY DEAR SIR: As an almond grower of Fair Oaks, Sacramento County, I wish to indorse Mr. T. C. Tucker, manager of the California Almond Growers' Exchange, in his effort to secure a tariff on imported almonds of 5 cents on the unshelled and 15 cents on the shelled almonds.

Most respectfully, (Mrs. J. W.) ANNIE G. HOBSON.

—

DELANO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

A tariff of 5 cents on unshelled almonds and 15 cents on shelled product is absolutely necessary to save almond industry. This the almond growers must have.

JOHN E. LATHROP.

—

ASSEMBLY CALIFORNIA LEGISLATURE,
FORTY-FOURTH SESSION, 1921,
Stockton, Calif., July 9, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: I know that you are deluged with letters and petitions, but please permit one who has been through a similar mill recently to suggest a way whereby you will earn a great deal of popularity and do a great deal of good to the California farmers who are growing almonds.

I am informed that the committee of the House has recommended a 4-cent tariff on unshelled and 8 cents on shelled almonds. I have talked with certain practical almond growers of this vicinity, well known to me personally, and they assure me that the almond industry, on account of European competition and high expenses, is in a rocky condition even now, and that unless they get at least 15 cents per pound tariff on shelled almonds their crop won't bring them expenses. They also need 5 cents per pound on unshelled almonds, for which there is less market.

If you could possibly get an amendment on the floor to this effect, or secure a committee amendment, this agricultural community would certainly appreciate it. There is no question but what the farmers not only desire the change, but are earnestly insistent that it is absolutely necessary to preserve their industry. Please do what you can for them.

Yours very truly,

OSCAR C. PARKINSON.

—

STOCKTON, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,

DEAR SIR: It is essential to the welfare of the almond growers to have a higher rate of duty on almonds than that proposed in the committee bill recently presented to the House. Please do all you can to have this increased, particularly on shelled almonds.

Very truly yours,

LEROY M. PHARIS,
R. D. 3, Box 155, Stockton, Calif.

—

SACRAMENTO, CALIF., *July 9, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: Understanding the legislature has allowed a very small tariff on almonds, I want to plead with you to help us get more. I am a nurse and a widow, and for the past number of years have been putting every dollar of my earnings I could spare in our almond ranch of 10 acres, which is just beginning to bear, and of which I had hopes of realizing a little income from now on; but am afraid I will lose all if you do not help us. I say us, for I know of others in the same shape as myself who will lose all if we do not get help on this question.

Hoping you will know how to help us, I am,

Yours respectfully,

KATE T. HENRY.

—

LOS ANGELES, CALIF., *July 9, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: As an almond grower of California, and one who is deeply interested in the prosperity of our State, I beg of you to use all influence possible in bringing about a tariff of at least 5 per cent on unshelled almonds and a 15 per cent tariff on the shelled product.

Unless we get a readjustment of tariff on shelled almonds of at least three to one it will mean the disintegration of the almond industry of California.

We entreat you to give this matter your serious consideration.

Very truly yours,

HORACE B. PECK.

—

SAN FRANCISCO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Urge your utmost assistance readjustment of tariff on shelled almonds. At least three to one, or 5 cents in shell, 15 cents shelled. As grower, I know almond industry of California will fail unless you help this cause. Unable to make living on my almond holdings under present tariff. Forced to work in the city and let place go.

C. G. CHIPCHASE,
Burlingame, Calif.

WOODLAND, CALIF., *July 9, 1921.*

Mr. SAMUEL M. SHORTRIDGE,
United States Senator of California, Washington, D. C.

MY DEAR SENATOR: In the interest of the California almond industry I protest against the tariff recommended by the Ways and Means Committee.

California requires at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled product.

Hoping for a readjustment in this matter.

Yours truly,

JOHN C. KAUPKE.

—

LODI, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: As the tariff bill is before Congress at present I, as one of the growers of almonds, would like to impress upon you the absolute necessity of a tariff of 5 cents on unshelled and 15 cents on shelled almonds if we, as growers of almonds, are to remain in existence. Hoping you will help us win our fight, I am,

Respectfully yours,

BOYD JACOBS,
P. O. Box 47, Acampo, Calif.

—

HELP THE CALIFORNIA ALMOND GROWERS TO PROTECT INDUSTRY.

Millions of American dollars go annually to France, Spain, and Italy because Americans like almonds.

Fifty millions of American dollars are invested in California in almond orchards and almond-shelling machinery.

The California millions are unproductive as an investment because the Federal Government fails in giving adequate protection to this California and American industry.

The dollars that go to Mediterranean Europe should rightly come to California. They would if proper tariff protection were given the industry.

The almond growers are asking California's delegation in the Congress to insist upon reasonably high duties on imported almonds.

Every Californian interested in the welfare of this State should do his part, by telegram or letter, to bring home to our congressional delegation the importance of such action.

We must protect what is our own.

—

SAN FRANCISCO, CALIF., *July 9, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senator from California, Washington, D. C.

DEAR SIR: I am an almond grower of this State, and I am writing you in the hope that you will do all in your power to have a tariff placed on almonds, otherwise the industry will be absolutely ruined, and quick action should be taken if anything is to be accomplished for the growers.

Thanking you in advance for your earnest attention, beg to remain,

Very truly yours,

E. N. CORNEAU.

—

BANNING, CALIF., *July 9, 1921.*

Senator SAM SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Am looking to you for help on tariff adjustment on almonds. We must have at least 5 cents a pound on unshelled and 15 cents on shelled almonds. This is very urgent.

R. H. COOMBS.

—

STOCKTON, CALIF., *July 9, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

I grow almonds, but can not continue in business with tariff lower than 15 cents per pound on shelled and 5 cents on unshelled almonds. I ask you to help California growers get adequate tariff protection.

B. A. GOODWIN.

—

SAN FRANCISCO, CALIF., *July 9.*

Senator SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

Authorities agree 5 cents correct tariff unshelled almonds. Shelled almonds one-third weight of unshelled. Fifteen cents on shelled necessary to protect growers. Eighty per cent demand American market is for shelled. Market for shelled now in hands Europeans. In three years California product 70,000,000 pounds. At present 9 per cent 1919 and 15 per cent 1920 crops unsold, because European almonds. California almond growing perishes if 3 to 1 tariff ratio on unshelled and shelled not provided. Your immediate assistance asked.

WESTERN CANNER AND PACKER.

—

BERKELEY, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: Save the almond growers of California by working for 5-cent tariff on unshelled and 15-cent tariff on shelled almonds.

We can not compete with European labor with tariff as recommended by Ways and Means Committee.

Save an important California industry.

Yours truly,

HORACE N. HENDERSON.

—

ESPARTO, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE:

We as one of the 4,000 almond growers in this State ask and plead of you to use your influence in getting a fair and just tariff on our product. The 4 cents on almonds in the shell and 8 cents on shelled almonds, as recommended by the Ways and Means Committee, is entirely too low if we are to exist as almond growers, as we can not compete with cheap foreign almonds. With the millions we have invested in almonds we feel we are entitled to fair chance with foreign almonds, and that we can only have by getting at least a 5-cents-a-pound on almonds in the shell and a 15-cent tariff in the shelled almonds.

Hoping you will give this a serious thought and a hard fight, we remain,

Yours royally,

LINDBERG BROS.
EDGAR LINDBERG,
M. A. LINDBERG.

BRENTWOOD, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: If the almond industry in California is longer to exist, a tariff of at least 15 cents a pound on shelled almonds will be necessary to equalize cost of production and delivery to our markets in competition with Mediterranean growers.

Preservation being the first law of nature, is the American Government to allow the industry to pass to Europeans and lose hundreds of thousands of dollars and ruin farmers already suffering serious losses?

Yours respectfully,

ALEX MURDOCK.

—

FRESNO, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

Published reports of tariff of 4 cents on almonds and 8 cents on shelled almonds is ruinous to the California almond industry. Can you or would you use your best influence to give the California almond growers a 5-cent tariff on almonds and a 15-cent tariff on shelled almonds? Labor conditions make this a minimum upon which we can compete with the Mediterranean countries.

H. S. DUFF.

—

PASO ROBLES, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I notice that it has been recommended that the tariff on almonds be 4 cents on unshelled and 8 cents on shelled. As California almonds shell out 3 to 1, it seems no more than fair that the tariff should be three times as great on the shelled as on the unshelled, and this is the branch of the trade that we must look to largely for our future trade. The California growers feel that they can not compete with European conditions on less than a 5-cent and 15-cent tariff, and ask that you kindly use your influence to this end, for if we can not get adequate protection it will mean ruin to a very large number of growers who have invested everything in this industry. Thanking you in advance for your efforts, I remain,

J. W. HINMAN.

—

PASO ROBLES HOT SPRINGS,
Paso Robles, Calif., July 8, 1921.

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I desire to put in my plea for your best endeavors toward procuring a protective tariff on shelled and unshelled almonds which will protect us almond growers of California, whose sales for last year's crop will not pay the cost of raising and harvesting.

I have all the savings of a lifetime invested in 33 acres of 7 and 8 year old almond trees and carrying a mortgage of $7,500 at 7 per cent as well. For a man 68 years old, it is pretty tough to not even get the cost of labor back from a crop.

The United States markets were flooded last fall with shiploads of European raised almonds which were sold below the cost of nuts out here, as the growers across the water do not count the labor of their women and children as any additional expense, while out here we can not get competent labor for less than $3.50 to $4 or $5 per day.

In future California growers must rely on shelled almonds very largely, which should have a tariff of at least 3 to 1 over unshelled nuts—say 5 cents on unshelled and 15 cents on shelled nuts would give us the needed protection. Will you do your best for us? I heard you speak at a big meeting in Los Angeles last year during the campaign and feel sure you are for the good working people of your home State, so go to it strong, please.

Yours with respect,

CHAS. C. WILMOT,
P. O. Box 785.

—

PASO ROBLES, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

Hon. SHORTRIDGE: We are heartily in favor of at least a tariff of 5 cents on unshelled almonds and a 15 cent tariff on the shelled product.

Respectfully,

A. P. BORKEY,
Almond Grower.

—

ELDRIDGE, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.:

We, the undersigned California almond growers, respectfully urge that you do all in your power to have the duty on unshelled almonds fixed at 5 cents and all shelled almonds at 15 cents per pound. The salvation of the almond industry depends on this measure.

W. T. SUTTENFIELD,
C. S. BALDWIN,
C. F. GOSSIN,
M. SOLEY.

—

ORLAND, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senator, Washington, D. C.:

Adequate protection for California almond industry demands 15 per cent tariff; lower tariff will not give adequate protection against foreign importations.

H. M. KINGWELL,
Horticultural Commissioner, Glenn County.

—

SACRAMENTO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As an almond grower in California and a member of the Almond Growers' Exchange, I solicit your favorable action on the demand of the exchange for a tariff of 5 cents on almonds not shelled and 15 cents on shelled almonds. The reason for this demand by almond growers has been fully represented by the exchange, and I will not attempt to repeat.

California is the greatest almond-growing section in the United States. Millions are invested in the industry. We want only a reason-

able return for our product. Unless we are protected against cheap foreign labor we can not get it, and we must either uproot our almond trees or be reduced to the level and plane of our foreign competitor. God forbid! Many almond growers are already considering the advisability of planting other fruits than almonds. Help your own people. I know you will.

Yours truly,

O. G. HOPKINS,
Second District.

—

OAKLEY, CALIF., *July 8, 1921.*

SAM. M. SHORTRIDGE,
Senator from California, Washington, D. C.

DEAR SIR: Will you kindly give your support to a new tariff on almonds—5 cents for unshelled and 15 cents for shelled?

We have a 14-acre ranch of almonds and we are dependent on the same for a living. Should the present tariff remain we will have to turn to something else to make a living.

Hoping you will interest yourself in this matter, I am,

Yours truly,

PAUL STEINER.

—

SACRAMENTO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senator from California,
Senate Office Building, Washington, D. C.

DEAR SIR: The almond industry of California, representing an investment of over $50,000,000, is at stake on the issue of the tariff legislation now before Congress, and to save the growers their means of a livelihood we must get a readjustment of tariff on shelled almonds of at least three to one. Our only future market is for shelled almonds, which represents 80 per cent of the demand of the United States. Only with proper protection on shelled almonds can the California growers market their product without a loss.

European almonds shell out four to one, and California almonds three to one. We are entitled therefore to a tariff on shelled almonds three times as great as on almonds in the shell, and we want a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled product.

Please use your influence to obtain this adjustment in the present bill before Congress and save one of California's principal industries.

Yours very truly,

A. B. USHER,
1321 Twenty-third Street, Sacramento, Calif.

Orchard located in Arbuckle District.

—

DUNNIGAN, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: As an almond grower I am taking the liberty of writing you regarding tariff on almonds.

What the growers want is a tariff of 5 cents on unshelled almonds and 15 cents on shelled almonds. Any effort you may make to obtain this tariff will be appreciated by every almond grower.

Yours sincerely,

A. E. AMADEN.

—

CHICO, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

HONORABLE SIR: I beg that you will use all your influence to obtain a raise in the tariff rate on almonds recommended by the Ways and Means Committee.

Anything less than 5 cents per pound on unshelled or 15 cents on shelled would be ruinous to our orchards here. Please do everything possible to get this rate for us.

Very truly yours,

HARRIET LOSEE.

—

PALO ALTO, CALIF., *July 8, 1921.*

Senator S. M. SHORTRIDGE,
Washington, D. C.:

Being interested in almond raising in this State, I think it is necessary that the tariff on almonds should be 5 cents on unshelled and 15 cents on shelled ones.

MRS. L. H. HAY,
744 Waverly Street.

—

MODESTO, CALIF., *July 8, 1921.*

Senator S. M. SHORTRIDGE.

MY DEAR SIR: As an almond grower I am very much interested in the tariff that we are very anxious should be put through. We can't possibly make ends meet if we don't get at least a 5-cent tariff on unshelled and a 15-cent tariff on shelled almonds. Will you kindly do all you can do for us, and we will surely appreciate it?

Yours very respectfuly,

C. W. MCEWEN,
Route A, Box 145.

—

CHICO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: In the interests of almond growers of California, of which I am one, I would impress on your mind that we need better protection against foreign importations of almonds than we have at present, at least a tariff of 5 cents on unshelled almonds and a 15-cent tariff on the shelled product.

Respectfully,

D. K. CORNELL.

—

SAN FRANCISCO, CALIF., *July 7, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senate, Washington, D. C.:

As a grower we insist on a minimum rate of 15 cents on shelled almonds. Industry facing ruin if not properly protected. United action of all California Representatives essential.

A. ANDRE,
T. BERTINSEN,
L. SEGELHORST,
230 California Street.

SAN JOSE, CALIF., *July 8, 1921.*

Hon. SAMUEL SHORTRIDGE,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR SHORTRIDGE: As an almond grower of California, I would call to your attention the tariff bill which the Ways and Means Committee has recommended to Congress. The bill is now on the floor of the House of Representatives. This bill provides a tariff of 4 cents on unshelled almonds and 8 cents on shelled almonds per pound.

It is indeed of vital importance to every almond grower of the State that a tariff be passed with at least 5 cents on unshelled nuts and 15 cents on the shelled. The California Almond Growers' Exchange petitioned for this rate.

It is inevitable that unless the American almond grower be protected with a higher tariff than is recommended by the Ways and Means Committee that his industry will absolutely fail. He can not compete with the Mediterranean, who can, with the tariff rates recommended by the Ways and Means Committee, harvest his crop, pay this low tariff, and make a gain. The American can not even harvest his crop at the prices thus made possible.

So you see, Senator SHORTRIDGE, it is imperative that the higher tariff as recommended by the growers themselves be passed.

I can assure you that any service you can render or any of your influence used to help the passage of this bill with a higher tariff will be greatly appreciated by each and every almond grower in the State of California.

Sincerely,

THOS. E. RAYNER,
Route C, Box 167, Monterey Road, San Jose, Calif.

—

SOLEDAD, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As a California almond grower, I appeal to you to do all in your power to further the petition of the California Almond Growers' Exchange for a tariff of 5 cents on almonds not shelled and on shelled almonds 15 cents.

Without such protection from the European market, this great California industry will be practically ruined.

Yours very truly,

F. V. GILCHRIST.

—

MARTINEZ, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

MY DEAR SIR: As an owner of 30 acres of almonds, I herewith appeal to you to use your power and influence to secure a 5-cent duty on unshelled almonds and a 15-cent duty (per pound) on shelled almonds entering this country.

Without this protection the investment of thousands of California almond growers is ruined. We raised our crop last season at a loss and the situation now appears desperate.

May we not have protection commensurate with the standards of American living and costs of production?

Very truly yours,

MAURICE H. ROWELL.

—

YUBA CITY, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: Since European almonds shell out four to one and California almonds three to one, our members are entitled to a tariff on shelled almonds at least three times as great as on almonds in the shell. Unless we get a readjustment of tariff on shelled almonds of at least three to one, it will mean the disintegration of the almond industry of California. Our only future market is for shelled almonds, which represents 80 per cent of the demand of the United States. This is a serious situation confronting the industry. Only by proper protection on shelled almonds can we bring to California the millions that are going to the shores of the Mediterranean. Now, we Californians want at least a 5-cent tariff on unshelled almonds and a 15-cent tariff on the shelled product.

Yours respectfully,

E. G. VAN ARSDALE.

—

JULY 8, 1921.

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: In regard to the tariff on almonds, I would ask you to work for 5 cents on unshelled and 15 cents on shelled almonds.

Thanking you for what you can do for us, I remain,

Your friend,

J. C. OSBORN, *Corning, Calif.*

—

SAN FRANCISCO, *July 9, 1921.*

Hon. SAM SHORTRIDGE,
Washington, D. C.

DEAR SIR: I take the liberty of writing to you in regard to a higher tariff on almonds. I am the owner of a 16-acre orchard near Esparto, Yolo County. Only a part of last year's crop sold, on account of cheap foreign almonds. I think a tariff of 5 cents on unshelled almonds and 15 cents on the shelled is necessary to save our orchards.

Thanking you for any interest taken in this matter, I remain,

Respectfully yours,

F. M. CORNELL, *1720 Larkin.*

—

SAN FRANCISCO, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

HONORABLE SIR: To assist in indicating to you the sentiment of the almond growers of California, the undersigned grower begs to add his indorsement to the petition presented by the growers to the Ways and Means Committee through the medium of the California Almond Growers' Exchange for a tariff of 5 cents on unshelled and 15 cents on shelled product.

Convinced that a lower tariff than that represented by the figures mentioned will result in the ultimate disintegration of this important California industry, we feel that we may justly solicit your hearty co-

operation and enthusiastic support to the end that the necessary protection may be obtained.

Your assistance will be appreciated.

Very respectfully,

LINTON HART,
252 Central Avenue, San Francisco, Calif.

—

LOS ANGELES, CALIF., *July 8, 1921.*

Mr. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

TO THE HONORABLE MR. SHORTRIDGE: The writer is engaged in growing almonds in the Atascadero district, San Luis Obispo County, Calif.

We have now nearly 400 acres in various stages of growth and development. The oldest are 6 years of age, just coming into commercial bearing. The returns last year on our almonds were barely enough to cover harvesting and marketing expenses, leaving the grower absolutely nothing for his labor and expenses. On the Mediterranean shores they pay 15 to 20 cents per day for labor, while we are paying $4 to $5 per day and other expenses in proportion.

If we are to continue in the almond industry in the United States, we should have at least a duty of 5 cents per pound on unshelled almonds and 15 cents per pound on shelled almonds.

Respectfully submitted.

WILLIAM BRIER,
711 Pacific Finance Building.

—

SAN FRANCISCO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As a grower of almonds, I would respectfully ask that you do all in your power to secure an amendment to the proposed tariff on almonds, especially on shelled almonds.

As it takes 3 pounds of almonds in the shell in this country to make 1 pound of almond meats, I respectfully submit to you that the tariff on shelled almonds should be at least three times as great as on almonds in the shell, and unless we get adequate tariff, especially on shelled almonds, it will mean that we are prevented from participating in the benefits of the shelled almond market, which represents 80 per cent of the consumption of almonds in the United States.

Unless we do secure an adequate tariff from the Congress our industry, representing an investment of approximately $50,000,000, is facing ruin, and I therefore respectfully ask you as a Californian to do everything in your power to secure a tariff on shelled almonds at least three times as great as on almonds in the shell in the protection of this California industry. Anything you may be able to do to assist the almond growers of California will be thoroughly appreciated not only by myself but by the 4,000 almond growers of the State of California.

Yours very truly,

C. LARSEN,
751 Tenth Avenue, San Francisco.

—

SACRAMENTO, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: I want to ask that you use your strongest efforts in the matter of the present tariff bill now pending before your House to secure proper and adequate protection for California almonds.

The California almond industry represents a livelihood to several thousand families and several thousand other people dependent upon its continuation.

It represents an investment of approximately $50,000,000, and this industry is seriously jeopardized under the present competition with European almonds.

The California Almond Growers' Exchange, which represents the great majority of the California almond growers and which has been one of the pioneers in cooperative marketing of farm crops, has recommended a tariff of 5 cents a pound on unshelled almonds and 15 cents a pound on shelled almonds.

We are vitally interested in this tariff, as we individually represent the owners and growers of over 2,000 acres of almond orchards, and we trust that you will do everything in your power to secure the tariff represented by the exchange, to wit: Five cents per pound on almonds not shelled and 15 cents per pound on shelled almonds.

We feel that this tariff is necessary and absolutely essential for the continuation and protection of the $50,000,000 almond industry in California.

As a Californian we feel that you have the best interest of this State at heart, and we shall appreciate whatever you can do in securing and fighting for the tariff protection requested.

Thanking you in advance,

Yours truly,

GEO. X. FLEMING.

—

RANCHO DE EL CAPITAN,
RIO LINDA, SACRAMENTO COUNTY, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senator, Washington, D. C.

DEAR SIR: As the almond growers of California will surely be up against it with a tariff less than 5 cents on unshelled almonds and 15 cents on shelled almonds we would surely appreciate it if you would do all within your power to fight for the above tariff. If the 4 and 8 cent tariff goes through, I know that the California almond grower may as well grub out all of his trees and let the land lay idle, for he will be as far ahead as trying to grow almonds with an inadequate tariff.

Knowing that your past record has always been for the best interests of California I feel assured that you will do all within your power and see that the almond growers get a fair deal.

Thanking you, I remain,

Very truly yours,

CAPT. H. A. LEWALD,
Box 1203, Motor Route A.

—

SAN FRANCISCO, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: I am the owner of 62 acres of producing California almond orchard land, which under normal conditions should have a valuation of $21,500. Last year the crop income from this property was insufficient to pay for the care, much less give any return on the investment. This property was planted under conditions and has since received the care such that I should expect now a reasonable interest on my investment. These are not normal times, and unless protection is afforded against the importation of almonds produced with underpaid labor under conditions with which we here are unable to compete I shall be obliged to uproot my almond trees and turn my attention to the production of other crops.

My position is the same as that of all the other almond growers of California, and I trust that we shall receive from you every assistance possible in securing protection for this California industry. The tax on shelled almonds should be at least three times that on unshelled almonds, and the rates proposed by the California Almond Growers' Exchange—i. e., at least 5 cents for the one and 15 cents for the other—are absolutely necessary to save the industry. We shall watch with interest and concern your activities in our behalf.

Very truly yours,

EVERETT N. BRYAN.

—

OAKDALE, CALIF., *July 8, 1921.*

SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SENATOR: I understand the Ways and Means Committee has recommended to Congress a tariff of 4 cents on unshelled almonds and 8 cents on shelled. This is entirely inadequate. We can not meet foreign competition unless we get 15 cents on shelled and 5 cents on nuts in the shell.

We will be driven out of business unless you can assist us in getting this protection to our industry in this State.

Yours truly,

WALTER J. STOLP.

—

TURLOCK, CALIF., *July 8, 1921.*

Senator SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: The Ways and Means Committee have recommended a tariff of 4 cents per pound on almonds in the shell and 8 cents per pound on shelled almonds. The almond growers of California, through the California Almond Growers' Exchange, have asked for a tariff of 5 cents unshelled and 15 cents shelled. This is not an unreasonable request, and much thought and time was consumed in arriving at these figures, and I believe that 5 cents and 15 cents is the minimum tariff required to protect the almond industry from the lower freight rates and the peasant competition of the south of Europe countries.

Kindly use your utmost endeavors to help secure the requested tariff.

Very truly yours,

R. K. SMITH.

—

SAN FRANCISCO, CALIF., *July 8, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: I will not take up your valuable time with a long-winded letter, but will ask you to do all you can for us almond growers out here in the golden West.

We are not asking for a very lot, but just a living chance with our products.

We feel that we should have at least a tariff of 5 cents on unshelled almonds and 15 cents on shelled.

Many of us have our savings tied up in almond orchards that are bearing or just beginning to bear, and we trust you will do all in your power to help us out.

Thanking you for all you can do for us in this matter, and all of us trust you can do a great deal,

I remain,

Yours very truly,

A. VAN HOYT,
2321 California Street.

We represent an investment of $50,000,000 in almond orchards and almond-shelling machinery.

—

ANTELOPE, CALIF., *July 7, 1921.*

Senator S. M. SHORTRIDGE,
Washington, D. C.

DEAR SENATOR: Kindly help us almond growers out and keep us from ruin by advocating tariff of 6 cents on unshelled and 15 cents on shelled nuts.

We are still holding part of 1919 and 1920 crop with 1921 crop on trees. You will appreciate our situation.

Protect us from cheap Spanish labor and oblige,

Sincerely, a grower,

I. E. EMERSON.

—

SACRAMENTO, CALIF., *July 7, 1921.*

Hon. SAMUEL M. SHORTRIDGE.

DEAR SIR: I appeal to you to please help to give the almond growers of California better protection against foreign nuts imported. I bought 20 acres three years ago. They are just coming into bearing and hoped they would later help make a living, but under present proposed tariff my place will be a practical loss to me, as well as thousands who have invested their savings will lose also.

Respectfully,

Dr. C. E. FENNER.

—

LOS GATOS, SANTA CLARA COUNTY, CALIF., *July 7, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Washington, D. C.

DEAR SIR: I am very much concerned about the almond industry of California. Our growers can not compete with the Mediterranean shores unless at least a 5-cent tariff on the unshelled product and a 15-cent tariff on the shelled product is secured. I hope we may have your active cooperation and assistance now for the good of our growers.

Very truly,

Dr. A. J. GERLACH,
Glenridge Heights, R. 1, Box 57.

—

VACAVILLE, CALIF., *July 7, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR SHORTRIDGE: I planted an almond orchard 26 years ago. It has proved a bad investment, because of the great expense of harvesting the nuts which have to be sold in competition with Europe's cheap almonds. The only reason why I have not dug up my trees is because I have believed my Government would give the

almond industry in the United States an adequate protective tariff. We need a tariff on shelled nuts three times as great as on almonds in the shell.

Yours very truly,

HESTER X. HARBISON.

—

HAMILTON CITY, CALIF., *July 7, 1921.*

Mr. SAMUEL SHORTRIDGE.

DEAR SIR: Being an extensive almond grower, am asking you to give us a tariff of 5 cents on unshelled almonds and 15 cents on shelled almonds, as we can not compete with the foreign trade at the present rates.

Every cent I have in the world is invested in this orchard and on account of not realizing much of anything on the crops the last two years, am not able to keep up any part of my expenses, let alone pay off a mortgage and support an invalid son and an orphan child, which I have adopted. Under the circumstances, I am sure you do not want myself and hundreds of others to lose their homes to allow foreigners to prosper on our territory.

Thank you.

MRS. ADA WEST.

—

OAKLEY, CALIF., *July 7, 1921.*

Hon. Senator SAMUEL M. SHORTRIDGE.

DEAR SIR: I am very much interested in this tariff business. Please see to it that a 5-cent tariff is put on all unshelled almonds and 15-cent tariff on all shelled. If you don't it is going to work such a hardship on us.

Please give this your immediate attention and oblige.

M. E. CADWELL.

—

ARBUCKLE, CALIF., *July 7, 1921.*

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.

DEAR SIR: As an almond grower of this State I am writing to ask that you favor at least a 5-cent tariff on unshelled almonds and at least a 15-cent tariff on the shelled product.

This is very vital to the industry in this State, as we will be unable to compete with the European market if a less duty is imposed.

Trusting that you will give this matter your favorable attention, I am,

Very truly yours,

C. F. HAMMER.

—

SACRAMENTO, CALIF., *July 7, 1921.*

To the Hon. SAMUEL M. SHORTRIDGE,
Senator, Washington, D. C.:

As a citizen of the United States and a resident of California, I humbly request you use your best efforts to obtain a tariff for the almond industry of California of at least 5 cents on unshelled almonds and 15 cents on shelled almonds.

I am only one of hundreds of wage earners in California who for the past several years have invested practically all our savings in a small piece of land, and planting same to almonds, with the expectation of deriving a reasonable income from same. And now, when our orchards are just on the verge of repaying us, we can not compete with the cheap European product, and unless we can secure the above tariff our years of hard work and saving have gone for naught. I am,

Respectfully yours,

OSCAR N. NELSON,
2110 L Street, Sacramento, Calif.

—

OAKLEY, CALIF., *July 7, 1921.*

SAMUEL M. SHORTRIDGE,
Senate Office Building, Washington, D. C.

DEAR SIR: As an almond grower I request your office to kindly use your utmost efforts in behalf of the almond growers of California in securing a 5 cents per pound protective tariff on almonds in the shell and a 15 cents per pound tariff on almonds that are shelled. I have a 25-acre farm of almonds, and as I derive a living for myself and family through the marketing of this product, I sincerely hope you will be able to help in getting this tariff through, as the almond growers of California have suffered badly in the last two years in not being able to market their almonds.

Respectfully,

F. P. MILET,
Oakley, Calif., R. F. D. Box 54.

—

CHICO, CALIF., *July 6, 1921.*

Hon. SAMUEL SHORTRIDGE,
Washington, D. C.

DEAR SIR: As an almond grower of California I am appealing to you that you and the others representing California in Washington do your utmost to preserve the almond industry to our great State.

Sincerely,

ELMO ARCHER.

—

WINTERS, CALIF., *July 5, 1921.*

Hon. SAMUEL M. SHORTRIDGE,
United States Senate, Washington, D. C.

DEAR SIR: I don't know whether a Senator can help along any House actions or not, but if you can would like to have you work for a 5-cent unshelled and 15-cent shelled tariff on almonds.

Some of us here, and I suppose it is the same in other parts of the State, are having all we can do to hang on and save our places. With $30,000 invested, I am continually running behind in spite of every economy I can use. When it comes to Senate know you will do your part.

Yours truly,

R. M. ROBERTS,
R. F. D. No. 1, Box A 55.

—

CHICO, CALIF., *July 1, 1921.*

Hon. SAMUEL SHORTRIDGE,
United States Senator from California, Washington, D. C.

MY DEAR SENATOR: When you spoke here in Chico I had the pleasure of introducing you to your audience and in so doing laid particular emphasis on the fact that through the election of a Republican Senator we of this district would be more apt to be protected in our almond industry by having a tariff placed on the imported almond. This was the argument made throughout this district, but on reading the dispatches this morning I discover that the proposed tariff on almonds is limited to 4 cents a pound.

Such a figure is absolutely valueless, and almonds might just as well be put on the free list. I am an almond grower myself, and while I am not looking for any extortionate profit, I do believe that we are entitled to a reasonable return upon our investment.

In order to keep the industry alive in California we must have a tariff of 5 cents on unshelled almonds and 15 cents on shelled almonds.

Recently the growers, through their association, erected a factory in Sacramento for the purpose of shelling almonds. At present most of the shelled product comes from Spain, where the work is done by hand under conditions which I am given to understand are far from sanitary. We growers handling a food product decided to put up a clean product for consumption, but it is a foregone conclusion that if the present tariff rate goes through we might as well close our factory and stop further developments on work in connection with the almond in California.

I write this special letter to you, as this was a special argument raised by us in this last campaign against Phelan. The campaign promises of the Republican Party were for a higher tariff, but it appears to me that California products always seem to get it in the neck when it comes down to a matter of tariff.

If the Republican Party can not protect California products through a tariff, then that party might just as well expect to see California go Democratic again. There is a wave of feeling throughout this section of the country and through all the almond-growing districts against the proposed tariff. The growers have labored for years bringing the industry to a paying basis in developing their orchards and finding out what particular species thrive best in California. This can only be done after many years of patience, labor, and expenditure of money.

Now that the almond orchards are coming into bearing we are confronted with a situation which makes our work and expenditure absolutely futile.

In my campaign for the Republican Party I have been repeatedly opposed by nominal Republicans who make the declaration that the Republican high tariff policy is no good to California, because the Republican Party never applies it here. This proposed tariff gives truth to the claim, and frankly, I must say, it takes the heart out of us who are trying to keep the party alive in the State.

Please do not run away with the idea that this is a matter of a few growers protesting. The industry is a well established one and its loss will mean much to the wealth of the State of California.

I am writing to you with the request that you do your very best in protecting your constituents in this regard.

Very truly yours,

HARRY DAVIDS.

Mr. SHORTRIDGE. Mr. President, I must beg the pardon of the Senate for having consumed so much of its time.

Mr. SIMMONS. Mr. President, I hope the Senator will pardon me, but I would like to ask one or two questions about the California almond business.

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from North Carolina?

Mr. SHORTRIDGE. I yield.

Mr. SIMMONS. I would like to have the Senator inform us, because I think it is an important point in connection with the question, what per cent of the almond crop marketed in the United States is shelled and what per cent is unshelled.

Mr. SHORTRIDGE. I think that has been stated.

Mr. SIMMONS. I do not think it has been stated. If it has been stated by anyone I have not heard it.

Mr. SHORTRIDGE. I think it is in the RECORD. I do not recall accurately, but I know that up to a comparatively recent day there has been a very small output of shelled almonds from California.

Mr. SIMMONS. I think the Senator is correct about that.

Mr. SHORTRIDGE. Yes. I was going to add that it is perfectly well known that the imported shelled almonds are shelled in the most primitive way.

Mr. SIMMONS. They are shelled by hand.

Mr. SHORTRIDGE. Yes; they are shelled by hand and by those who work for just enough to enable them to breathe and exist.

In other words, I do not call it pauper labor, I call it poorly paid, unhappy labor; but be that as it may, the methods are primitive. In California we can no more engage in that method than the Senator could in his own great and good State. Wherefore we have built in Sacramento an expensive—I think fully $300,000 it has cost—factory for the shelling of almonds. It can be done. Given, as we claim, the protection we ask, we can shell almonds and enter very greatly into the market of shelled almonds. Hitherto our output of shelled almonds has been limited. The great amount has been imported. We can shell almonds. We can enter into the market and we can give work and employment, and to that extent we will, of course, increase vastly our output not only of shelled almonds, but it will develop further the industry itself. I do not know that I have sufficiently answered the Senator.

Mr. SIMMONS. The fact is that up to this time, by reason of the fact that they have not been able to shell almonds by machinery, they have not put the shelled almonds upon the market to any considerable extent.

Mr. SHORTRIDGE. That, I think, may be admitted.

Mr. SIMMONS. The Senator said they are providing a great plant for the purpose of shelling almonds by machinery. If that plant is successful—and I suppose that matter has been

investigated, and it has been conclusively determined that it will be a successful operating plant——

Mr. SHORTRIDGE. Mechanically, yes.

Mr. SIMMONS. When that happens, when California finds herself in the position where she can shell almonds by machinery probably the labor cost of shelling almonds in this country would be less than the labor cost of shelling them by hand anywhere else in the world, would it not?

Mr. SHORTRIDGE. I think not. Shelling by machinery here presumably would be much cheaper than shelling by hand here. However, that is but one element of the cost.

Mr. SIMMONS. Is there anything that can be done now, and is being done now successfully with machinery which can be done anywhere else as cheaply by hand labor? For instance, is there anywhere in the world that a shoe can be made by hand labor as cheaply as it can be made in this country by machinery? Is there anywhere in the world that a pair of stockings can be knit by hand as cheaply as by machinery in this country? Would the Senator contend that if we could provide suitable and efficient machinery for shelling almonds we could not, with that machinery, shell them at a less labor cost than they could be shelled for anywhere else in the world or even here by hand?

Mr. SHORTRIDGE. May I answer in a word, having regard to the cost abroad and those engaged in the shelling of almonds abroad, that I can not imagine there could be any process, even by machinery, having regard to the cost of machinery and maintenance and labor employed, which would be as low or as little as is paid abroad.

Mr. SIMMONS. But those people have to live. They can not do it for nothing. It may take 100 people, shelling by hand, to shell as many almonds as one man could shell with a machine in a day. Those 100 people may be paid a very small wage each, but all the 100, if they live at all, would have to receive enough to equal the wages of the one man who operated the machine.

If the Senator will pardon me, in some sections of Europe, I think, even to this day they cut their wheat and their rye and their oats with the old hand scythe. In this country we cut those products by machinery. Would the Senator contend for a moment that the labor of Europe or anywhere in the world was so low as compared with American labor that they could cut wheat at a less labor cost with the old hand scythe than we could cut it here with our highly improved machinery?

Mr. SHORTRIDGE. I suppose the Senator is entirely familiar with conditions prevailing in practically all of the European States or the Asiatic countries, as well as conditions prevailing in our own country. In a little, limited area of wheat growing in a little, secluded valley in the Balkans it may be that a poorly fed and clothed Rumanian might cut the grain at a given 5 cents a day. It might be that upon a great wheat field in Montana they could cut the grain at a given price. But when we compare the style of living, the clothes, the food, the carpets on the floor, the pictures on the walls, the music, the schoolhouse, the church, the newspaper—when we compare American conditions with conditions prevailing abroad, I am sure the Senator does not wish to reduce us to the conditions prevailing there.

Mr. SIMMONS. No; I am simply trying to show to the Senator and to the country that where almonds are shelled by hand in one country and shelled by highly efficient machinery in another country the wage paid the laborer for the shelling by hand is not comparable to the wage paid the laborer for the shelling by machinery, and that the wage paid in the two cases is no index whatever of the ultimate cost of production. In other words, in cases of that sort we can not take the wage paid for the purpose of making a comparison of the cost of production, because we may have 100 hands engaged in shelling almonds for a whole day, but they would not shell as many almonds in a whole day as the one man operating a machine would shell in the same length of time. We can not compare, therefore, the wage paid to each one of those 100 men shelling by hand with the wage paid the one man shelling by machinery. I think that is about the way the Senator has reached his conclusion that the shelled almonds must have a duty about 300 per cent higher than the duty on unshelled almonds, because he has estimated that there will be an immense difference in the cost of shelling almonds in the foreign country and the cost of shelling almonds in this country when he begins to shell almonds in this country, which he has not begun to do yet.

Mr. SHORTRIDGE. Oh, yes; we have. It is conceded on all hands that the ratio abroad is as 4 to 1, but it is now proved that in America the ratio is as 3 to 1. The difference between shelled and unshelled was stated in the figures brought out. That is admitted on all hands. With respect to the other House, that was the mistake which the House made in taking the ratio as 1 to 4. The Senate committee puts it as 1 to 3.

Mr. SIMMONS. But let us keep to the concrete proposition. Does the Senator contend that the labor cost of shelling almonds by machinery will be as great as the labor cost of shelling them by hand?

Mr. SHORTRIDGE. There are various elements to be taken into account—the capital invested, the amount of output, the number of employees, and so forth—and it is very difficult to compare the cost abroad with a given cost in California. There are many elements that enter into it, but it seems to me—not only seems, but I am very sure—that the calculations of those familiar with the whole subject are correct, namely, that if it be necessary, as claimed, to have a 5-cent duty on the unshelled almond as it is picked from the tree and cured or made ready for market, there is a necessity for three times that rate for the shelled almond.

Mr. SIMMONS. Is that because of the higher cost of shelling here as against the cost abroad?

Mr. SHORTRIDGE. It is one of the elements that enters into it, naturally.

Mr. SIMMONS. And the Senator thinks after they get their machinery at work out in California the difference in the labor cost will be so great as to justify this high differential?

Mr. SHORTRIDGE. Unquestionably. I do so contend.

Mr. SIMMONS. The Senator does admit, however, that up to this time there has been a very limited quantity of shelled almonds placed upon the American market?

Mr. SHORTRIDGE. Yes; though, of course, "limited" is a relative term.

Mr. SIMMONS. I want to ask the Senator now if at this time there are any domestic shelled almonds held for the market in this country?

Mr. SHORTRIDGE. I think there are.

Mr. SIMMONS. I find in one of the telegrams which I put into the RECORD the other day, to which the Senator from California has referred, a statement to the effect that the association in California which controls the sale of almonds have no goods for delivery. The telegram asks the question:

> Why should Representatives vote for such an increase when the California Almond Growers' Exchange can not even deliver goods?

Mr. SHORTRIDGE. The almonds may now be in the hands of brokers or local houses here in the East.

Mr. SIMMONS. Then I find a statement made in another one of these telegrams to the effect that a very small proportion of shelled almonds which are produced in this country are used by the manufacturers of candies, and for the reason that they are not so desirable, that the public does not like the almonds which grow in California, that the imported almond is much preferable. I find this in a statement from the New England Confectionery Co.:

> We are speaking now of shelled almonds and walnuts, and not nuts in the shell. Why should we manufacturers be forced to pay such an increase when the total amount of almonds shelled in California yearly would not supply two of our manufacturers in this country for one and one-half days?

Mr. SHORTRIDGE. Just a word.

Mr. SIMMONS. The statement which I have just read is from the New England Confectionery Co., and is to the effect that the total amount of California shelled almonds at the present time would not supply two of the great candy manufacturing concerns in this country for two days.

Mr. SHORTRIDGE. I may in a word reply to the last thought suggested by the Senator from North Carolina. There are always two arguments advanced in opposition to the almond industry—first, that we can not produce almonds in quantity; second, that we can not produce in quality. Our position is that, given adequate protection, we can produce in quantity sufficient and, beyond all controversy, that we can produce in quality. If there were an embargo to-day, established by law or created by war, we should find the New England candy men crying out for almonds from California, and there would be no objection whatever to them on the score of quality.

Mr. SIMMONS. I do not desire to discuss that question with the Senator from California, because I know nothing about it. I simply know what the manufacturers of confections have stated in their telegrams. If we should impose this duty of 15 cents a pound on shelled almonds which are imported into this country, we should have this situation—and I want to hold the Senator to it and to get his answer to it—with no shelled almonds of American production on the market and none for delivery, all the shelled almonds would have to come from abroad and would have to pay the 15 cents duty until the almond growers in California were prepared to supply shelled almonds.

Mr. SHORTRIDGE. We shall get them in California very speedily.

Mr. SIMMONS. If they get them at all they will probably get them rather slowly; they have not the mills yet erected to shell the almonds.

Mr. SHORTRIDGE. Oh, yes; there is a magnificent mill there for that purpose.

Mr. SIMMONS. Is the mill in operation?

Mr. SHORTRIDGE. There is not a wheel turning. Why? Because there is no market.

Mr. SIMMONS. There is no market and there are no almonds.

Mr. SHORTRIDGE. We shall have the almonds there to turn the wheels.

Mr. SIMMONS. And yet the Senators from California are asking Congress immediately to impose a duty of 15 cents upon every pound of almonds which is used in this country, when in California they have no almonds ready to be marketed to be protected against the foreign imports.

The Senator from California says that they will have some in the future, but we have got to take that for granted. Would it not be time enough for the Senator to come and ask that this 15 cents duty be imposed upon the almonds after the California producers have some shelled almonds to sell or at least until after they have a reasonable quantity of shelled almonds to put upon the American market?

Mr. SHORTRIDGE. Mr. President, to make an end of my remarks, I answer the Senator from North Carolina by saying that if we should wait until those who believe, as the distinguished Senator from North Carolina believes, we never should have any shelled almonds; we should cease to have any unshelled almonds. Almond growing is in a sense what might be called a new industry with great possibilities. We seek to keep what we have and to increase it. The theories of the Senator from North Carolina and myself differ radically. I hold to the notion expressed here again and again that in California we can produce almonds in quantities which are ample and in quality unexcelled.

Mr. SIMMONS. But the Senator——

Mr. SHORTRIDGE. Just let me finish the thought. As to the theory, whether it be that of Cobden or Hamilton, Washington or Calhoun, we may differ, but we are not discussing that question now. We simply come here and say that under present conditions we can not compete with the cheaply produced unshelled or shelled almonds of Europe, and it is for us legislators to determine whether we shall maintain an American industry which will serve to bring about competition with the imported article, and at the same time add to the prosperity of State and Nation, or whether we shall abandon an American industry and again become dependent upon the foreign industry, which will speedily become a monopoly over which we shall have no control. Let us as to this and all our industries stand up for America.

Mr. SIMMONS. Mr. President, I think the almond industry in the Senator's State has been prospering pretty well up to this time. I do not think any money has been lost in California in the almond business. The lands cultivated in almonds are, as I understand, valued at about $500 an acre. There is no evidence that the almond industry up to this time has not been prosperous, at least as well as any other industry, certainly any other agricultural industry. The almond growers have been selling in considerable quantities shelled almonds, but have been finding a ready market for their unshelled almonds. I have heard no complaint on that ground. They do not seem to have a large quantity of either shelled or unshelled almonds on hand. The truth is there is not and never has been any considerable demand in the markets of this country for the California shelled almonds, partly for the reason that the California shelled almonds do not seem to keep so well as the shelled almonds grown abroad, partly for the reason that it is said to contain more pulp and therefore not so desirable for the purpose of making confections as is the foreign almond. There has been no market for the domestic shelled almond, and, because there has been no market for them, they have not been shelled.

Senators need not tell me that in America, with all of our initiative and with all of our energy, if the almond growers of California could have found a market for their shelled almonds they would not have long ago provided ample up-to-date machinery and put it in operation for the purpose of shelling their almonds. In this situation, if we should adopt the Senate committee amendment and impose the duty proposed, it would be the first time in my knowledge of tariff making that we imposed a high duty such as this—for this is a very high duty, being 275 per cent higher than the rate in the present law and 150 per cent higher than the Payne-Aldrich rate—for the purpose of protecting an American product, when it was disclosed in the argument there was not any of the product sought to be protected on sale in the American market. We are asked to provide this rate of duty simply upon the theory that if we will impose it possibly in the future they will be produced.

Mr. President, if we impose this duty under such circumstances we can not do it for the purpose of protection, because there is nothing to protect. Almonds have been raised in California, I presume, for 25 or 30 years, and yet the industry has no shelled almonds on the market to-day, according to the telegram from which I have quoted, and there is no American product to be protected. Therefore, Mr. President, if we impose it, for the present, at any rate, it will be a pure revenue duty and not a protective duty, and I think not only for the present but for a long time in the future. Even if the almond growers of California are successful in their shelling processes and in the expansion of their business, it will be a long time before they will be able to supply even a small part of the demand of the country for the unshelled almonds.

Mr. SHORTRIDGE. Mr. President, if the Senator will allow me, it is not necessary for our argument or for our position for me to add that, speaking for myself, I hold to the theory that if it is possible to develop an American industry in the State of the Senator from North Carolina or in the State of my friend from Mississipi, if it is possible to develop an industry whereby the people of the several States may have profitable employment I would impose a tariff duty on the imported product. Why? In order that an industry might be developed so that we would not become dependent upon the foreigner. In the end the prices would be no greater. I challenge the learning of my friend from North Carolina to point out in this country where, after we have developed an American industry, the cost of the product is more than when we were formerly dependent upon the imported article.

Mr. SIMMONS. Mr. President, I am not going to enter upon a discussion of the rudimentary principles of the tariff as understood and enunciated by the other side. I am discussing this case upon the facts, and I am attempting to show that, according to the facts, even from the standpoint of the Republican theory, there is no present ground for a duty, especially a duty of the proportions proposed. In the telegrams of which the Senator has spoken and in connection with which he has taken occasion to say some very delightful things about me for which I wish to thank him, the statement is made that the 15-cent duty upon shelled almonds will be practically prohibitory; that the consuming public will not stand the prices that the confectioners will have to charge for this class of sweets if they shall have to pay the proposed high rates of duty for the foreign product, there being no domestic product which they can buy, and therefore they are compelled to buy the foreign product.

Under the theory which the Senator has just invoked I do not recall any instance where any industry has come and asked us to give it in the very beginning, in the very initiation, a prohibitive duty to protect an industry that does not exist in the United States; and practically the industry of shelled almonds does not exist in the United States. Although you have been in the almond business for 25 or 30 years, multiplying each year your acreage, the shelled-almond industry does not exist. You have no goods to-day which you could deliver to these candy producers if they demanded them of you, so that they must necessarily pay these high rates of duty while you are developing your industry—an industry that practically does not now exist—and you can not give us any reasonable information as to how long it is going to take you to supply a reasonable percentage of the demand of the American consumers of shelled almonds. You do not know yourselves. It depends upon the growth of your trees; it depends upon the success of your newly installed shelling machines; it depends upon a great many contingencies, all in the future.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

Mr. SIMMONS. Therefore—if the Senator will pardon me one minute—I say that if this duty be imposed at this time it can not be for the purpose of protection, because there is nothing to protect. It must be for the purpose of revenue; and does the Senator want to impose for revenue purposes a duty that the consumers of the product say will be prohibitive?

Mr. SHORTRIDGE. In the first place, it would be justified as a revenue measure.

Mr. SIMMONS. If it is prohibitive?

Mr. SHORTRIDGE. In the second place, it would not be prohibitive; and in the third place, according to the Senator's argument, this industry never would grow, never would develop, and we would forever be dependent upon the foreigner.

Mr. SIMMONS. I did not say that. What I have said is that when an industry in contemplation, in anticipation, comes

and asks for protection before it becomes a reality, before it is brought into being, it at least ought not to ask for a prohibitive duty. It ought to be satisfied with a very moderate duty until it does get into existence. That is the point I am making. The point I am making is that you have no unshelled-almond industry, and you are asking us to give you a duty to foster an industry that if it exists at all is in swaddling clothes, and you want a prohibitive duty to begin with. Out of those many telegrams that you speak about, presented by me, I think nearly a fourth of them say that the duty will be absolutely prohibitive.

Mr. SHORTRIDGE. The trees are in existence, the factory is in existence, the men and women are in existence, the soil is in existence, the sunlight of heaven is in existence, and the moon showers down her silver; so that this industry is in existence—in esse and not in futuro.

Mr. SIMMONS. The industry exists, but the marketable usufruct of the industry is wanting. There is no usufruct on the market or in existence to supply in whole or part the daily demand.

The PRESIDING OFFICER. The question is on the amendment of the committee.

Mr. WALSH of Massachusetts. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. FERNALD (when his name was called). I transfer my pair with the Senator from New Mexico [Mr. JONES] to the Senator from Michigan [Mr. TOWNSEND] and will vote. I vote "yea."

Mr. SWANSON (when Mr. GLASS's name was called). I desire to announce that my colleague [Mr. GLASS] is detained from the Senate on account of sickness. I will let this announcement stand for the day.

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Making the same announcement of the transfer of my pair as on a previous roll call, I vote "yea."

Mr. POMERENE (when his name was called). Again announcing my pair for the day with my colleague [Mr. WILLIS] I find that I can transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK], which I do, and will vote. I vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote as to my pair and its transfer, I vote "yea."

Mr. UNDERWOOD (when his name was called). I transfer my pair with the Senator from Massachusetts [Mr. LODGE] to the Senator from Rhode Island [Mr. GERRY], and will vote. I vote "nay."

Mr. WARREN (when his name was called). I transfer my general pair with the junior Senator from North Carolina [Mr. OVERMAN] to the junior Senator from Michigan [Mr. NEWBERRY], and will let that transfer stand for the day. I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. BALL. Transferring my pair with the Senator from Florida [Mr. FLETCHER] to the Senator from Iowa [Mr. CUMMINS], I vote "yea."

Mr. TRAMMELL. I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Montana [Mr. MYERS] and will vote. I vote "nay."

Mr. CURTIS. I desire to announce that the Senator from New York [Mr. CALDER] is detained on official business.

I have been requested to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Kentucky [Mr. ERNST] with the Senator from Kentucky [Mr. STANLEY].

The result was announced—yeas 39, nays 17, as follows:

YEAS—39.

Ashurst	Frelinghuysen	McCormick	Poindexter
Ball	Gooding	McCumber	Rawson
Borah	Hale	McKinley	Shortridge
Broussard	Harreld	McLean	Smoot
Bursum	Johnson	McNary	Spencer
Cameron	Jones, Wash.	New	Sterling
Capper	Kellogg	Nicholson	Sutherland
Curtis	Kendrick	Norbeck	Warren
Fernald	Keyes	Oddie	Watson, Ind.
France	Ladd	Phipps	

NAYS—17.

Caraway	King	Shields	Walsh, Mass.
Dial	La Follette	Simmons	Walsh, Mont.
Harris	Lenroot	Swanson	
Harrison	Pomerene	Trammell	
Reflin	Sheppard	Underwood	

NOT VOTING—40.

Brandegee	Ernst	Nelson	Robinson
Calder	Fletcher	Newberry	Smith
Colt	Gerry	Norris	Stanfield
Crow	Glass	Overman	Stanley
Culberson	Hitchcock	Owen	Townsend
Cummins	Jones, N. Mex.	Page	Wadsworth
Dillingham	Lodge	Pepper	Watson, Ga.
du Pont	McKellar	Pittman	Weller
Edge	Moses	Ransdell	Williams
Elkins	Myers	Reed	Willis

So the amendment of the committee was agreed to.

Mr. SMOOT. I ask that paragraph 758 be now taken up for consideration.

The PRESIDING OFFICER. The amendment of the committee will be stated.

The READING CLERK. On page 111, paragraph 758, on line 1, it is proposed to strike out "2½" and insert "4," so as to read:

Walnuts of all kinds, not shelled, 4 cents per pound.

The PRESIDING OFFICER. The question is on the committee amendment.

Mr. JOHNSON. Mr. President, I should prefer, of course, that we might have immediately a vote upon these amendments; but the Senator from Massachusetts [Mr. WALSH] tells me that he desires to present certain facts, and he has suggested that I present the reasons which actuate us in asking these rates. I am very glad, indeed, therefore, to provide him and the other Members of the Senate with a demonstration of the necessity for the rates upon walnuts which have been given in the bill by the Finance Committee.

Walnuts are somewhat unlike almonds. While, of course, it is important that upon both the shelled and the unshelled almonds a tariff should be levied, and while, of course, it is important that upon both shelled and unshelled walnuts a tariff shall be levied, the importance in the two instances perhaps is in inverse order. The essential rate in the almond tariff was the rate upon the shelled almonds, the very important rate upon the unshelled. The essential rate concerning walnuts is upon the unshelled, the very important upon the shelled.

The walnut tariff and the history of the walnut industry illustrate the wisdom and the beneficence of the protective tariff policy. Walnuts are not only a luxury, if you choose to call them such, but walnuts are a food product, and a food product of the very highest value. I think the analyses of walnuts demonstrate that there are more vitamines in the walnut than in almost any other food product. So when we are dealing with the walnut we are dealing not only in what may have been termed, in dealing with the almond, a luxury, but we are dealing with something that we ought to be able to produce in quantity and that we ought to foster and encourage in production because of its very high food value.

The rates which have been accorded to walnuts in the past are as follows: Under the Payne-Aldrich law, 3 cents upon the unshelled walnuts and 5 cents upon the shelled. In the Underwood bill it was 2 cents and 4 cents. In the bill which passed the House it was 2½ cents and 7½ cents; and in the amendment now before the Senate the rates are fixed at 4 cents and 12 cents.

Ninety per cent of the domestic output of walnuts are unshelled. The domestic production now is about 56,000,000 pounds, and that constitutes 70 per cent of the American consumption of unshelled walnuts. The present investment in the walnut industry is greater than $110,000,000. The wholesale value annually at the point of production is over $12,000,000.

There are to-day 89,000 acres of walnuts on the Pacific coast; 64,000 of these are bearing, 25,000 are nonbearing. There is, I may add in passing, enough acreage in the State of California to supply all the world, and the production is increasing on the Pacific coast now at the rate of 100 per cent in every four years.

The walnut is one of the slow bearing of our fruit trees. It does not reach its maturity with the rapidity with which other trees do, and consequently the investment in a walnut grove is greater than in other trees and a longer time elapses before there can be any return upon it.

The walnut grower must spend the best portion of his life in bringing his grove into a profitable bearing state. The tree grows to a very large size, and indeed, from my point of view, it is one of the most beautiful of all the trees we have. To my mind there is no picture quite so charming as is presented by the walnut groves in southern California and in parts of Oregon, groves where the trees are planted symmetrically and where they have grown to full age, with an appearance somewhat like the umbrella tree, but really more beautiful. The spread of a full-bearing tree is fully 50 feet, and there are only 12 to 17 trees planted to the acre.

The walnut, of course, differs very much from annual crops, where the grower can rotate his crop from year to year and abandon his business without loss of any capital investment.

The walnut grower can do nothing of the sort. He of necessity makes a heavy capital investment in the first place, then a heavier capital investment in constantly caring for his grove during the period between planting and profitable bearing. He can not rotate his crop and can only abandon his business at absolute ruin to himself.

As I stated a moment ago, the output of American walnuts for the past 12 years has been doubling on an average every four years, and there is every indication that this ratio of increased production will continue for the next 10 or 12 years. The rapid increase proves that the point of market saturation will be reached within a very brief period, probably the next year or two. The American-grown product will not only be available in sufficient quantities to supply the entire normal consumption of the United States but there will be a large surplus, which will make for competition in the markets so keen as to force prices down to lower levels, regardless even of foreign competition.

Mr. President, these trees are bearing in about 10 years. They reach full bearing in 15 to 25 years. It will be obvious, therefore, that while under the provisions of the Payne-Aldrich law planting began in the State of California and that planting has continued under the provisions of that law, it is only now that the trees bear sufficiently to make the product really an article of commerce.

Exclusive of interest on investment, it costs in this country 15 cents a pound to raise walnuts. The labor cost is 65 per cent of that, or about 10 cents. The labor cost in America in raising walnuts is 10 cents a pound. We come in contact with and we have to meet in competition France and Italy, and in the last two years, perhaps greater than either, or more dangerous and perilous than either, China and the Orient. While our labor cost is 10 cents a pound, the labor cost in France is 2½ cents a pound, the labor cost in Italy is 1 cent a pound, and, from the best available data, the labor cost in China is one-half of 1 cent a pound.

It will be observed, therefore, that the difference in labor costs between America and foreign countries is 7 to 9 cents a pound. The duty that is asked upon the unshelled walnut is less than one-half the difference in the labor cost here and abroad. I want to impress that upon my brethren, because if a tariff should be determined in the fashion the Senator from Massachusetts has stated it ought to be fixed, then there could be no complaint upon his part, or on the part of any of his Democratic colleagues, against the duty that is asked upon this particular product.

In transportation, again we are at a disadvantage. Since 1913 freight has increased 1 cent a pound upon our products. One cent a pound added to what the Payne-Aldrich law gave us, 3 cents a pound, would make the duty now 4 cents a pound, and without considering the additional labor cost, without considering all of the changed conditions which have come in the metamorphosis of the world from the war, thinking only of the increase of 1 cent a pound which has occurred in transportation alone, by the bill under which the orchards were planted, in the main, in California, we would, were it to be enacted again to-day, be given as the very minimum of protection 4 cents per pound, which is all that is here sought.

The foreign freight rate is 80 cents per hundred pounds. The American rate is $2.40 per hundred pounds. The foreign rate to New York, Boston, Philadelphia, and New Orleans is only 40 cents per hundred pounds from the countries of Europe with which we have to compete with our California raised walnuts. That rate of transportation is only one-sixth of the rate of transportation we are compelled to pay upon our transcontinental roads.

First, therefore, they may raise their walnuts for from 7 to 9 cents a pound more cheaply than we because of labor conditions abroad and at home. Next, they may ship them to the greatest markets there are in this country for one-sixth the sum it costs us to transport our walnuts upon our railroads; and when these things are shown, and they can not be gainsaid, we believe we present a case not only justified and demonstrated but a case which requires and demands imperatively the protection we ask.

It needs no statement of mine to make perfectly apparent that conditions were vastly different when the original rates were fixed under former tariff bills, and those changed conditions, if we acted upon the same theory as was acted upon when former bills were enacted, would give us higher rates than those contained in this bill.

Do you realize, sir, that in 1864 there was a 3-cent duty—a 3-cent duty that was reestablished in 1883, and that that 3-cent duty continued until the Underwood law was passed? So what we are seeking to-day is really nothing new, and is not at all out of proportion; indeed, is less, considering changed conditions, than would have been accorded under the older bills and under the system which was in vogue in the past.

The United States is the largest consuming market of walnuts in the world. Here we consume 80,000,000 pounds annually, and because the United States is the largest consuming market for walnuts we have become the dumping ground of walnuts raised in every country in Europe where there is culture at all, and in the last two years we have become the dumping ground of the Orient, and from China and Manchuria we are being flooded at present with walnuts.

That the walnuts produced in this country are infinitely superior to those produced abroad, I do not think admits of question at all. They are produced in different fashion. We maintain our regular groves in the manner in which I have detailed. They must be irrigated a number of times yearly. The nuts are graded with extraordinary care after they are picked from the trees, and every sanitary condition prevails in the culture of this product in the West, while there is no such care in the production of the walnuts which come from abroad.

The walnut industry found it essential, like most industries of this sort, to market by cooperation, and formed its nonprofit cooperating society in order that it might obtain the very best prices that could be obtained for those who produce the walnut in the first instance.

The Walnut Growers' Association presents indeed as fine a business acumen as any association in the country. It sells at the lowest possible price that it can and it endeavors to bring, of course, some return to its members. There is the slightest spread in this business between the consumer and the producer that there is in any business with which I am familiar. It speaks volumes for the mode of doing business with the walnut growers and the Walnut Growers' Association that they have maintained this slight spread between the producer on the soil and the ultimate consumer throughout the land.

The sales policy of the domestic walnut growers is built up entirely on the theory that quality pays. It has long been recognized by the American walnut producers that domestic consumption can only be increased by furnishing the American consumer with an article that is as near perfect as American ingenuity and skill can make it. For this reason nothing but the very best selected stock is packed under first grades. Domestic shippers are given positive guaranties to the trade that their deliveries will crack 90 per cent perfect. The average of all American-grown shipments for the past several years have cracked 95 per cent perfect.

American producers, in order to avert financial disaster, have made almost superhuman efforts along merchandising lines. For many years prior to the enactment of the Payne-Aldrich bill the American walnut growers were operating at an actual and considerable net loss. During this period many full bearing groves were uprooted and other crops substituted. It was found that the producer was only receiving about one-third of the price charged the consumer for his product. Finally a cooperative, noncapital, nonprofit sales organization was developed, which now markets over 75 per cent of the walnut production of America. Through the efforts of this organization all speculation in the product handled has been eliminated. The number of dealers through whose hands the product formerly passed has been cut in two. The product has been so thoroughly standardized and merchandising methods so highly perfected that the ratio between consumers' cost and producers' selling price has finally been reversed. So to-day the consumer receives an almost perfect product at but 35 per cent advance over what the producer receives, or conversely the producer receives 65 per cent of the consumers' price. The 35 per cent spread between the consumers and producers' price includes all freight charges and both wholesalers and retailers' profits. We believe this margin between producers and consumers' price to be less than that on any other nonperishable product of the soil. This is but one example of the many economies which market conditions have forced upon American producers and no further perceptible savings either along producing or marketing lines can be expected.

The 4 cents per pound duty would make it unprofitable for foreign importers to ship to this country the poorest grades and qualities of walnuts. Therefore the quality of importations would be improved, which, in the long run, would prove of benefit to both the American and foreign producer as well as a source of great satisfaction to the American consumer.

The duty proposed by us would add to the revenue of the United States Treasury approximately $1,750,000 annually above that yielded by the present rate.

In America the producing of walnuts is a highly specialized business. It is in no way a roadside crop or by-product of the soil as in foreign countries. Over 85 per cent of the American

walnut growers depend exclusively on the production of walnuts for their livelihood and produce no other crop. The cultural methods are as highly developed as those of any fruit-producing industry. To obtain the best results it is necessary for the growers to fertilize annually, irrigate at least three times a year, and cultivate the ground from five to six times each season. It is only the richest land that will satisfactorily produce walnuts. Added to this, peculiarly adapted climatic conditions must prevail. Interior sections are usually too hot in summer and many other localities are too susceptible to frost in the early spring or late fall. Consequently the available area for producing walnuts is somewhat limited, for out of nearly 100,000,000 acres in California only about 300,000 acres are suitable for walnut growing. The land suitable for the production of this crop is also suitable for producing beans, many kinds of vegetables, and in some cases citrus and deciduous fruits. Consequently, in order that the industry may survive and prosper, the profits per acre must be kept in harmony with the average income that can be derived from the land used for producing any of the other crops referred to. There are at least 200,000 acres of land in California alone still producing only annual crops which are very properly suited for the production of walnuts. With fair protection it is only reasonable to suppose that enough of this acreage will shortly be planted to keep the American production well ahead of the domestic consumption.

In all European countries walnut culture is principally a by-product. Walnut trees are set out in a rather haphazard manner in pastures, as roadside borders, and on otherwise rather worthless hill slopes. Irrigation is unheard of. Little or no cultivation is practiced and about the only cost is the harvesting cost. The report of Mr. Thomas W. Murton, for many years American vice consul at Grenoble, France, the center of the French walnut production, and who is perhaps the best posted authority on European walnut culture, shows the mode of cultivation abroad, and this report I desire to have printed in the RECORD as an appendix to my remarks.

The PRESIDING OFFICER. Without objection, permission is granted.

(See Appendix A.)

Mr. JOHNSON. Mr. President, I ask leave to annex as a part of my remarks various exhibits, as follows:

Exhibit A: Amount invested in the walnut industry in California alone.

Exhibit B: Number of acres, bearing and nonbearing, devoted exclusively to walnut culture in California and Oregon.

Exhibit C: Out-of-pocket cost of producing walnuts in the United States compared with European costs, also labor costs in the United States compared with that in Europe, particularly Italy and France, and cost of farm labor in China.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Appendix B.)

Mr. JOHNSON. Now, Mr. President, considering the extraordinary investment in walnut groves, considering how the walnut tree represents a generation, really two generations, before it can become profitable to the owner, considering the fact that there has been a rate of duty of 3 cents in the past, considering also the changed conditions, and that it would not be inappropriate to make the rate 6 or 8 cents now, while but 4 cents is asked in this instance, it would seem that without further argument even Senators on the other side of the Chamber ought to agree that this duty be given to us.

APPENDIX A.

STATEMENT ON THE COST OF PRODUCTION OF THE WALNUT IN FRANCE BY THOMAS W. MURTON, GRENOBLE, FRANCE, DECEMBER 30, 1920.

The walnut is a tree that in France grows freely all over the country, mostly in its natural state, and without any particular care or attention. Only in one or two places is it really cultivated, which consists mainly in grafting, namely, in the department of Dordogne, which produces a fairly good quality known as Cornes, and in the department of Isere, where along both sides of the river of that name, known as the valley of the Greswandan, the fine so-called English walnuts, otherwise Mayettes, are grown.

Formerly farmers and peasants attached but little importance to the walnut, which was planted principally for its wood. It is only in recent years that it has become interesting for its fruit by reason of the high value it has attained. Thus scientifically planned and laid out orchards like those of California are practically unknown here. There are plantations, of course, and plenty of them; but mostly all with a double purpose; that is to say, the production of other field crops at the same time, walnut crops being generally considered as a side issue.

Under these conditions it is difficult to estimate the cost of production of walnuts alone, for in nine cases out of ten the trees benefit from the care given to other crops growing around them and which otherwise they would not get. When trees stand on ground unutilizable for other crops, they generally perish from sheer negligence because the earth around the roots is rarely, if ever, loosened and no manure used. And as for pruning, this is a luxury rarely resorted to as being too costly or from want of time, so the trees carry deadwood from year to year until it finally drops or is blown off by a stiff wind.

Of all the proprietors of medium sized plantations that I have consulted as to their annual expense of maintaining them not one in his reply has stated the honest truth. All have exaggerated the cost, either because they are afraid of compromising themselves or of giving away something—what they do not know.

Of all the figures submitted by the different parties those of M. A. Buisson, of Sorges, Dordogne, appear to me to be the most sincere, as he frankly states that he cultivates other crops at the same time. For 120 trees he gives a rendering of 3 tons and a cost of maintenance of 2,400 francs ($138, or 2½ cents per pound). Admitting that he sold his nuts at 240 francs ($13.80) the hundred kilos (220 pounds, or 6½ cents per pound), which is the lowest price quoted, the cost of production would be about 33 per cent of the value. But as two crops were tended at the same time, I consider the figure 33 should be cut in half. In my opinion the maintaining of an orchard dedicated solely to the production of walnuts and receiving every care and attention should not exceed 40 per cent of their value. I regret exceedingly that I am not able to give you more precise information, but with the best wish such is not possible, seeing that conditions of production in France differ so greatly with those in vogue in the United States.

It is convenient to call to mind here that in France the land is cut up mostly into small parcels, and many are the families that contrive to live comfortably and save money on the production of a few acres. Most peasant farmers possess a few walnut trees scattered over their property, which receive no special attention and profit only from the care given to other crops, and as this class forms the vast majority of agriculturists, it will be readily understood how difficult it is to establish even an approximate idea of the cost of production of walnuts. As a matter of fact it is exceedingly small, and by many is considered negligible.

Not a quarter of the persons to whom I addressed a questionnaire have responded to it. I inclose herewith what answers are at hand, untranslated, as the time is too short to undertake this work.

COST OF PRODUCTION OF WALNUT MEATS.

The obtaining of data on this subject has been a much more simple operation than is the case with walnuts in the shell. Crackers pretend that there is practically no saving by the employment of a machine, although the cost is only 2 francs per 100 kilos as against 12 and 15 francs by hand, because the shell being only broken the meat has to be picked out and separated the same as by hand. In general, the cost of cracking and putting up 100 kilos of walnuts ready for shipment, without taking into account the cost of the merchandise, averages about 45 francs. This figure may vary a little, accordingly as the nuts cracked are large or small. This sum, decomposed, would be about as follows, according to M. Eugene Ferrieux, of Romans, Drome, who has favored me with a very complete summary of the situation. I transmit his letter, which, however, I have not had time to translate.

	Per 100 kilos (220 lbs.) rendering 55 pounds good meats.	Equivalent in United States exchange.	Cost per pound United States exchange.
	Francs.		
Transportation of merchandise from seller's to buyer's premises and brokerage	10.00	$0.58	$0.01
Cracking by hand	12.00	.67	.012
Sorting	6.60	.40	.008
Case and packing	5.00	.29	.005
Manipulation, etc.	10.00	.58	.01
	43.60	2.52	.....
Contingencies	1.40	.08	.....
	45.00	2.60	.035

This is certainly not an extravagant price and must compare very unfavorably with that paid for the same work in the United States. It would seem then only just and equitable that an increased tariff should compensate for such difference.

THOS. W. MURTON.

The following is a copy of a questionnaire sent by Mr. Murton to a number of the principal growers of walnuts in the various producing districts of France:

"To complete a study on 'The Walnut and its Propagation,' which I am in the act of preparing in a spirit of propaganda, I desire to know approximately what is the cost of production per annum and per hundred kilos.

"As I believe you will not find any objection to favor me with this information, I should be greatly obliged if you would kindly fill out and return to me as soon as possible the inclosed questionnaire.

"With my anticipated thanks, I am,

"Yours truly,

"T. W. MURTON."

QUESTIONNAIRE.

1. How many producing walnut trees do you possess?
2. What is about the quantity of nuts they render annually?
3. What are your expenses for maintaining these trees, viz:
For labor?
For fertilizer?
For gathering, sorting, washing, sulphuring, etc.?

The following replies are typical in averages of all received:

From M. Minet, N. Quentin, December 22, 1920:

"Owns 150 trees, thickly planted. Average production, 1,500 to 2,000 kilos (4,000 pounds); manual labor, 400 francs; fertilizing, 500 francs; gathering, etc., 300 francs; total, 1,200 francs. (Equivalent, United States exchange, $68.40; 4,000 pounds at cost of production of $68.40; average cost of production per pound, 1.71 cents.)"

From Joseph Marchand, Polinas, France, December 26, 1920:

"Owns 500 walnut trees. Average production, 3,000 kilos (6,600 pounds). Cost: Manual labor, 3,500 francs; fertilizer, 1,200 francs; gathering, etc., 2,000 francs; total, 6,700 francs. (Equivalent, United States exchange, $381.90; 6,600 pounds at cost of production of $381.90; average cost of production per pound, 5.8 cents.)"

From L. Maire, Dordogne, France, December 23, 1920:

"Answers: The only expense is in connection with picking them."

From A. Buisson, Sorges, France, December 22, 1920:

"Owns 120 trees. Produces 3 tons (6,000 pounds). Cost of labor, 1,200 francs; fertilizer, 600 francs; gathering, etc., 500 francs; total

cost, 2,300 francs. (Equivalent, United States exchange, $131.10; 6,000 pounds at a cost of production of $131.10; average cost of production per pound, 2.2 cents.)"

From Marc Bussiere, Brantome, Dordogne, France, December 22, 1920:

"I have not forgotten your pleasant visit, and I shall be delighted to be useful to you in giving you what information I can on the cultivation of our walnut trees.

"In Perigard generally and at Brantome the walnut is raised along borders or in the middle of fields where chance has planted it or it is planted in rows, where it receives no particular care and benefits only from the labor and fertilization given to the grain. They are not always even grafted, but they are trimmed, so that the animals when plowing can pass under them.

"The trees are also allowed to grow in amongst the vines. They are planted as a border in lines. Certainly the tree grows to a great size, and is bad for the vine, but it develops very well amongst the vine.

"Under these conditions the trees are of no expense whatever. The nuts are merely gathered when they fall, and their fall is hastened by beating the trees with poles.

"This rudimentary cultivation is not worthy of praise, and the trees do not yield all that they might, but it costs nothing and reduces expenses to a minimum.

"In our district there are to-day trees which have been carefully grafted with good species, but they receive hardly any other care than that given the crops in the middle of which they grow. That is the farmer's usual method of cultivation.

"I have trees of every age, but most of them are young, all the old trees having been renewed or needing renewal.

"This year my walnut trees on the hill and on the plateau were the only ones that had a normal quantity. The greater part of the fruit buds in the lower sections were frost bitten, which hurt all the trees this year.

"I hope that this information will be of some utility to you.

"Believe me, etc."

Of a total of 18 answers received to the questionnaire the average cost of all those growers who replied giving costs was a total of production cost of 3.67 cents per pound.

THE FRENCH WALNUT-MEAT INDUSTRY.

A similar questionnaire to that sent the walnut growers was sent by Mr. Murton to all the principal walnut-cracking plants in France.

A total of seven replies were received, that of M. Ferrieux being the most complete. However, the French cost, exclusive of the price of the unshelled walnuts purchased taken from the seven replies, shows a cost of cracking, packing cases, sorting, manipulating, commission, etc., to be 2.84 cents per pound when translated to United States weights and exchange.

(NOTE.—The original letters of reply and original translations are on file with the United States Tariff Commission, Washington, D. C.)

APPENDIX B.

EXHIBIT A.

Amount invested in the walnut industry in California alone.

Average value of bearing walnut acreage ----------per acre----	$1,477.05	
(Determined by taking an average of the appraised valuation per acre, exclusive of buildings, but including irrigating system, compiled from answers to questionnaires received from 231 walnut growers of 15 various walnut-producing districts, owning 5,030 acres.)		
Total value of 60,800 acres bearing walnuts----------		$89,804,640.00
Average value of nonbearing walnut acreage ----------per acre--	$826.65	
(Determined by taking an average of the appraised valuation per acre, exclusive of buildings, but including irrigating system, compiled from answers to questionnaires received from 15 walnut growers of 10 various walnut-producing districts.)		
Total value of 23,900 acres nonbearing walnuts------		19,756,935.00
Total investment in land----------		109,561,575.00

There are in California 42 walnut packing houses where walnuts delivered by the grower are culled, graded, cleaned, and packed.

Answers to questionnaires received from 21 of these packing houses show a total investment of $511,217.49, or an average per house of $24,343.69.

Total value of 42 packing houses----------	$1,022,434.98
Total investment in walnut land----------	109,561,575.00
Total investment in walnut industry----------	110,584,009.98

The assessed valuation of bare land in Ventura, Los Angeles, and Orange Counties—the three largest walnut producing sections of California—in the districts where walnuts are grown and where land is under irrigation, ranges from $350 to $440 per acre, depending upon quality, location, etc. This assessed valuation is generally considered to be one-third the actual cash value.

(Copy of questionnaires, from which this information was obtained, on file with and approved by the United States Tariff Commission.)

EXHIBIT B.

Number of acres, bearing and nonbearing, devoted exclusively to walnut culture in California and Oregon.

CALIFORNIA.

Figures as shown by monthly bulletin of State commissioner of horticulture, April, 1919, except where marked.[1] (See footnote.)

County.	Acres bearing.	Acres nonbearing.	Total acreage.
Alameda	112	220	332
Butte	53	.....	53
Contra Costa	180	496	676
Los Angeles[1]	19,845	4,332	24,177

Number of acres, bearing and nonbearing, devoted exclusively to walnut culture in California and Oregon—Continued.

County.	Acres bearing.	Acres nonbearing.	Total acreage.
Orange	13,753	3,090	16,843
Riverside[1]	505	1,884	2,389
San Benito	73	.....	73
San Bernardino[1]	671	403	1,074
San Diego	483	46	529
San Joaquin[1]	700	1,125	1,825
San Luis Obispo	520	180	700
Santa Barbara[1]	4,500	150	4,650
Santa Clara	880	922	1,802
Sonoma	250	105	355
Stanislaus	135	.....	135
Tulare	161	550	711
Ventura[1]	11,531	3,243	14,774
Yolo	46	.....	46
Yuba	50	.....	50
	54,448	16,746	71,194

[1] Figures taken from individual report from county horticultural commissioner, July, 1919.

The statement above gives the latest official figures available, but as these are some two years old now they do not include the last two seasons' plantings, estimated at 13,500 acres. Therefore the present walnut acreage in California may be said to be 60,800 acres bearing, 23,900 acres nonbearing, 84,700 acres total.

OREGON.

Figures as shown by statement compiled by Oregon State tax commission for the year 1920: 2,675 acres bearing, 1,614 acres nonbearing, 4,289 acres total.

EXHIBIT C.

Out-of-pocket cost of producing walnuts in United States compared with European cost, also labor cost in United States compared with that in Europe.

PRODUCTION COST IN THE UNITED STATES.

The out-of-pocket cost of production of merchantable walnuts compiled from answers to questionnaires from 231 walnut growers of 15 various walnut-producing districts covering 5,030 acres of bearing walnuts, with a production of 4,020,224 pounds in 1920, or an average of 799 pounds per acre, is as follows:

	Pounds.
Cultural cost, per acre, $79.27----------	$0.0992
(Exclusive of harvesting, but including cost of water for irrigation; 10 per cent depreciation on pumping plant, pipe lines, live stock; 20 per cent depreciation on tools, implements, tractors, etc.; 1 per cent depreciation on value of above, all taxes, insurance, labor, fertilizer, and a reasonable charge for owner's labor and supervision.)	
Harvesting cost----------	0.0256
(Includes yard work, picking, and drying.)	
Packing cost; per ton, $27.54----------	.0137
(The cost of packing includes insurance, taxes, labor, bleaching materials, bags, twine, repairs and replacements, 5 per cent depreciation on buildings, 20 per cent depreciation on machinery, and other costs, such as stationery, power, etc., and is compiled from answers to questionnaires received from 18 packing plants located in the 15 districts above referred to.)	
Marketing cost----------	.0112
(This is the average selling expense of California Walnut Growers' Association, including advertising, commission to brokers, 1 per cent trade discount, maintenance of field department, inspection department, rent, salaries, overhead, etc.)	
Total American cost of production----------	0.1497

Cost of farm labor in walnut industry in Italy compared with the United States.[1]

[Per 8-hour day in the lemon industry.]

	Lira per day.	Converted into United States exchange.	Figures originally submitted by Walnut Protective League in brief to Ways and Means Committee.
Male laborers----------	11½	$0.48	.....
As American male farm labor is costing $4.61[2] per day, the labor cost in Italy is 10.4 per cent of the American cost.			
American labor cost to produce a pound of walnuts----------	.....	.0973	$0.0973
Italian labor cost to produce a pound of walnuts, 10.4 per cent of 9.73 cents----------	.....	.0101	.0108
Saving in labor cost between Italy and America----------	.....	.0872	.0865

[1] See pp. 34 and 36, Ways and Means Committee bulletin "Wages in the United States and Foreign Countries."

[2] P. 36—Either same rate as "male workers in lemon industry" or average of other comparable workers in agriculture specified in table.

Cost of farm labor in walnut industry in France compared with United States.[1]

[Compiled from bulletin published by Ways and Means Committee entitled "Wages in the United States and Foreign Countries."]

	Francs per day.	Converted into United States exchange.	Figures originally submitted by Walnut Protective League in brief to Ways and Means Committee.
Male farm laborers	17	$1.19	
As American male farm labor is costing $4.61 [2] per day, the labor cost in France is 25½ per cent of the American cost.			
American labor cost to produce a pound of walnuts		.0973	$0.0973
French labor cost to produce a pound of walnuts, 25½ per cent of 9.73 cents		.0250	.0243
Saving in labor cost between France and America		.0723	.0730

[1] See p. 35, Ways and Means Committee bulletin "Wages in the United States and Foreign Countries."

[2] P. 34, "Average Wages of American Farm Labor, Far West, by the Day, Without Board."

COST OF FARM LABOR IN CHINA.

The United States Department of Commerce, Bureau of Foreign and Domestic Commerce, Far East Division, labor and wages, in digest of material in files as of January 1, 1921, are authority for the fact that in the Tientsin Province, where most of the oriental walnuts are produced and packed, the April, 1920, average wage of coolie labor was from 28 cents to 40 cents per day, Mexican money, and they state that agricultural laborers were available at $20 per year, Mexican money, and board.

We have used the higher rate of 30 cents per day, Mexican money, or 22 cents per day, American money, in making our calculations.

	Mexican cents per day.	Converted into United States exchange.
Male farm laborers	30	$0.22
Male coolie laborers	28	.21

As American male farm labor is costing $4 per day, the labor cost in China is 5½ per cent of the American cost.

	Cents.
American labor cost to produce a pound of walnut---per pound--	9.73
Chinese labor cost to produce a pound of walnuts, 5½ per cent of 9.73 cents---per pound--	0.53
Savings in labor cost between China and America---do----	9.20

Mr. WALSH of Massachusetts. Mr. President, the facts in connection with the tariff rate upon walnuts are very similar to those with reference to almonds. I do not know of any better argument to make in answer to the one the Senator from California has just made than to quote one statement made by him. "This industry," he said, "has doubled every four years." That means that during the eight years of the protective duty levied under the Underwood law the industry has grown over 400 per cent. How can he justify such a tremendous increase in duty over the Payne-Aldrich law as is provided by the committee amendment, in view of the record of growth of this industry?

The walnut industry is a very prosperous one. I am not going to ask the Senate to accept my personal information about it. I am going to give the Senate the information about the industry which the Walnut Growers' Association itself furnishes to the public. I am going to read from an article written for the Western Canner and Packer, by Mr. Carlyle Thorpe, general manager of the California Walnut Growers' Association. The article was published in the Western Canner and Packer for February, 1922:

The opening prices, 22½ cents per pound for No. 1's, 17 cents per pound for No. 2's, and 28 cents per pound for fancy budded, were so well received by the trade that the California Walnut Growers' Association was completely swamped with orders by the end of the first week in October.

Referring to the trade of the previous year, the year 1921, the prices were so satisfactory that the Walnut Growers' Association "was completely swamped with orders by the end of the first week of October."

Early demands for walnuts at opening prices brought in orders for about four times as many walnuts as could be supplied. The association sold about 90 per cent of its unshelled walnuts at the opening prices in taking care of the requirements of old customers.

The market continued to show strength and advanced to a point 4 cents above the opening figures, by which time the California crop was entirely exhausted, not a single bag of walnuts remaining in the warehouses at the end of November.

This is the industry for which we are asked to increase the protective tariff duty 200 per cent, and not a bag of walnuts in late November was available. What industry in the country can show such a record? Yet protection, high protection, is demanded.

In recent months the association has found it necessary to decline orders for hundreds of tons of unshelled walnuts, and has only been able to offer the trade its shelled walnuts, which are vacuum packed in tins and glass jars.

The shelled-walnut business promises to become the big end of the California walnut industry. During the past season the association has handled four times as many meats as it shelled and packed during any former season.

In standardizing the 1921 pack it screened out and eliminated by hand sorting 10,000,000 pounds of undersized, shriveled, and lightweight walnuts from a 40,000,000-pound harvest, putting these offsizes through the cracking machines and reducing them to hand-selected, bright, and toothsome walnut meats, ready for the can opener and the dinner table.

The associated growers have hit a popular note with the housewife in offering her walnut meats. When she wants to finish a cake in a hurry or top a salad for dinner or luncheon she hasn't time to stop and crack and pick out nut meats, but she does have time to open a jar of selected meats.

In the same article, referring again to the prosperous character and nature of the walnut business, I call attention to the following:

The year's outstanding accomplishments, which include quick sale of the crop, reduction of railroad freight rates, erection of a magnificent association building, and a successful campaign for protective tariff, are all convincing evidence of the benefits derived from cooperation.

By presenting a solid front when matters of great importance present themselves, the California walnut industry has succeeded in protecting its own interests, and in so doing it has protected to a considerable degree the interests of the wholesaler, the jobber, the retailer, and the ultimate consumer.

So prosperous is the industry that the entire production was sold in a few weeks. So prosperous is the industry that the price of land suitable for the cultivation of walnut trees is said to be $1,200 per acre. Does this show need of such prohibitive rates?

Mr. McNARY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Oregon?

Mr. WALSH of Massachusetts. I am glad to yield to the Senator.

Mr. McNARY. The Senator is attempting to make much of the statement that the California Walnut Growers' Association disposed of the entire crop. From that does he deduce that the producer made a large profit?

Mr. WALSH of Massachusetts. Yes. It is my opinion that an association such as the Walnut Growers' Association would not at the outset fix a price that did not give the grower a profit; and the very fact that in a very few weeks the whole output was sold is evidence to me of a very successful season.

Mr. McNARY. The Senator is usually accurate, but he is terribly mistaken in this instance. At the very time the crop was sold the average gross return to the growers in California was $16 an acre.

Mr. WALSH of Massachusetts. Then I am to understand from the Senator that the growers' association opened up this season by offering walnuts at a price which brought no profit to the grower. Is that the fact?

Mr. McNARY. They are not offering in a monopolized market. They do not fix the price at any figure that may suit them. There are very many elements that control the price the consumer pays the grower for his product. This is merely a cooperative selling agency, that gets the best price possible. I want to say to the Senator, because it is related to the subject under discussion, that the cost to the producer is 14 cents a pound and the walnuts are sold for 16 cents a pound. I want further to say that that is a margin of 2 cents a pound, and the average production per acre in all the Pacific Coast States, in the matured orchards over 12 years old, is 800 pounds to the acre. So that it may be said that the net sum of money which the growers received for their crop was $16 an acre. I shall have something more to say in reference to that matter in a few moments, but I simply wanted to get the state of mind of the Senator at this time.

Mr. WALSH of Massachusetts. I will read to the Senator from the Tariff Commission report and give him the information that it contains about the activities of the growers' association. I can not conceive—it seems incredible—that a growers' association would give the public information which is contained in what I have just read—that they have had a successful season; that as soon as the prices were named they had a tremendous demand; that the prices shortly jumped 4 cents per pound; that the whole crop was sold out in a few weeks—and then presented evidence that it was all done at a loss. I repeat, it is incredible. What must we think of an association

that handles the product of the growers in the fashion and manner described by the Senator from Oregon and then boasts about what a successful season they had, the rapidity with which orders came in to the growers' association, and what a short period of time elapsed before the whole output was purchased?

Mr. McNARY. Mr. President——

Mr. WALSH of Massachusetts. Let me read what the Tariff Commission says:

The growers organized in 1912 as the California Walnut Growers' Association. Its prime object is to market the product advantageously for the growers and to standardize and stabilize the industry. The association, which includes between 75 and 85 per cent of the growers, annually establishes opening prices for different grades. The actual prices realized may be higher or lower, according to the demand. To improve and make uniform the product, the association early adopted a trade-mark and brand name, and first-quality nuts are now sold under the Diamond Brand trade-mark. This brand is applied to the three top grades, which constitute 60 per cent of the crop. No. 2 nuts, which constitute 30 per cent, are sold as "California walnuts." The remaining 10 per cent, consisting of culls, is sold as walnut meats. Nearly the whole of the crop is marketed in the shell, except the so-called culls, which consist of walnuts that are partially filled, blighted, or have a poor appearance.

Further on in the same report, speaking of the crop of 1919 and confirming what I quoted from the article which I have just read, the Tariff Commission says:

The average return for the 1919 crop was 24 cents per pound, and for 1918 slightly less. The best grades of French and Italian nuts sold during 1920 at 18 and 19½ cents. But a large part of the imports auctioned off at around 8 cents per pound. (Table 8.) Commercial advices indicate that virtually all of the domestic walnut crop of 1920 has been sold.

This report was published in the early part of 1921.

It is noteworthy that the growers were able successfully to dispose of their crop at prices far higher than were received for the foreign product and in the midst of the prevailing business depression. They were able to do this by a prompt price reduction of around 28 per cent. Such wide differences in price seem to indicate that the tariff problem is not a vital one, and that the higher domestic costs are to a very large degree offset by the higher prices received for the better California product.

Mr. President, there is further evidence from the Tariff Commission itself that the crop was disposed of and that very shortly after the harvest season there were no walnuts upon the markets which were available for the American demand.

I now quote from a publication which is known as the Confectionery Market, as follows:

The value of the domestic walnut crop (97 per cent being produced in California) increased between 1909 and 1919 from two and a quarter million dollars to over fourteen millions—

And that during the time when there was a very much lower duty imposed than is contemplated in this amendment—

It did not need a high protective tariff to bring about this phenomenal result. During the first half of this period the rate of duty was 5 cents; the last half, 4 cents.

The labor cost of production of California walnuts is approximately 65 per cent of the total. Nobody wants workers in California to have to compete with European labor nor to live under European conditions. A glance at the development of the California industry noted above would seem to indicate that it is not necessary they should. The development was due to progress in cultural and marketing practices. The United States Tariff Commission, referring to the walnut crop, says:

"It is also to be noted that the great bulk of the crop is marketed by a growers' association, which annually establishes opening prices, * * * but it is apparent that the control it exercises over the great bulk of the domestic crop enables it to profit in prices from a tariff more readily than is the case of an industry where competition among individual producers is general."

In a letter from one of the leading candy manufacturers of Boston I note the following comment in reference to California walnuts:

During the war when walnuts were scarce, we used some California walnuts. They came in very much discolored, due to the thin shells on them. In fact, most of them showed up very black. While they are white when they are cut open, they are very far from being attractive and are not desirable for confectioners.

Were it not possible to get French nuts, we believe there are many confectioners who would not use these nuts at all, unless it were for inside work.

The price of walnuts and almonds is now so high that we are not using anywhere near the quantity we would use if prices were nearer normal. The normal price on walnuts is 30 cents; the price to-day is about 60 cents.

Many similar letters have come to me—some of them are printed in the RECORD of July 3. I can not believe the candy manufacturers would intentionally and willfully assert that the California walnut was not suitable for their purposes unless their experience justified it.

Let me read further from this letter of April 27, 1922:

In our small business here we thought nothing of buying 100 cases of walnuts when the price was around 30 cents; to-day we buy them in 5 and 10 case lots.

If this bill passes, it will work a great hardship on all the confectioners, and will be the means of taking away some of the attractiveness from our package goods, which make up a large part of our business.

We are willing to do anything we can to help, and of course understand it is necessary for the Government to obtain revenue through such sources, but if our business is injured we can not make money to pay taxes. In other words, "If they kill the hen, they lose the eggs."

If we should write you every time we were asked to do so, you would receive about three letters a week from us.

Mr. President, the question is very simple. The walnut industry is a very prosperous one. It has grown rapidly by leaps and bounds, but it does not and can not produce a sufficient quantity of walnuts to meet the American demand. The domestic production is about 50 per cent of the consumption and the imports are 50 per cent, chiefly shelled walnuts. The confectioners say the foreign shelled walnut is superior to the domestic shelled walnut; that its color is better for their purposes, and that its flavor is better, but they frankly admit that the California unshelled walnut is one of the best in the world and does not compete with the foreign unshelled walnut; that it is superior and commands a better price in the market. However, when shelled and exposed to the air it discolors, so the confectioners say, and is not suitable for their purposes. In any event, the California walnut growers have not shelled their walnuts, because the demand for their unshelled walnuts is more than their supply.

Mr. President, it does not seem to me that these high rates can be justified or can be successfully defended in view of the disclosures in this case, and the evidence, which is overwhelming, to the effect that walnut growing has been a prosperous and successful industry and has grown tremendously under a very much lower tariff duty than that proposed by the amendment, which amounts to an increase of 200 per cent over the rates of the existing law. If the rate reported by the committee is sound, if it is defensible, then every agricultural industry which can show the prosperity that the walnut industry shows and which can show a production equal to one-half of the consumption ought to have similar high protective tariff rates imposed. Of course, the proposed duty can not be defended and the amendment ought not to prevail.

I desire to say in conclusion that we are establishing some very bad precedents in this bill. It is easy enough to levy duties now, but when the time comes to revise this tariff bill, as it will have to be revised in the future by either the Democratic or the Republican Party, precedents like this will be at hand which will make much trouble for future revisionists. I tell the Senate that it is a very serious matter to levy high duties upon these products without having sufficient evidence to warrant this action and facts to justify an increase of this proportion.

I ask unanimous consent to have printed in the RECORD a memorandum prepared by me showing the rates of duty under previous laws, the extent of production, and cost to the consumers if the increased duty shall be imposed.

There being no objection, the memorandum was ordered printed in the RECORD, as follows:

DIFFERENCES BETWEEN SENATE BILL AND PREVIOUS LAWS.

In the Underwood Act walnuts unshelled were dutiable at 2 cents and shelled at 4 cents per pound.

In the Payne-Aldrich Act walnuts unshelled were dutiable at 3 cents and shelled at 5 cents per pound.

The pending bill is an increase over the rate in the Underwood Act of 100 per cent on unshelled and 200 per cent on shelled walnuts, and an increase over the rate in the Payne-Aldrich Act of 33⅓ per cent on unshelled and 140 per cent on shelled walnuts.

PRODUCTION, IMPORTS, AND EXPORTS.

The United States produces about 59,000,000 pounds of walnuts per year. Imports of unshelled walnuts range about 16,000,000 pounds, and imports of shelled walnuts range about 12,000,000 pounds (54,000,000 pounds in terms of unshelled walnuts); a total consumption of 129,000,000 pounds.

The domestic product is marketed as unshelled walnuts, and adding to 59,000,000 pounds of the domestic product 16,000,000 pounds of unshelled walnuts imported we have a total of 75,000,000 pounds of unshelled walnuts consumed yearly. With a tax of 4 cents per pound, the total tax would be $3,000,000.

Practically the total consumption of shelled walnuts are imported—12,000,000 pounds at a tariff rate of 12 cents will impose a total tax of $1,440,000 on the consumers.

The tax on the shelled and unshelled products will amount to $4,440,000—4 cents per capita—$160,000 for the 4,000,000 people of Massachusetts.

Mr. McNARY. Mr. President, I want to speak briefly in reply to the able Senator from Massachusetts [Mr. WALSH].

I find myself in total disagreement with the Senator from Massachusetts. That is regrettable, but nevertheless it is a fact. I think the Senator approaches this argument from the standpoint of a confectioner. In no place do his argument or his facts furnished or his statistics supplied show any profits being made by the producers of walnuts. That is an important element, and must be considered in making up our decision in this matter. I am speaking now more or less as one who is familiar with this industry.

There is no horticultural industry that pays so little profit upon the investment or for the labor employed as the culture

of walnuts. There is no one on the Pacific coast who has made a considerable sum of money in the development of the walnut industry. I know this from having studied the industry. I went through the groves of California some years ago and carefully surveyed the industry.

It takes 15 years for a tree to produce a profitable crop. There is twelve or fourteen hundred dollars invested in each acre by the time the trees arrive at a proper bearing period. Only a few trees can be put out to an acre. If they are 60 feet apart, you have only 12 trees to an acre working for you. You must cultivate the tree, you must fertilize it, you must prune and spray it year after year, without getting a single cent of return upon your investment; and when the tree is 15 years old, and producing fruit profitably, it takes 10 or 15 years from that time on to catch up with your investment.

Mr. President, I do not know a single rate in this whole bill that has more merit than this one protecting walnuts. The expected competition from Manchuria is so serious that the Department of Agriculture within the year will send an expert to study the subject in Manchuria. The annual agricultural appropriation bill which we voted for in the Senate a few months ago—and I have no doubt that the Senator from Massachusetts voted for it—carried an appropriation to send a nut expert to Manchuria to determine whether it would be profitable to go ahead and plant walnuts in this country in competition with Manchuria. If the great Department of Agriculture and both branches of the Congress know the great menace in the future from that country, and Congress voted for it, then it must exist, and is not an idle dream.

Mr. President, the growers of the Pacific coast can not possibly compete with the growers of walnuts in Manchuria, in China. There are no cultural methods adopted there. They are grown haphazardly on the roadside or as a by-product where wheat, vegetables, or rice are raised. The labor costs pactically nothing, and it costs a whole lot less to bring a pound of walnuts into New York from China than it does to bring it from the Pacfic States to New York.

Again, Mr. President, one of the great injuries that is being done is not only the fierce and ruinous competition, but the foreign nuts are inferior. They are small and rancid, the pellicle is dark, and people buy them and find they are not tasty, and they get out of the habit of buying walnuts and go to buying other nuts; and that in itself is ruinous competition.

In the State of Oregon about 5,000 acres have been planted to walnuts in the last 10 years. Very few of the orchards are old enough to bear profitably. If this tariff is left at the present rate, with the increased planting in Manchuria, and also in Europe, and the low labor cost, the nut producers will be compelled to take up their trees and plant other crops, after wasting perhaps $1,000 an acre and waiting 8 or 10 or 12 years. This duty is an absolute necessity. We do not produce all of the walnuts that we need, and this duty will protect these growers from having foreigners put inferior nuts on the market in competition with them at a price at which they can not live.

I would not want to vote to see harm come to an industry so large as this in California, where there is $100,000,000 invested, and $8,000,000 or $10,000,000 in Oregon, and about half as much in the State of Washington. It is an industry which ought to be protected, and which employs hundreds, and I might say thousands, of men and women. A walnut orchard is a grove that is beautiful, as the Senator from California so aptly described. It is a healthful industry. It bears through a time of the year when the other crops have been harvested. People who have been working in the wheat fields or the corn fields or the hay fields can go to the walnut groves, because that crop comes along and is harvested along in October. It extends the time of employment to those people who are living on the farms and the industry must be protected in order to endure; and I certainly hope that the Senators present will not vote to accept the theory of the Senator from Massachusetts.

There has been no profit made, Mr. President. The Senator argues, and ably argues, that because this association has sold its entire crop there was a profit. I want to say to the Senator from Massachusetts, from the actual figures that I have here, and from what I know personally, that the average production of an acre of trees after 12 years is about 800 pounds to the acre. If I may use the figures the Senator quoted, the highest he quoted, as I recall, was 24 cents a pound, and the lowest 18 cents. It is indisputably true that it costs 14 cents a pound in America to produce walnuts.

Mr. WALSH of Massachusetts. Mr. President, if the Senator will yield a moment, this statement says that the opening prices were 22½ cents per pound for No. 1, 17 cents per pound for No. 2, and 28 cents per pound for fancy budded.

Mr. McNARY. That is true; but it must be remembered that you are not taking into consideration orchard run. That is the average price for all of them. You may have a budded nut, a first-class nut that is fancy, put up in a nice way and sold, that brings 24 cents, but your culls and your orchard runs and your seconds will perhaps only bring 12 cents; so, in discussing this matter, you must keep in mind what we call orchard runs, or the general average price.

Mr. WALSH of Massachusetts. Mr. President, will the Senator answer this question? Will he state whether this statement in this article that I have read is a fact or not?

Mr. McNARY. I do not recall the statement. I shall be glad if the Senator will let me know what it is.

Mr. WALSH of Massachusetts (reading)—

> Early demands for walnuts at opening prices brought in orders for about four times as many walnuts as could be supplied. The association sold about 90 per cent of its unshelled walnuts at the opening prices in taking care of the requirements of old customers.

Mr. McNARY. Will the Senator state what the price was?

Mr. WALSH of Massachusetts. The article does not state the price, but I want to know if it is true that the harvest of walnuts was sold out almost upon the opening of prices.

Mr. McNARY. I have no doubt of it.

Mr. WALSH of Massachusetts. Does the Senator seriously argue to us that these prices were fixed at a sum which caused a loss to the growers?

Mr. McNARY. I have said to the Senator—perhaps he does not appreciate it because he comes from a part of the country where the manufacturers do fix their prices—that they do not fix the prices of agricultural products. The law of supply and demand to a large extent controls. The association markets the nuts, and they do try to get the best price obtainable; and if the buyers in the East or the commission men or brokers say, "We will give you 22 cents," they report it back to the growers, who come in and tell them whether or not they will sell. They do not fix prices. If they were going to fix prices, they would perhaps put them at a dollar a pound, but they are controlled all the time by and amenable to the consumption power of the country and the law of supply and demand.

Mr. WALSH of Massachusetts. May I read another line from this same article?

Mr. McNARY. I shall be very glad to have the Senator do so.

Mr. WALSH of Massachusetts (reading):

> In recent months the association has found it necessary to decline orders for hundreds of tons of unshelled walnuts.

And yet we are told that that walnut supply was sold at a loss.

Mr. McNARY. Mr. President, the Senator is arguing from a simple statement that means nothing. I want him to tell me what they sold for.

Mr. WALSH of Massachusetts. I have quoted the prices.

Mr. McNARY. What are the prices?

Mr. WALSH of Massachusetts. This article is written by the general manager of the California Walnut Growers' Association. It is written to let the public know how successful, how prosperous, the business is, what a great demand there was for walnuts, how quickly the output was sold, and what good prices they received. He says:

> The opening prices—22½ cents per pound for No. 1, 17 cents per pound for No. 2, and 28 cents per pound for fancy budded—were so well received by the trade that the California Walnut Growers' Association was completely swamped with orders by the end of the first week in October.

What does that mean except that the business was prosperous, that there was more of a demand than they could supply, and that the prices they fixed at the outset were so satisfactory that the harvest was cleaned right out?

Mr. McNARY. Mr. President, that is no argument at all. It is a mere baseless assumption. I take the Senator's own figures. On the highest grade of nuts there was a gross profit of 12 cents a pound; on the low grade there was a gross profit of 3 cents a pound, so we will say the average was a gross profit of 10 cents a pound. With 800 pounds to an acre, and a profit of 10 cents, you make $80 gross per acre. Does the Senator say that is profiteering, when you have $1,400 invested in an acre?

Mr. WALSH of Massachusetts. I make no such claim; but the Senator has to take either one of two positions: Either that the prices were fair and that the output was sold immediately at those prices, or that at the very outset the growers' association fixed a price that meant a loss.

Mr. McNARY. Mr. President, that is not unusual. Very many times the Prune Growers' Association or the Almond

Growers' Association, or like organizations, fail to obtain a profitable price. They do not go out and fix a price. If they should do that, they would be prosecuted. They are amenable to the general economic laws of the country. They get the best price they can. In 1920—I have the figures here—the crop was sold, orchard run, which, I explained, was the general average, at 16.97 cents a pound. That left a gross profit of 2 cents per pound, which would give the grower a gross profit of $16 an acre, with perhaps $1,500 an acre investment.

You can not live on that. You can not pay your taxes on that. You can not pay your insurance on your buildings or the interest on the money which you borrowed at the bank. It can not be done. A grower ought to have at least 10 to 15 cents a pound gross profit in order to make any sort of return upon his investment; and there are no figures the Senator from Massachusetts has given that dispute the fact that I am relating now, that they do not produce at a great profit, and that it is one of the poorest paying crops in all the horticultural activities of the country.

Mr. McCUMBER. Mr. President, an assertion that rates have been raised 100 per cent or 200 per cent or 300 per cent may be somewhat startling to the uninitiated, but it ought not to affect those who are capable of understanding just what it means. If we give a duty of a quarter of a cent per pound on any commodity under the present law and we increase that to 1 cent per pound, we have increased the rate 300 per cent, and yet the 1 cent per pound may mean very little. So a specific duty ordinarily does not mean much to those who are not at all times thoroughly acquainted with prices. What the public wants to know is to what extent, by percentage, it raises the price of a given commodity, and that becomes important in the discussion of this matter. Therefore I want to put into the RECORD a few figures that will bear upon that particular point.

The production of walnuts in 1921 was about 36,000,000 pounds. In 1921 we had a short crop, because in 1919 our production, in round numbers, was 59,000,000 pounds; so it must be that an average crop will give us something over 50,000,000 pounds.

Now, let us take the imports for the purpose of determining what the ad valorem rate is.

In 1921 we imported 31,821,639 pounds of walnuts not shelled. The value per pound of the imports was 13 cents. Therefore with the Senate rate the equivalent ad valorem duty is 31 per cent; certainly not a high rate of duty. In the same year we imported 13,264,089 pounds of shelled walnuts at an importing value of 38 cents a pound. With the Senate rate of duty the ad valorem upon the shelled walnuts is 32 per cent, also a very moderate tariff.

In 1921 we had 63,474 acres of land in trees bearing walnuts. We had also young trees covering an acreage of 25,513—trees which had not yet reached the bearing stage. Therefore, in 1921, we had 88,980 trees, which will soon become bearing, and with that number of trees bearing in an ordinarily good year we could produce nearly all the walnuts which would be required for the consumptive demand in the United States. I say nearly; I do not think it would be quite sufficient.

This is an important industry, and if America can produce the walnuts necessary to supply the demand, I certainly am in favor not of our supplying one-third or one-fourth, but I think we ought to supply at least nine-tenths of the demand, and the other tenth will be enough to take care of the prices.

So I think that with 31 and 32 per cent ad valorem we can justify these rates. Certainly we can justify them when we compare them with the rates which are given upon other commodities.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WALSH of Massachusetts. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Again transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Vermont [Mr. PAGE], I vote "yea."

Mr. POMERENE (when his name was called). Again announcing my pair for the day with my colleague [Mr. WILLIS], I beg to transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK], and vote "nay."

Mr. STERLING (when his name was called). Making the same announcement as to my pair and its transfer as on the last vote, I vote "yea."

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Montana [Mr. MYERS] and vote "nay."

Mr. WARREN (when his name was called). Again announcing my pair and its transfer, which I ask to stand for the day, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. SWANSON. I desire to announce that my colleague [Mr. GLASS] is detained from the Senate on account of illness. He is paired with the Senator from Vermont [Mr. DILLINGHAM]. I ask that this announcement may stand for the day.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

Mr. FERNALD (after having voted in the affirmative). I transfer my pair with the Senator from New Mexico [Mr. JONES] to the Senator from Michigan [Mr. TOWNSEND] and allow my vote to stand.

Mr. ERNST. Making the same announcement as before, I vote "yea."

The result was announced—yeas 38, nays 21, as follows:

YEAS—38.

Ashurst	Fernald	Lodge	Rawson
Borah	France	McCumber	Shortridge
Broussard	Frelinghuysen	McKinley	Smoot
Bursum	Gooding	McLean	Spencer
Calder	Hale	McNary	Sterling
Cameron	Johnson	New	Sutherland
Capper	Jones, Wash.	Nicholson	Warren
Curtis	Kellogg	Oddie	Watson, Ind.
du Pont	Kendrick	Phipps	
Ernst	Ladd	Poindexter	

NAYS—21.

Caraway	King	Robinson	Underwood
Culberson	La Follette	Sheppard	Walsh, Mass.
Dial	Lenroot	Shields	Walsh, Mont.
Harris	Nelson	Simmons	
Harrison	Pittman	Swanson	
Heflin	Pomerene	Trammell	

NOT VOTING—37.

Ball	Glass	Norbeck	Stanley
Brandegee	Harreld	Norris	Townsend
Colt	Hitchcock	Overman	Wadsworth
Crow	Jones, N. Mex.	Owen	Watson, Ga.
Cummins	Keyes	Page	Weller
Dillingham	McCormick	Pepper	Williams
Edge	McKellar	Ransdell	Willis
Elkins	Moses	Reed	
Fletcher	Myers	Smith	
Gerry	Newberry	Stanfield	

So the committee amendment was agreed to.

Mr. McCUMBER. Mr. President, I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock.

Mr. HARRISON. Reserving the right to object, is there any intention of offering a cloture rule and taking a vote on it to-morrow?

Mr. McCUMBER. We could not vote on it to-morrow.

Mr. HARRISON. If it is offered to-day it will go over until day after to-morrow?

Mr. McCUMBER. Yes; it could not be voted on before day after to-morrow.

The VICE PRESIDENT. Is there objection to the request of the Senator from North Dakota? The Chair hears none, and it is so ordered.

The next amendment of the committee was, in paragraph 758, on page 111, line 2, to strike out "7½" and insert "12," so as to read:

Shelled, 12 cents per pound.

Mr. ASHURST. Mr. President, I do not want to interrupt the consideration of this amendment, but I ask the Senator from North Dakota, in charge of the bill, as to tomatoes, to be found provided for on page 113, in line 16, where a rate of 1 cent per pound is imposed on tomatoes in their natural state. If I am correct in my opinion, that would not be subject to amendment until we dispose of the committee amendments.

Mr. McCUMBER. The amendments in that paragraph have been agreed to.

Mr. ASHURST. There is no amendment as to tomatoes in their natural state?

Mr. McCUMBER. No; there has been no amendment to the rate on tomatoes in their natural state.

Mr. ASHURST. And it would not be in order for me at this time to offer an amendment?

Mr. McCUMBER. The Senator is correct.

Mr. ASHURST. As to line 17——

Mr. McCUMBER. That amendment has been agreed to.

Mr. ASHURST. I see that the rate on tomato paste has been increased from 28 to 45 per cent ad valorem. That was done on Saturday. I am not especially interested in that, but I want to be sure that I am not waiving any of the rights I might possess with reference to the amendment of the rate on tomatoes in their natural state.

Mr. McCUMBER. That can come up after we have disposed of the committee amendment.

Mr. WALSH of Massachusetts. Mr. President, returning to the amendment about to be voted on, all that has been said about shelled almonds can be applied to shelled walnuts. There is practically no production at all in this country of shelled walnuts. The unshelled walnut is the domestic product. The "Confectionery Market" says:

> Nearly the whole of the domestic crop is marketed in the shell. There are probably several candy factories any one of which could use all the shelled walnuts produced in California and sold out of shell.

California produces about 1 per cent of the various shelled nuts consumed in the United States. The size of the kernel and the count per weight are both in favor of the imported walnuts.

The same objection is made to walnuts that is made to almonds by the confectioners, namely, that the California product is not suitable for their uses. So we have a situation where it is absolutely necessary to import shelled walnuts, and the duty will be effective in raising the price of shelled walnuts. The amendment increases the rate of duty over the Underwood law and over the Payne-Aldrich law. The rate on shelled walnuts in the Underwood law was 4 cents per pound. The rate in the Payne-Aldrich law was 5 cents. The rate suggested by the House was 7½ cents. The rate suggested by the Senate committee amendment is 12 cents per pound. It can not be justified. It is notice to the consumers of America that the price of shelled walnuts is immediately to be raised 8 cents per pound. There is no justification whatever for it. If there were a shelled walnut industry in this country or an industry engaged in selling shelled walnuts, something could be said for a small protective duty, but there can not be anything said, in my opinion, in view of the fact for such a high duty upon shelled walnuts.

Mr. President, on the committee amendment I ask for the yeas and nays.

The yeas and nays were ordered and the Assistant Secretary proceeded to call the roll.

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "nay."

Mr. NEW (when his name was called). Repeating the announcement made upon the previous vote, I vote "yea." I ask that this announcement of my pair and transfer may stand for the day.

Mr. POMERENE (when his name was called). Announcing my pair as heretofore with my colleague [Mr. WILLIS], I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. TRAMMELL (when his name was called). I transfer my general pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Montana [Mr. MYERS] and vote "nay."

Mr. WARREN (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. BALL. Making the same announcement as before as to my pair and transfer, I vote "yea."

Mr. ERNST. Making the same announcement as before, I vote "yea."

Mr. STERLING. Making the same announcement as on the last roll call, I vote "yea."

The result was announced—yeas 36, nays 18, as follows:

YEAS—36.

Ashurst	France	Ladd	Oddie
Ball	Frelinghuysen	Lodge	Phipps
Broussard	Gooding	McCumber	Poindexter
Bursum	Hale	McKinley	Shortridge
Cameron	Johnson	McLean	Smoot
Capper	Jones, Wash.	McNary	Spencer

So the committee amendment was agreed to.

Mr. FRELINGHUYSEN. Mr. President, I send to the desk a circular which is universally being sent to all the dye manufacturers and dye users in New Jersey by the German importers. I ask that it be read for the information of the Senate.

The VICE PRESIDENT. Without objection, the communication will be read.

The Assistant Secretary read as follows:

NEW YORK, *July 1, 1922.*

DEAR SIRS: We beg to offer you our services for the importation of coal-tar dyes, including indanthrene and other vat dyes, manufactured by the Badische Anilin & Soda Fabrik and by other makers. We have the assurance of the manufacturers that they will give prompt attention to our orders. The prices will be as low as can be made, and, we have every reason to believe, will be found satisfactory by you.

It is to be hoped that the embargo and license provisions which were eliminated from the tariff bill by the House of Representatives will not be put back. It is also to be hoped that these same provisions now in force under the terms of the emergency tariff bill will be repealed. The removal of these restrictions on importations of coal-tar dyes would enable us to carry in stock all the dyes needed and to fill your orders promptly at current prices. It would permit us to bring in samples of new products as soon as they are put on the market, as well as to provide quantities sufficient for your practical trials. Thus you would be in a position to adopt improvements as quickly as the foreign dye consumer.

Soliciting your favors, we remain,

Yours truly,

KUTTROFF, PICKHARDT & CO. (INC.).

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. In paragraph 759, page 111, line 5, the committee proposes to strike out the word "pound" and insert the same word, with a semicolon and the following words thereafter: "pickled, or otherwise prepared or preserved, and not specially provided for, 35 per cent ad valorem," so as to make the paragraph read:

> PAR. 759. Edible nuts, shelled or unshelled, not specially provided for, 1 cent per pound; pickled, or otherwise prepared or preserved, and not specially provided for, 35 per cent ad valorem: *Provided*, That no allowance shall be made for dirt or other impurities in nuts of any kind, shelled or unshelled.

Mr. McCUMBER. Just for the record, I desire to state that during the calendar year 1921 the imports of these nuts under the basket clause were 3,880,676 pounds, valued at $805,303, or 21 cents a pound. On the basis of 21 cents per pound, the 1 cent per pound rate is equal to about 5 per cent ad valorem. Upon the pickled or otherwise prepared and preserved nuts, it will be noted that we have given a rate of 35 per cent ad valorem.

The VICE PRESIDENT. The question is on the committee amendment.

The amendment was agreed to.

Mr. McCUMBER. I ask now that we return to page 107, paragraph 741, figs. The committee authorizes me to make the following modification: On page 107, line 14, strike out "35" and insert in lieu thereof "40," so as to read:

> PAR. 741. Figs, fresh or dried, 2 cents per pound; prepared or preserved in any manner, 40 per cent ad valorem.

The VICE PRESIDENT. The question is on the committee amendment as modified.

Mr. WALSH of Massachusetts. Mr. President, the same situation exists in regard to this amendment as with reference to the amendments which we have just considered. Figs are a California product. There is not sufficient production for our consumption. The committee have seen fit to impose excessively high rates of duty upon all of the citrus fruits and nuts produced in southern California.

The Senate committee amendment on figs as modified increases the duty from 20 per cent ad valorem, as proposed by the House, to 40 per cent ad valorem.

Under the Underwood law prepared figs were dutiable at 20 per cent ad valorem, and under the Payne-Aldrich law at 1 cent per pound plus 35 per cent ad valorem. Fresh figs or dried figs were dutiable at 2 cents per pound under the Underwood law and 2½ cents in the act of 1909, while 2 cents is the rate proposed in the pending bill. The domestic production for the year 1919 was 21,801,000 pounds, valued at $2,180,000. The imports for 1920 were about 20,000,000 pounds, valued at about $5,000,000. The imports, therefore, were about one-half of our consumption.

It is to be noted that we imported about one-half of our consumption and that the imports were valued at $5,000,000; that the domestic production was valued at only $2,000,000, showing

that the imported fig sells at a much higher price than does the domestic fig; in fact, there is no very serious competition between the foreign fig and the domestic fig. The foreign fig is so superior that it does not compete with the fig which is produced in southern California and in some of the Gulf States.

Mr. President, I do not care to consume any more of the time of the Senate in discussing this item. It involves the same principles that were discussed when we considered the duties upon almonds and walnuts. Our people demand the importation of figs. That this duty will be effective there can be no question, and consequently our people will have to pay an increased price for this product equivalent to the rate of duty provided in the bill. The California industry does not need this protection. It is excessive, unwarranted, and indefensible. It is a very great injustice to the consumers of America to impose this very heavy burden upon them.

I ask, Mr. President, to attach to my remarks a statement and table showing a comparison of rates of duty, the percentage of production to consumption, the increased burden which will result to the consumer on all the citrus fruits and nuts produced in California.

There being no objection, the matter was ordered printed in the RECORD, as follows:

HEAVY TAXES LEVIED ON CONSUMERS FOR CITRUS FRUITS AND NUTS.

Table showing increased duties on citrus fruits and other products raised or produced chiefly, and in some instances exclusively, but which constitute only a small percentage of our consumption, in southern California:

Article.	House bill	Senate bill.	Per cent of increase Senate bill over House.	Senate bill over act of 1913 (per cent).
Almonds, unshelled	4 cents per pound.	5 cents per pound.	25	66⅔
Almonds, shelled	12 cents per pound.	15 cents per pound.	25	275
Walnuts, unshelled	2½ cents per pound.	4 cents per pound.	60	100
Walnuts, shelled	7½ cents per pound.	12 cents per pound.	60	200
Raisins	2 cents per pound.	2½ cents per pound.	25	25
Figs, prepared or preserved.	20 per cent ad valorem.	35 per cent ad valorem.	75	75
Dates, prepared or preserved.	....do....	....do....	75	75
Beans, dried	1¾ cents per pound.	2 cents per pound.	14⅔	380
Beans in brine, prepared or preserved.	2 cents per pound.	2½ cents per pound.	12½	125
Lemons	....do....	2 cents per pound.	.....	300
Olives	20 cents per gallon.	20 cents per gallon.	.....	33⅓
Average per cent increase.	.....	.....	41	150

To what extent this industry in southern California is subsidized at the expense of the American people can best be appreciated by comparing the percentage of production in California with our total consumption.

California produces only 15 per cent of our consumption of almonds; 3 per cent of our consumption of olives; one-half of 1 per cent of our consumption of dates; 50 per cent of our consumption of figs; 46 per cent of our consumption of walnuts; and 77 per cent of our consumption of lemons.

As we must import in large quantities most of these products in order to supply the demand of our people, how can we justify an average increase in tariff duties on these products of 150 per cent over existing law?

The pending bill will continue the increased tariff duty of 2 cents per pound named in the emergency law of 1921 on lemons amounting to $1.12½ per box, or 4½ cents per dozen, an increased duty of 300 per cent over the rate in the Underwood tariff law, the tax under that law amounting to 1½ cents per dozen.

The Underwood rate was the law from 1913 to 1921, and during that period the production of lemons in California increased 200 per cent. If this industry could prosper under a tariff protection of one-half cent per pound, equivalent to 1½ cents per dozen, how can an increase of 300 per cent in the duty be justified except as a governmental subsidy to the lemon industry of California controlled by relatively few growers' organizations. The tax in this bill will increase the cost of lemons $1.12½ per box over the cost of lemons under the Underwood tariff law, making the total increased price which the public will have to pay about $9,300,000 if these duties become effective.

Practically all of the walnuts and almonds produced in California are sold unshelled. The imports of walnuts and almonds are almost entirely shelled and are used in very large quantities by confectioners and bakers.

The high duty upon shelled walnuts the confectionery trade estimates will increase the price of the 12,000,000 pounds imported annually to the amount of $960,000, all of which increased price will, of course, be passed on to the consumers.

The high duty upon shelled almonds will increase the price of the 20,000,000 pounds imported annually for the use of the confectioners and bakers to the amount of $2,200,000, which will also be passed on to the consumers. As 85 per cent of the consumption of almonds must be imported, how can an increased cost through increased tariff duties, amounting to $2,200,000, be justified?

Mr. McCUMBER. Mr. President, the California production of figs for the year 1919, which is the last year of which I have a record, amounted to 26,460 pounds, while the importations in 1921 were 38,794,431 pounds. At 2 cents a pound, the proposed duty would be equivalent to an ad valorem rate of 22 per cent. So we have a 22 per cent duty upon fresh figs, and upon preserved and other figs a duty of 40 per cent under the bill as reported.

The VICE PRESIDENT. The question is on the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 107, paragraph 741, line 15, after the words "ad valorem," to strike out:

Dates, 1 cent per pound.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 107, after line 15, to insert:

PAR. 741a. Dates, fresh or dried, 1 cent per pound; prepared or preserved in any manner, 35 per cent ad valorem.

Mr. McCUMBER. On behalf of the Committee on Finance, I ask to modify the amendment which has just been stated, in line 17, before the words "per centum," by striking out the numerals "35" and inserting in lieu thereof the numerals "40."

Mr. WALSH of Massachusetts. Mr. President, this is another amendment which can not be successfully defended. The rate proposed by the committee is unwarranted and most excessive. The California production of dates amounts practically to 145,000 pounds, valued at only $29,000. The imports in 1920 amounted to 36,000,000 pounds, valued at $2,224,000. The California production is less than 1 per cent of the consumption.

This is not an infant industry. Dates are not produced in any large quantities in this country; they are imported. Here again the exceedingly high rate proposed of 40 per cent ad valorem means that for preserved dates costing 10 cents a pound the American people will have to pay instantly, to-morrow—if this bill should become a law to-morrow—about 15 cents a pound; if dates were selling for 20 cents a pound, this amendment means that the people would be charged about 30 cents a pound for dates; if dates are selling for 30 cents a pound, this amendment means that the people will be charged almost 50 cents a pound. There ought to be some limit upon these rates.

Evidently what the Senator from Wisconsin [Mr. LENROOT] said this morning is becoming more and more apparent, that any Senator on either side of the Chamber who promises to vote for this bill may get whatever he wants in the way of duties upon the products in which he is interested. It is a give-and-take proposition. This is a duty of 40 per cent ad valorem on something that the American people must buy abroad; a food supply for which they have to go into a foreign market to secure what they want.

I am surprised that the Committee on Finance would, day after day, in the face of the opposition throughout the country to the pending bill, come here proposing to increase these rates. I do not know where the pressure is coming from or what the influence is, but the fact is that there has not been, to my recollection, a single amendment offered by the Committee on Finance to the agricultural schedule proposing to reduce a rate; there has not been a single amendment of the committee rejected; and I honestly believe that if the Senator from North Dakota had proposed to make this rate 200 per cent ad valorem he would get a majority in this Chamber in favor of it and that it would be adopted. The committee may come in with any rates they see fit and get favorable action.

There is no longer independent judgment here. We might just as well end the discussion. When the chemical schedule was under discussion and the metal schedule was being considered the committee came to the conclusion, after hearing the opposition, that many of the rates proposed were too high,

and in a few instances they reported amendments reducing the rates on metals, but on food every single amendment proposed here has been designed to increase the rates. I venture to say that the Senator from North Dakota, representing the Finance Committee, has proposed at least 25 amendments to the agricultural schedule in this bill increasing the rates since this schedule has been under consideration, and that those amendments have all been adopted. What is the justification for these increases? There is a day of reckoning coming.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. Does the Senator from Massachusetts yield to the Senator from North Dakota?

Mr. WALSH of Massachusetts. I yield.

Mr. McCUMBER. Does the Senator want to have the duty on fresh or dried dates reduced to the Underwood rate?

Mr. WALSH of Massachusetts. I would reduce this rate to 20 per cent ad valorem.

Mr. McCUMBER. But I ask the Senator in regard to dates, fresh or dried. Most of the dates come in either fresh or dried, although some come in in candied or glacéd form. Now, does the Senator desire the Underwood rate to govern in this instance?

Mr. WALSH of Massachusetts. I think the Underwood rate on fresh dates was about the same as the rate provided in this bill, and, perhaps even a little bit more. But that rate was for revenue purposes.

Mr. McCUMBER. The Senator thinks the Underwood rate is too high, does he?

Mr. WALSH of Massachusetts. I am discussing the only amendment before the Senate, and that is the amendment in relation to prepared or preserved dates and not fresh or dried dates, which I do not desire to discuss now, because there is no commitee amendment pending to that bracket.

Mr. McCUMBER. The whole paragraph 741a is an amendment, and therefore the Senator can discuss the entire paragraph.

Mr. WALSH of Massachusetts. I ask the Senator's pardon. The entire paragraph 741a is in the nature of an amendment, but the rate has not been changed in the Senate committee amendment so far as fresh or dried dates are concerned. The only change in the rate originally proposed in the bill is from 35 per cent ad valorem to 40 per cent ad valorem.

I am informed that the acreage in both figs and dates is relatively insignificant. In broad terms, the proposed duty will mean virtually nothing to the industry except in the case of a few scattered producers.

To show the inconsistency of the position of the committee in levying any duty at all upon dates, fresh or dried, prepared or preserved, the committee placed upon the free list bananas, which are imported in large quantities and are very insignificantly produced in this country; but on dates, which are also imported in very large quantities and practically are not produced at all in the United States, the committee imposed a duty of 1 cent per pound upon fresh or dried and 40 per cent ad valorem upon prepared or preserved.

Mr. President, I have nothing further to say upon this amendment.

The VICE PRESIDENT. The question is upon the committee amendment as modified.

Mr. McCUMBER. Mr. President, the imports of dates, fresh or dried, in the year 1921 were 45,827,320 pounds. The import price was about 5 cents per pound, and therefore a duty of 1 cent per pound is equivalent to 20 per cent ad valorem. I am rather surprised that my good friend from Massachusetts can find such serious objection to this rate, when it is exactly the same as that fixed in the Democratic tariff law of 1913. We have not raised the rate a penny; and yet the importation of dates continues and we are still importing many times the quantity raised in the United States. I have not noticed that the duty on dates has enormously added to the cost of living in the United States.

When we come to glacéd or candied fruits, which are luxuries, and in which there is a great deal of waste and an enormous expense, with our high standard of wages it was necessary to increase the protective principle, or, if we say that it is not for protection, then we are entitled to have the benefit of the duties; but inasmuch as these glacéd fruits are produced in this country to a considerable extent by the higher cost of labor we of necessity are required to give a higher protective duty than under the Payne-Aldrich law.

The quantity produced in California does not amount to a great deal. In 1919 California produced 144,992 pounds; Arizona, 42,812 pounds. The total produced in those two States was 187,804 pounds. The imports of this 45,000,000 pounds, the Senator must remember, were not imports which will now take a duty of 40 per cent ad valorem. They are imports which will take a duty of 1 cent per pound, or 20 per cent ad valorem on the present basis of importing values.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

The VICE PRESIDENT. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. In paragraph 742, page 107, line 20, it is proposed to strike out "2" and insert "2½," so as to read:

Grapes in barrels or other packages, 25 cents per cubic foot of the capacity of the packages; raisins, 2½ cents per pound.

Mr. WALSH of Massachusetts. Mr. President, this item illustrates once more the want of an underlying principle in the fixing of rates in this bill.

Raisins are exported in large volume. Dates are imported in large volume. Walnuts are imported in large volume. Almonds are imported in large volume; but whether the volume of imports be large or small, whether the industry be on an export basis or not, under this bill all have been given increased protective duties.

In 1919 the production of raisins amounted to 336,000,000 pounds, valued at $50,000,000. The imports amounted to only 14,000,000 pounds, valued at $2,653,000, about 4 per cent of our production. The exports were six times as large as our imports, amounting to 86,000,000 pounds, valued at $12,000,000.

Here, then, is an industry where our production is beyond the requirements of the consumers of our country—an industry that is so profitable that we are exporting six times as much as we import of raisins. Clearly these facts do not justify the imposition of an increased tariff duty. There is nothing to protect when there are no importations.

Attention ought to be called to the fact that this is an industry that the Federal Trade Commission recently cited and called attention to the trade and price practices of the Raisin Growers' Association as not being entirely legal. The result of the action of the Federal Trade Commission against the Raisin Growers' Association was a modification of their marketing practices in trying to fix prices.

This industry can not claim that it is going to be injured by foreign exploitation. It is a very prosperous industry. Its prosperity has increased since the coming of prohibition. There is a greater demand for raisins in America to-day than ever before. The prohibition amendment has done more for this industry than tariff duties will ever do.

Mr. McCUMBER. How does the Senator explain that?

Mr. WALSH of Massachusetts. I did not think the Senator was so innocent.

Mr. President, how can we explain to the American people the need of a protective-tariff duty upon an industry that is not meeting with any competition from foreign sources? How can we justify a protective-tariff duty on an industry that is so prosperous that it can successfully compete with the world and export in large volume its products to all parts of the world?

Protection usually implies the necessity of preventing something of an injurious nature being inflicted upon an industry. Protection usually suggests that an industry needs to be safeguarded against foreign importations that may undersell the domestic product in the home markets. This claim can not be made of raisins. The facts do not warrant the levying of any duty whatever upon raisins, except for revenue purposes; and this amendment, as I said at the outset, is further evidence that no principle of tariff protection heretofore approved and supported by the majority party has been invoked in the preparation of the rates and schedules in this bill.

Mr. McCUMBER. Mr. President, in 1921 we imported $1,136,947 worth of grapes in barrels and other packages. That gives us $300,000 duty for revenue purposes, and we shall need that many times over. The raisins also give us a fair return in duties.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. On page 107, line 21, it is proposed to strike out the words "dried currants and."

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 22 it is proposed to strike out the word "pound" and to insert the same word with a semicolon and the words "currants, Zante or other, 2 cents per pound," so as to read:

Other dried grapes, 2½ cents per pound; currants, Zante or other, 2 cents per pound.

The amendment was agreed to.

The ASSISTANT SECRETARY. In paragraph 743, page 107, lines 24 and 25, it is proposed to strike out "oranges, and grapefruit,

1 cent per pound," and to insert "and oranges, 1 cent per pound; grapefruit, one-half of 1 cent per pound."

So as to make the paragraph read:

PAR. 743. Lemons, 2 cents per pound; limes and oranges, 1 cent per pound; grapefruit, one-half of 1 cent per pound.

Mr. McCUMBER. Mr. President, on behalf of the committee, I offer the following amendment: On page 107, line 25, before the word "and," insert the words "in their natural state or in brine."

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The question is on the amendment of the committee as amended.

Mr. WALSH of Massachusetts. Mr. President, the item of lemons in this paragraph is not now under consideration, there being no amendment offered to that part of the paragraph by the Senate Finance Committee; so I shall not take up the time of the Senate in discussing the high rate upon lemons named in this paragraph. The committee does, however, propose an amendment on oranges and on grapefruit, and I should like to have inserted in the RECORD some information which I have in regard to these products.

First of all, let me call attention to the fact that the House rate of 1 cent per pound is higher than the rate in the Underwood law, which was one-half cent per pound, and the rate named by the Senate committee restores the Payne-Aldrich duties.

The California orange crop is around 20,000,000 boxes, and that of Florida about 8,000,000 boxes. The imports are negligible, rarely exceeding $100,000 worth, while our exports have been around three to seven million dollars worth. This industry, therefore, has reached a stage where it can maintain itself against foreign competition without the aid of a tariff, and this has been achieved not by the tariff but by production through the development and improvement of orange-grove cultivation.

The exports of oranges are relatively small, since it requires nearly a generation to create a citrus industry. Oranges come chiefly from Spain and the Mediterranean countries, but this supply is dwarfed by the demand for the domestic product. Here we have an illustration of why a tariff is continued upon an established industry in spite of the fact that it no longer requires such support. It affects relatively insignificant quantities of oranges from the West Indies, and assists the growers' association in maintaining their prices through the feeding out of the orange supply to the different markets. The increased uses of oranges, such as for drinks and as a table fruit, have tremendously expanded the demand.

As to grapefruit, Florida produces the great bulk of the domestic grapefruit, production in 1919 being 3,000,000 boxes, valued at $6,000,000. Porto Rico produced in 1919, 345,340 boxes. California produced 465,000 boxes. The imports have been relatively small, amounting to about half a million dollars.

Mr. President, with these facts before us, I want to call attention to the fact that the orange industry does not need any protective tariff duty. One cent per pound will not bring any revenue, because there are no imports; and the only purpose is that it will give the growers' association a chance to increase the price. Oranges are produced in sufficient amount to take care of the domestic demand, and there is not any justification, in my opinion, for this duty. Oranges, like raisins, are produced in such quantities that they can not possibly be considered infant industries.

I have nothing further to add, Mr. President.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

Mr. McCUMBER. That completes paragraph 743?

The VICE PRESIDENT. It does.

Mr. McCUMBER. I ask, then, that we take up paragraph 718, providing for duties on fish.

The next amendment of the committee was, in paragraph 718, page 102, line 18, to strike out the word "all" and insert the words "fish, fresh, frozen, or packed in ice; halibut, salmon, and swordfish, 2 cents per pound."

Mr. WALSH of Massachusetts. The Senator from Washington [Mr. JONES] is interested in these paragraphs. He ought to be sent for, or a quorum call had.

Mr. LODGE. Mr. President, I move to amend the amendment by adding, after the word "salmon," in line 19, the word "mackerel" and a comma.

The amendment to the amendment was agreed to.

Mr. WALSH of Massachusetts. Mr. President, fish is a product that differs from all others in the very nature of the industry, and therefore it must be considered upon somewhat different principles. First, I want to call attention to a striking inconsistency in this paragraph. Halibut is the fish most extensively found in the eastern markets. Salmon and swordfish are found more extensively in the Pacific coast markets.

The imports of salmon and of swordfish are insignificant, so that the salmon and swordfish market, largely on the Pacific coast, has practically no competition, while halibut, a fish caught in the Atlantic Ocean waters, and marketed in the Atlantic coast markets, meets with very serious competition from Canadian fish importations, yet the committee amendment, drawn so unscientifically, only gives the same protection to the halibut fisherman of the East that it gives to the salmon fisherman of the West, although the halibut fisherman must compete with an importation from foreign markets of 17 per cent of the amount of our consumption.

I think this is a very grave and serious injustice to the halibut fisherman, and that the rate upon halibut ought to be more than the rate upon salmon and swordfish, in view of the statistics upon the imports and the production and consumption of these various kinds of fish, or the rates on salmon and swordfish reduced.

I do not know that there is anything more I care to say, but I ask that some letters which I have received and information which I have summarized about the imports and domestic production of these fish be incorporated with my remarks.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

DIFFERENCE BETWEEN THE SENATE COMMITTEE AMENDMENT AND PREVIOUS LAWS.

Under the Underwood Act fresh fish, frozen or packed in ice, were free. Under the Payne-Aldrich Act fresh fish were dutiable at three-fourths cent per pound, with a special provision of one-fourth cent per pound for fresh herring, eels, smelts, and fresh-water fish, and a special provision of 1 cent per pound for fresh mackerel, halibut, and salmon.

PRODUCTION, IMPORTS, AND EXPORTS.

The present annual catch of fresh fish amounts to about 2,500,000,000 pounds. Our imports average about 100,000,000 pounds, of which fresh-water fish constitutes about 4 per cent. Exports are relatively small; ordinarily they amount to around 10,000,000 pounds.

Imports are almost exclusively from Canada and are received at North Atlantic ports. The great bulk of salt-water fish consists of halibut, cod, haddock, hake, pollock, herring, smelts, salmon, and mackerel.

Of the total catch of fresh fish 35,000,000 pounds are halibut and 613,910,000 pounds are salmon. I have not been able to obtain any accurate figures as to swordfish. The figures on halibut and salmon, however, are sufficient to indicate that a large percentage of the total catch is of these varieties, and that therefore the proposed increase from 1 cent to 2 cents per pound on halibut, salmon, and swordfish will be applicable to at least 30 per cent of our domestic catch.

About 17,000,000 pounds of halibut and about 6,000,000 pounds of salmon are imported per year. Imports of halibut amount to about 17 per cent of our total consumption; imports of salmon amount to less than 1 per cent of our consumption.

It is clear from these figures that halibut fish should bear a higher duty than salmon.

—

GLOUCESTER FISH EXCHANGE,
Gloucester, Mass., June 5, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SIR: At a meeting of the Gloucester Fish Exchange, held this morning, I was instructed to communicate with you and to ask your kindly influence in having the provision in the proposed tariff relating to fresh mackerel raised from 1 cent to 2 cents per pound.

The suggestion offered is that the word "mackerel" be inserted in Senate Document No. 187, Schedule 7, agricultural products and provisions, paragraph 718, page 42, so as to read:

"Par. 718. Fish, fresh, frozen, or packed in ice: Halibut, mackerel, salmon, and swordfish, 2 cents per pound," etc.

Briefly, and as a reason for making the foregoing request, it might be added that the American fresh-mackerel market is flooded with fish imported from Nova Scotia, with the result that the product is selling at figures unprofitable to the American industry.

During the past two weeks, as an illustration, thousands of barrels of fresh mackerel have been shipped in from Nova Scotia and dumped on the New England market, with the result that the American fisherman finds his usual and regular market destroyed and unprofitable.

Trusting that the suggestion herein contained will meet with your approbation and thanking you in advance for a kindly consideration of the matter at your convenience.

I am, sir, with great respect, sincerely yours,

WILMOT A. REED, *Secretary.*

—

CHAMBER OF COMMERCE,
Gloucester, Mass., June 6, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

HONORABLE SIR: The board of directors of the chamber of commerce has asked me to bring the following matter to your attention, with the request that, in so far as may be possible, you lend your influence in support of the proposed change.

The matter relates to the proposed tariff, and especially to that portion which concerns fresh mackerel. It is found in Senate Document No. 187, schedule 7, "Agricultural products and provisions," paragraph 718, page 42, and reads as follows:

"Fish, fresh, frozen, or packed in ice, n. s. p. f., halibut, salmon, and swordfish, 2 cents per pound; all other fish, n. s. p. f., 1 cent per pound," etc.

The board of directors is convinced from the facts presented to it by its committee and its affiliated organizations that the tariff on fresh mackerel as herein provided for would result in great injury to the

extensive mackerel fisheries existing in Gloucester and elsewhere in New England. It is apparent that at present Canadian fresh mackerel are being imported via Boston at a cost far below the cost of production to our own fishermen. The board of directors therefore begs to suggest that this particular paragraph be so amended as to include along with the three other fresh fish mentioned mackerel. The paragraph would then read as follows:

"PAR. 718. Fish, fresh, frozen, or packed in ice, n. s. p. f., halibut, mackerel, salmon, swordfish, 2 cents per pound; all other fish, n. s. p. f., 1 cent per pound," etc.

We trust that this suggestion will meet with your approval and that there is still time and opportunity in which to make the desired change. We fully appreciate all your past efforts in our favor and know that you have our interests at heart, for all of which we are truly thankful.

Sincerely yours,

HERMAN F. LION, *Manager*.

Mr. JONES of Washington. Mr. President, I was called out for a moment. What is the pending amendment?

The VICE PRESIDENT. The amendment relative to fish.

Mr. JONES of Washington. The first amendment?

The VICE PRESIDENT. The first amendment.

Mr. JONES of Washington. I desire to offer an amendment to the committee amendment.

The VICE PRESIDENT. The Secretary will report the amendment.

The ASSISTANT SECRETARY. On page 102, line 19, the Senator from Washington moves to amend by inserting after the word "pound" the following proviso:

Provided, That from and after 90 days after the enactment of this act no fresh or frozen halibut, salmon, or swordfish from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country, except when the same shall be in bond from an American port.

Mr. JONES of Washington. Mr. President, this amendment to the amendment does not affect the duty on fish as proposed by the committee. I will say frankly that it is intended to meet rather a local situation which has been brought about by special orders in council and regulations by the Canadian Government.

I do not know whether the committee will oppose the amendment or not. I will take just a few moments to explain the situation, and I hope there will be no opposition to it. I can not see how there can be, from the American standpoint.

This amendment was put in the tariff bill of 1913 in the Senate. It was very carefully considered by the committee and there was a very extended debate on the floor of the Senate. Senator Chamberlain, of Oregon, on the Democratic side, made a very strong speech in behalf of it. As I said, it was put in the bill in the Senate; but it went out in conference.

The situation which we seek to meet by this amendment is about this: The halibut fishing grounds are 600 or 700 miles north of Seattle, extending a distance of about 1,500 miles. They are fished very largely by American fishermen and American vessels; at least, that used to be the case.

In 1915 the Grand Trunk Railway was completed to Prince Rupert, which is about thirty-odd miles from the Alaskan coast, It is the terminus of this railroad. Immediately upon the completion of the railroad, or when it was near completion, the Canadians, with characteristic energy and characteristic devotion to the interests of Canadians, took steps to concentrate business at Prince Rupert and provide freight for the Grand Trunk Railway.

One of the inviting fields in this direction was the fishing industry, and especially the halibut fishing industry. If this product could be diverted over the Grand Trunk Railway it would furnish a very large freight tonnage coming to eastern cities and eastern markets.

Canada has a very effective legislative system, one that can be used very promptly, and it was put into operation at once. Certain regulations were made and certain orders in council were passed, with the avowed purpose of concentrating the fishing fleet and the fishing industry at Prince Rupert.

I made an address myself in connection with the tariff bill of 1913 and quoted from some of these orders in council, and I desire to quote from those orders now, because they are just as pertinent at this time as they were in 1913. I desire to quote from a statement I made, because it summarizes the action of the Canadian Government. It is as follows:

In December, 1914, the Canadian Government passed an order in council permitting the Minister of Customs to make such regulations and conditions as he found necessary to induce foreign corporations and American vessels to bring their business to Canadian ports.

That was the distinct purpose of these regulations and orders in council. I read further:

This order in council provided that during the year 1915 foreigners and foreign corporations bringing fresh fish in vessels registered in the United States could land such fish at any Canadian port without the payment of duty and transship the same in bond to any port in the United States. This order in council also provided that foreigners and foreign corporations bringing fish into Canada would be permitted to purchase supplies at any port in British Columbia; all of these things to be done, however, under such regulations and conditions as the Minister of Customs should determine.

After making inducements which would lead the fishing fleet to go into Canadian ports for the purpose of acquiring provisions and for the purpose of disposing of their fish, and so on, one of the provisions was that these fish should be shipped out of Canada only by railroad. In other words, it was the avowed purpose of these orders in council to have the fish shipped over the Canadian railroad. That was the only railroad there, and the only way to get those fish out was to ship them over the Canadian railroad. It was also provided, I think in the 1914 order in council, that the fish could be brought into Canada and transshipped in bond. That precluded many of the smaller catches from being disposed of.

In order to encourage the fisherman to come into Prince Rupert a subsequent order in council was made, modifying the original order in council, and permitting these fish brought by American ships and American seamen into Canada to be sold to Canadians for the purpose of shipment in bond into Canada. It was provided also by these orders in council that fish brought by Americans into those ports could not be sold for consumption in Canada at all.

One of the principal objections made by some of the fishermen and seamen out in that country seems to be based upon the idea that if an amendment like this should be adopted, the price would be lowered. As a matter of fact, in my judgment, they would get a much better price in American ports and American territory than under the present conditions. They seem to have overlooked the fact that under the Canadian orders in council they can not sell their fish to Canadians for consumption in Canada; in other words, the market is very decidedly limited.

Briefly, that is the situation we strive to meet by this amendment. The Canadian Government has used its legislative power to concentrate the fishing industry at Prince Rupert. We think this industry should have an opportunity, at least, and an encouragement, to concentrate at American ports.

I believe the effect of the amendment I have offered will be to induce American fishermen to bring their fish to Ketchikan, Alaska. Some think this is aimed to promote the welfare of the city of Seattle. That is not the purpose. Ketchikan is about 600 miles north of Seattle, less than a hundred miles from Prince Rupert, and the only disadvantage to which it is put, aside from these orders in council, is the fact that it has not railroad connection with the land. In other words, Prince Rupert, as I said, is the terminus of this railroad.

I have here a petition in the form of a guaranty from business men and business interests at Ketchikan, in which they guarantee that a ferry service would be maintained between Ketchikan and Prince Rupert if legislation of this character should be enacted so that the Canadian railway may not lose the business. One objection heretofore urged has been that this was intended to confine the shipment of the fish to American railroads. I believe that a great deal of it will come over the American railroads. I believe a great deal of the fish will come to Seattle with legislation of this character, but it may not do so. Even though a great deal of it may come to Seattle, a great part of it will still go to Prince Rupert under this legislation and go over the Canadian railroad, but the business involved in the handling of the fish, in taking care of it and storing it and preparing it, and all that sort of thing, will be done in American territory by American capital and American interests. That is done pretty largely, I think, in Ketchikan and elsewhere; in other words, this will result in encouraging American industry and employment and capital, and so forth, in Alaska. That is another consideration that commends it to me.

The guaranty that I have is dated Ketchikan, May 8, and reads as follows:

We are informed that your objection to the legislation now pending before Congress, relative to the Alaska fresh-fish business, is due to the lack of facilities and transportation between Alaska and the rail terminal at Prince Rupert, British Columbia.

In order, therefore, that this objection may be overcome and Alaska receive its full share of the benefits accruing from the fisheries operations along the North Pacific coast and to conserve this industry to the American instead of Canadian people, we, the undersigned, whom you know to be financially responsible, agree to provide upon the passage of the suggested legislation satisfactory transportation facilities for all shipments of fresh and frozen fish between Ketchikan, Alaska, and the western terminal of the Grand Trunk Pacific Railroad, at a rate which shall not exceed the present cost of delivery, and we offer for your consideration the hereto-attached statement of the facilities now available at Ketchikan for the economical and expeditious handling of the product of these fisheries as compared with those at Prince Rupert, British Columbia.

This is signed by some 30 or 40 leading business men, including bankers, merchants, and so on, of Ketchikan. Then they point out the facilities for handling the fish at Ketchikan. I desire to say that because of the tendency of this legislation and the proposals which they knew were going to be urged from time to time and in the belief that Congress would respond

to this desire and this need of encouraging American industry the people in Ketchikan have gone on to provide the facilities that may be necessary to handle the fish. They have, according to their statement—and I have no reason to doubt it—much more extensive facilities than have been created even at Prince Rupert.

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. JONES of Washington. I yield.

Mr. KELLOGG. I was not in the Chamber when the Senator commenced his remarks, and I would like to ask a question. Is it proposed to prohibit the importation of fish into the United States except through an American port of entry?

Mr. JONES of Washington. They can not come into the United States except through an American port of entry. The amendment provides that they can not come through a foreign country, except in bond from an American port.

Mr. KELLOGG. The Senator means that they could not come on any of the Canadian railroads into the United States?

Mr. JONES of Washington. They could not come in on any Canadian railroad, unless shipped from an American port in bond. In other words, they could come from Ketchikan in bond over the Grand Trunk Railway.

Mr. KELLOGG. But they could not come from any Canadian port into the United States?

Mr. JONES of Washington. No.

Mr. KELLOGG. In bond?

Mr. JONES of Washington. This prohibits their coming from any Canadian port in bond.

Mr. KELLOGG. The Senator is aware, I suppose, of the great amount of Canadian products to be exported which come through the United States. Is not this rather radical discrimination against Canadian interests when we take a large amount of their products, even for export, through United States ports?

Mr. JONES of Washington. This deals only with particular products—with halibut and salmon and swordfish.

Mr. KELLOGG. But products from Canadian farms—wheat, flour, live stock, and meats—are shipped through the United States and through the United States ports to foreign countries.

Mr. JONES of Washington. I do not try to deal with those.

Mr. KELLOGG. I know the Senator does not, but it seems to me that they could with equal justice prohibit any of their exports coming through the United States.

Mr. JONES of Washington. Does the Senator think they will do it?

Mr. KELLOGG. I do not know whether they will or not.

Mr. JONES of Washington. Did the Senator hear what I stated with reference to what they have done to us to center this trade at Prince Rupert? What I propose to do is to meet the very discrimination they have made against us. That is all in the world it is. They provide that our people can not bring fish to Canada and sell them there for Canadian consumption.

Mr. KELLOGG. Do they place an absolute embargo on American fish in Canada? Is that what the Senator means?

Mr. JONES of Washington. No; they encourage it to come in there to be shipped over the Grand Trunk Railroad, but they say that it can not be sold for local consumption.

Mr. KELLOGG. Then it is an embargo against the local consumption of American fish?

Mr. JONES of Washington. Yes. They have done that by their orders in council. They have used their legislative power, as I said awhile ago, to build up Prince Rupert.

Mr. KELLOGG. Do we sell much American fish in Canada locally?

Mr. JONES of Washington. They prohibit it.

Mr. KELLOGG. Would we sell much if they did not prohibit it?

Mr. JONES of Washington. I expect we would.

Mr. KELLOGG. Does the Senator know whether we would or not?

Mr. JONES of Washington. I can not tell what we would do absolutely. I think that we probably would, because our fishing fleets gather in most of the halibut and the salmon, especially the halibut from the halibut bank. They are American fishermen and American ships, and they take them to Prince Rupert, and have been doing it. I have not any doubt that if they could be sold locally many of them would be sold there, but they especially prohibit that by their order in council. I have here a copy of that order. Here is what they say. This is an amendment of the order in council of 1914:

> Said order in council of December 10, 1914, is hereby amended to provide: During the present calendar year (1915) foreigners or foreign corporations—

This is aimed directly at the United States, and I want the Senator from Minnesota to notice it—

> During the present calendar year (1915) foreigners or foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transship the same in bond to any port in the United States, or to sell such fish in bond to such local dealer or dealers as may be properly and duly licensed therefor, under the regulations and conditions thereinafter mentioned, which dealer or dealers shall export the same in compliance with the bonding requirement (without the right, however, in either instance, to sell in Canada for consumption therein, or otherwise except in bond, any of such fresh fish so landed); and such foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to purchase supplies and ship crews for such vessels at any port in said Province of British Columbia, the whole under such regulations and conditions as the minister of customs may determine.

As I called attention a while ago, by this order in council the fish brought in there could not be sent out of Canada except by railroad. In other words, if an American fishing vessel went into Prince Rupert with fish and landed them there and could not dispose of them or could not sell all of them, they could not take them by boat to Seattle; they could only get them out of there by railroad. What Canada may do by way of retaliation I do not know. We are trying to meet retaliation that Canada has already practiced against us. In dealing with many of these questions where we are trying to meet discrimination, an act aimed directly at us and against us, I can not understand why we should be urged not to do something for fear that we may offend or for fear they may retaliate against us. We did not begin this. They commenced it. They began it upon the completion of the Grand Trunk Railway for the specific and avowed purpose of building up the business of Prince Rupert, and for the further purpose, as stated in one of these orders in council, of securing the transfer of registry of American ships to Canadian registry. Here is what they said in one of the whereases to this order in council of 1915—I shall not take the time to read it all:

> And whereas the minister of the naval service is informed that, in view of the fact that Prince Rupert is several hundred miles nearer the fishing grounds than is Seattle, and as the Grand Trunk Pacific Railway is now operating, so that fish can as readily be shipped to the eastern United States markets from Prince Rupert as from Seattle, if such boats and smaller vessels were permitted to go to Prince Rupert and sell their catches to some person or corporation which would in turn ship them in bond to the United States, and if such vessels or boats were then permitted to purchase supplies for their fishing operations, a considerable number of them would transfer their base of operations from Seattle to Prince Rupert, and would probably later transfer their vessels or boats to the Canadian registry and permanently operate from Prince Rupert.

That is another method that our friends across the line take to build up their merchant marine. I commend it upon their part. If I were a Canadian, I would be very proud of the action which they took in order to promote and build up their interests, especially their shipping interests. I would like to see us do the same thing to look after our shipping interests.

Mr. LODGE. Mr. President——

Mr. JONES of Washington. I yield to the Senator from Massachusetts.

Mr. LODGE. I only interrupt the Senator because I really desire information, and I want to understand the situation fully. As I understand it, the fish comes in at Ketchikan, which is an American port. It is shipped from there to Prince Rupert.

Mr. JONES of Washington. Not now. By reason of the encouragement and the special inducements offered the fishing vessels do not go to Ketchikan, but to Prince Rupert.

Mr. LODGE. They go direct to Prince Rupert?

Mr. JONES of Washington. They go direct to Prince Rupert.

Mr. LODGE. American vessels?

Mr. JONES of Washington. American vessels, and they turn their fish over to some dealer, who will ship them in bond into the United States; in other words, they have the business transaction there.

Mr. LODGE. They are relieved from the Canadian duty?

Mr. JONES of Washington. That is true.

Mr. LODGE. The reason why I ask is that I have received a telegram from the New England Fish Co., referring to another communication, which I have not been able to find, asking me to oppose the amendment placing an embargo on fish other than packed in American ports. Then I also have a letter from the Fishing Vessel Owners' Association of Seattle, and they speak in it of a pamphlet which they prepared for the Senate Finance Committee, which I have not received. They say:

> If you can see your way clear to oppose this amendment when it is proposed, you will materially assist in the preservation of a great American industry in which our members, who own over 100 sea halibut schooners, have invested their all and on which their living depends.

That is from Seattle; it is not from New England.

Mr. NELSON. Will the Senators yield to me?

Mr. JONES of Washington. I yield to the Senator.

Mr. LODGE. I was merely asking a question for information.

Mr. NELSON. What the Senator from Washington contends for may be of some benefit to American shipowners, but it will

be very disastrous to the Alaskan fishermen. They contend, and I have numerous letters from them to that effect, that they are cut off and are unable to sell their fish for the prices for which they could otherwise sell them. The amendment proposed, if adopted, would be a curse to the Alaskan fishermen.

Mr. JONES of Washington. I desire to say that the mere statement of the Senator from Minnesota does not make it a fact. I should like to have some one point out how it would be a curse to the Alaskan fishermen. It does not take away in any degree their market; it really expands their market. The Alaskan fishermen now take their fish into Prince Rupert, but they can not sell them there for local consumption. The only way they can sell them in Prince Rupert is in such a manner that they may be shipped in bond to ports into the United States to be sold.

Mr. NELSON. At present all of the fish which are caught there have to go through Seattle to be shipped to the eastern market.

Mr. JONES of Washington. Oh, no.

Mr. NELSON. Oh, yes.

Mr. JONES of Washington. Oh, no.

Mr. NELSON. The Alaskan fishemen can not now sell their fish at Prince Rupert; if they wish to ship any fish eastward anywhere in the United States they have all got to go through the port of Seattle and nowhere else. The Alaskan fishermen bitterly complain of that; I have had them come to see me about it here within the last three months.

Mr. JONES of Washington. Of course, the only way that fish from Alaska may be shipped to the eastern market, unless they go around by vessel, is over American railroads or over Canadian railroads; and the American railroads, of course, connect at Seattle. That is all true; but the amendment which I have proposed does not prohibit the Alaskan fishermen from shipping their fish to the eastern markets over Canadian railroads; it does not deprive them of that market at all.

Mr. NELSON. I will call the attention of the Senator from Washington to the fact that the Legislature of Alaska was so interested in this question that it directed the attorney general of Alaska to bring suit in the Supreme Court of the United States in order to get rid of this hamstringing legislation that is ruining the Alaskan fishermen. The case was argued here in the Supreme Court—and I saw the attorney general of Alaska at that time—but the Supreme Court held that inasmuch as the law complained of related to a Territory, Congress had the power to enact it. If Alaska had been a State, that legislation never could have been enacted.

Mr. JONES of Washington. Mr. President, the legislation to which the Senator from Minnesota has referred does not relate to fisheries at all. That was a provision of the merchant marine act with reference to the coastwise laws of the country and to shipping, and has no bearing whatever upon this proposition. Why the Senator from Minnesota should bring that law in, I do not understand.

The Senator from Minnesota states that the Legislature of Alaska and the attorney general of Alaska are objecting to this proposal. I have here a resolution which was passed by the Alaska Territorial Fish Commission with reference to this very matter. The Senator from Minnesota thinks, and I think, that we should pay some attention to the local sentiment and the views of the people of Alaska.

Mr. NELSON. Mr. President, will the Senator from Washington yield to me?

Mr. JONES of Washington. I yield to the Senator from Minnesota.

Mr. NELSON. Mr. President, ever since I visited Alaska in 1903, with a committee of the Senate, I have been a warm friend of Alaska. A geat deal of the legislation which has been obtained in behalf of Alaska in the past I formulated and secured its passage here. Alaska has had such very hard times that the Territory now has not as large a white population as it had 10 years ago. If it is desired to build up Alaska, its industries should be encouraged, and one of its leading industries is that of fishing, which should not be frozen out in the interest of Seattle.

Mr. JONES of Washington. Mr. President, I do not think the Senator from Minnesota means what he says or he does not appreciate what he is saying. I am not trying to freeze out the fishing industry in Alaska in the interest of Seattle. As a matter of fact, as I stated a while ago, this amendment is in the interest of Alaska; it is in the interest of Ketchikan, Alaska. There is where, if this amendment is adopted, the fishing business will be concentrated.

I appreciate what the Senator from Minnesota has said regarding his friendship for Alaska and as to what he has done for Alaska. Too much can not be said as to his interest in Alaska and his friendship for that Territory; and I am sorry to see that because of a few people who, in my judgment, have been very largely inspired by Canadian influences, the Senator will unwittingly join in defeating a proposition that is for the benefit of Alaska, and is especially for the benefit of one of the principal towns in Alaska.

I know that some of the fishermen oppose this proposition; but I want to say to the Senator that I am very reliably informed that a prominent Canadian attended the meetings of some of the fishermen on Puget Sound and used his influence there in opposition to this proposed legislation. Canadians know how to look after their own interests, and they do it; they know how to use their business connections in this country to look after their interests, and they use them.

Mr. NELSON. There is this difference, I wish to say to the Senator, namely, that when these poor fishermen take their fish to Prince Rupert they get a better price in cash than they do at Seattle.

Mr. JONES of Washington. I do not want them to have to come to Seattle.

Mr. NELSON. And they make more money; it is more profitable to them. If the fishermen are compelled to go to Seattle, as under existing arrangements and under the proposed arrangement, they will be the losers.

Mr. JONES of Washington. Why does the Senator say that this proposed amendment is in the interest of Seattle? I wish he would tell us.

Mr. NELSON. Because it will compel them to take all their fish and ship them eastward through the port of Seattle.

Mr. JONES of Washington. How will the amendment compel them to ship their fish through Seattle?

Mr. NELSON. That is provided under the law already existing, and the Senator's proposal is supplementary to that law.

Mr. JONES of Washington. No; the Senator is mistaken.

Mr. NELSON. No.

Mr. JONES of Washington. The Senator is not usually mistaken, but sometimes, like the rest of us, he does make a mistake, and he is mistaken in this instance. There is not any law which requires them to ship their fish through Seattle; they are not doing it now; they are selling their fish at Prince Rupert, and this amendment will not take away their markets, but will expressly permit them to send their fish in bond from Ketchikan over the Canadian railroads to the eastern markets.

So, Mr. President, this amendment does not take away from the American fishermen any market that he has, but, as a matter of fact, it expands his market.

I am just as much interested in the Alaskan fishermen as is the Senator from Minnesota; I am just as much interested in the fishermen of Puget Sound as is the Senator from Minnesota, although I may not have done as much as has the Senator from Minnesota; I am just as much interested in the welfare of Alaska as is the Senator from Minnesota, and, with all due respect to him, I believe I know about as much about it as does the Senator from Minnesota, and if I thought that this amendment would be an injury to Alaska I would not propose it, but, instead of thinking that it is a benefit to Seattle, I believe it is of special benefit to Ketchikan.

Now, here is a resolution passed by the Alaskan Territorial Fish Commission at the session held in Juneau January 14, 1921:

Whereas it is the sense of the commission that the fresh-fish industry of the Territory is one of its greatest and most important resources; that said industry should be encouraged as a means of developing and building up the said Territory; and that if proper protection is given this industry to prevent the fish caught in the waters of and adjacent thereto from being packed and prepared in foreign countries for shipment to the markets of the United States, a permanent fishing population will settle in Alaska, improve its lands, and aid in the settlement and development of the Territory: Therefore be it

Resolved, That all fresh or frozen halibut or salmon, or the products thereof, arriving at an American port from or through any foreign country, which have been packed or prepared for shipment in other than American territory, shall be subject to a duty of 3 cents per pound, and all other deep-sea fish or the products thereof arriving at an American port from or through any foreign country, which have been packed or prepared for shipment in other than American territory, shall be subject to a duty of 1 cent per pound; and

Resolved, That no fresh or frozen fish taken from the North Pacific Ocean or tributary waters shall be admitted into the United States through any foreign country except when the same shall be in bond from an American port; and

That is the amendment which I have proposed.

Further resolved, That a copy of these resolutions be transmitted to the Secretary of Commerce through the Governor of Alaska as chairman of this committee.

I have before me another resolution which was adopted setting out the reasons for all the position taken, but I will not take the time to read it now.

The Governor of Alaska came down here, and I understand, though I was not present, that he appeared before the com-

mittee and urged this same proposition. I know that he is for it; he is looking after the interests of Alaska; he is devoted to her interests; he wants done that which will benefit Alaska.

Mr. President, I know there are some who oppose this amendment. Some of our fish vessel owners' associations have sent telegrams and resolutions opposing it, but let me call attention to the fact that when the Simmons-Underwood tariff law was pending in this body the same organizations urged the same amendment. I have copies of their letters and telegrams here urging the adoption of the amendment. I am told—and the information comes from reliable authority—that some of the representatives of Canadian interests and Canadian companies have appeared in the meetings of the vessel owners' associations at Seattle opposing this amendment, and they sent me resolutions or telegrams protesting against its adoption.

I have here a copy of a letter signed by O. O. Hvatum, dated Ketchikan, May 22. It is addressed to "Fellow members of Fishing Vessel Owners' Association," the writer of the letter being a member of the association. He says:

GENTLEMEN: I have had considerable discussion with Mr. Strong about the proposed legislation which will move the market and port of discharge for our fish from Prince Rupert, British Columbia, to Alaska—

Not as the Senator from Minnesota says to Seattle, but to Alaska, and I believe if the business men stand back of their agreement, namely, to put a ferry on the run between Ketchikan and the Grand Trunk Railway, to be run on train schedule, regardless if there is a load or not, that our main objection is removed.

I do not know whether the Senator was present when I read from the guaranty signed by nearly all the business men of Ketchikan—not signed by any business men of Seattle, but by nearly all the business men of Ketchikan—banks and business houses, merchants, and so forth, saying that they will guarantee the establishment of a ferry service, not from Seattle but from Ketchikan to Prince Rupert. They certainly know, or at least they ought to know, what is of interest to them and what will benefit them. The writer of the letter goes on to say:

I do not know if you are aware of the fact that at the present time American fish is barred from Canadian markets when discharged at their ports by American fishing vessels. However, such is the case. Consequently Canadian boats often receive—

I hope the Senator will note this—

Consequently Canadian boats often receive from 1 to 3 cents a pound more for their fish than we do, which I consider unfair to American boats. I was under the impression that American fish could be used in Canada by paying the duty. Had conditions been generally known, I believe the most of us would have taken a different view and action at our meetings held in Seattle last winter.

It is impossible for us to meet together at this time of year, and I would suggest that each of you give the legislation which has been proposed by the citizens of Ketchikan careful consideration. I believe it should have our support.

Respectfully, O. O. HVATUM.

Mr. President, I do not feel like taking more of the time of the Senate in the discussion of this matter. The sole purpose of this amendment is to encourage American interests, American industry, American capital, and it is in the interest of the American fisherman, the American fleet.

Mr. NELSON. Mr. President, will the Senator allow me to interrupt him?

Mr. JONES of Washington. Certainly.

Mr. NELSON. Take the Ketchikan case: Most of the fisheries in Alaska are immediately west of Prince Rupert, the terminus of the Canadian railroad. What the Senator asks and what the Ketchikan people ask is that instead of bringing that fish to Prince Rupert, which is close by, it shall be brought 100 or 200 miles farther south to a little mining town, Ketchikan, and there shipped back to Prince Rupert. That is what they are after.

Mr. JONES of Washington. Mr. President, the Senator was professing his love and his interest and friendship for Alaska a few moments ago.

Mr. NELSON. My interest is in the poor fishermen of Alaska. Theirs is the most permanent industry. The gold mining, the placer mining, is only transient. The timber supply of Alaska is limited. It is the fishing industry of Alaska that is the most permanent industry there, and I am in favor of the poor fishermen who catch the fish.

Mr. JONES of Washington. The Senator overlooks the fact that Ketchikan is many miles nearer to the fishing grounds than Prince Rupert, and that the fishing boats must largely go by Ketchikan to get to Prince Rupert with their cargoes. That would be another saving to the fishermen and to the fishing vessels.

Mr. KING. Mr. President——

Mr. JONES of Washington. I yield to the Senator.

Mr. KING. For information, may I ask a few questions of the Senator? This is rather terra incognito to me, although it is in the water.

As I understand, the fishermen have no general restrictions imposed upon them, and may invade the waters of the Pacific coast and fish as and when and where they please.

Mr. JONES of Washington. These fisheries, of course, are outside the 3-mile limit.

Mr. KING. Yes. The only competition they have is among themselves. The product of their catch they bring either to Canadian ports or to American ports. I am speaking now of Canadian fishermen and American fishermen, too, and I am confining these interrogatories to the Pacific coast. Why should a tariff be levied at all, unless it is for revenue, when the people need fish, when meat prices are high, when fish is so important an article in the diet and in the food supply of the people? The ocean is free. They do not have to plant, they do not have to sow, they do not have to reap. They go there and catch the fish. They bring them into our markets. If we put on a tariff, obviously it is to enable them to get just that much more per pound for their fish than otherwise they might get.

Mr. JONES of Washington. My amendment does not deal with the matter of the tariff, and I am not discussing that phase of it as yet. I am in favor of a tariff myself. As a matter of fact, the rate proposed by the committee is not as high as a good many would like to see. Our people on Puget Sound meet the Japanese fishermen, and their markets have been very seriously invaded under the free-fish legislation that we now have on the statute books. Our people believe that if this is continued our fishermen are going to be driven out of business by the Japanese fishermen.

Mr. LODGE. Mr. President, will the Senator yield to me just on that point?

Mr. JONES of Washington. Yes.

Mr. LODGE. Japan gives a very heavy subsidy to her fishermen, and it is impossible for our people to contend at all with them for our markets unless we have a duty. They ask a higher duty than is in this bill, and I have no doubt they are justified in asking it; but we are presented in these fisheries with a contest with subsidies everywhere. Other powers have more intelligence about their fisheries than we have shown of late. We used to be very intelligent about it at the beginning of the Government. The Japanese competition I happen to know about, and I know—if the Senator will pardon me for interrupting him——

Mr. JONES of Washington. Yes; I am glad to have the Senator do so.

Mr. LODGE. I know that they subsidize all their fisheries, and they have an advantage which no unsubsidized fishery can possibly meet.

Mr. KING. Mr. President, may I inquire of the Senator, if that statement is true—and, of course, I accept it——

Mr. LODGE. Oh, there is no doubt about it. It is all in testimony here.

Mr. KING. May I inquire if it is not based upon the fact that the Japanese live almost entirely upon fish and rice, and therefore it is important that they shall have fish brought to their shores, and in order to get quantities adequate for the wants of their people they are compelled to subsidize their fishermen, as the Senator says?

Mr. LODGE. All nations do it. The Japanese are not the only ones. Canada subsidizes very extensively. Great Britain used to subsidize, and I think is returning to it; but almost all the countries that have any fisheries, like Holland and the others, give subsidies. I have it all here. I did not want to take the time of the Senate to go over them all, but Japan substantially subsidizes all branches of the fishing industry and has done so for several years past.

Canada for years has offered bounties to resident Canadian fishermen employed in deep-sea fishing, and has also subsidized cold-storage plants at fishing ports up to 30 per cent of their cost, and has given substantial transportation aid in absorbing up to two-thirds of transportation charges on certain products shipped from the Pacific coast to interior points in order that the production of these goods may be encouraged and the product made available in the interior areas not otherwise served with ocean fish.

That is, they pay two-thirds of the charges of the railroads. We give them nothing.

The United Kingdom, in recognizing the importance and need of fostering and promoting this industry, has now established a department of marine and fisheries. Very recently a similar department has been established in Canada.

The Senator will find, if he will look into it, that those bounties are given by practically all nations that have fisheries.

Mr. JONES of Washington. Mr. President, just a word and then I will conclude.

I hope the Senator from Minnesota will not allow himself to be controlled in opposition to this measure by some opposition coming from fishermen. As I say, I know some of them oppose it, but they do not all oppose it. I have received letters and petitions from fishermen out there favoring this legislation, and since the situation has been explained to them more fully they are in favor of it. As I say, I do not claim that they are all for it, but the Senator from Minnesota might do a very great injustice to many other fishermen by taking the statements of a few fishermen who may, of course, voice their opposition, and it may be very sincere opposition. I do not question that.

Mr. NELSON. Mr. President, if the Senator will allow me——

Mr. JONES of Washington. I yield to the Senator.

Mr. NELSON. I got the most of my information from the attorney general of Alaska, who was here during the winter. He came down to argue that case. Under existing law they have to ship all the fish caught in Alaska to Seattle. This amendment modifies it and would put Ketchikan in place of Seattle. The fishermen were so insistent upon it that they succeeded in getting a resolution passed through the Legislature of Alaska instructing the attorney general to bring this suit in the Supreme Court; and, as I understood from the attorney general, but for this legislation the fishermen could bring their fish into Prince Rupert and get a far better price for them than they could at Seattle. Under existing law they can not ship any of the fish eastward, no matter where they are caught in Alaska, without sending them to Seattle, and Seattle in that way had a complete monopoly of the business. That was my understanding. That was why the legislature instructed the attorney general to bring the suit.

I have sent my clerk down to get the opinion of the Supreme Court in the case. The discrimination was of such a character that if it had been a discrimination between two States it could not for a moment have been tolerated. If Alaska had been a State instead of a Territory, it would not have been tolerated, but the Supreme Court held—and the case was ably argued on both sides—that inasmuch as Alaska was a Territory, Congress had a right to pass any kind of legislation that it saw fit to pass.

I have no interest in the railroads. I do not care a bit about the Canadian railroads. My heart goes out for those poor men who are on the water catching the fish. Those men ought to get the best possible return for their work, and they can only get it by leaving them free to take their fish to any of these places—Prince Rupert, Victoria, Seattle, or Ketchikan.

I know what Ketchikan is. It may be a little more of a town now than it was when I was there. It is at the end of a very narrow channel that leads up to Skagway on the inner passage. When I was there it was a little bit of a mining town, and the mining industry was at work there. A gentleman sent me a paper, and I think I referred it to the Finance Committee, in favor of this amendment that the Senator from Washington advocates. He had a brother who lived at Ketchikan, and Ketchikan was aching to get the monopoly of this fish trade.

Mr. JONES of Washington. Mr. President, the Senator is a good lawyer. The Senator understands the coastwise laws of this country, and he knows that there is nothing in our law that prevents an American ship catching fish out in the ocean from going to any foreign port to which it desires to go. He knows that the trade between one American port and another American port is confined to coastwise American ships. That is true, and that was the question that was involved in the suit to which the Senator refers.

The attorney general of Alaska contended that Congress had no right to confine the trade between areas in the United States and points in Alaska to American ships, but, Mr. President, that does not require the American fishermen to bring their fish to Seattle. It does require trade between Ketchikan and Seattle to be by an American ship, that is all. These fishermen and these vessel owners got the very idea that the Senator from Minnesota urges here now, that if this legislation were passed, under the decision of the Supreme Court their vessels could not go from Ketchikan to Prince Rupert.

Mr. President, that is foreign trade, and there is no question whatever about the right of any American ship to go from one American port to a foreign port; so that the Senator from Minnesota is basing his opposition to this legislation upon an entire misapprehension of the facts and of the law as it is sought to be applied.

Mr. President, I was going to read the statement of the facilities at Ketchikan. I shall not take the time to read it. I will ask, however, that the letter which I have here from the president of the Commercial Club of Ketchikan, together with the petition and the statement regarding these facilities, may be printed in the RECORD. I do this to save time. I have also a memorandum prepared by a very reliable man, one whom I can vouch for, with reference to the conditions, which sets this matter out very concisely and very fully, which I ask to have printed in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

KETCHIKAN COMMERCIAL CLUB,
Ketchikan, Alaska, May 16, 1922.

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.

DEAR SENATOR JONES: About a week ago the Commercial Club of Ketchikan mailed you some data in support of the halibut legislation which we furnished the Hon. DAN A. SUTHERLAND.

Since that data was compiled, the writer has been able to make a thorough check on the equipment of the Canadian Fish & Cold Storage Co. at Prince Rupert, and find that in addition to the 150 tons of refrigerating capacity, they have also an absorption plant of an additional 75 tons. Our statement, therefore, should read 225 tons for the Canadian Fish & Cold Storage Co. as against 410 tons of refrigerating capacity contained in the two plants at Ketchikan.

We trust the above will arrive in time so that we will not be charged with any misrepresentation of the facts.

Yours very truly,

J. C. BARBER,
President Ketchikan Commercial Club.

—

KETCHIKAN, ALASKA, *May 8, 1922.*

Hon. DAN A. SUTHERLAND,
Delegate to Congress from Alaska,
Washington, D. C.

DEAR SIR: We are informed that your objection to the legislation now pending before Congress relative to the Alaska fresh-fish business is due to the lack of facilities and transportation between Alaska and the rail terminal at Prince Rupert, British Columbia.

In order, therefore, that this objection may be overcome and Alaska receive its full share of the benefits accruing from the fisheries operations along the north Pacific coast and to conserve this industry to the American instead of Canadian people, we, the undersigned, whom you know to be financially responsible, agree to provide, upon the passage of the suggested legislation, satisfactory transportation facilities for all shipments of fresh and frozen fish between Ketchikan, Alaska, and the western terminal of the Grand Trunk Pacific Railroad at a rate which shall not exceed the present cost of delivery, and we offer for your consideration the hereto attached statement of the facilities now available at Ketchikan for the economical and expeditious handling of the product of these fisheries as compared with those at Prince Rupert, British Columbia.

H. C. Strong, president Northland Dock Co.; W. A. Bryant, manager J. R. Heckman & Co.; Alfred Howe, manager Tongass Trading Co.; I. Y. Pruell, jeweler; M. J. Heneghan, merchant; P. J. Gilmore, merchant; Thomas Torry, mayor; Jno. R. Beegle, insurance; Forest J. Hunt, merchant; L. H. Kubler, merchant; F. E. Ryus, manager Ryus Drug Co.; Frank Mullally, American Meat Co.; G. E. Lingerfelt, manager Ketchikan Iron Works; A. C. Kreedlee, contractor; W. F. Schlothan, Beegle Packing Co.; W. A. Williams, Northern Machine Works; T. A. Thatcher, hardware; W. H. Patching, grocery; W. K. Spaulding, coal and explosives; J. H. Mustard, physician; H. R. Thompson, merchant; Chas. H. Cosgrove, lawyer; Dean C. Cannon, merchant; H. M. Sawyer, logging business; Albert Reinert, dry goods; Jas. Neunan, sign writer; Edward Morrissey, editor Chronicle; C. H. Field, clothier; F. H. Bold, electric laundry; E. A. Howard, furrier; John Kall, real estate owner; W. E. Peterson, dentist; R. V. Ellis, physician; N. R. Walker, druggist; A. R. Larson, cashier Miners & Merchants' Bank.

—

STATEMENT OF FACT SUBMITTED TO DAN A. SUTHERLAND, DELEGATE FROM ALASKA.

For the purpose of giving you positive assurance that there is now at Ketchikan, Alaska, adequate facilities for icing, freezing, and packing for shipment the entire amount of halibut, salmon, and sable fish that is now being handled at both the Canadian port of Prince Rupert and the American port of Ketchikan, Alaska, we beg to give you the following figures, showing the capacity of the refrigerating plants at Prince Rupert and at Ketchikan; and wish to state that at Ketchikan during the past year an amount running into hundreds of thousands of dollars has been expended to provide facilities for handling fish taken from the Alaska banks for consumption in the United States, which we believe would, through a protective tariff measure, be handled at American instead of Canadian ports, where this Alaska resource is now centered.

At Prince Rupert, which is now the headquarters of the big fleet fishing on the Alaska banks, there is located but one cold storage, or fish-freezing plant, and this has been subsidized and fostered for the past eight years by the Canadian Government for the purpose of assisting the development at her port of this fishing industry, the products of which are consumed in the United States. The capacity of ice-making and cold-storage plants is estimated by the compressor capacity installed; and the measurement of that of the Canadian Fish & Cold Storage Co. is 150 tons per day. The Canadian Government has provided its wharf with suitable sheds in which fish may be packed in ice for immediate shipment, the ice being supplied by the above cold storage plant.

The above are the entire facilities now in existence at Prince Rupert through which they handled during the past year 25,000,000 pounds of halibut, nearly all of which were caught off the shore of Alaska and consumed in the United States; but the Canadian port has reaped the benefits of the industry, while stagnation has ruled in Alaska. At Ketchikan two substantial cold-storage and fish-packing plants have been constructed with American capital—one of them built entirely by

Ketchikan citizens with no Government aid, as compared with subsidies, amounting to $300,000, which have been given by the Canadian Government to foster this industry at Prince Rupert.

The compressor capacity of the New England Fish Co. at Ketchikan has been increased this year to 240 tons, and that of the Ketchikan Cold Storage Co. to 170 tons, making a total compressor capacity at Ketchikan of 410 tons, as compared with 150 tons at Prince Rupert. In addition, at Ketchikan we have in existence 1,200 feet of wharf frontage set aside exclusively for handling this class of fish business, and our existing facilities are sufficient to handle four times the volume of business we have had to handle or that we can expect to have without the enactment of a congressional measure which will in effect bring to Alaskan ports the permanent fishing industry which we have permitted Canada to take from us.

KETCHIKAN COMMERCIAL CLUB,
By M. J. HENEYHAN,
Vice President.
By GEO. W. WOODRUFF, *Secretary.*

WASHINGTON, D. C., *January 9, 1922.*

SUGGESTED AMENDMENT TO TARIFF BILL.

Fish, iced, frozen, boxed, or otherwise prepared for shipment in a fresh or frozen state other than at a port of the United States, and all other fish entering the United States in fresh or frozen state, shall be subject to the following rates of duty: Halibut and salmon 3 cents per pound, all other fish 2 cents per pound.

REMARKS.

Enactment of this amendment would protect to Alaskan cities and towns the fisheries of Alaska and prevent improper diversion of such fisheries to the Canadian ports of British Columbia. No action by the Congress could more concretely benefit Alaska or accomplish more by way of increasing the population and wealth than to insure by this action the development of its natural resources in the fisheries from Alaskan bases. The sea fisheries of the north Pacific Ocean exist principally on banks upon the continental shelf lying off the coasts of Alaska. They are very properly American fisheries, and at least, so far as the product is intended for American markets, we should require that they be conducted from American ports and by American fishermen and gear.

Unfair differential market advantages were created for Canadian ports on the Pacific, particularly the port of Prince Rupert, by the interpretation of a Canadian order in council issued in January, 1916. The so-called Alaskan fishermen are mainly of foreign birth or nationality and all are not, therefore, wholly irretrievably attached to American ideals. The relative advantages afforded fishermen under the Canadian flag led many of these fishermen to adopt Prince Rupert as their home. Many fishing vessels owned by such of these fishermen as held American citizenship papers have been transferred to Canadian registry. The Canadian order in council referred to predicted that as a result of such order the American fishing fleet engaged in the deep-sea fisheries of the North Pacific would be transferred to the Canadian bag. The transfer of the fleet would undoubtedly have been accomplished ere this had it not been for efforts heretofore made to procure legislation which would establish the fisheries in Alaska, and the fear on the part of the fishermen that the Congress by legislative enactment might interfere with the permanence of Prince Rupert as the base port of fisheries for United States markets.

Fishermen, vessel owners, and Alaskan citizens who are attached to American ideals have opposed the Canadian efforts to absorb the sea fisheries of Alaska and have repeatedly urged upon Congress the necessity of protecting American fishermen operating from American ports against their Canadian competition either by requiring the payment of duties such as are suggested in the amendment proposed or by other form of legislation, which would offset the unfair Canadian port advantage. Paradoxical as it may appear, it is nevertheless true that if the fisheries of Alaska were protected in the manner suggested herein, the cost of the product of the fisheries to the American consumer could be materially reduced and the earnings of the fishermen themselves materially increased. This would be accomplished by elimination of the unfair profits taken by the operators within Canada at such times as they are successful in obtaining control of the market supply and is briefly covered in the following paragraphs and tabulation.

Official reports of the Canadian fisheries by the Canadian Government for the years 1916 to 1920, inclusive, demonstrate as regards halibut that if the landing values be compared with the market values, which is the Canadian export value, the profit taken averages 68 per cent over prices paid the fishermen at the Canadian ports. The following table shows quantities, the landing value or price to the fishermen, the average per pound payment, the market or export value within Canada, the average per pound value, together with the annual percentages by which such export value exceeds the price to the fishermen. The table follows:

Year.	Quantity.	Canadian landing value.	Annual average per pound to fishermen.	Canadian market value for export.	Price per pound for export.	Percentage of profit taken in Canada.
	Pounds.					*Per cent.*
1916	25,328,912	$1,195,552	$0.0472	$2,261,776	$0.0857	86
1917	15,996,176	1,085,608	.0673	2,263,573	.1415	109
1918	23,199,568	2,865,151	.1234	5,490,226	.2367	92
1919	27,266,288	3,057,632	.1121	5,119,842	.1877	67
1920	29,425,312	3,553,969	.1205	4,535,188	.1541	28
Total	121,216,246	11,758,912	[1].0970	19,670,605	[1].1623	[1]68

[1] Average.

It will be noted that during the years 1917 and 1918, when our bona fide American fishermen of military age were serving their country in the war, and the fisheries were principally in the hands of aliens, Canada was exacting from the American people a profit of 109 per cent and 92 per cent, respectively, before the halibut could reach the American wholesale market. The foregoing table does not include the profit upon halibut added within the United States by the distributors of the Canadian-landed fish, which corresponded to the profit taken by the American dealers upon fish purchased by them at American ports in Alaska or on Puget Sound.

This increased cost to the American consumer is the direct result of price fixing beyond the reach of United States laws. When operators at the Canadian ports are able to procure control of the major portion of the supply of halibut, the public demand for this particularly desirable product is such that fish dealers within the United States who desire a fair share in the marketing of the halibut without pressure readily conform to what they understand to be the desires of the factors within Canada controlling the supply regarding maintaining market prices. When the control of the major production is obtained by United States dealers through the fact that the major portion of the catch is marketed at the American ports upon the Pacific, the market becomes more competitive. This is evidenced by the percentages shown for the year 1920, in which year the major portion of the catch of the north Pacific was landed at the American ports of Alaska and the State of Washington, and the profit obtainable within Canada on that portion of the catch delivered at Prince Rupert or Vancouver was reduced from 67 per cent the year before to 28 per cent. What is here stated with regard to halibut applies in measure to fresh or frozen salmon.

It may be added that the Prince Rupert market discriminates against boxed fish, such as are taken by the smaller vessels operating in Alaska and shipped boxed in ice, in favor of vessel fish, paying from 2 to 3 cents per pound more for vessel fish than the boxed fish. This fact was brought out by Mr. Thompson, of Ketchikan, a fish shipper, and is of record within the Shipping Board rate hearings for 1918. Such differential in price is presumably for the purpose of discriminating against fishermen who choose to use American ports instead of the Canadian ports for the delivery of their catches.

Adopted, the amendment proposed would establish the American fisheries in American ports where benefits therefrom would accrue to citizens of the United States. Such result would be beneficial alike to the fishermen, the fish buyers, and the consuming public of this country. Under such provision of law deep-sea fish would be landed in the ports of Alaska nearest the banks from which they were taken, and the buying of such fish for American markets would be subject to open competition by firms of any nationality at such ports. The free movement of fish landed at American ports either over the railroads of Canada or those of the United States would not be interfered with and competition for the movement of the product would very likely establish lower transportation cost than with the market established at Prince Rupert, where there is absolutely no competition, and shipments must move over on Canadian rail line.

The fisheries once established in United States ports, the business methods of all parties to the marketing of fish would be controlled by United States laws. This would insure equitable consideration to both buyer and seller and would prevent combinations in restraint of trade wholly adverse to the American fisheries and the American consumer, such as are now possible and probable, and have been charged even by Canadian officials to exist at the port of Prince Rupert, British Columbia, where the fish buying for American markets is now largely centered, and is beyond the authority of American regulatory laws.

Under such enactment as mentioned fishermen would find markets for their fish without the necessity of themselves transporting it by uneconomical conveyance distances of 700 to 1,200 miles. The competitive buying would of necessity be established in American ports to enable the purchaser to escape the payment of duty. The fishermen would thus be enabled to spend the major portion of their time fishing instead of in transportation of fish as at present, and would be able to make more money, notwithstanding the fish could reach the consumer at considerably lower price than now.

History reveals that the fisheries are the natural cradle for both merchant marine and navy. Anyone familiar with our own history must be aware of the important part played by the sturdy Americans then engaged in our sea fisheries, and the value of their services in determining the successful outcome of the war for independence. This lesson should never be forgotten and should of itself be sufficient incentive for the adoption of the amendment suggested.

Merchant marines and navies of other nations are noted for an esprit de corps which does not exist in the merchant marine of the United States. This is largely due to the fact that other nations engaged in maritime enterprises are able to recruit their seamen from fisheries conducted by their own nationals, whereas the United States has heretofore permitted its fisheries to be conducted by aliens who give this country but half-hearted allegiance and not infrequently do not understand our language.

The nation which neglects the protection of its fisheries and fails to take the proper steps to encourage its own citizens rather than those of other nations to engage therein is at disadvantage in the expansion of both merchant marine and naval protection. It is thus robbed of the natural advantages of the sea fisheries as the medium for training its citizens to a seafaring life.

Mr. JONES of Washington. Just one word to summarize. As I said a while ago, this provision was put in the Simmons tariff bill here in the Senate in the interest of American fishermen and American capital and the development of Alaska. It went out in conference. One of the ablest, as well as one of the most patriotic Senators on the Democratic side, Senator Chamberlain, urged this provision most strongly, and I have here a letter from him denying an application of an American shipowner to transfer his ships to Canadian registry on account of the situation up there, just exactly what these orders were intended to do. He took the patriotic stand that we ought to encourage our own merchant marine.

So the purpose is to encourage the development of the fishing industry in an American port, and to meet the discrimination and the legislative action of Canada, which had the specific purpose and object of building up Prince Rupert at the expense of America, and to induce the transfer of registry of American ships to Canadian registry. They look after their interests; I hope we will look after ours.

Mr. KING. Mr. President, it would seem to me—and I ask for information—if we impose a tariff upon fish brought to our ports the very object the Senator has just indicated would be accomplished. As I understood him, the British were attempting

to divert the trade from our ports to their ports. They wanted to have the fish caught in the ocean brought to Canadian ports rather than to American ports. It would appear to me that if we desired to have the fish brought to American ports we would effectuate that object much sooner and to a greater extent if we permitted the fish to come in free of duty, but if we impose a high tariff then it would seem to me that the fish would be taken to the ports of other countries.

Mr. JONES of Washington. The Senator is mistaken about that. If we were to impose a tariff upon fish brought into this country prepared, or boxed, or iced in a foreign port, then we might accomplish what this amendment is intended to accomplish, but I do not think anything like so effectively. In fact, that is one of the methods proposed by many of the people out there who are interested in this matter. They ask that a tariff duty of 3 cents a pound be placed upon fish brought into this country iced, packed, or prepared in a foreign port. I think this is the more effective way of dealing with the proposition.

On page 13180 and following pages of the CONGRESSIONAL RECORD, volume 53, part 13, Sixty-fourth Congress, first session, will be found the orders in council to which I have referred.

Mr. McCUMBER. Mr. President, this matter was before the committee. The Senators from Washington were given a hearing, and the conclusion of the committee was that we ought not to use the tariff-making power of the United States for the sole purpose of forcing trade from one foreign port into another particular port. I think there is something a little surprising in the argument that Canadians are trying to get the American trade, and that they are trying to get it by discriminating against us. That is a new method of inviting our trade. I never heard such a proposition made before in any argument.

Let us get at the simple truth of the matter. American vessels and Canadian vessels can go out into the Pacific and catch the fish. They will take those fish to the market that will give them the best price, will they not? If Ketchikan will pay as good a price and is as convenient to the American fisherman, he will take his fish there, will he not? If he is nearer to Prince Rupert or Prince Rupert will give him a better price, he will take them there.

We are asked to interfere with that law of supply and demand. We are asked to interfere with the convenience of fishing fleets. We are asked to tell them that they must go to a port that is often not convenient to them for the purpose of selling their fish, and which may not be able to give them the supplies they want to purchase.

It may be true that Prince Rupert is doing a great many things to induce the catchers of fish to bring their product to Prince Rupert. Of course, they have a right to do that. But the main thing that will induce the fisherman to sell in Prince Rupert is that he gets a better price for his fish there.

There is perhaps another inducement, namely, the ability to get supplies there. He can perhaps get supplies at Prince Rupert that he can not get at the other place, and it may be convenient for him in selling his fish and in purchasing his supplies. There is no law of Canada that will compel an American fisherman to sell his product to a Canadian company or in a Canadian port, but if the American fisherman does so, he does so because he can get a better price or has some other advantage.

That is practically all there is to this proposition. In the matter of discrimination, stop and look at it from another aspect of the case. I claim that this kind of law would be directly opposed to our treaties, outside of the merits of it. What does it provide, in simple terms? It says to the Canadian who deals in fish, "If you buy fish from the Pacific Ocean and land them at your port, you shall not sell them in the United States and you shall not transfer them through the United States."

Think of such a provision in a tariff law! We would say to him, "If you buy them from Americans, you can send them to an American port." Suppose the Prince Rupert merchant desires to sell his goods in Minneapolis or St. Paul, he can not ship them over a Canadian road at all. He can not sell them in St. Paul unless he will send them back to Ketchikan, unload them from an American ship, and give Ketchikan the business.

If that is not violative of treaty obligations, then I do not know the meaning of treaties. Suppose we would say to Great Britain, "You may want to sell a certain line of goods at Savannah, but you can not ship them directly to Savannah or Charleston; you must land them in Boston first." That is practically what this provides.

I do not think a tariff bill ought to be used for the purpose of helping out some companies wanting to buy fish over in Ketchikan but can not compete with the buyers of fish at Prince Rupert. If they will pay the price to the fishermen, they will get the trade, and if they will not pay the price, they ought not to have the trade, and we should not compel the fishermen to sell their product in an American port as against a foreign port where they can get a better price for their product.

That is the way it strikes me. I do not know just what companies there are in Ketchikan to buy the American product. I do not think there would be much competition, and I think the moment we passed a law of this kind we would destroy all competition for the American fishermen and they would have to sell to a single company or to certain people in Ketchikan. I do not believe that is right.

The basis of the claim for this amendment is the assertion that some one discriminates against us; but the people who are making the petition are not complaining at all of discrimination, because they know that whatever the discrimination is, they are getting a better price in Prince Rupert.

Suppose Canada, as an independent country, passes any kind of a law relative to goods coming into Canada. Is that our business? We object to any country on the face of the earth interfering with our domestic affairs. How can we deny to Canada rights we claim for ourselves?

Mr. LODGE. Mr. President, we certainly can not deny Canada, nor can Canada deny us. I do not agree with the Senator about the matter of treaties. This does not say one port; it says to any American port and it applies to all the world. It is no violation of the favored-nation clause. I am not arguing whether it should be done; I am not clear about that.

Mr. McCUMBER. But it says to the people of the country, "If you buy fish from the Pacific Ocean"—not from the Atlantic but from the Pacific—"you can not ship them into the United States." That is really what it says. They are making no such claim as that. The Governor of Alaska and the Alaskan people want to build up their own towns. There is no doubt the real estate people have a great scheme to make a great metropolitan city out of Ketchikan, and the way to start it is to pass a law providing that fish caught in the Pacific Ocean by Americans and by Canadians who want to have them come finally into the United States shall be sent through this Mecca in Alaska.

Let us see what they say. I will take the letter which the Senator from Washington introduced. It is a letter dated January 3, 1922, addressed to Hon. W. L. JONES, signed by H. C. Strong. There is not a word of complaint in the letter about the Canadian treatment, but it says:

> The sole object of this tariff measure is to make the Alaska fisheries a resource of American ports, instead of permitting them to be exploited by Canadian interests and a fleet sailing from Canadian ports, the product of which is entirely consumed in the United States. The duty suggested will not affect the price of fish to either producer or consumer; it simply moves the market place of the fishing fleet from Canadian to American soil, making it an American asset which will be highly beneficial to the future growth and prosperity of Alaska.

That is why they want this, to build up the town in Alaska, and to force the products of the whole northern part of the ocean to come through that city.

Again, I will take the petition from which the Senator from Washington read and which sounds exactly the same:

> MEMORANDUM SUPPORTING TARIFF ON FRESH AND FROZEN FISH.
>
> The offshore fisheries of Alaska—that is, fish taken from the Pacific Ocean or its tributary waters—

I had thought it was only the North Pacific, but they want to take the whole Pacific Ocean and direct its products into an Alaskan town—

> is a national resource——

Mr. KELLOGG. The amendment applies only to the North Pacific.

Mr. McCUMBER. It does—

> is a national resource which should be the means of supporting large, permanent, and prosperous communities in Alaska.
>
> However, to make this a reality, constructive and protective legislation is imperative. Something must be done which will create in Alaska a market for these products, a market which will bring the producer and the representatives of eastern distributors in the United States together at ports in Alaska.
>
> To-day the economical market for the Alaskan fisheries is in a foreign port at the terminus of a Canadian railway—

Stop and think of it; they admit that the economical market for them is in another country. An economical market means that it is to their economical advantage to sell in that particular market—

> and here these fisheries, together with the buyers for the consumers of the United States, are building a big industry. The deep-sea fisheries of Alaska and American markets are jointly supporting a larger population and a greater volume of business at Prince Rupert and Vancouver, British Columbia, than they are doing for all the coast of Alaska.
>
> Legislation alone—

Now, stop and think of this—

Legislation alone will move this market and its benefits from Canadian to American ports in Alaska. Transportation problems in Alaska will solve themselves when this volume of business originates in Alaska instead of at Canadian ports, therefore Congress is petitioned to enact the following tariff measure.

Then follows the wording of the amendment.

So, Mr. President, it seems to me after all that we are attempting by this amendment to use the power to fix duties to break our treaties with foreign countries with reference to shipments from those countries, so as to compel an enormous trade to go through some other port to which it will not be advantageous for that trade to go.

I agree with the Senator from Minnesota [Mr. NELSON]. I think the real question is, Which will best benefit the fishermen? You have no right, in my opinion, to use this means for the purpose of building up one town or denying the right of a foreign country to import products which it buys upon the same conditions that we allow other countries.

Mr. President, at this time, if the Senate will allow me, I wish to file and have read a petition, that it may be acted upon day after to-morrow.

The PRESIDING OFFICER (Mr. LADD in the chair). It will be read.

The reading clerk read as follows:

We, the undersigned Members of the United States Senate, move to close the debate on the bill (H. R. 7456)—Calendar No. 591—an act to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, in accordance with the provisions of Rule XXII of the standing rules of the Senate:

W. B. McKinley.
W. P. Dillingham.
Truman H. Newberry.
E. F. Ladd.
Albert B. Cummins.
Chas. A. Rawson.
J. W. Harreld.
Bert M. Fernald.
F. R. Gooding.
Geo. P. McLean.
L. Heisler Ball.
Ralph H. Cameron.
Coleman du Pont.
Knute Nelson.
J. S. Frelinghuysen.
Walter E. Edge.
Joseph I. France.
Selden P. Spencer.
Frederick Hale.
I. L. Lenroot.
James E. Watson.
W. L. Jones.
H. C. Lodge.
Charles Curtis.

LeBaron B. Colt.
G. W. Pepper.
Howard Sutherland.
Richard P. Ernst.
Davis Elkins.
Harry S. New.
C. S. Page.

Mr. UNDERWOOD. Mr. President, I believe under the rule no action can be taken upon the proposed petition until an intervening day has elapsed, and that it will come up for consideration at 12 o'clock noon on Friday. Is that correct?

Mr. McCUMBER. Yes; one hour after the Senate meets on Friday.

Mr. UNDERWOOD. I shall not take up the time of the Senate to discuss the proposal now. I hope to-morrow to have an opportunity to say something in reference to it, not that I am opposed to a reasonable limitation of debate. I myself once proposed a cloture rule in the Senate. I believe in a reasonable limitation of debate, but I am equally opposed to an unreasonable limitation of debate.

With over 1,000 amendments proposed to the bill by the majority, without the opportunity of the minority to have proposed an amendment yet, because the minority were courteous enough to agree to the request coming from the chairman of the committee that his own amendments should be first considered, I must say that this is not the time, it seems to me, when in fairness the majority should propose to cut off debate, knowing that by doing so they would entirely cut off all opportunity under the consideration of the bill for any proposal to come from those opposed to the measure.

But more than that; under the terms of the rule the discussion of amendments is limited to 10 minutes. Of course, there are many of the thousands of amendments that could be disposed of in five minutes, but there are other amendments that could not be disposed of in an hour's time—I mean intelligently disposed of. One could not in an hour's time present the salient features to be considered.

I think if the Senate is ever going to come to the adoption of a cloture rule on appropriation bills and revenue bills, it should have a proper rule, one that is automatic enough to meet the situation, and not a mere gag rule, as the present rule of the Senate provides. I say it is a gag rule. On some bills it would not be a gag rule. On some propositions, where there is only one salient feature involved, an hour's general debate might enable each Senator fairly to present his views and 10 minutes on minor amendments would be probably sufficient. But when every item in the bill is a matter in which some business interest in America is concerned, where almost every item in the bill is a matter in which the consumers of America are interested, it seems to me clear that such a rule as the Senate provides for cloture is a rule that ought not properly to apply to this class of legislation.

Mr. HARRISON. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Mississippi.

Mr. HARRISON. The Senator said one hour of general debate and 10 minutes on each amendment. If the motion to apply the cloture rule should prevail there would not be 10 minutes on each amendment. There would be one hour altogether, and that would include argument on amendments, on the bill, and everything else; in other words, each Senator would be limited to one hour.

Mr. UNDERWOOD. I had not read the rule for some time, and I thank the Senator for his correction. I thought the rule provided for 10 minutes on amendments. I am glad I was corrected, because that makes it more impossible. The idea of discussing a thousand amendments or more than a thousand amendments in 60 minutes, less than a sixteenth of a minute to an amendment! Senators on the other side of the Chamber had better suggest that we have no further debate at all, because that is practically what this means.

In all my legislative experience I have never known a majority to propose to a minority that the majority amendments should be considered first, and, when the courtesy was granted to them, and before the minority had an opportunity even to propose their own amendments, come in with a proposition that the minority should have no opportunity to debate their own proposals.

Mr. ASHURST. Mr. President, in view of the motion which has been filed, I direct respectfully attention to part of the language that is used in the rule, which reads:

Except by unanimous consent, no amendment shall be in order after the vote to bring the debate to a close unless the same has been presented and read prior to that time.

Senators will take notice that if they intend to propose amendments they ought to propose them and have them read before 12 o'clock on next Friday.

Without discussing the motion or its merits, if it have any——

Mr. SIMMONS. Mr. President——

Mr. ASHURST. I yield to the Senator from North Carolina.

Mr. SIMMONS. Would the members of the committee themselves be permitted to propose any amendments unless they proposed them before we voted on the cloture proposition?

Mr. ASHURST. No Senator can propose an amendment unless it is proposed between now and 1 o'clock Friday, if we shall meet at 12 o'clock noon, or between now and 12 o'clock Friday, if we shall meet at 11 o'clock.

I believe out of fairness the Senate ought to agree now that if an amendment is presented to the Senate and ordered printed in the RECORD before next Friday noon, we may dispense with the reading of the same. I have a number of amendments of my own which will require attention, and I do not want to be foreclosed by any contingency. So I ask unanimous consent that the rule be abrogated, so far as it requires that amendments shall be presented and read.

Mr. ROBINSON. Mr. President, I object.

Mr. ASHURST. Then I beg all Senators to understand that their amendments should be presented and read. Personally, I am opposed to the motion to close the debate, and shall vote against it.

I know of Senators who are absent by reason of illness and because of intimate personal affairs who, if this request is not granted, would be denied the right to offer amendments to the bill.

Mr. ROBINSON. Mr. President, every Senator knows that the motion just submitted can not prevail. Every Senator who has attended to-day's session knows that the entire debate has proceeded from the other side of the Chamber. We have considered two amendments, one proposing an increase in the duty on certain nuts and another proposing to levy higher rates on importations of fish under certain conditions. If the proponents of the cloture rule believed that it would be adopted they would not dare submit it. I raise directly the issue of good faith in the presentation of the motion at this time. It is not fair to the Senate; it is not fair to this side of the Chamber; it is not fair to the people of this country, with the most important provisions of the bill unconsidered and undisposed of,

to attempt to shut off debate and to deny Senators the opportunity of presenting amendments.

We have heard during the last 30 days threats of cloture, and now we are confronted with the direct issue of an attempt by the proponents of this bill, who have brought into the Senate 2,082 amendments, to shut off debate before more than one-third of the committee amendments have been considered. Not only is it proposed, as pointed out by the Senator from Arizona [Mr. ASHURST], to shut off debate on pending amendments, but the effect of the adoption of this motion would be to deny to Senators the privilege of offering amendments. Everybody must realize that that would be the effect of the proposal.

The proceedings of to-day disclose that the purpose of this proposed cloture is to stop complaints on the other side of the Chamber, amounting almost to insurrection against this bill. We have heard the debate between the Senator from California [Mr. JOHNSON] and the Senator from Wisconsin [Mr. LENROOT], the latter openly expressing the intention, if the present method of dealing with the bill is pursued, to vote against the bill when it shall have been perfected. We have noted the controversy between the Senator from Minnesota [Mr. NELSON] and the Senator from Washington [Mr. JONES] respecting a duty on fish. This bill in the form presented by the Finance Committee is beaten; it is beaten in the Senate by open, courageous, manly debate. During 20 years of service in the Congress of the United States I have never known a debate confined more closely to the issues presented than during the consideration of this bill; and I have never known a debate more effective than has been the debate on this tariff bill. Now, with the tide of sentiment running high against it, with courageous Republicans rising in their seats and threatening to vote against the bill, with the committee amendments scarcely one-third disposed of, it is proposed to bar all amendments other than those proposed by the committee, for no amendment not presented previous to the vote on the motion to close debate can be voted on if the motion prevails. Until the committee amendments have been disposed of other amendments can not be considered, and indeed can not be intelligently presented to schedules which have not been passed upon.

Mr. POMERENE. Mr. President, will the Senator from Arkansas permit a suggestion?

Mr. ROBINSON. I yield to the Senator from Ohio.

Mr. POMERENE. As a result of this debate, the Republican members of the Committee on Finance themselves have come in and changed the rates proposed on many of the articles covered by the bill.

Mr. ROBINSON. The committee have withdrawn amendment after amendment. There has been retreat after retreat; the committee have advanced and retreated over the same ground.

Mr. POMERENE. And, Mr. President, if the Senator from Arkansas will permit me further to interrupt him, when the distinguished Senator from Indiana [Mr. WATSON] was discussing this question about two weeks ago he made the statement that the members of the committee had presented some 80 or more amendments of their own to the bill as it was originally reported to the Senate.

Mr. ROBINSON. That is also true.

Mr. WALSH of Massachusetts. Mr. President, will the Senator from Arkansas yield for a moment?

Mr. ROBINSON. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. I think since the agricultural schedule has been under consideration at least 25 amendments have been offered by the Finance Committee on the floor increasing the rates. I suppose, however, we ought to remain silent and make no protest.

Mr. ROBINSON. The same thing has occurred with reference to every schedule of the bill that has been considered. The debate has disclosed the obnoxious character of the proposed legislation, and, as a result, the committee itself has repeatedly receded from the position which it at first took. Is there a Senator present who does not know that on the other side of the Chamber there is a growing feeling of disgust which threatens to result, if the attacks are continued, in the defeat of the bill?

I said some weeks ago that there was no great desire manifested to facilitate the prompt disposal of this bill even by those who are sponsors for it. I repeat that declaration. During the last 30 days two-thirds of the time consumed in the debate has been used by those who occupy seats on the other side of the Chamber. Nowhere, neither in the Senate nor in the country, is there a sentiment which justifies this bill as a whole. It is beaten in the public conscience. The committee has recognized that fact time and time again by withdrawing amendments first submitted and presenting others in lieu of them. Now, with the knowledge of the fact that this motion can not be adopted, for the simple reason that there are not enough votes in favor of it to adopt it, the proposal for cloture is presented as pure buncombe, and some who are favoring it would be glad to see the bill abandoned.

Everywhere in the primary contests where the pending bill has been made an issue its proponents have met with disaster. The press of the country is against it almost unanimously; students of political economy find no justification for it; and in the issues that have arisen the decision has, in some instances at least, reflected the opposition which the country feels to the bill. The action of the Senate to-day in consuming seven hours in the discussion of two relatively unimportant amendments, the discussion coming almost entirely from the other side of the Chamber, reveals the dissatisfaction and the growing differences concerning its provisions arising on the other side of the Chamber.

No one is going to be deceived by this proceeding; no Senator thinks that the motion will be adopted; and some Senators who signed the petition probably would not have done so if there had existed the slightest ground for the belief that the cloture rule would be agreed to.

There is not any desire here—and there is no conduct on this side of the Chamber which justifies the imputation that such a desire exists—unduly to prolong this debate. Any person of ordinary intelligence would have known, when 2,082 amendments were brought in by the committee, that those amendments could not, under the ordinary procedure of a legislative body, be disposed of within a short time; and the time consumed upon the various amendments has been greater from the other side of the Chamber than from this side of the Chamber. Senators in the majority will not fool anybody who is not desirous of being deceived by any such "bluff" as this.

For my part—and I think I am authorized to speak for many of my colleagues—we want the public to understand what it is you are proposing to do in the passage of this bill. Why do you object to the country having information concerning it? The only inference that can be drawn is that you fear that the result of future proceedings will further discredit this measure and its important proposals as not justified by economic and industrial conditions.

Mr. LODGE. Mr. President, the Senator from Arkansas [Mr. ROBINSON] charges us with bad faith—which is a serious charge to make—in offering this motion under the cloture rule.

The request for action under the rule is made in absolute good faith. If any Senator on the other side doubts that it is made in good faith, he has a very simple method of testing it, and that is to vote it through and see whether or not we shall take a vote under it. If Senators think the tariff is beaten, why do they not bring it to a vote? They know that it is not beaten.

The Senator guarded very carefully what he said. He said that the tariff "as reported by the Senate committee" was defeated already. I suppose he used that expression because the committee have made certain changes in what they originally reported.

First and last, since I have been in Congress I have been through some eight tariff discussions, and I have never failed to see in the Senate a great number of amendments offered by the committee in charge, and some of them changed by the committee in the course of the debate. A tariff can not be made in any other way.

I was a member of the Finance Committee when the tariff of 1913 was before us. Of course, I attended none of the meetings in which the bill was made up. They were held exclusively by the members of the majority party, with which I found no sort of fault. I think it is perfectly proper that they should do it. What shifts or changes they then made I do not know; but, as I recall, they brought out some six or seven hundred amendments, and they were discussed here, but at no such length as has been shown in this debate.

Mr. President, the Senator speaks of time being consumed on this side, and a great deal has been consumed on this side; but, if that be true, then it is ourselves that we are cutting off by this proposition, and we are entirely ready to do it. We believe that the country demands prompt action on this bill, and this rule will at least prevent any deception, and will allow the country to know who is refusing to take action. We have had no offer, no suggestion of any agreement. We have had days and days here when no one spoke on this side, of elaborate discussion of perfectly trivial amendments, of matters of no consequence.

I have had some experience in watching delay by debate—not a technical filibuster, but the wasting of time—and I have never seen it practiced on so extensive a scale as by the mi-

nority on this bill. They never have been ready to make any concession of time. They never have been ready to make any arrangement to bring the bill to an end or reach a vote, no matter how reasonable or how extensive the time allowed. They have simply gone on wasting the time of the Senate and of the country in debate, which ought to be cut off, or at least ought to be limited.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Ohio?

Mr. LODGE. I do.

Mr. POMERENE. The Senator from Massachusetts has just suggested that no proposition had been made from this side to limit debate. Has any been made on the other side until this day?

Mr. LODGE. We are perfectly ready to do it and to make arrangements, and suggestions have been made—not openly, but they have been made—more than once; not on the floor, publicly, but they have been made.

Mr. POMERENE. Not until this day have I heard a statement of that kind made.

Mr. LODGE. Not publicly; no.

Mr. POMERENE. I remember very distinctly that this debate had not progressed to exceed three weeks until charges were made on the other side of the Chamber that we on this side of the Chamber were filibustering; and I think those who made the charges were very unfair toward those on this side of the Chamber.

Mr. LODGE. It depends altogether on what you call filibustering. Of course, technical filibustering is taking advantage of every parliamentary point, and insisting on roll calls and quorums, and raising points of order, and an infinite number of things; but as a mere delay, if you choose to call it filibustering, it was developed in the first week that this bill was up by the perfectly reckless way in which time was wasted on wholly insignificant things, particularly in the chemical schedule, and it has been carried on more or less ever since.

I am ready to cut off the debate for both sides if necessary. We offer this rule in perfect good faith. If any one doubts it, let him vote to put it through, and we on this side will all live up to it, and live up to it without complaint, and suppress our own amendments; for there are individual amendments probably on this side as well as on the other; but at least it will have this effect: It will show the country which party is responsible for the delay, which party refuses to stop the debate, which party is unwilling to make any reasonable arrangement to bring it to an end, which party thinks there is political advantage in dragging out this debate all summer and leaving business in a condition of suspense. The worst tariff ever made was better than suspense, and anything is better for the business of the country to-day than to have this long, protracted, weary discussion, no matter who is engaged in it.

I hope that the rule will pass and that an overwhelming majority of the Senators on this side will vote for the rule. If we can not get it, it will be because the other side manage to control a third or more, without which the rule can not be adopted, but we present the rule. We invite its adoption. If it is not adopted, we shall then have no choice except to continue as we have before, and unless we lay aside the tariff altogether and start to bring about a majority cloture we shall be obliged to go on and return to night sessions.

I hope we shall press this rule and offer it again later and demonstrate even more fully to the country where the delay lies and who is causing the delay and why business is held in suspense for purely political purposes, and for no other reason.

Mr. UNDERWOOD. Mr. President, I only want to say a word in reply to what the leader of the majority party has just said in reference to responsibility concerning this bill. I realize, of course, that it is natural that a party in power should want to pass legislation that it proposes. It is perfectly natural for it to assume that the delays in the opposition are unwarranted.

This issue has always been a political issue in this country. The two great parties are divided between a protective tariff and a low so-called revenue tariff. Their viewpoints in regard to the matter are entirely different. It was impossible for the Senators on this side of the aisle to go to the majority of the Finance Committee of the Senate and expect favorable consideration of amendments that represented their viewpoint. On the other hand, the Members on the other side of the Chamber had the opportunity to present their amendments to their own committee. They had an opportunity for friendly and full consideration, and their amendments have been considered and have been passed upon. The only opportunity that we have to make our proposals to the country is on the open floor of the Senate.

As to the delays in this bill, debate may at times have run unduly long on certain items, on this side and on the other side. No Senator in the Chamber can deny the fact that at times the debate has become extended on the other side of the Chamber on various items. The debate has been legitimate, as a whole. It has been to the point, to the bill before the Senate, as a rule. Of course, at times, there has been extraneous debate, but nothing more on this side than on the other side as to matters that were not pertinent to the bill.

The Senator from Massachusetts, the leader of his party, criticizes this side of the Chamber, however, because we have not proposed a cloture, because we have not made a proposal for an early vote on this bill.

Mr. LODGE rose.

Mr. UNDERWOOD. Does the Senator want to interrupt me?

Mr. LODGE. I only wanted to say that I did not blame the minority for not proposing a cloture. I said they had made no proposition of an arrangement to bring debate to an end, which is a different thing from a cloture.

Mr. UNDERWOOD. That is what I desired to reply to. The Senator criticizes this side of the Chamber because we have not been willing to make an arrangement to bring this debate to an end. As a practical proposition it has been impossible for us to do so. This bill has 4,000 items in it vitally affecting the industry and the lives and the health and the happiness of the American people. They are vital issues, most of them.

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. UNDERWOOD. I yield.

Mr. KELLOGG. Did not the Underwood bill do the same thing? It involved as many items as this bill, did it not?

Mr. UNDERWOOD. Yes; it did.

Mr. KELLOGG. It was disposed of in seven weeks, was it not?

Mr. UNDERWOOD. I do not remember how many weeks it was debated in the Senate. I was in the House then, and I know that we sent the bill to the Senate by the 1st of May, and it went to conference in September. I do not know; I did not keep up with the debate in the Senate.

Mr. KELLOGG. The bill was in the Senate seven weeks and three or four days.

Mr. ROBINSON. Will the Senator from Alabama yield?

Mr. UNDERWOOD. I yield.

Mr. ROBINSON. Does the Senator from Minnesota recall the number of amendments reported to the Underwood-Simmons bill by the Finance Committee?

Mr. KELLOGG. I was not here.

Mr. ROBINSON. I think the Senator from Massachusetts stated that there were 600.

Mr. WATSON of Indiana. My recollection is that there were 640.

Mr. ROBINSON. Much less than one-third of the number of amendments which the Finance Committee reported to this bill.

Mr. KELLOGG. But the Senate has already used over 10 weeks, which is the longest time that has ever been used in the Senate to pass a tariff bill.

Mr. POMERENE. Mr. President, it may also be added that the Senate Finance Committee never before took so long a time to prepare and present a tariff bill to the Senate.

Mr. UNDERWOOD. Undoubtedly.

Mr. WATSON of Indiana. But the Senator must know that practically all the amendments were changes from the American valuation to foreign valuation.

Mr. UNDERWOOD. I am not arguing the question from the standpoint of why the committee made the changes. Of course, they had a reason for making the changes, but the changes were made and the bill is here. The bill does not carry on its face any indication that the changes were made because of a change of valuation, although that may have been the reason which actuated the committee. But the Senate is compelled to vote on a lower or a higher rate, and the bill is before the Senate regardless of the reasons of the committee in reporting it.

The VICE PRESIDENT. The Chair will ask the Senator to suspend while the Chair states the motion, which it must do under the rule. The Chair is in receipt of the following motion:

We, the undersigned Members of the United States Senate, move to close debate on the bill H. R. 7456, Calendar No. 591, an act to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, in accordance with the provisions of Rule XXII of the Standing Rules of the Senate.

That is signed by the Senators whose names have been stated.

Mr. UNDERWOOD. It is the same paper which the Secretary read, is it not?

The VICE PRESIDENT. It is.

Mr. WATSON of Indiana. The Chair was simply formally stating the motion. It is the same paper.

Mr. UNDERWOOD. I understand.

Mr. WATSON of Indiana. Will the Senator permit me to ask him a question?

Mr. UNDERWOOD. Certainly.

Mr. WATSON of Indiana. It must be apparent to the Senator, who is a man of long experience in legislative bodies, that if this debate runs on as it has been going on, with the wool schedule and the cotton schedule and the silk schedule, with potash, and sugar, and gloves, and so forth, and so forth, which have yet to be considered, it will go on until the 1st of October. Does the Senator think that the majority party, with 24 majority, should sit by and permit this sort of thing to go on until the 1st of October, with what we think is undue delay in the passage of the bill and which this party promised to pass?

Mr. UNDERWOOD. I do not expect the majority party to do unreasonable things. I think it is very natural that you should want to pass this bill without debate if you can, but you can not expect the Senate to agree to an unusual limitation of debate.

Mr. WATSON of Indiana. Let me ask the Senator another question, kindly. We have made this proposition, and I must take issue with my delightful friend from Arkansas [Mr. ROBINSON], because we have made it in good faith. Fifty-two Senators have signed it. That is more than a majority, more than enough to pass the bill. There will be no trouble about passing the bill. What counterproposition does the Senator make? Unless the consideration of this bill is to run on endlessly, what counterproposition does the Senator make to our proposition?

Mr. UNDERWOOD. I was just about to try to reply to the statement of the leader of the majority party, and I have gotten far away from my reply, because I have been interrupted. That is what I was coming to—not to make a proposition, but to state why it has been impossible to make a proposition.

In passing I want to respond now to the suggestion made by the Senator from Minnesota [Mr. KELLOGG] that the act of 1913, with 600 amendments, had only 7 weeks of debate and that this bill has now had 10 weeks of debate. But this bill has three and a half times as many amendments to be considered as the act of 1913. If you multiply 7 by 3½ you will have nearly 24 weeks instead of 10 weeks in which to consider it. So if you view it from the standpoint of the actual issue presented to the Senate, there has not been nearly as much time taken up in the consideration of this bill as was taken up in the consideration of the act of 1913.

The Senator from Massachusetts complains that we have made no suggestion in reference to closing debate. How can we make a suggestion? How can we say when we will close debate, the way the bill has been presented to the Senate? If we make an agreement, it must be a reasonable agreement, an intelligent agreement, and when I say "intelligent" I mean it must be an agreement that does not propose to abandon the issues, but an agreement under which we can fairly consider and discuss the issues before the Senate.

We are not responsible because you brought in a bill with over 2,000 amendments. We are not responsible because in the consideration of that bill from time to time you have changed your mind, and changed your amendments on the floor. I am not criticizing you for doing it. If you found out that you had made a mistake, it was only the part of wisdom to make the change. But until you have determined what your issue is in the Senate, how in the world can the minority determine what we propose to offer you by way of amendment?

We foreclosed the proposition of doing that item by item at the request of your chairman. We might have done that as each paragraph came up, but the chairman desired to have all the committee amendments considered first. He asked unanimous consent that the bill might be considered in that way, and we consented. It took unanimous consent, and we granted the courtesy, and allowed him to have the bill considered in that manner.

We do not know what your final disposition of this bill is to be. There may be amendments proposed now which are satisfactory to us, but before you dispose of it they may be very unsatisfactory to us. With this vast number of amendments, how are you going to determine what limitation of debate can be made which will reasonably allow a fair discussion of the issues presented to the country and to the Senate? You can not do it. It is a practical impossibility.

I want to say, so far as I am concerned, that I have endeavored not to occupy any more time on the floor of the Senate in discussing the bill than was necessary to present my viewpoint in part, and the entire time I have taken in the discussion of the bill in the 10 weeks it has been before the Senate I do not think amounts to more than two or three hours. I have repeatedly said to the Senate, and I said to the members of my own party, that although I believe the bill should be fairly considered, I am not in favor of any policy that attempted delay for delay's sake; and I am not and I have not been from the beginning.

I think the larger portion of the time that has been taken has been taken in legitimate debate.

One man can present his viewpoint clearly in 10 minutes. It will take another man an hour to do the same thing. That is the personal equation. It is due to the difference in the way men speak. How could I say to-day, when I do not know what the issues are to be on hundreds of items, how long we should determine to debate them? What kind of a proposal should we make? An hour on each side? You would say that is too long. Do you propose 10 minutes on each item? If you gave 10 minutes to every Senator on each item, or even on your own amendments, instead of passing the bill in October, as my friend suggests, you would not pass it before March. Yet you know as well as I that there are hundreds of items in the pending bill which could not be intelligently discussed in 10 minutes. Nay, more, there are many of these items which could not be fairly presented to the country in an hour.

The real difficulty about the situation is that you delayed reporting this bill to the Senate until you rode into a most ill-advised time to present it—an election year. I do not say that critically. It applies as much to one party as to another. To pass a tariff bill in the face of an election is the most ill-advised thing that a party can do, and I know you realize that. Probably conditions have driven you to do it.

Now we are in the midst of debate. There is not a man on the other side of the Chamber, I know, who will say that he thinks this bill can be fairly considered under the proposal you have made—that there shall be a limitation of one hour's debate to each Senator, and no amendments allowed after 12 o'clock on Friday next.

No matter how much of a mistake the committee should find it had made in the framing of the bill, if you adopted this ironclad rule for the consideration of the bill you would have to destroy American industry. If you find that you have made a mistake in the bill—and you have made many, and you have admitted it by changing it—you will then have your hands bound, and if it happens to be that in that particular instance you have agreed with the House, and they have made the mistake also, you will have to go to the country with destruction in the wake of the bill, you knowing it, because you have gagged the Senate.

You gentlemen on the other side of the Chamber know that this bill can not be considered intelligently under any such rule, no matter what conditions confront you. You know that you can not go to the American people and say you have given intelligent consideration to this measure under this rule.

Unless you can do that you had better not enact the legislation. The country is not going to be destroyed if you fail to enact the legislation, but if you attempt to enact it under a system by which you gag debate in the Senate and gag amendments, which is even more important than debate, you will simply scatter the dragons' teeth to the winds, not knowing what you may sow by your reckless conduct.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. UNDERWOOD. Certainly.

Mr. LENROOT. I would like to ask the Senator when, in his judgment, the bill will pass the Senate if there be no limitation on debate?

Mr. UNDERWOOD. I will say to the Senator candidly that I do not know, but I should be very much delighted if we could come to a final vote on the measure by August. I do not want to stay here. I am not in favor of the bill—I hope it can be defeated—but I realize under our system of parliamentary government that the majority party have a right to enact their laws and submit them to the country. I am perfectly willing. I rejoice in the opportunity to go to the country on the issue. I am not afraid to face it. But I can not tell how long Senators will take to discuss items in the bill on the other side of the Chamber or on my side of the Chamber any more than the Senator can tell. I can only say that I have earnestly hoped that there might be no undue delay in the matter, and I know that I have not indulged in any undue delay.

Mr. WALSH of Massachusetts. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. How can there be any time fixed to vote on this bill when the committee have not completed their work yet? The committee are meeting every morning and changing amendments and changing this bill. How can we fix a time until the committee finally finish their work on the bill?

Mr. UNDERWOOD. The Senator is clearly correct. The chairman of the committee has repeatedly stated to us on the floor that from day to day the committee are meeting and proposing new amendments and changing the proposals in the bill, and yet it is proposed by this rule to say to your own committee at 12 o'clock noon on Friday next they shall labor no more and shall not give the bill further consideration, because any proposals of theirs can not thereafter be considered.

Mr. LENROOT. Mr. President, may I ask the Senator another question?

Mr. UNDERWOOD. Certainly.

Mr. LENROOT. The Senator states that he hopes the bill can be passed by August. If that be true, it will only be because debate is limited by action of the Senate or by the voluntary action of Senators. Does the Senator believe that Senators upon his side of the aisle are now willing to curtail debate voluntarily?

Mr. UNDERWOOD. I can not speak for anyone but myself, and I do say that I hope debate on items which are not of great importance can be curtailed to an extent so that we can get through by that time. I think it is necessary for us to reach a conclusion, and yet, with the great schedules of wool and cotton and sundries, which carry taxation into every home in America, yet undisposed of, I do not want anyone to think for a moment that those schedules should be passed without reasonable consideration and fair debate. But I think that it can be done. If the Senators look at it from my viewpoint I am sure that it can be done. I may make one or two other speeches on the bill; but I am sure the time I take, if proportioned out to other Senators on the floor, would not carry the passage of the bill beyond an early date in August.

I merely want to say that of course you have your rights. The rule is a part of the Senate procedure. If you can get a two-thirds majority you have a right to gag us, and you have a right to cut off amendments and cut off debate and throw this misshapen piece of legislation into the face of the country, but I say you will make a very serious mistake if you do so.

Mr. McCUMBER. Mr. President, I move that the Senate take a recess until to-morrow morning at 11 o'clock.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum. I withdraw the request for the present. There are just a few hours during which the rule can be discussed.

Mr. McCUMBER. It can be discussed all day to-morrow.

Mr. HARRISON. It ought to be discussed a little this afternoon. I have here a speech which the Senator made in 1918, in which he said he was against cloture and that an hour's debate was too little, and he argued against the rule at that time. I wanted to read it to refresh the memory of the Senator from North Dakota as to that speech. Will he withhold his motion until I can read a part of that speech to him?

Mr. McCUMBER. The Senator can do that to-morrow.

Mr. HARRISON. Very well; the Senator will do it to-morrow.

Mr. KING. Mr. President, will the Senator yield to me?

Mr. McCUMBER. I yield for a question.

Mr. KING. I gave notice, or, rather, I voted for the almond paragraph and indicated at the time that I would move to reconsider the vote by which it was agreed to. I just want to submit the motion to reconsider and will take it up to-morrow.

Mr. McCUMBER. That can be done in the morning.

Mr. KING. To-day is my last day.

Mr. McCUMBER. No; it is not. We are still in the same legislative day.

Mr. KING. Very well. With that understanding I shall submit the motion to-morrow.

RECESS.

Mr. McCUMBER. I move that the Senate take a recess, the recess being under the unanimous-consent agreement, until 11 o'clock to-morrow.

The motion was agreed to; and the Senate (at 6 o'clock and 5 minutes p. m.), under the order previously made, took a recess until to-morrow, Thursday, July 6, 1922, at 11 o'clock a. m.

SENATE.

THURSDAY, *July 6, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

PAY OF SENATE PAGES.

Mr. CALDER. Mr. President, in the general appropriation bill passed each year we include a provision for the payment of the salaries of the employees of the Senate, but no provision was made in the last appropriation bill for the payment of salaries of pages of the Senate after July 1 of this year. To take care of the matter the Senator from Wyoming [Mr. WARREN], chairman of the Committee on Appropriations, introduced a resolution (S. Res. 313), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate. I am directed by that committee to report back the resolution favorably without amendment. The resolution provides for the payment of the 16 regular pages from now until the 1st of December, or during such days as the pages may be employed. I ask for its present consideration.

Mr. KING. Mr. President, may I inquire what is the purpose of the resolution?

Mr. CALDER. I will say to the Senator from Utah that in the passage of the regular appropriation bill which takes care of the pay of Senate employees the Senate neglected to provide for the payment of the pages of the Senate. No provision was made for any pay of the pages until the next regular session of the Senate. We are taking care of them through this resolution by providing for the payment of their salaries out of the contingent fund of the Senate.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Secretary of the Senate be, and he hereby is, authorized and directed to pay from the miscellaneous items of the contingent fund of the Senate the 16 pages borne on the session rolls of the Senate from July 1, 1922, to and including the last day of the month in which the second session of the Sixty-seventh Congress is adjourned sine die, at the rate of $2.50 per day each.

ADDITIONAL SENATE PAGES.

Mr. CALDER. I report back favorably without amendment, from the Committee to Audit and Control the Contingent Expenses of the Senate, Senate Resolution 314 to provide for the continuation of the five additional pages who have been carried on the pay roll for the last year and a half. I ask for the present consideration of the resolution.

The resolution was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That Senate Resolution No. 175, agreed to November 10, 1921, authorizing and directing the Sergeant at Arms of the Senate to employ five additional pages for the Senate Chamber at $3 per day each from the 1st day of December, 1921, to the end of the second session of the Sixty-seventh Congress, to be paid from the miscellaneous items of the contingent fund of the Senate, be, and the same is hereby, amended to continue their employment to and including the last day of the month in which the second session of the Sixty-seventh Congress is adjourned sine die at the rate of $2.50 per day each.

POLAR FLIGHT OF EDWIN FAIRFAX NAULTY.

Mr. ROBINSON. Mr. President, some months ago the importance of Wrangel Island as an air base for flight routes across the Arctic was brought to the attention of the Senate in connection with a controversy respecting the priority of rights by discovery and occupation respectively accruing to the United States and Great Britain. Mr. Edwin Fairfax Naulty, renowned for his investigations in scientific and practical aeronautics, then proclaimed the right of the United States to assert just priority by actual discovery and continued occupation. The importance of the controversy apparently was not fully realized at that time by our Department of State.

About one year ago Mr. Naulty formed and published a plan for a trans-Arctic, transpolar flight. This plan was definite in all its details and was illustrated on a chart supported by known observations of ice drifts, current flow, known directions, known shallows and depths, and other data. This chart was deposited in a Government bureau and no attempt was made by Mr. Naulty to maintain secrecy respecting his plans and purposes.

The Washington Post of August 2, 1921, the Pittsburgh Post-Dispatch of August 4, 1921, the New York Times of September 11, 1921, the Washington Herald of October 12, 1921, and other newspapers published last summer, contained editorials and comments respecting Mr. Naulty's plan for a polar flight. The editorial in the Pittsburgh Post of the date above mentioned points out in definite detail the route of Mr. Naulty's proposed flight and the difficulties probably to be encountered, especially

that pertaining to fuel, and the scientific value of such an aerial expedition if successful.

Mr. Naulty's expedition, which should have taken place about October, 1921, was postponed on account of adverse weather conditions until autumn of the present year.

In the meantime, several months after the formation and publication of Mr. Naulty's plan, Amundsen, in an effort to establish a claim for Norway to an airway across the Arctic from the Atlantic to the Pacific, apparently appropriated the Naulty idea and plan, and his 1921 expedition on behalf of Norway having failed, and the Naulty proposal having come to his knowledge, Amundsen sought to adopt it as his own and to procure the benefits of the same for himself and his Government. That the true facts may become known and be preserved, I ask leave to print in the RECORD a communication from Mr. Naulty accompanied by newspaper editorials and news articles which are believed to set forth the subject fairly and fully.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *July 4, 1922.*

Hon. JOSEPH TAYLOR ROBINSON,
United States Senate, Washington, D. C.:

In addition to the facts set forth in the articles printed in the New York Times of August 2, 1921, September 11, 1921, and June 29, 1922, the Washington Post and Herald of August 2, 1921; the Washington Herald of October 13, 1921; and the Seattle Times of October 13 and October 23, 1921, permit me transmit to you, with the request that it all be printed in the CONGRESSIONAL RECORD for the information of the people of the United States, as well as the Senate and House of Representatives, some additional facts in regard to my plans for a flight to the North Pole and across the Arctic, the Arctic itself and its strategical importance for short air routes from the Atlantic to the Pacific to the nations bordering on the Arctic, and particularly to the United States.

In conjunction with the Arctic the strategic value to the United States of the entire Alaskan coast, from Dixon Entrance to the north Pacific to the one hundred and forty-first meridian in the Arctic Ocean, should not be lost sight of nor should the value of the Aleutian Islands, the Pribilofs, or Seal Islands, St. Paul, St. Lawrence, and Diomede Islands be overlooked.

Two foreign explorers, Vihjalmer Stefansson, a Scandinavian, who now asserts that he is a British subject, and Roald Amundsen, a Norwegian, have taken, and are about to take, action that may result inimically to the interests of the United States. Their work is camouflaged under the name of "scientific exploration," but as I see it, and as the facts seem to prove, this is only a disguise for territorial exploitation and aggression. Were the work of these two men carried on from the countries of their birth or adoption but little objection might be made, but under the pretense of "science" all the obtainable facilities of various departments of the United States Government have been used to forward their plans at the expense of the United States.

Last July I discussed my plans for a trans-Arctic, transpolar flight with DAN SUTHERLAND, Delegate from Alaska, and from him then got much assistance. Later Mr. SUTHERLAND met Stefansson, and being a single-minded man, free from guile and with no thought of it in others, Mr. SUTHERLAND discussed my plans with Stefansson. This was in late August, 1921. In September, 1921, Stefansson hastily organized a party, as described in the articles that appeared in the New York Times in March, 1922, that were reprinted in the CONGRESSIONAL RECORD of March 25, 1922, and "took possession" of Wrangel Island for Great Britain. Stefansson had been under fire from Professors O'Neill and Anderson, of Canada, over the Karluk expedition of 1913–14, and one of them had definitely charged Stefansson with having "subordinated the interests of science to his own personal advantage" during the Karluk expedition, which was under Canadian auspices. In his exploit of "taking" Wrangel Island Stefansson perhaps saw a way of rehabilitating himself with Canada and Great Britain owing to the great value of Wrangel Island as an air base for flight routes across the Arctic.

Alaska and Siberia effectively close the air exit of Great Britain or Canada from the Atlantic, across the Arctic, to the Pacific, on the main littoral, so that Herald Island, a small granitic rock, unsuitable for an air base, and Wrangel Island, which is 70 miles long and 30 miles wide, assume intense strategical importance. To Herald Island Great Britain might lay fair claim by right of Kellett's discovery of it except for the implication of the northward extension of boundary lines of nations abutting on the Arctic, a claim for which northward extension Canada makes for all the territory lying between the 60th meridian west, and the 141st meridian west, running from the known lands therein to the North Pole.

The first announcement of Stefansson's exploit was given out while he was on a lecture tour of the United States and at Kansas City. As it appeared in the Evening Star of Washington, on November 11, 1921, it read:

"STEFANSSON'S HELPERS REACH WRANGEL ISLAND—MEN SENT BY EXPLORER TO ESTABLISH BASE NORTH OF SIBERIA REPORTED SAFE.

"KANSAS CITY, MO., November 9.—Vilhjalmur Stefansson, Arctic explorer, announced here that a party he had sent from Nome, Alaska, to Wrangel Island, about 100 miles north of Siberia, to establish a base for what he said would be a huge British exploring party into the north, had arrived safely at its destination.

"In making the announcement Mr. Stefansson said the safe arrival of the party on Wrangel Island had made it possible for him to discuss some of the plans under consideration.

"There are six men in the Wrangel Island party, he explained, all of whom were picked for the expedition because of heroism or especial initiative shown on previous expeditions with him. The party left home secretly last September. 'I financed and sent the expedition into the north,' Mr. Stefansson said.

"The work of the six men will be confined entirely, he stated, to arranging the base for the big British party, which, he stated, will be formed in Canada or England in March.

"He said that a comprehensive announcement as to the purposes of the British expedition probably would be made in London as soon as the party had been organized."

Stefansson sent his "expedition" out in an American vessel, flying the American flag, the *Silver Wave*, of Nome, Alaska. He financed it with money obtained by lecturing in the United States, according to his own story in another publication; he cajoled three Americans to join the party under a Canadian leader, without explaining to them the object of his expedition, to take Wrangel Island for Great Britain. This was in September, 1921. The Stefansson party can not get out from Wrangel Island much before late July or August at the earliest this year, when we shall know surely if the Americans in Stefansson's party raised the American flag, as the captain of the *Silver Wave* said they did, when the Canadian raised the British flag over Wrangel Island on landing.

Great Britain is always alive to her interest, and so is Canada, and properly so; so it is not surprising to find the following dispatch printed in the Washington Post under date of May 13, 1922:

"Claims Wrangel Island—Canada plans to occupy land despite American priority.—Ottawa, Ont., May 13, 1922: The Canadian Government maintains that Wrangel Island is part of Canadian territory, the Canadian flag now flies over the island and an expedition is being prepared to go up there. This is the declaration of the Prime Minister, W. L. McKenzie King, when the House of Commons last night voted $15,000 for patrol of the northern waters of Canada.

"C. P. Graham, minister of defense, said the amount was necessary to publish the report of the Stefansson expedition. Hugh Guthrie, former minister of militia, said there was no doubt that the United States would make claims to the island on the ground of previous discovery."

Forty degrees of longitude separate the western boundary of Canada from Wrangel Island and it is 11° of longitude west of the one hundred and sixty-ninth meridian which, in Bering Strait, divides Alaskan from Siberian territory. Wrangel Island is the air Gibraltar of the Arctic. The nation of Europe that controls Wrangel Island controls the North Pacific, the West Arctic, and Bering Sea and the air approaches thereto across the Arctic. Although seldom visitable by surface craft, due to the heavy ice, and then only in the months of August and September, Wrangel Island is approachable by air during 12 months in the year, and has ample level ground, level ice, and sheltered harbors for land plane and seaplane landing. By aircraft Wrangel Island at present speeds is only three-quarters of an hour's flight from North Cape, Siberia; three and a half hours' flight from Nome or Point Barrow, and five and a half hours from Demarkation Point, each of which is Canadian territory.

From an aircraft carrier stationed in the open sea near Spitzbergen, and irrespective of the control of Spitzbergen, Great Britain, over the most northerly course could send a fleet of seaplanes to the mouth of the MacKenzie River, in Yukon territory, northern Canada, in flights of three stages of six and a half, six, and four hours each, with many emergency landing places on the way. Adding the flight from Demarkation Point to this Great Britain could fly her seaplanes to Wrangel Island in 22 hours with four stops en route.

From Wrangel Island to the north end of Sakhalin Island, now controlled by Japan, is a less distance by air than from Wrangel to Demarkation Point; allowing five hours for the flight from Wrangel Island to Sakhalin Island, it brings England and Japan in touch by air, going either way, if the British Empire controls Wrangel Island, in 27 hours. This is actually developed speeds is easily made to-day, as the United States has a seagoing triplane making 163 miles an hour and Great Britain has a plane that has done 212 miles an hour.

The strategical importance of flight routes across the Arctic and of air bases therein that would permit short flights and assure fuel supply and of Wrangel Island as a western station, air base, and supply stop may be seen when it is realized that the flight distance across the Arctic from the Shetland Islands, in Great Britain, to the Kurile Isles of Japan is less than the surface steaming distance across the Pacific from Vancouver, Canada, to Yokohama, Japan.

If in his early interviews in relation to Wrangel Island Stefansson was brutally frank, even alleging indirectly that he raised the money for his Wrangel Island venture from his lectures and the sale of his books in the United States, thus not only using American ports but also American money for alien purposes, Roald Amundsen, the Norwegian, has been just the opposite. Personally and through his press agent, H. H. Hammer, in Seattle, he has misrepresented his plans constantly, and has done this particularly in relation to his abandonment of his original plans for a seven-year surface drift through the Arctic ice in the schooner *Maud* and the substitution of the Fairfax Naulty polar flight plans, appropriated by him in toto, even including the route from Point Barrow to North Cape, as if he did not have the originality to find another west to east route or wanted to block the American expedition.

Amundsen's reputation among men who are familiar with the situation may be known by citing some of his exploits. He hastily organized a ski-racing crew to beat Capt. Robert B. Scott, the English explorer, into the South Pole, and used the route previously blazed by the gallant Shackleton to do it. Out of this adventure came nothing of scientific interest or value. Amundsen permits his press agent to assert constantly that Amundsen is the discoverer of the North Magnetic Pole, and repetition of this claim has caused it to be accepted as fact by those who do not know that the Englishman Parry sailed north of it in 1819 and that it was definitely located by the Englishmen John and James Clarke Ross in 1831.

Amundsen allows it to be claimed for him that he is the first man to make the Northwest Passage. The Northwest Passage was made by Captain McClure, of the British ship *Investigator*, in 1851, and he and his entire crew made the passage from Bering Sea to Baffin Bay, part of the way by sledge, and were paid $50,000 by England for the feat, and this 70 years ago. The two Rosses first, Franklin next, and a host of others searching for Franklin, made King William Land from the east, and Collinson first and a host of others since made Victoria Strait, west of King William Land, thus completing the southerly Northwest Passage. When Amundsen worked the *Gjoa* through the southerly Northwest Passage and into Beaufort Sea he "discovered" 11 American whalers wintering there calmly as a mere matter of whaling routine.

I challenged Amundsen in the columns of the Seattle Times of October 23, 1921, to produce any records of scientific worth made by him and made public that were new or original or covered previously unknown ground, excepting the short distance separating Shackleton's farthest south and the South Pole, a matter of three days' march, that Shackleton could have made with 20 pounds more food. He did not do so then, nor can he now.

Now, pursuing his old tactics of following in the tracks blazed out by others and of using their plans, Amundsen changes his ice drift plan for the *Maud* and his amended plan for short flights from the *Maud*

for a flight across the North Pole. In all the annals of exploration, though there has been much controversy over accomplishments, there is no case of a man, claiming to be a scientific explorer, who has appropriated the plans of another, as far as he knew them, used them to raise the financial backing denied him for his own plans, claimed the appropriated plans as his own, tried to hoodwink a friendly people who had extended him help in his dire need, used their territory as a base of operations for his secret plans for the benefit of his own country and against their interests and generally acted as a shrewd beech trader instead of according to the ethics of men like Franklin, Kane, Hall, Nares, Collinson, Nordenskjöld, Nansen, Peary, Scott, Shackleton, and other explorers of high standing.

Unless one has made a close study of the strategical importance of the short flight routes across the Arctic from the Atlantic to the Pacific and from the Pacific to the Atlantic, along the North American littoral, the European-Asian littoral, or across the North Pole, and the practicality of such flights for eight months of the year, it may seem as if any discussion over whether Naulty or Amundsen is the first proponent and route charter of trans-Arctic flight is of little moment to any one but themselves. It may seem as if it is of much less importance who accomplishes the Polar flight so it is "done and have it over with," but important air traffic rights are involved, rights as important to the United States as those involved in the Panama Canal.

Five nations are at interest in the matter. They are Norway, Denmark, Great Britain, the United States, and Russia.

Russia and the United States, in their own territory, control the entrance from the Pacific through Bering Sea to the Arctic.

Great Britain, through Canada, controls the easterly entrance to the Arctic from the Atlantic from Baffin Bay across the magnetic archipelago to the Middle Arctic as far as the one hundred and forty-first meridian, as well as a northerly route via Great Land, Heiberg Land, and Parry Islands.

Denmark, controlling Greenland and Iceland and Peary Land, north of Greenland, which was yielded to her by Secretary Lansing under the treaty for the cession of the Danish West India Islands in 1917, has closed the entire coast of Greenland and Peary Land to other nations and now divides control with Canada of the old "American Passage" between Greenland and Hall Land and Grinnell Land and Grant Land, and, with Cape Washington, at 83 degrees, 24 minutes north, has the highest north land and the land nearest the North Pole and controls the westerly approach from the Atlantic to the Arctic.

Norway controls the European coast from the Naze to the North Sea, to the Tana Peninsula at the White Sea, all of which is ice free the year round and has an incompletely ratified mandate to Spitzbergen from the League of Nations.

Russia and Siberia control the rest of the north European coast and the north Asian coast from the White Sea to Bering Sea.

Peary took possession of the region surrounding the North Pole, as well as Peary Land, north of Greenland, for the United States. Delong and Melville took possession of the Delong Islands, and Wellman and Baldwin did the same with Graham Bell Land, a part of the Franz Joseph Archipelago.

Norway, having North Cape and Spitzbergen under her control, in combination with a generally ice-free native coast, is strategically situated in Europe as the eastern flight gateway to the Arctic, eastern from America, northwestern from Europe. Seaplanes can fly from the North Sea along the Norwegian coast to Hammerfest, Tromsoe, or Gjaesvaer Harbor, thence to Bear Island, thence to South Cape, Spitzbergen, thence to North Cape, Spitzbergen, where they are less than 6 hours' flight from the pole and 18 hours' flight from Bering Strait. If Amundsen can fly from Point Barrow, land on, and take possession of the land that exists north of Alaska without protest from the United States, Norway would then have an air route from the North Sea practically to Bering Sea.

In addition, if her claim to Axel Heiberg Land and Ringnes Islands is admitted by Great Britain, Norway would then have a closed air route from the North Sea practically to Bering Sea. It would be the shortest and most usable route, and of tremendous trading value to Norway, which does not forget that the United States paid Denmark $25,000,000 for the Virgin Islands and threw in Peary Island through lack of knowledge of its value. The United States has never closed a land or sea route to any nation in peace times. Denmark has. So may Norway, as she has done with Spitzbergen. My flight plans did not contemplate the seizure and closing of flight lands in the Arctic, but their opening up.

No wonder, after Amundsen had time, from August 2, 1921, to October 12, 1921, with perhaps a suggestion from other sources, to digest my plans for a polar flight and a strategical use of them for his nation had fully penetrated, that Amundsen made a hurried trip to Norway and was there able to raise the financial means to anticipate our flight. Our plans, in their initiation, were scientific and not political; Amundsen's present plans are political and not scientific. The course of Amundsen may be "good business" and shrewd trading, and perhaps it is, but it is not based upon scientific ethics. What I object to in the entire Amundsen propaganda, with which the newspapers of the United States have been flooded for the last six months, is that his plans are camouflaged under the name of "scientific exploration," and that Amundsen, by misrepresentation of his objects, got for himself and his associates assistance from various officials of the United States as a "scientist" that would have been withheld from him by them in his true capacity of a territorial adventurer.

I am willing to go on record now that the Hydrographic Office of the Navy, the Coast and Geodetic Survey, the Geological Survey, the Weather Bureau, the Bureau of Standards, or any of the other bureaus whose heads have good-naturedly and courteously helped Amundsen and opened their facilities to him will never get a report from him of the slightest value. What he may find that is new he will keep for Norway. Amundsen has made Nome, Alaska, his base of operations for years. Four times he has sailed from it for the north. Has he transmitted yet a single observation of value from there? He will not even buy his fur clothing there, but deals for it at East Cape, Siberia.

I have kept a careful clipping watch on Amundsen since his first announcement of his intention to hire Norwegian aviators and take the land north of Alaska for King Haakon, of Norway. I will file with you later the entire series. Better than any words of mine they show how, from the first ballon d'essai, Amundsen grew bolder and bolder in his announcements as he met with no American opposition, finally deciding to fly across the American Continent to his ship at Seattle, but coming to grief and deserting his plane in western Pennsylvania. Amundsen's whole course has been one of misrepresentation. He tells one story in the United States and another in the London Times of June 9. In the London Times, over his own signature, Amundsen asserts that a Capt. Godfred Hansen has established a depot for his use at Cape Columbia, which, Amundsen says, is in North Greenland. Cape Columbia is not in North Greenland but is the most northerly point of Grant Land. Amundsen says Hansen has "worked hard and shown great capacity." He certainly would have to to establish, in the dead of winter, and an Arctice winter at that, a depot at Cape Columbia. Such an exploit would be well worth heralding. There are only three routes in on the surface. One by way of steaming or sailing around the northeast coast of Peary Land, which has never been done; one by way of an overland mush over the ice of Greenland, crossing the "American Passage" on the ice or over open water to Cape Columbia; one by way of Kane Basin, Kennedy Channel, Hall Basin, Robeson Channel, Lincoln Sea, and around Cape Sheridan. Any one of these exploits would have given Godfred Hansen a right to entry among the Arctic immortals. If Hansen flew in from Spitzbergen or Smith Sound that too would be a great feat. Small wonder when Amundsen was asked for details about this "depot" that it was announced from Christiania that he had changed his plans again and would not land at Cape Columbia. One of the late stories sent out by Amundsen's press agent from Seattle described Amundsen on the deck of the *Maud* starting for the icy north. Amundsen did not sail on the *Maud* but as a passenger on the passenger steamer *Victoria*. Of course, he had a perfect right to so sail but it was not truth to convey the impression deliberately that Amundsen had sailed in the *Maud*. Nor has there been much truth about any of the announcements of the man that the Seattle Times called the "much advertised explorer."

I have in my possession, as one of the many announcements made by Amundsen's press agent, an article under the date of August 1, 1921, in which Amundsen makes an appeal for books to be read in the long drift in the ice in the *Maud*. The full story of the polar flight plans of my son and myself were made public on August 2, 1921, after long previous preparation. Is it likely that Amundsen, if he had planned a polar flight, using the *Maud* as a base, at that time, would have sent out a weak story, like an appeal for books, if he had then worked out such an epochal enterprise as a 2,400-mile flight across the Arctic and the North Pole? Hardly. Amundsen and his press agent, and so far as I know, Amundsen is the only polar explorer ever to use a press agent, would have flooded the country with the account of their plans, as they did later when they realized what the Fairfax Naulty polar flight plan meant.

I have kept out of the limelight of publicity during the preliminary work, but there is not an official of importance in Washington whose duties or work would bring him in contact with any of the phases of the proposed flight who does not know that for over a year our polar flight plans have been constantly forwarded. One bureau of a department is the depository of 25 charts of the entire Arctic regions, prepared by my son and myself, which cover for the first time all the known data and the conclusions to be drawn therefrom on land, water, ice, wind, fog, rain, ice drift, Arctic Ocean currents, Arctic wind currents, probable lands, air routes, air bases, supply points, coal and oil deposits reduced to graphic form and digesting all the results of previous Arctic work from Hudson to Peary. This and other information with especial reference to Arctic flight routes was all prepared and filed long before Amundsen went to Norway to raise the funds there for his flight and, as I have reason to believe, claiming as his own idea the entire plans of the American flight.

Amundsen claims that the King of Norway is financing in part his expedition. I do not know that he is nor do I know what Amundsen told the King of Norway about polar flight plans, but I am to-day sending to the King of Norway photostatic copy of the original Fairfax Naulty polar flight plans as published, showing the date of publication of August 2, 1921, in order that he may have the facts in the matter before him. I am not doing this "through channels," but am sending it direct.

Amundsen's unethical conduct in regard to polar flight is not his first act that has caused criticism. His surreptitious exploit against Scott in the Antarctic is not forgotten by Englishmen nor, as a matter of fact, by scientific men everywhere. Scott spent years in preparation for real scientific results; his plans were world known; he took his time going in to the South Pole in order to obtain data of scientific value with proper instruments and by trained men. Amundsen hastily organized a ski-racing outfit and rushed it secretly over the route Shackleton had previously blazed out to within three days of the South Pole. It was a personal exploit for the glory of Amundsen, a much dimmed glory in the minds of men who know, and it added not one iota of value to scientific knowledge.

Amundsen went to Norway last winter to there raise funds for his plan of appropriation of the Fairfax Naulty polar flight. His ship, *Maud*, was then at Seattle being refitted at the yards of H. H. Hammer, who also acts as his press agent. If Amundsen had been honest in his polar plans, the clean thing for him to do would have been to make the flight westward from North Cape to Point Barrow, across the North Pole, if he could make it, thus taking departure from his own country and using Spitzbergen en route. Then it would have been a challenge to a race for the object sought, and little objection could have been made.

From Seattle to Point Barrow by surface ship is about 3,200 miles, short course. The ice clears out of Norton Sound, on which Nome is situated, between June 15 and July 1, and out of Kotzebue Sound about the first week in July, in favorable seasons. The Coast Guard cutter *Bear*, which under various commanders has made Point Barrow for 30 years, never attempts to make Point Barrow before August 1 on account of the ice conditions. The *Maud* left Seattle on June 1, and a month later was just about ready to clear from Nome with 700 miles of ice-clogged water to steam through before she could reach Point Barrow. The *Maud* could have made Hammerfest in the same time it will take her to make Point Barrow.

Amundsen is a Norwegian and must be familiar with the Norwegian coast. He knows that on account of the Gulf stream the Norway coast is free of ice the entire year. If Amundsen had meant to do the right thing, he could have taken the *Maud* from Seattle around the Panama Canal and to Hammerfest, Norway, with his airplanes on board and made his start from Hammerfest, Tromsoe, or Gjvaesvaer Harbor, all in Norway, flown from any of these points to South Cape, Spitzbergen, up Wybe Jans Water to North Cape, Spitzbergen, and from there, or from the Seven Islands, or any other departure place in Spitzbergen, made his flight attempt on the North Pole, and no one could have criticized him. If he could not have made the pole in a nonstop flight, he could probably have made Cape Morris K. Jessup, Cape Washington, or even North East Foreland or Cape Bridgeman, and from there started his final flight to the North Pole. This is one of the 50 Arctic flight routes worked out by my son Leslie Fairfax Naulty

and myself in the last five years, and were it not for the fact that we would be treading on others' territory we might have tried this route instead of the Point Barrow start from American territory.

Possibly, however, Denmark informed Amundsen, as the secretary of the Danish legation told me last summer, that Denmark had closed all of Greenland to foreign nations and would not look with favor on an attempt to use any part of Peary Land, yielded to Denmark by the United States by Secretary Lansing under the treaty for the cession of the Danish West India Islands in 1917, as a base for American or other nations' Arctic operations.

If Amundsen says that it is over 9,000 miles to take the *Maud* from Seattle to Hammerfest through the Panama Canal, I answer that it would be clear steaming all the way, with no blockading ice to buck, as in Kotzebue Sound, Bering Strait, and the Arctic to Point Barrow. We intended to fly from Nome to Point Barrow, not to use a surface ship. If Amundsen had made the polar-flight attempt from Norway and sent the *Maud* to Point Barrow as an arrival station, there still would have been no conflict. But Amundsen, using Norwegian outfitting, an alien surface ship, a German plane with a Bavarian motor, an English pilot just retained instead of the discredited Omdal, the Norwegian pilot brought over with such a hurrah, uses Seattle, Nome, and Point Barrow, American territory, as bases, for what purpose? Solely, I think, to block the American flight expedition, if possible, and to seize for Norway the land that all Arctic explorers think exists north of Alaska and between it and the North Pole before Americans can take physical possession of it and complete the American chain of title to Arctic lands north of Alaska now existing under the terms of the Alaskan cession negotiated by Secretary of State Seward with Russia in 1867.

A motive for this attempted seizure may be assumed from the fact that although Norway controls the western European approach to the Arctic by land from the Naze, in the North Sea, to Tana Peninsula, in Barentz Sea, north of Europe, and has an unratified mandate from the League of Nations, acquiesced in only by Holland and Denmark, to Spitzbergen, and a conflict over claims to Bear Island with Russia, south of Spitzbergen, Norway has no western outlet from the Arctic to Bering Sea and the Pacific. The taking of the land north of Alaska, or any land between Peary's north polar region, which Peary claimed for the United States by right of discovery, would give Norway a flight route across the Arctic, under complete control by her, of 3,000 miles from the north Atlantic to Bering Sea and the north Pacific, as against a sea-surface route via the Panama Canal of 9,000 miles.

Such a flight route with the present and coming development of aircraft, would have great trading value for actual use or for a sale to other nations for Norway. It is not much wonder that Amundsen was able to finance my flight plans in Norway.

To show the thoroughness of our preliminary work on the polar flight and of our consideration of Arctic lands my son and I have worked out a chart on a series of what might be called intersections of 5° projections, supported by known observations of ice drift, current flow, wind direction, known shallows and deeps, and other data, and have recorded thereon areas within the compass of which land will probably be found. This chart is on deposit in a bureau of a Government department with a date of record.

If I have avoided publicity notoriety in my preliminary work, I have not worked in secret, as during the progress of my plans, mostly in 1921, I have laid them before and discussed them with Secretary of the Interior Fall; Assistant Secretary of the Navy Roosevelt; Admiral Robison; Admiral Smith; Captains Bryant, Cole, Watt, Bostwick; Commanders Hooper, Farwell, Puleston, Asserson; Lieutenants Brayton and R. L. Lerch, of the United States Navy; Brig. Gen. William Mitchell; Lieut. Col. H. E. Hartney; Capt. St. Claire Street; Lieut. C. E. Crumrine; Captain Wright, Air Service, Army; Assistant Director Smith and Geologist Brooks, Geological Survey; Col. E. Lester Jones; Captains Patton, Giacomini; Major Bowie, Coast and Geodetic Survey; G. W. Lewis, executive engineer, National Advisory Committee for Aeronautics; Commandant W. E. Reynolds; Captains Hamlet, Henderson, Bullard, Coast Guard; Admiral Benson and Mr. Robinson, United States Shipping Board; Colonel Curtis and Major Bender, Signal Corps; Senators Wadsworth, Fernald, Reed, Walsh of Massachusetts; Representatives Oldfield, Hicks, Bulwinkle. With a few exceptions all of these gentlemen were familiar with my polar-flight plans long before October 12, 1921, as my diary shows, when Amundsen made his first tentative announcement of a plan to use airplanes in conjunction with the ice drift of the *Maud*, which he has since enlarged to the complete appropriation of my known plans. I also made arrangements with Colonel Shaughnessy, Second Assistant Postmaster General, to establish a United States post-office station at the North Pole, and he arranged that I was to be made an air-mail pilot, so that letters I had arranged to take to Europe could be stamped "North Pole" officially when we made it.

Nor were these men the only ones I conferred with. Brig. Gen. D. L. Brainard, who with Lieutenant Lockwood as a member of the Greely Arctic party, discovered Cape Washington, Hazen Land, is a resident of Washington; so also is Admiral G. B. Harber, who made the wonderful journey across Russia and Siberia to bring back the bodies of the De Long party. I sought their advice on matters of equipment, and from them and from Admiral Benson, who made the voyage in the *Yantic* to Littleton Island; from Captain Hamlet, of the Coast Guard, who knows the north Alaskan coast as former commander of the *Bear;* Commandant Reynolds, of the Coast Guard, who planted the American flag on Wrangel Island, I sought and was cheerfully given the results of their experience in order to eliminate all mistakes of preparation possible. I have had the cooperation of Capt. St. Claire Streett, in command of the New York-Nome-New York flight of 1920, and Lieut. C. E. Crumrine, a flier with the party, and many conferences with both over my plans in 1921.

I have communicated by letter and in person to the officials of the State Department, under whose purview the matter falls, full information concerning my polar-flight plans, the results expected to flow therefrom, and the effect on American rights in the Arctic of the exploits accomplished and proposed of Amundsen and Stefansson. Their game is not a new one. Peary discovered Independence Bay and Peary Channel, dividing Peary and Hazen Lands from north Greenland, thus proving that that territory, from Nares Land—so named by the American Brainard in compliment to the Englishman and not by any member of the Nares party—on Lincoln Sea to Cape Wyckoff on Spitzbergen Sea, an island separate from north Greenland. Peary traversed this route in 1890 and again in 1893–1895, and explored it with true Peary thoroughness. If Hazen and Peary Lands combined formed an island which was separated from north Greenland by a channel running from Lincoln Sea, so named by Hall, on the west, to Peary's Independence Bay, opening on the east to Spitzbergen Sea, this island, which Peary took possession of for the United States, would conflict with Denmark's nebulous claim to sovereignty to the "whole of Greenland," although the entire region was opened up and explored by Americans from Kane, Hayes, Morton, Hall, Greely, Lockwood, Brainard, and Peary. So Peary's discoveries were attacked by Koch and other Danes, and as a part of their plan political pressure was brought on the Hydrographic Office to withdraw a chart which bore a photograph of Peary with the American flag planted on Cape Morris K. Jessup and to alter its Arctic chart so Peary Channel would not be shown thereon as dividing Peary Land from north Greenland.

Peary Land now possesses great strategic value in flight crossings of the Arctic, going west from the Atlantic or east from the Pacific, and Denmark has closed this entire coast, under her claim of sovereignty, to all nations. It may be said that all of these matters are very much in the future and dependent for any value on the problematical operation of aircraft. So was the expansion of the United States to the westward when Washington was President and railroads were unknown, a matter of the future; so also was Duluth in Proctor Knott's day. We must look to the future and provide for it, if possible. "The people who have no vision perish."

Pardon the digression, and to return to the polar flight—

I have been told that I am to blame, and perhaps I am, for not hiring a press agent and keeping the project constantly before the American public. Methods like this are repugnant to a man of professional or scientific standing and difficult for me to adopt. But if little Norway has vision enough to back Amundsen, it would seem as if there are enough public-spirited men in the United States to put an American flight expedition in the air this summer.

We are taking nothing from Norway. The project of a polar flight is American in its initial conception. Back in 1912 Peary, as I have recently learned, suggested the use of airplanes, when they were sufficiently developed, for polar work, his idea being a crossing by air from Cape Columbia, Grant Land, to Cape Chelyuskin, Siberia, across the North Pole, a matter of 1,200 miles flight. It was impossible then, but is easily accomplished now.

If a dispatch printed in Washington last week is authentic, Norway is to send another flight expedition from North Cape to Point Barrow to cross the route Amundsen hopes to fly, but flying west instead of east. Maj. Tryggve Gran is reported to head this flight. Norway has no plane of her own built capable of a nonstop flight for the distance, so this is to be taken cum grano salus, if I may be permitted a bad Latin pun.

I am responsible to no one but God, my countrymen, and my conscience, and have no commercial motives in my proposed flight. I had designed, and it is a matter of Government record, an all-metal monoplane for the purpose of the Arctic flight, but to avoid any charge of commercialism I had decided to use instead Navy designed and built seaplanes and noncommercial equipment throughout.

It may be well to restate the purposes of the Fairfax Naulty polar flight, as they were printed in the New York Times of August 2, 1921, two months before Stefansson sent in his scratch expedition to seize Wrangel Island as an air base for Great Britain and three months before Amundsen gave out a word about a polar flight. Under the heading "Purposes of expedition" the announcement read:

"By the first polar air expedition we hope to accomplish these results: To positively demonstrate the practicality of the air route to and across the North Pole; to observe and photograph the North Pole and trans-Arctic regions; to study Arctic Ocean and air currents; to make observations of magnetic variation, inclination, and dip between the magnetic pole and the geographical pole; to observe north polar vortical [note vortical, not vertical] air movements; to obtain data of aurora borealis and northerly extension of zodiacal light; to obtain spectrum records by a new and simple means of circumpolar stars from full north; to determine the seasonal height of the congelation sphere (the freezing height) of the atmosphere from west to east across the Arctic; to open a route for later scientific expeditions; and, if possible, to gain for the United States the credit of the first northeast passage by air."

I challenge Amundsen or any other man to produce in print or show a dated record of any such plan for polar flight as herein outlined as broad in scope of scientific purpose, or as operatively worked out, which antedates this publication of my Arctic flight plans in the New York Times on August 2, 1921. I also announced in the same article that we had arranged for a relief expedition, if we needed rescue, via the east coast. Where are Amundsen's relief plans? Is he relying, as other foreign explorers in the region have, on the United States Coast Guard cutter *Bear* to help him out and bring him back to civilization in case his Norway-financed expedition to seize American territory comes to grief?

The theatric announcement was made from Nome in Amundsen's behalf that it is "success or death." Very dramatic, or very press-agenty, but not very edifying to the commander and crew of the *Bear* who may have to do the work of rescue. I arranged for a relief party by airplane with my original plans and as a part of them, and even devised a new type of portable, knockdown antennæ for use on airplanes for long-distance radio communication, so our rescue party would have our last known position to head for in the event of failure on our part. In all the flood of his press agent's work, work for which Hammer announced that he had been knighted by the King of Norway, Amundsen has not made public a single working plan that is not covered in my first announcement. I have kept my plans to myself since last October to avoid furnishing Amundsen further ideas for appropriation. The plain facts are that Amundsen has appropriated the entire American Fairfax Naulty polar flight plans outright, so far as he knew them, and substituted them for his original surface drift through the ice across the Arctic in the *Maud*, which he has often announced would take seven years.

An idea is property. An idea is just as much property as a piece of real estate or personalty, and it is so regarded in the high ethics of professional and scientific circles. Often the only reward of the originator is to have the satisfaction of reducing his theory to accomplished fact. It has been well said that the people who have no vision perish, and ideas have a spiritual and psychical value to the race, an individual of which produces them, far beyond any material rewards that may flow from them. If imitators, unrebuked, may steal ideas and claim them as their own, original thought is penalized and a premium is put on intellectual theft. Postponement of a plan is not abandonment of it. My original plan was for a flight in 1922. It was advanced to September or October, 1921, because of unusually favorable weather conditions that came unexpectedly to pass.

A long course of preparation is necessary to execute a successful Arctic flight. This takes time and work and no right is canceled because of postponement. England did not try to rush in and beat the

Navy N. C.'s trans-Atlantic flight. When Lieutenant Porte—the Englishman—proposed a trans-Atlantic flight in the Curtiss plane *America* Americans did not rush in to beat him to it, and it was not until Porte definitely announced that he had abandoned his proposed flight that the United States Navy took up the question of a trans-Atlantic flight, and then it chose a different route from Porte's. I had planned a trans-Atlantic flight, and the records of it are on file in Washington, via Newfoundland, Labrador, Greenland, Iceland, Faroe Islands, Shetlands, and Scotland to London, choosing this route as aircraft of that time were not capable of a nonstop trans-Atlantic flight, but gave it up in order not to come in conflict with Porte.

Spain did not try to get ahead of Portugal in the recent flight from Europe to Brazil; France did not try to beat the Rosses in their England-Australia flight. The nonstop trans-Atlantic flight from Newfoundland to Ireland, won by Alcock and Brown, was a challenge flight for a prize in money and open to all entrants. When Shackleton came to the United States in January, 1921, for the purpose of looking over the chances of a flight from the MacKenzie Detla across Beaufort Sea, and I saw him in New York and told him of my Arctic flight plans at a meeting with him at the Waldorf-Astoria in New York, he gave up his tentative idea when he found it was anticipated, and that gallant explorer said he would "chuck the Arctic and go back to his own field, the Antarctic." Shackleton even asked me if it would be "crossing my trail" if he used an airplane in the Antarctic. When G. S. Nares, in the *Alert* and *Discovery*, in 1875, pushed up the American Passage opened by Kane and Hall, the Americans before him, he took with him a bronze tablet, made in London before his departure, to place on Hall's Arctic grave, on which was deeply engraved by Nares the tribute to Hall, "In whose footsteps we follow." It has been reserved for Amundsen to break the high ethics of exploration for the sake of personal notoriety, self-exploitation, and material profit.

Our plans are complete and we are ready to attempt a flight to the North Pole and if possible across the Arctic this summer or early autumn, and by another route, also recorded in full long before any previous announcement of it by others. We are now arranging to get the final backing from Americans who will put the all-American polar flight in the air. More is at stake in this polar flight than a contest between two men of different nationality, over priority rights. If Americans do not make this flight and are beaten to the goal by Europeans it will be a source of regret to the United States later when aviation comes into its own.

Yours very truly, EDWIN FAIRFAX NAULTY.

[From the New York Times, Friday, June 30, 1922.]

CHARGES AMUNDSEN APPROPRIATED PLAN—E. F. NAULTY SAYS NORWEGIAN GOT IDEA FOR POLAR FLIGHT FROM HIS OWN PREPARATIONS—POSTPONED HIS ATTEMPT—CITING IMPORTANCE OF NATIONALITY, NAULTY SAYS AMUNDSEN WILL CHART NORWEGIAN AIR ROUTE.

(Special to the New York Times.)

WASHINGTON, June 29.—The allegation that Capt. Roald Amundsen, the Norwegian polar explorer, has appropriated American plans for a flight across the North Pole from Point Barrow to North Cape was made to-night in a prepared statement to the New York Times by Edwin Fairfax Naulty, of New York and Washington, a physicist, who has long been interested in polar exploration and aviation.

It is Naulty's contention that Amundsen has adopted the so-called Fairfax Naulty route and plans for a flight over the pole which were prepared by Naulty and his son, Leslie Fairfax Naulty, for use in connection with plans of their own for a trans-Arctic flight. These plans and the route were disclosed by Naulty in an exclusive interview he gave a Washington representative of the New York Times last year, and were printed in a Washington dispatch to the Times on August 2, 1921.

Naulty and his son had intended to start on their expedition for a transpolar flight in the fall of 1921, but called it off in the face of reports indicating that they would have met with adverse polar weather conditions. Naulty said to-night that he and his son plan to make their own transpolar flight this fall, but that he has refrained from talking about it for publication because he did not care to disclose scientific details for use by others.

"I challenge Amundsen or any representative of Amundsen's," said Naulty to-night, "to produce one line of print prior to August 2, 1921, to show that Amundsen had worked out before the publication of our plans in the New York Times any operative plan for transpolar or trans-Arctic flight. Amundsen claims that he bought a Farman plane in 1914 and learned to fly for the purpose of polar flight. Anyone who knows the limitations of a Farman bus of 1914 will smile at the thought of it making the 2,400 miles between Point Barrow and North Cape. In the Seattle Times of October, 1921, Amundsen said he learned to fly in 1914; in the London Times of June 9, 1922, he says he has had no experience as an airman.

SAYS EXPEDITION WAS BROKEN.

"The real facts are that in 1921 Amundsen was in Seattle with a broken expedition in which the public, even of Norway, had no interest. He read accounts of the Fairfax Naulty polar flight as proposed for that year, and when it was announced that the flight was postponed to 1922 he thought he would play the same game he did with Scott in the South Polar region. He is now at Nome, where he is in telegraphic communication, and he was challenged on the ethics of his course last year, so no advantage is being taken of him due to absence. Incidentally, Nome is a long way from the North Pole by ship or by plane.

"If Amundsen thinks he is putting anything over on the American people or the Department of State of the United States by his deliberate appropriation of the Fairfax Naulty route and plans for a flight across the North Pole from Point Barrow to North Cape via either Cape Columbia or Spitzbergen, he is doomed to the same disappointment that many Eureopeans have met in trying to 'let the United States in' for something.

"Amundsen stole a march on Captain Scott, the Englishman, when he rushed into the South Pole along Shackleton's old route on skis, merely to beat Scott to it, but his actions then and his record since are well known, and the Norwegian will learn in time, as others have learned, that America is not asleep.

"When Amundsen sailed as a passenger on the steamer *Victoria* out of Seattle in June and his press agent gave out a story that he was on the *Maud*, he thought no one had fathomed his carefully laid plans.

AN AIR ROUTE FOR NORWAY.

"Amundsen's sole motive in trying to make the transpolar flight is to establish a claim for Norway to an air route across the Arctic from the Atlantic to the Pacific, Norway controls the northwest Atlantic coast from the Naze in the North Sea to the Tana Peninsula in Barentz Sea. The League of Nations gave mandatory control of Spitzbergen to Norway. Norway claims territorial rights in Axel Heiberg Land and Adulf Ringes Land, which lie between Spitzbergen and Bering Sea.

"Now, if Norway could take possession of the 'unknown land' lying to the north of the Alaska north coast, she could control the air traffic of the future across the Arctic, since her airplanes could fly from North Cape to Spitzbergen, from Spitzbergen to Axel Heiberg Land, from there to Adulf Ringes Land, and from there to the southwesterly 'end' of the land which undoubtedly bounds Beaufort Sea on the north and lies between the Parry Islands and Bering Sea.

"To-day announcement is made that Norway is to send Maj. Tryggve Gran on a flight expedition probably from Hammerfest, Norway, via Spitzbergen, to the North Pole and thence westerly, and that a race is on between Amundsen and Gran to make the North Pole and the trans-Arctic crossing by air. It may interest both Amundsen and Gran, who are in touch by radio with the world, that all the possible routes that either or both may fly are already charted in full detail and in the possession of a department in Washington. This same department also has a series of 25 carefully worked-out Arctic charts, prepared by my son and myself, which show all practical flight routes across the Arctic, with a mass of other data, the first ever prepared for any Government, so here again they are not 'putting anything over' on us.

"Amundsen used Seattle as his base for repairs and operations. He is now using Nome as a ship base and intends to make his attempt to fly from Point Barrow, if his announcements can be relied on. All these points are American territory. I wonder if Americans realize just what this means. Amundsen is not doing this for the United States; he is doing it for Norway. Americans who have had experience with Europe can readily see what would happen to an American if he attempted to use Norway as a base of operations for exploration of the Tana Peninsula for the benefit of the United States, with a view of making it an air base in the north of Europe.

ISSUE OF TERRITORIAL RIGHTS.

"I have referred to a Norwegian air route across the Arctic and have allowed Norway claim to Axel Heiberg Land and Adulf Ringes Land. But neither Canada nor Great Britain will be so generous. Great Britain realizes the value of the Arctic air route just as well as Norway. Though little attention was paid to it before, much attention has been centered on the Arctic air route since August 2, 1921. Canada claims her northern territory extends from a line dividing Peary Land from Grant Land to the North Pole and thence down the one hundred and forty-first meridian to the boundary between Alaska and Yukon Territory. Canada has definitely asserted this claim in a chart issued in 1904. Within this northernly angle is inclosed the entire magnetic archipelago from Grant Land to Banks Land and including Adulf Ringes Land, Axel Heiberg Land, and the land north of Prince Patrick Land and west of Ringes Land reported by Stefanssen.

"Canada claims territorial rights to all the region within this angle extending to the North Pole and covering unknown as well as known lands. Not considering claims of the United States to part of this region by right of discovery and occupation, claims that have never been definitely abandoned or canceled, there still remains the claim to the North Pole region for the United States established by Peary in 1909. If Canada's claims to this entire angle be admitted tenable and with the exception of Grant Land and Grinnel Land, there can be no contest over Canada's rights, it would follow that the United States has undoubted territorial rights to the polar region north of Alaska and west of the one hundred and forty-first meridian extending to the boundary line between Alaska and Siberia.

"The Alaskan-Siberian boundary runs along the one hundred and sixty-ninth meridian at Bering Strait by definite agreement between Russia and the United States, and were there no other factors to be considered, adopting the Canadian claims as fact, the northerly boundaries of the United States would run from Demarkation Point due north to the North Pole, along the one hundred and forty-first meridian, thence south along the one hundred and sixty-ninth meridian to Bering Strait. This would include as American territory the probable 'Unknown Land' north of Alaska, which Amundsen said early this year he would claim for and name after the King of Norway.

"But United States rights to Arctic territory do not end with the one hundred and sixty-ninth meridian. West of it lies Wrangel Island and the De Long Islands, composed of Jeannette, Henrietta, and Bennett Islands. Wrangel Island is cut by the one hundred and eightieth meridian and lies due north of North Cape, Siberia. It was not discovered by the Russian after whom it is named, but was first seen by Captain Kellett, of the British Navy, from Herald Island in 1849, and reported by him on his return to England in 1853. Kellett did not take possession of Wrangel Island and made no claim to it, although he did land on Herald Island, named after his ship, H. B. M. *Herald*. In 1867, an open-water season in the Arctic, Captain Long, of the American bark *Nile*, whaling in those waters, coasted along the entire south shore of Wrangel Island, landed a boat's crew, took possession of it for the United States in 1867. It was Captain Long who gave the island the name of Wrangel Island. In 1881 Lieut. W. E. Reynolds, now commandant of the Coast Guard, then a junior officer on the United States revenue cutter *Corwin*, under Captain Hooper, landed at the head of a boat's crew, planted the American flag, and officially took possession of Wrangel Island for the United States. His act has never been disavowed by the United States and remains effective to-day.

STEFANSSON AND WRANGEL ISLAND.

"The recent exploit of Stefansson in taking possession of Wrangel Island for Great Britain through a party of three Americans, headed by a young Canadian, who were sent in on the steamer *Silver Wave* from Nome in September, 1921, has as little effect on the rights of the United States as did Stefansson's previous landing on Wrangel Island from the wrecked *Karluk* in 1914.

"West of Wrangel Island, along the seventy-fourth parallel and between the one hundred and fiftieth and one hundred and sixtieth meridian east, lies the Delong Island, discovered by the *Jeannette* party in 1881. There is no doubt whatever about these islands being American territory, as they were first discovered by the Delong party and have never been visited since. Wrangel Island and the Delong Islands would carry the American boundary from the one hundred and sixty-ninth meridian west across the one hundred and eightieth meridian and to the one hundred and fiftieth meridian east, giving a total sweep of 69° across the western Arctic and running to the North Pole. If rights of the United States be maintained and sustained, and the rights of Canada be maintained and sustained, it is difficult to see how Amundsen can claim any land or any rights for the King of Norway or the Norwegian Government in that region.

"A very interesting diplomatic situation has been developed by the advance made in aviation which on present day actual performances makes it possible for an airplane to fly from the North Atlantic to Bering Sea and thence to the North Pacific in a nonstop flight. The flight from Point Barrow to North Cape, across the North Pole, can be made in 24 hours, and the distance is less than 2,400 miles. The possession of air bases in the Arctic thus becomes of paramount importance to the nation whose territory adjoins the Arctic; that is, the United States, Great Britain through Canada, Denmark through Greenland, Norway through her own territory, Spitzbergen, on which Norway has a League of Nations mandate, and Russia.

"Without false modesty I claim for myself and my son, Leslie Fairfax Naulty, the credit of being the first to work out a definite, operative plan for transpolar flights and to make a special study of Arctic conditions with relation to flight."

TO ATTEMPT FLIGHT ACROSS NORTH POLE—EDWIN F. NAULTY ANNOUNCES PLANS FOR A 6,000-MILE TRIP OVER "TOP" OF THE EARTH—ONE PLANE AND FOUR MEN—STARTING IN SEPTEMBER FROM ALASKA, PARTY WILL TRY TO LAND AT POLE, THEN GO TO LONDON.

[Special to The New York Times.]

WASHINGTON, August 1.—Plans for an airplane flight over the North Pole from Alaska to Norway, to be attempted in September, were announced to-night by Edwin Fairfax Naulty of New York, a physicist who has long been interested in polar exploration and aviation.

Mr. Naulty stated that the plans call for the use of only one airplane and an expeditionary party of four, which would include himself and three experienced pilots, all ex-service fliers. They expect to cross the Arctic zone in 24 hours' actual flying time.

His son, Leslie Fairfax Naulty, who will be associated with him in the enterprise, is going to Europe to take care of plans for continuation of the flight from North Cape, via the Scandinavian capitals, to London.

The start of the important part of the flight from a scientific standpoint—the trans-Polar and trans-Atlantic flight—is to be made from Point Barrow, Alaska, Mr. Naulty announced, and the route to the pole will be, as far as flight conditions permit, along the Meridian of 155 west to the North Pole. The distance from Point Barrow to the pole is 1,200 nautical miles, and it is the plan that the first stop shall be made halfway between these two points.

SECOND STOP AT THE POLE.

The second stop is planned to be made at the North Pole, or as near to that point as there is a landing, for full observations, to determine position. Then, after overhaul and restowage, the route will run to Spitzbergen, where the third landing is planned to be made west of Andree Point, from which the ill-fated Andree some years ago started on his projected balloon voyage to the North Pole.

From Spitzbergen the fourth projected leg calls for a flight across Spitzbergen with a possible landing at Bear Island if conditions warrant, and thence to North Cape, Norway.

Mr. Naulty said that only one plane would be used for the flight. At first it was his plan to head a squadron of three ships, but difficulties of carrying on if one or more of the planes came to grief and the consequent necessity of carrying crews and adding their weight to the carried weight of the crew, stores, gas, and oil of the surviving plane determined the decision to make it a one-plane flight.

The complete route of the polar flight will be, according to Mr. Naulty's announcement, from Seattle to Ketchikan, Alaska; Ketchikan to Anchorage; Anchorage to Nome; Nome to Point Barrow, and thence across the polar regions to North Cape, Norway, and thence by taxi flights via Christiania and Stockholm to London. The Arctic flight proper, he explained, would start from Point Barrow. The journey from that point over the pole to Spitzbergen, a distance of 1,800 nautical miles, will be regarded as the transpolar flight. The trip from Point Barrow to North Cape, a distance of 2,400 nautical miles, will be regarded as the trans-Arctic flight.

TOTAL FLIGHT, 6,000 MILES.

As the distance from Ketchikan, Alaska, to Point Barrow is about 2,000 nautical miles, and from North Cape to London approximately 1,500 miles—with at least 100 miles spent in observation flying around the pole, provided the plans succeed—the total distance covered by the flight from Ketchikan to London would be 6,000 miles.

Mr. Naulty said he had been convinced by years of study of data of ocean, ice, and wind currents that land exists, in the form of an archipelago, isolated mountain peaks or a low range of "tailing-out" hills, in the region lying between 120 west and 135 east and 75 north and the pole, and that the plans for the projected polar flight are practicable. It had been his plan to undertake the flight next spring, he explained, but it has been moved up to late September on account of reports indicating unusually favorable Arctic conditions this year.

Mr. Naulty stated that he has been interested in polar exploration for 20 years and has discussed results with Shackleton, Bartlett, Flaii, and other polar surface explorers. In aviation his scientific work in connection with aviation had been in investigation of kinetics and statics of the airsphere. Most of his aviation work has been based on studies of air conditions, floatability, and motion.

DETAILS OF FLIGHT PLANS.

Mr. Naulty made this statement in announcing his plans to-night:

"Land is indicated by the course of the North American polar current from the whaling grounds above Beaufort Sea until it reaches Grant Land and flows south through Robeson and Kennedy Channels into Kane Basin. This current is separate from the Bering current, flowing farther south across Beaufort Sea, through the magnetic archipelago, into Baffin Bay. On the Asian side there are two ocean currents. One, the tidal coastal current, flows 'west' starting from North Cape, Norway, thence across the mouth of the White Sea, south of Nova Zembla, north in the Kara Sea, across Cape Chelypskin and the Nordenskield Sea, thence west along the Siberian coast to Bering Strait. The other—and this is a very important indication of land in the unexplored region—develops north of the seventieth parallel, runs north of Wrangel Island, across the Arctic 'shallows' to De Long Islands, and continues in a sweep 'east' across the deeps recorded by the sounding of the *Fram* until north of Franz Joseph Land it swings over toward the Greenland east coast and becomes the Greenland current flowing south between Iceland and Greenland.

"Under certain circumstances the Siberian tidal current and the Bering current and the polar current of the American side of the North Pole might be considered as one circumpolar current, originating off the north coast of Norway and coursing around the entire Arctic Basin, but dividing into two streams as the current flows east and south on the American side, its set being established by the sharp rotative motion of the Arctic basin, but it is more likely that the deflection of the polar current and the Wrangel and De Long current is caused by land in the region lying north of the seventh parallel and the North Pole.

AIR CURRENTS OF MORE INTEREST.

"Consideration of the action of the Arctic Basin currents first gave me the view that this land exists. I definitely recorded it in an Arctic Basin chart in 1917 and went on record then, but it is the course of the air currents that will be of more interest to us in the proposed trans-Arctic-North Pole flight.

"All the indications are that at an altitude of from 6,000 to 8,000 feet we shall find a strong 'easting' air current—that is, a definite current blowing more or less steadily from west to east below the North Pole at certain seasons and swinging north and south with the movement of the sun, like the lower latitude trade winds. Starting from Point Barrow this wind will be in our favor, as we shall have it on our tail in the flight across. If it is not found on the American side of the North Pole, it is pretty sure to be blowing on the Asian side. I expect to meet this as a beam wind at about 70° north, and by its direction there can determine whether we shall fly to the pole bearing in toward the one hundred and twentieth and ninetieth west meridians, or swing over toward the same meridians east—that is, toward the Asian coast.

"We plan to make our pioneer flight as speedily as possible and, strange as it may seem, to do it in late September. There are good reasons for the choice of this time rather than earlier. Our plan of the flight contemplates an air crew of four, with ground crews at start and finish.

"Our flight speed is estimated at 100 miles an hour, and to this, if wind favors, will be added the speed of the following air current I spoke of. The first jump will be from Point Barrow to the ice or land north of the seventieth parallel. We expect to find it at that point, but if not, and all goes well, we shall fly north until we do. At the first landing we shall restow and adjust for the hop to the North Pole. The distance from Point Barrow to the North Pole across the Arctic is 1,150 nautical miles up the one hundred and sixtieth west meridian. If we find land, it will halve this jump. If we do not, we shall be able to make the North Pole, or the region close to it, in a nonstop flight.

PLANS FOR POLAR OBSERVATION.

"Unless there is the fabled open sea surrounding the immediate region of the North Pole, we shall land as close as possible by observation and then take enough observations to determine the exact polar point. A complete set of observations—negative solar, as the sun will be below the horizon; positive, stellar, and lunar—will determine position, and then we shall check up by a quartering flight around a 25-mile radius of the pole.

"Forty-eight hours ought to enable us to do this, and then the flight south will begin. We expect to use stellar observations for course. We will have the advantage over the surface explorer on land or sea in that we can fly above the clouds and get a clear sky for observing our position—that is, unless the clouds are of unexpected and not probable thickness. Fog, of course, is our great enemy, but at the time of year we hope to be there fog is not likely.

"From land leave at the pole to land sight at Spitzbergen is a jump of 600 miles. Allowing for delaying winds, we ought to make this in 10 hours, but we hope to do it in 6. When we reach Spitzbergen, if we do, we shall have completed the North Pole flight, but to make the trans-Arctic flight we shall continue on to North Cape, Norway, probably landing at Bear Island, making two hops of the jump of 600 miles from Spitzbergen to North Cape.

"Landing conditions at the actual North Cape may force us to make a land rest near by, possibly at Hammerfest or east of the Cape. From North Cape we expect to fly south across Finland to the head of the Gulf of Bothnia, just north of which we shall cross the Arctic Circle and complete the trans-Arctic flight, Deo volente.

"The flight route continues along the Gulf of Bothnia to the Baltic and Stockholm. From Stockholm we plan to fly to Christiania, from Christiania to Copenhagen, from Copenhagen to Paris, and from Paris to London, where the expedition will end. Adventure is not the only incentive. In fact, the less adventure we have the better we shall like it.

PURPOSES OF EXPEDITION.

"By the first polar air expedition we hope to accomplish these results: To positively demonstrate the practicability of the air route to and across the North Pole; to observe and photograph the North Pole and trans-Arctic regions; to study Arctic Ocean and air currents; to make observations of magnetic variation, inclination, and dip between the magnetic pole and the geographical pole; to observe north poral vertical air movements; to obtain data of aurora borealis and northerly extension of zodical light; to obtain spectrum records, by a new and simple means, of circumpolar stars from full north; to determine the seasonal height of the congellation sphere of the atmosphere from west to east across the Arctic; to open a route for later scientific expeditions and, if possible, to gain for the United States the credit of the first northeast passage by air.

"If we fail to get through because of the limitations of our fuel supply, we have planned a relief expedition via the east coast. We shall have the best of wireless equipment, and we hope to be in constant touch with civilization by relay all the time we are north. We shall be able to 'listen in,' and we hope to be able to constantly make the northerly stations with our apparatus, and hope to announce the location of the North Pole by wireless from the pole itself. Beginning at Nome there is a chain of wireless stations of different governments all along the Arctic Basin, so that some one will pick up our messages and then relay them south. It is possible, owing to expected superior night sending, that we can extend the normal range of our wireless.

"Fuel is our great problem. We must take it with us, as there are no supply stations between Point Barrow and Spitzbergen. We shall have 50 flying hours' supply. If we can make 100 miles an hour flight, we shall get through in 24 hours' transverse flight from Point Barrow to North Cape and have a margin of safety in fuel supply for intratrip flight at the first landing and at the pole. If we do not make it, a relief will start from New York, fly to the mouth of the St. Lawrence, thence to the head of Labrador, thence to Disko Island, Greenland; thence to Etah, Washington Land; Cape Washington, or Cape Columbia, and thence north to our relief.

TO PHOTOGRAPH THE NEW LAND.

"But we are not thinking of relief so much as we are of getting through on the first trip. The flight from Seattle to Point Barrow will thoroughly test the flight qualities of the plane. If it is what

we have reason to expect, the plane will be well tuned up and the motors will have 'found themselves' by that time. Further but not prolonged tests will be made at Point Barrow. We shall have ample gas there by our plan, and we shall not need to save until the final start.

"Even if we only make Spitzbergen, we shall have come through and, Deo volente, will have settled the question of land to the 'west' of the pole. Our instrumental observations will be continuous during flight and stops and, though the time seems short, we shall get enough to warrant consideration and at least to blaze the way. Photographs with telephoto lenses will enable us to get an initial record of distant objects, and we shall see the country flown over far beyond the capacity of land or sea observation. We shall rely on still photographs rather than on motion pictures, as weight is an important factor in this flight, and impedimenta will be reduced to the least possible amount to allow for strength of structure of ship and fuel and oil supply. Later on, if we get through, there will be plenty of time for confirmation observations and flights.

"If the first flight is successful, it will be followed by others. The most important of these is to the location of the magnetic pole on Boothia Felix Peninsula to determine magnetic polar verticity. Amundsen years ago made a series of magnetic observations, but his train of compasses were not coordinated and the results obtained were not what he expected. The magnetic pole flight will be followed by an attempt to explore by air the Asian Arctic coast and littoral.

"The presence of oil, coal, copper, and other minerals and other surface indications seem to show that in prehistoric ages the present Arctic was equatorial or subtropical in temperature and condition; that in a way it bore the same relation to that past time as the Mediterranean does to historical times. Every nation on earth has the legend of the 'men from the north' as the founders of their civilizations. It is possible—mind, I say possible—that there may be the remains of such prehistoric civilizations buried under the ice, and perhaps occasionally exposed now, through melting (as mammoth remains have been found long preserved in ancient ice and finally brought to view). If an ancient civilization existed along the shores of the present Arctic, it is probable that large communities arose at tactical points, as in historic and modern times.

"On the Asian coast of the Arctic Telaun Bay the estuaries of the Rivers Kolima, Indigika, and Yana, and particularly the delta of the Lena, surprisingly like the Nile Delta, Katangha Bay, Cape Chelyuskin, Yenisei River, Breknovski Islands, at its mouth. Yenisei Gulf, Gulf of Ob, Kara Bay and Strait. Pechora Bay, Islands, and Pechora River, if free of ice, would present ideal conditions for settlement. Similarly, the archipelago lying between Greenland, Hudson Bay, and Beaufort Sea, on the North American side of the Arctic, would offer many sites for cities comparable to the ancient cities of the Mediterranean.

"For the exploration of these places the air offers a way that is far better than land or sea surface work. With fuel and oil bases first relayed in, a few years' work would accomplish more than generations of plodding and sailings have done. Aircraft have their limitations as well as surface craft or methods, but the limitations are not as severe. An ice pack impassible to a ship or that would take weary days for an explorer to mush across may be flown over in an hour. Altitude enables you at once to distinguish between ice, open water, and land, and gives topographical results incomparable.

"Cold? No more than we meet in summer flights to high altitudes. A recent flight for altitude over Paris reached a temperature of 60° below zero while on the street level in Paris the thermometer stood over 90 above. At 12 000 feet above Washington the mercury registered below freezing while the street heat stood at 90°, and the flyer passed from one extreme to the other in half an hour."

[From the Washington Post, Tuesday, August 2, 1921.]

FLIGHT OVER NORTH POLE TO MAP CURRENTS OF AIR—AVIATOR NAULTY OUTLINES PLANS FOR TRIP FROM ALASKA TO SPITZBERGEN AND POINT IN NORWAY NEXT MONTH—TAKING ADVANTAGE OF WARM WEATHER—OTHERS TO BE MADE.

[By the Associated Press.]

Plans for a transpolar flight in September from Point Barrow, Alaska, to Spitzbergen and the North Cape, Norway, were announced here yesterday by Edwin Fairfax Naulty, of New York. Scientific observation of ocean, air, and ice currents will be the chief purpose of the trip, he said, with the hope of establishing the feasibility of the new route for commerce as a secondary consideration.

As announced, the start will be made from Seattle with a convoy of several planes, which will proceed by easy stages up the Alaskan coast to Point Barrow, stopping at Ketchikan, Anchorage, and Nome.

ADVANCED BY WARM WEATHER.

The Arctic flight will be made by one plane, which has already been constructed, carrying four men, including Mr. Naulty. The other three are former service men, and it was said their names would be announced soon.

Originally, it was explained, it was the intention to make the flight next year, but reports of warm weather near the Arctic Circle had led to the advancing of the date.

"We plan to make the flight as early as possible," Mr. Naulty said, "and, strange as it may seem, to do it in late September. There are good reasons for the choice of this time. Our flight speed will be about 100 miles an hour, to which might be added the speed of a following air current."

FUEL IS CHIEF PROBLEM.

Fuel was conceded to be the chief problem of the proposed expedition. A supply ample for 50 hours of continuous flight will be carried, it was said, and those planning the attempt expressed the belief that this would furnish an excess which would permit short by-flights at the first landing place on the polar ice and at the pole itself. If no landing places are found, it is the intention to make the 1,150-mile hop without a stop.

If the first flight is successful, others will be undertaken at once, it was said, with a view to settling definitely the location of the magnetic pole and the determination of "magnetic polar verticity."

—

[From the Washington Herald, Tuesday, August 2.]

AIRMEN PLANNING FLIGHT OVER POLE NEXT SEPTEMBER—NAULTY EXPECTS TO START FROM POINT BARROW, ALASKA.

Flight over the North Pole by airplane is planned by Edwin Fairfax Naulty and his son, Leslie Fairfax Naulty, of New York.

The elder Naulty, who in 1916 completed the first all-metal airplane, is now in Washington completing plans for the proposed flight, which he intends to start from Point Barrow, Alaska, in September.

The prime objects of the flight will be to demonstrate the practicality of the northwest passage by air to and across the North Pole; to photograph the North Pole region, with the various phases of its animal life, and to obtain various other scientific data that could become available in no other way.

FIRST JUMP, 600 MILES.

"We expect to make 600 miles on the first hop and land at the eighteenth parallel," said Naulty last night. "If a landing is impracticable, we will continue north until it is. From the first stop the flight will be direct to the pole.

"Time enough for full observations will be spent at the pole, and then the flight will continue on to Spitzbergen, a landing being planned to the west of Andree Point, up on Northeast Island. From there the flight will go on to North Cape, Norway."

The flight over the Arctic Circle is but a small part of the long journey planned. In succession it is planned to touch at Stockholm, Christiania, Copenhagen, Paris, and London.

FOUR MEN IN PARTY.

Only one machine will be used and the expedition will consist of four men. Names of the others will be announced later, Naulty said.

"Fuel is our great problem," continued Naulty. "We must take it with us, and there are no gas tanks between Point Barrow and Spitzbergen. We shall have the best of wireless equipment and hope to be in constant touch with civilization by relay through high north stations all the time we are north. We hope to arrive at the North Pole by the most modern of means—the aircraft—and tell it by the most modern of communications—the radio.

"If we fail to get through, a relief expedition will come after us up the east coast, starting from New York, via Labrador, Disco Island, Cape Sabine, Cape Washington, and thence to the North Pole. But we are not thinking so much of relief as we are of 'getting through.'

THROUGH A CLOSING DOOR.

"We will be slipping through a closing door, but I think we can make it. We'll carry gasoline supply for 50 flying hours. At 100 miles an hour, we can make it in actual flying time of 24 hours from Alaska to Norway. At 50 miles an hour, we'll just slip through.

"If the first polar flight is successful, it will be followed by others. The most important of those we have planned is the location of the magnetic pole and the full determination of the point of north magnetic polar verticity."

It is also hoped by subsequent flights, Naulty added, to solve the question whether the Arctic is the seat of a prehistoric civilization.

"If we should find evidences of ancient cities," he continued, "it would result in a later flight along the Asian coast.

"We do not know that we shall succeed—no man can know that—but we shall do our best to get through."

—

[Editorial from the Pittsburgh Post, August 4, 1921.]

TO THE NORTH POLE BY AIRPLANE.

As a sporting venture none of the various feats of aviation proposed from time to time surpasses in interest that which Edwin Fairfax Naulty, New York scientist, announces he will attempt next month. With three companions, all formerly military aviators, Naulty will try to reach the North Pole by airplane. He plans to fly from Seattle to Ketchikan, Alaska; from Ketchikan to Anchorage, Anchorage to Nome, Nome to Point Barrow, and thence across the Pole to North Cape, Norway; North Cape to Christiania, Christiania to Stockholm, and Stockholm to London—a total distance of more than 6,000 miles. It is an ambitious undertaking in all of its features, but that part of the journey which lies in the polar regions transcends all the rest, of course, in importance.

The venture involves great risk, but offers good chance of success. There is a question if landing places will be found in the land of eternal ice. It is 1,200 miles from Point Barrow to the pole, and 600 miles from the pole to Spitzbergen. Three stops are planned on that 1,800-mile leg of the journey. If it is impossible to find suitable places for descending, can the airplane cover the whole 1,800 miles without a stop? Capt. John Alcock and Lieut. Arthur W. Brown flew from St. Johns, Newfoundland, to Clifden, Ireland, a distance of 1,960 miles, without a stop in 16 hours and 12 minutes on June 14–15, 1919. Lieutenants Bossoutrol and Bernard remained in the air in an airplane continuously for 24 hours and 19 minutes at Etampes, France, on June 4, 1920. These records will give an idea of what a machine carrying two persons is capable of doing. Naulty's plane will carry four. It will have a speed of 100 miles an hour, but there is a question as to whether it will be able to carry all the gasoline that will be needed.

Notwithstanding the fuel difficulty, the expedition seems to give greater promise of success than the plan of other explorers to make a quick dash across the ice with sleds drawn by dogs.

The enterprise brings to mind the ill-fated expedition of Salomon August Andree, the Swedish explorer, who perished in an attempt to reach the pole from Spitzbergen in a balloon in July, 1897. Naulty will have a great advantage over Andree in that he not only will be able to steer his craft accurately but will be able, through wireless, to keep in touch with the world and guide rescue parties if he should require aid.

The expedition, if successful, should add considerable to our knowledge of the polar regions, since it will be possible to make observations, photographs, and maps from an airplane that will be superior in value to those made on the ground.

—

WINDS MAY DELAY POLAR AREA FLIGHT—WEATHER CONDITIONS LEAD FAIRFAX NAULTY TO CHANGE PROBABLE DATE TO OCTOBER—REPORTS OUTLOOK BRIGHT—EXPLORER CONFIDENT HE CAN REACH THE POLE IN ONE FLIGHT FROM POINT BARROW.

[Special to the New York Times.]

WASHINGTON, September 11.—Fairfax Naulty, who recently announced his intention to make an airplane flight to the North Pole and across the polar area to Norway, declared to-night that the sudden change in continental weather, extending from Trinidad to northern Canada and from the California coast east to the Mississippi, has not changed his plans for the North Pole trans-Arctic flight this autumn further than to advance the last probable day for the hop off from Point Barrow, Alaska, from the end of September to the end of October.

"In Pittsburgh last Friday," said Mr. Naulty to-night on his return to Washington from that city, where he had been perfecting plans for the expedition, "I got, through Delegate DAN SUTHERLAND, of Alaska, a relayed radio from the captain of the U. S. revenue cutter *Bear* giving the weather conditions east of Point Barrow in the Arctic Ocean and in Beaufort Sea. The *Bear* has just made Nome from a cruise

as far as Demarcation Point, at the edge of Beaufort Sea, the farthest north and east that even that intrepid vessel ever made, and this report shows that all the heavy ice in the Arctic is offshore, that there is not much of it, that the weather has been unusually warm, and, best of all, that there was neither rain nor fog in August in the Arctic Ocean.

"If the expected condition of weather comes in October, we shall be able to make the flight from Point Barrow across the North Pole to North Cape, Norway, and have ample time for observations to insure that we have reached the pole in a week from the time we take the air for the flight.

"I have been conducting experiments with catalytic radio transmission in Pittsburgh, and feel that we can now be sure of a sending range of 2,700 miles by radio under fair conditions. We have cut our weight of the set so it weighs less than a member of the crew. With a dual set we shall be in hourly radio communication with the world. If we get into trouble, relief can and will be dispatched at once, and the rescue party will know just where we are, as we shall give our position every hour. We can easily reach Nome radio station, and may even be able to make the high power at Annapolis in night sending.

"At the North Pole we shall radio our observations and ask for any corrections from the Naval Observatory or Harvard University, and if we are in error that error can be corrected while we are at the pole. Our method will relieve our reports of any doubt as to accuracy.

"If all goes well we hope to start the polar flight from Washington, using a land chassis as far as Seattle. There we shall change the underbody to the special underbody I have devised for the Arctic, by means of which we can make a landing on ice or water. From Seattle we shall fly up the Alaskan coast to Anchorage, and from there cut across to Nome and on to Point Barrow.

"From Barrow the actual polar flight will start. We shall fly due north, and if we can make the North Pole in a single flight we will do so. From the pole we will fly to Spitzbergen, from there to North Cape and on to the head of the Gulf of Bothnia, where we again cross the Arctic Circle, which we cut just north of Nome. We shall fly down the Bothnian Gulf to the Baltic and to Stockholm, thence to Christiania, Copenhagen, Amsterdam, Brussels, Paris, and London. We expect to reach London on November 15.

"North to Point Barrow and south from North Cape we shall not have much difficulty about fuel. We shall carry 50 flight-hours fuel for the polar flight, and expect to go through on it. The rest of the way, on the proposed return flight to New York, via Scotland, Faroe Islands, Iceland, Greenland, Labrador, and Canada, even at Iceland and Cape Farewell, it will be easy to ship in a supply ahead of time."

—

[From the Washington Herald, October 13, 1921.]

DISTRICT AVIATOR SAYS AMUNDSEN STOLE HIS IDEA—CLAIMS HE ORIGINATED PLAN OF FLIGHT TO NORTH POLE.

"If the report from Seattle, issued October 12, 1921, credited to H. H. Hammer, representative of Roald Amundsen, that Amundsen has changed his plans and intends to attempt a flight by airplane to the North Pole is true, it seems to be a very unsportsmanlike thing to do in view of the announcement that I have organized and am preparing a trans-Polar flight," Fairfax Naulty, commander of the first Arctic air expedition, declared last night.

VIOLATION OF ETHICS.

"Ample publicity has been given to my plans and the fact that our party of four is to attempt the polar flight this autumn. Under such circumstances an attempt to anticipate our carefully planned work with a scratch flight hastily conceived is not in line with the very strict code of ethics that has hitherto governed all explorers, and particularly all pioneer work in the air.

"An idea is property just as definitely as a piece of real estate. It belongs by right to him who brought it into existence."

—

[From the Seattle Times, October 13, 1921.]

"WASHINGTON, D. C., October 12, 1921.—If the report from Seattle, printed to-day and credited to H. H. Hammer, business representative of Roald Amundsen, that Amundsen has changed his original plans for an Arctic drift in the *Maud* and intends to attempt a flight to the North Pole in two airplanes is true and Amundsen and not Hammer is responsible for the entire change of the original plans of the Norwegian explorer, it seems to me a very unsportsmanlike thing for Amundsen to do in view of the fact that I have organized and am hard at work on a trans-Polar, trans-Arctic flight, said Fairfax Naulty, commander of the first Arctic air expedition here to-night.

"Sufficient publicity has been given in advance to my plans and the fact that our party of four is to try for the North Pole from Point Barrow to North Cape, thence south to London and back, next year, to Washington via Scotland, Orkneys, Faroes, Iceland, Greenland, Labrador, and Canada to our starting place, the first air expedition starting this autumn from Washington and flying across the continent to Seattle and thence to Point Barrow, to make my plans well known to everybody. Under such circumstances an attempt to anticipate our carefully planned work with a scratch flight, hastily conceived, is not in line with the very strict code of ethics that has hitherto governed explorers and particularly applied to all pioneer work in the air.

"An idea is property, just as definitely property as a piece of real estate, a bank account, or an explorer's ship. It belongs by right of invention and original conception to him who brought it into being and hitherto it has been the rigid custom for all scientific and technical men of standing to respect, with the most scrupulous care, the right of others in their various lines of special endeavor. If science is to be brought to the level of competitive small trading and the tricks of copyists and imitators are to be introduced into a field that has been kept clear of such tactics professional courtesy has fallen into a low ethical state.

"I can not believe that Amundsen himself is responsible for the alleged announcement, and I look for a prompt disclaimer from him personally. The American public know, from published reports this summer, of our preparations that the Fairfax Naulty trans-Arctic, trans-Polar flight is an all-American expedition, and there has been no secrecy over my plans, which were published in full with the routes, objects, technique, and flight schedules all set forth. As scientific, technical, and operative sections here in Washington know, I have given the most minute personal attention to every feature of the flight from the preparation of condensed charts to photographic, navigating, radio, and magnetic gear, even to the extent of devising a new portable radio mast for airplanes to be used in wirelessing out our observations at the North Pole.

"There have been delays, but these have been due to my resolute decision to make and correct all mistakes in civilization and not in the wastes of the Arctic, where four men's lives depend on the thoroughness of my preparations and their practicality. I have been in constant consultation with men here who know the Arctic to the limits of its explored surface, have had the best of advice and cooperation on every necessary gear of structure, operation, and aviation, have had constant reports of temperature, wind force, rain, snow, and fog, ice and water conditions, air currents, magnetic and auroral state, and on every physical factor that could be checked up from past or current experience.

"We hoped earlier in the year to attempt the polar flight in late September but could not get away, and I alone am to be charged with the responsibility of the postponement, or any other postponements that may be required. I do not intend to expose the men who will risk their lives with me to any disaster through insufficient or hasty preparation or incomplete or insufficiently tested accessories. Although the prime object of the first transpolar flight is to make the northerly passage by air, across the North Pole from Alaska to Norway, and everything else will be subordinate to that object, still, if conditions permit, we expect to make and have the instruments to observe meteorological, geological, geodetical, magnetic, and astronomical phenomena, as well as to record permanently, by photography, the land, water, ice, and conditions of the region flown over.

"Amundsen started on his surface exploration of the Arctic with the *Maud* two years ago but because he has been delayed in getting into the Arctic by unpreventable obstacles and accident to his surface ship as well as crew trouble is no reason that anyone else would thereby have a right to duplicate his expedition because of Amundsen's delay in starting. Even if I am compelled to postpone until next spring or summer, as Providence has waited 6,000 years for man to think of and plan to execute the polar flight, surely others may possess their souls in patience for six months or so.

"I hope there will be no controversy over the polar flight. I seek none, but in justice to those who are interested in our success and to the men who are willing to risk their lives and all with me, and who have worked as hard as I and my son to make this American expedition a success, I must protest against an attempt from any quarter to anticipate our plans and to use the very confidence we have reposed in all by making our plans public to 'beat' us to our objective.

"Competition of such sort is not good sportsmanship; it is not good science, nor is it even decent, common courtesy. I am certain that Amundsen is misrepresented by his business manager, Hammer, and I sincerely hope he is. A prompt disclaimer from Amundsen will settle the whole matter. I do not claim a continuous monopoly on polar flight, but I do feel that I am entitled to be permitted to carry my plans to execution without the necessity of defending them by competitive haste to rush through what ought to receive the most careful workout. But if it does come to a question of speed in making the flight across the North Pole perhaps we shall show as much as another."

—

[Printed in Seattle Times, Sunday, October 23, 1921.]

Fairfax Naulty, commander of the first trans-Arctic, transpolar flight, replying to assertions made in telegrams sent him by Roald Amundsen and Hakon Hammer, which the Seattle Times published on October 18 but which were not received by Fairfax Naulty until October 20, said last night in Washington:

"I have been too busy with work on my North Pole flight equipment to give time to Amundsen, but in view of his attitude and that of his employee, Hammer, for whom Amundsen assumes responsibility, and of the attitude of other foreign visitors and foreign critics of America and American ideas and plans, I can not let the matter go without calling the public's attention to some facts of Arctic and Antarctic exploration.

"First, however, let us suppose that Fairfax Naulty had planned a drifting trip in a surface ship from Norway along the Asian coast to the westward and that he had got into trouble with his crew, smashed his ship, and limped into Hammerfest for help, which was given him, and then got his ship down to Trondhjem, Norway, for repairs, which were made for him. Finding that the people of Norway were courteous, helpful, and polite, but not wildly excited over the proposed drift, and casting about for a way to catch the public eye, Fairfax Naulty, learning that Amundsen had carefully planned an air expedition for scientific and technical purposes from North Cape to Point Barrow, that he was then at Christiania, the capital of Norway, working hard to get away, decided that he would also make a flight across the North Pole, that he would import two American aviators to fly, and that he then instructed an employee, not overly familiar with either Norway or aviation, to announce his plans? What would the people of Norway think of the American gall of Fairfax Naulty in trying to slip in ahead of Amundsen? Especially if Fairfax Naulty, an alien, were using Norway as a base of operations.

"Now let us suppose that a hired man of Fairfax Naulty's crew sent a telegram to Amundsen telling him that a statement of Amundsen's 'showed your lack of study of the situation, as my boss's expedition and yours can not be compared, as his is for the purpose of scientific work while yours apparently is an aeronautic experiment.' What would Amundsen be justified in thinking? What would the Norwegian people think? 'American brass, cheek, nerve, and impertinence.'

"I have simply reversed our positions in this supposition.

"Seriously, I am—and I think most other Americans are—getting a trifle weary of European patronizing. Amundsen claims his expedition is scientific, while mine is an experiment. I challenge Amundsen to produce one solitary, previously unknown scientific or technical result from any of his previous expeditions.

"The Northwest Passage by Amundsen in the *Gjoa* in 1903–1906? Parry, an Englishman, made it to 125 west longitude in 1819–20, going west. McClure, a Scotchman, made it in 1851–1853, crossing Parry's westing at Banks Land, going east. The Magnetic Pole? James C. Ross found it in 1831; Sir John Franklin died in sight of it in 1847.

"An outlet from Baffin Bay to the Arctic? Elisha Kent Kane, an American, found it in 1853, and Charles Francis Hall, another American, made it complete in 1870. The very names of the region, Lincoln Sea, Grant Land, Garfield Coast, United States Range, Greely Fiord, Washington Land, Cape Columbia, Cape Washington, Lincoln Sea, and McKinley Sea, all indicate who were the original discoverers of the region.

"A drift across the Polar Basin? Nansen made it in the *Fram* from the delta of the Lena to Spitzbergen in 1893–1896, when he reached 86° 14′ north of the ninety-fifth east meridian. In 1881 De Long, in the *Jeannette*, made a 'westing' on the Asian side of the basin to the one hundred and fifty-third east meridian, and after the

Jeannette sank the expedition made the delta of the Lena. In the Swedish ship *Vega* Nordenskjold, in 1878–79, made the Northwest Passage from Tromso to Bering Strait along the coast of Europe and Asia, but even he had been anticipated in part by Leontief in 1770. Chelyuskin in 1741–42, Laptev in 1739–1741, and by the other Russian expeditions of Wrangell, Billing, Minin, and Lutke from 1738 to 1821. And if Spitzbergen is brought in, Henry Hudson sailed north of it in 1607.

"The Duke of the Abruzzi, Cagni, Zeigler-Baldwin, and Fiala also added to the world's actual knowledge of the Arctic, and there have been scores of other minor explorers in the region. Amundsen, in the *Gjoa*, wintered in 1905–6 on Beaufort Sea while making his 'Northwest Passage,' but that region had been mapped in 1890 by J. H. Turner, of the United States Coast and Geodetic Survey, so Amundsen was not in new territory, and Beechy, Franklin, Deaze and Simpson, Pullen, Hooper, Moore, McClure, McGuire, Collinson, Ray, Howard, Stoney, Stockton, Peters, Schrader, and General Funston had all been in the region during the years from 1826 to 1894.

"If Amundsen says soundings made in Beaufort Sea by him have novel value, I say that whaling captains have frequented the Beaufort since 1854; that they know the coast thoroughly from Barrow to Bathurst, and have all of them made a higher northing than he did, and that they know the 7-fathom line better than he does. Yet none of them would claim or be permitted to claim the name of scientist.

"The North Pole? Perry made it in 1909.

"The South Pole? The British still recall how Amundsen rushed in ahead of Scott, merely making a dash and presenting little scientific data on his emergence, while Scott, with the finest and best equipped polar expedition ever organized, starting ahead of Amundsen, knowing nothing of Amundsen's quickly organized venture, took careful observations, obtained accurate data, collected specimens, did genuinely useful scientific work, unaware that a rival was racing him to his objective merely for the sake of getting there first.

"I wonder if Amundsen recalls that Andree tried to fly to the North Pole and lost his life in the brave attempt in 1897; that Walter Wellman spent some years building a dirigible for the polar flight, and that both dates were long before 1914, when Hammer says he conceived the idea of flight to the pole in a Farman plane. Anyone who knows anything about aviation must smile at the idea of a Farman 'bus' of 1914, with a 60–80 horsepower motor, speed of 60 miles an hour, and flight radius of 50 miles nonstop, with luck, being used to make the flight to the North Pole.

"It might interest Amundsen to learn that at the trials at Fort Myer, near Washington, D. C., in 1909, a newspaper man talking to me about Wright's airplane said that an airplane would provide an ideal way to make the North Pole, and that he spoke of it to Wright, who agreed it might come in time.

"Hammer is mistaken when he assumes I gave no thought to the polar flight before 1914. I did not from August 6, 1914, until April, 1919, when the war and its aftermath occupied all the time of myself and son; but when our work was done we took up the project again. Being neutral during that time, Amundsen had time to think about many things.

"Of this Amundsen may be sure: I do not intend to let him beat me as he beat Scott. Nor do I intend to waste valuable time in controversy before the fact."

ADDRESS BY SENATOR ROBINSON.

Mr. KING. Mr. President, a question which has attracted considerable attention of late deals with the subject of the Cabinet officers having seats on the floor of the Senate and in the House of Representatives, and having the right to participate in debate, particularly if the debate should relate to questions arising in their respective departments. The subject has attracted a great deal of attention, and some newspapers have supported the proposition. The subject has received attention in a very able address delivered by the senior Senator from Arkansas [Mr. ROBINSON] at a meeting of the Maryland Bar Association, July 1, 1922. I ask unanimous consent that the address of the Senator from Arkansas may be printed in the RECORD in 8-point type.

The VICE PRESIDENT. Without objection, it is so ordered.

The address is as follows:

ADDRESS OF SENATOR ROBINSON AT ANNUAL BANQUET MARYLAND BAR ASSOCIATION, ATLANTIC CITY, JULY 1, 1922.

THE BUSINESS OF LEGISLATING.

Senator ROBINSON spoke as follows:

"It is at once an inspiring opportunity and a grave responsibility to live in the present and to bear even an humble relation to the events in progress throughout the world. The obligations now attending private citizenship in the United States are momentous. The responsibilities of public office are well-nigh overwhelming.

"The strain is not confined to the financial, industrial, and political systems of the Old World. It extends in less degree to our own. Lawlessness, particularly in the centers of industry and population, approaches anarchy. Frequent riots and mob violence are manifestations of local states of the public mind, betokening lack of confidence in the administration of justice and deep-seated resentment against constituted authority.

"It is not altogether surprising, nor yet entirely fair, that the unrest and vexation incident to postwar problems should find expression in bitter criticism of the Congress.

"Legislation erroneously is regarded by the masses as the remedy for every ill which afflicts the body politic. Consequently the continuance of disturbed conditions occasions bitter censure of the National Legislature for what is superficially deemed obstinate indifference to alleged essential reforms.

"Congress often is blamed by the public, ridiculed by editors and orators, and flayed in magazine articles for faults, some of which inhere in our political system, and for mistakes and failures attributable in part to causes beyond its control.

"This results from the comprehensive discretion vested in the legislative department and from the excessive employment, since the war, of propagandist methods for questionable purposes.

"A disinterested study of its recent proceedings will disclose that the Congress deserves only a part of the censure which public opinion directs against it for the prevailing restlessness and discontent, although it is undoubtedly following a faltering leadership whose strategy is to make mere successive advances and retirements over the same ground.

"The Congress, unlike the executive and judicial departments, primarily is concerned with questions of policy and naturally attracts the denunciation of agencies which reflect dissatisfaction and discontent.

"The wise executive and the upright judge by the nature of their duties are shielded against responsibility for mistakes in policy. It is always a complete defense for them to answer criticism with the declaration: 'Thus the law is written.'

"While legislative authority is necessarily discretionary, and therefore responsible for policies, its exercise is circumscribed by both natural and constitutional limitations.

"Many problems are so deeply rooted in human nature and in the instincts and customs of mankind that their complete solution can not be accomplished by the mere enactment of new laws. Indeed, experience proves that profound issues rarely are decided by direct and logical process, nor do they present distinct alternatives of choice and action. On the contrary, they usually appear clouded with confusion, enveloped in prejudice, and distorted by falsehood.

"The normal difficulties of the Congress, due to its broad discretion, have been augmented since the war by the pressure of propaganda.

"Every department of the Government is assailed by class influences deliberately organized and set in motion to secure selfish advantage. During the war the United States resorted to systematic stimulation of public opinion as the best means for securing support of its war policies and for counteracting German propaganda. The American people then learned the effectiveness of organized efforts to give form and expression to public opinion as a certain means of dominating governmental agencies. The result is that the Government is being administered through the influence of propaganda.

"The Senate and the House of Representatives no longer divide strictly along party lines. Frequently the alinement is according to blocs or groups organized for the promotion of special interest, as, for instance, finance, labor, and agriculture. The finance and labor groups have long been influential factors. The agricultural bloc is of recent origin, and is justified as indispensable to the protection of a large and deserving element whose situation renders compact organization difficult and who therefore are at the mercy of other interests which profit by oppressing farmers. The Congress under pressure from conflicting forces has manifested indecision, nevertheless in many instances its failure to act is less harmful than would be compliance with selfish demands subversive of the general public interest.

"Comprehending the readiness of elective officers to respond to appeals from the electorate, propagandists habitually use two general plans to influence legislation:

"1. To create public opinion respecting measures either by wholesome educational processes or by concealment and misrepresentation; and

"2. To make the legislator believe a well-grounded sentiment exists touching a subject, when in fact the public neither knows nor cares anything about it.

"The methods resorted to are often so undisguised as to counteract themselves. Propaganda, to be effective, usually must be insidiously planned and carried on.

"Such unwholesome practices probably can not be prevented without infringement of the constitutional right of freedom of speech. It is better to endure the evils of unrestrained propaganda than to stifle free speech. The only sane remedy for propaganda is exposure—full and fair publicity.

SHALL CABINET MEMBERS PARTICIPATE IN CONGRESSIONAL DEBATES?

"The fallacy that discontent may be removed by additional legislation finds its counterpart in the suggestion that our legislative system may be improved by giving to Cabinet members the right to participate in congressional debates.

"The division of the legislative, executive, and judicial functions into separate coordinate departments is a wholesome provision of the Constitution. This valuable principle of government would be threatened, if not destroyed, by any change which would confuse and commingle the legislative and executive functions. The argument advanced in support of such a change is that it would promote harmony by providing the Congress full information concerning the opinions and motives of the Executive. Anyone familiar with the congressional procedure rejects this argument as utterly fallacious. The President by address can furnish the Congress any information in his possession. He may advise what action he deems necessary in the public interest. The committees and Houses of Congress now call upon the executive departments for information concerning matters within their respective jurisdictions. It is true that frequent and sometimes bitter differences have arisen between the President and the Congress, but these differences usually have not been due to lack of mutual understanding. They have uniformly grown out of opposing viewpoints. The admission to congressional debates of Cabinet members would divert their attention from the important and intricate details of executive duties and convert them into legislative agents. The President inevitably would be committed in advance by his ministers to the approval or rejection of measures which our scheme of government contemplates shall be passed upon by him with an independent mind. The Congress would be subjected to Executive influences, and the result would be either subordination of the legislative mind to the Executive will or hopeless and irreconcilable conflict between the two.

"Whatever may have caused present conditions and whoever may be to blame for them, participation of Cabinet members in the business of Congress will not constitute an effective remedy.

LESS GOVERNMENT RATHER THAN MORE LEGISLATION THE REMEDY.

"The cause of the prevailing restlessness and discontent is too much government rather than necessity for additional legislation.

"Every lawyer is conscious of the process of centralization. The sphere of Federal activity is constantly expanding and Federal agencies are being rapidly multiplied. The States and their subdivisions have been repressed, until the last stronghold of local authority, the police power, is threatened by Federal encroachment.

"The disease which afflicts the body politic is so complicated that the patient can not describe the symptoms and the doctors can not correctly diagnose the illness. Nothing is worse needed than a cure for the prevailing neurotic fanaticism which manifests itself in clamorous calls for legislation which in the long run must prove harmful rather than beneficial.

"Approximately 16,000 written statutes, including municipal ordinances, are applicable to the government of the conduct of citizens in the various municipalities. The public mind would be calmed and comfort and happiness would be promoted if one-half of these, judiciously selected, were at once repealed.

"The fanatical tendency toward excessive law making is demonstrated by the introduction during the last session of Congress of 16,170 bills in the House of Representatives and 5,052 in the Senate, making a total of 21,222, not including resolutions and joint resolutions to the number of about 2,000.

"A sane program for the restoration of whole-hearted confidence in the Government might well include the following policies:

"1. More deliberation in the enactment of laws and the repeal of unnecessary, vexatious, and admittedly unpopular statutes.

"2. The simplification of all laws continued in force. Federal revenue acts, especially income-tax provisions, are notable instances of complex statutes which no one subject to them fully understands.

"3. Rigid and impartial enforcement as the surest means of compelling the repeal of obnoxious statutes and of creating a spirit of obedience to law.

"The notoriously frequent, and in some localities open violations, of the national prohibition act are creating a spirit of contempt for law and are tending to convert the American people into a nation of lawbreakers. The inauguration of national prohibition was premature in the sense that public sentiment in many communities did not approve it, and wherever that was true it has been difficult, almost impossible, to enforce the law. Nevertheless, while the National Constitution and statutes provide prohibition, there is no honorable course to advocate or pursue save rigid and impartial enforcement.

"4. The creation of higher standards of public duty for the citizen and the officer as the certain means of destroying the power of organized selfishness now threatening to dominate the Government.

"5. An intelligent and comprehensive study of the various phases of industrial life with a view to the establishment of just tribunals for the investigation and adjustment of disputes likely to result in strikes and lockouts.

"6. A nation-wide campaign, led by lawyers, to refine the administration of justice as the surest means of stabilizing our civilization and of perpetuating high ideals in American citizenship."

INVESTMENT AND PROFIT IN SOFT-COAL INDUSTRY (S. DOC. NO. 207, PT. 2).

The VICE PRESIDENT laid before the Senate a communication from the Federal Trade Commission, transmitting explanatory and statistical material supporting its preliminary report on investment and profit in soft-coal mining, 1916–1921, etc., which, with the accompanying papers, was referred to the Committee on Education and Labor and ordered to be printed.

PETITIONS.

Mr. EDGE presented a letter from Nelson Dunham, of New Brunswick, N. J., accompanied by a petition of the Plainfield Radio Association, praying that radio vacuum tubes be placed upon the free list in the pending tariff bill, which were referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

NEW BRUNSWICK, N. J., *July 3, 1922.*

Hon. WALTER E. EDGE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I have been requested by New Jersey radio amateurs to present their views and to petition Congress.

Amateurs everywhere are deeply interested in this matter and strongly feel that corporations are seeking a strangle hold which affects that which is fast becoming a public-utility service.

The purpose of this communication is to request that the inclosed petition be presented to the Senate.

Respectfully, NELSON DUNHAM.

TARIFF PROTECTION TO A MONOPOLY IN RADIO APPARATUS.

The honorable the Senate of the United States in Congress assembled.

SIRS: Your petitioners, believing that there exists a monopoly in the manufacture, sale, use, and importation of radio apparatus, submit that such monopoly should not be encouraged by tariff protection and that radio apparatus, particularly vacuum tubes, should be placed upon the free list.

Reference is made to (1) the testimony before the radio conference committee, appointed early this year by the Secretary of Commerce; (2) one of that committee's basic recommendations to the effect that radio apparatus should be freed of existing restrictions; and (3) the fact that importation of radio vacuum tubes—even for Government purposes—is virtually prohibited by the combine or its affiliated interests. Thus America is restricted to tubes of comparatively inferior quality and to a most limited selection as to power and type. For instance, four-element tubes are not obtainable in this country, though freely made and used abroad.

We do not presume to express an opinion as to whether a legitimate patent monopoly can legitimately be combined with all other patents and patent rights of like nature. It is manifest, however, that such combination can be used to defeat the antitrust laws, are contrary to public policy, and should not be fostered by tariff protection.

We believe that the Army and Navy Departments have a large surplus quantity of radio vacuum tubes, the disposal of which has been tied up by those interested in the monopoly. Inquiries made abroad meet with replies to the effect that importation of such tubes into this country is prohibited—not by reason of the tariff but by the control here of foreign patents and patent rights.

Your petitioners pray that radio vacuum tubes be placed upon the free list, at least for research and amateur experimental purposes.

Respectfully submitted.

PLAINFIELD RADIO ASSOCIATION,
(In behalf of its other New Jersey radio clubs and associations),
J. P. W. TAYLOR, *President.*

Mr. LADD. I present a resolution passed by the Irrigation Congress of North Dakota on irrigation and flood-control conditions in the West, and ask that it be referred to the Committee on Irrigation and Reclamation and printed in the RECORD.

There being no objection, the resolution was referred to the Committee on Irrigation and Reclamation and ordered to be printed in the RECORD, as follows:

Whereas the womanhood of America are rapidly coming to a comprehensive grasp of the duties of American citizenship and the responsibilities that such citizenship implies; and

Whereas the comfort and prosperity of the home on farm and in village is a material factor in economic, social, and political contentment; and

Whereas the conservation of the flood waters of the Missouri-Yellowstone watershed will effect irrigation of certain arid and semi-arid tracts and will likewise enable the development of hydroelectric power, which may be utilized to increase agricultural productivity and at the same time provide comforts and conveniences aforementioned; and

Whereas the reclamation fund available to North Dakota, South Dakota, and Montana may be wholly inadequate to so comprehensive a project: Therefore be it

Resolved, That the womanhood of these several States urge and demand upon our Representatives in Congress that immediate steps be taken with a view to the reclamation of this vast area in the interest of the development and prosperity of the farms, villages, and cities in the entire watershed of the Missouri-Yellowstone; and

Resolved, That if the funds available to the several States are inadequate to such a comprehensive project, we urge and demand that our delegations in Washington call upon Congress for the appropriation of such additional funds as may be necessary to the completion of such a project.

Resolved, That it is understood and agreed that all lands in the Mouse River and Des Lacs watershed are considered a portion of the demand.

Adopted by the Fourth North Dakota Irrigation Congress in convention assembled June 8, 1922.

E. A. WILLIAMS, *President.*
GEORGE N. KENISTON, *Secretary.*

Mr. BROUSSARD. I have here a concurrent resolution adopted by the legislature of my State with reference to the flood waters of the Mississippi River, which I ask to have referred to the Committee on Commerce and inserted in the RECORD in 8-point type.

There being no objection, the resolution was referred to the Committee on Commerce and ordered to be printed in the RECORD in 8-point type, as follows:

Senate concurrent resolution (By Mr. Williamson, chairman).

Whereas the control of the flood waters of the Mississippi River and its tributaries is a question of vital and national importance, affecting as it does the lives and property of the people residing in this great fertile valley extending from the States of the Central West to the Gulf of Mexico; and

Whereas the United States Government alone has the power, authority, and responsibility to solve this great national problem: Therefore be it

Resolved by the senate of the State of Louisiana (the house of representative concurring)—

First. That there should be immediate recognition by the Federal Government of national responsibility for interstate drainage, and particularly the protection of the lower Mississippi Valley from floods originating above.

Second. That there should be a prompt and systematic completion of the levees up to the standard adopted by the Mississippi River Commission.

Third. That an immediate comprehensive study of the flood problem should be made.

Fourth. That there should be such supplemental protection for the lower Mississippi Valley in addition to the standard levees as may be found practical; be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Secretary of War, the Congress of the United States, and the governors of the various States, inviting their cooperation in solving this great national problem.

I hereby certify that the above and foregoing is a true and correct copy of senate concurrent resolution No. 8, adopted by the senate June 13, 1922, and concurred in by the house of representatives of the Louisiana Legislature on June 14, 1922.

O. H. SIMPSON,
Secretary of the Senate.

REPORTS OF COMMITTEES.

Mr. EDGE, from the Committee on Interoceanic Canals, to which was referred the bill (H. R. 11872) to amend sections 7, 8, and 9 of the Panama Canal act; to amend sections 288, 289, 342, 343, 368, and 461 of the Penal Code of the Canal Zone; and section 2 of the Executive order of July 9, 1914, establishing rules and regulations for the opening and navigation of the Panama Canal and approaches thereto, including all water under its jurisdiction; to amend section 6 of an act entitled "An act extending certain privileges of canal employees to other officials on the Canal Zone and authorizing the President to make rules and regulations affecting health, sanitation, quarantine, taxation, public roads, self-propelled vehicles, and police powers on the Canal Zone, and for other purposes, including provision as to certain fees, money orders, and interest deposits," approved August 21, 1916; and to regulate divorces in the Canal Zone, and for other purposes, reported it without amendment.

Mr. NEW, from the Committee on Territories and Insular Possessions, to which were referred the following bills and joint resolution, reported them severally without amendment and submitted reports thereon:

H. R. 11589. An act to provide for the transfer of the lands and buildings of the Federal leprosy investigation station at Kalawao, on the island of Molokai, in the Territory of Hawaii, to the Territory of Hawaii, and for other purposes (Rept. No. 806);

H. R. 11590. An act to amend sections 34 and 40 of the organic act of the Territory of Hawaii (Rept. No. 807); and

H. J. Res. 316. Joint resolution authorizing the reappointment of Frederick Mears as a commissioned officer of the Regular Army and making him available, when so reappointed, for service as chairman and chief engineer of the Alaskan Engineering Commission (Rept. No. 808).

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. RAWSON:

A bill (S. 3789) granting a pension to Carrie Mott (with an accompanying paper); to the Committee on Pensions.

By Mr. WALSH of Montana:

A bill (S. 3790) authorizing the Secretary of the Interior to enter into an agreement with Toole County irrigation district of Shelby, Mont., and the Cut Bank irrigation district, of Cut Bank, Mont., for the disposal of the surplus waters of Milk River, Two Medicine, Cut Bank, and Badger Creeks, not needed by the Indians of the Blackfeet Indian Reservation for domestic or irrigation purposes; to the Committee on Indian Affairs.

SPEECH BY SENATOR STANLEY.

Mr. BROUSSARD. Mr. President, on July 4 the senior Senator from Kentucky [Mr. STANLEY] addressed Tammany Hall. The speech is a most brilliant, interesting, and illuminating one, and I ask unanimous consent to have it inserted in the RECORD in 8-point type.

There being no objection, the speech was ordered to be printed in the RECORD in 8-point type, as follows:

ADDRESS OF SENATOR A. O. STANLEY, TAMMANY HALL, NEW YORK CITY, JULY 4, 1922.

Senator STANLEY spoke as follows:

"Fellow Democrats, in the mental and physical vigor of her children, in industrial enterprise, in financial strength, in martial achievement, a nation unconquered and invincible, commands upon the one hundred and forty-sixth anniversary of her birth the envy and the admiration of the world, the acknowledged premier of the planet, holding in her youthful and puissant hands the destinies of a distracted globe.

"In reviewing the proud annals of the past, rich in historic incident, one supernal fact stands, a thing apart, rising tower-like above the material mastery of a continent, above the discoveries of inventive genius, the immortal labors of philosophers and sages, above valor's inspiring victories on land and sea—for that one and mighty thing is at once the inspiration and the reward of all that we have ever hoped or thought or done—the declaration of our independence of the domination or control of any power on earth. It is more than a national liberation, it is the eternal guaranty of personal freedom, it is the inestimable heritage of every citizen, rich or poor, high or low, under the protecting aegis of the Stars and Stripes.

"After 4,000 years of vain endeavor and blighted hopes, weary wanderers in the wilderness of oppression found in the New World freedom's promised land, where all men may stand erect and unawed by human power, free to live their own lives, speak their own thoughts, shape their own destinies, bending the knee only to God, to whom alone they owe their independence and by whose grace they will forever maintain and defend it. For, said the immortal Declaration—

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among them are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men deriving their just powers from the consent of the governed.

"The fathers never contemplated a sort of ubiquitous governmental Santa Claus, however benevolently disposed in the exercise of unlimited and autocratic powers. The Federal Government was not made the source or custodian of a people's wealth or the censor of its manners or its morals; it was not its function to prescribe its regimen or its faith, to curb its indolence or reward its industry. No; its one mission was, not to create or bestow or limit 'these rights,' but to secure them.

"To bestow a right implies its previous possession in the hand of the grantor, and the rights secured by the Declaration came not from governments, for it is self-evident—

"That all men are created equal and are endowed by their Creator with certain unalienable rights.

"No government having created, none save a despotism will ever dare to invade or restrict them. It matters not whether the abominable thing be attempted by a monarch or a majority; no name however euphonious, no form however popular or delusive can excuse the execrable act of oppression. For 'whenever any form of government becomes destructive of these ends it is the right of the people to alter or abolish it.'

"For long and weary years patriots, patient but vigilant, without a thought of secession or rebellion, sought to preserve these 'unalienable rights' secured by the great charters and denied by a stupid king and a bigoted ministry; revolution came only when reform was impossible.

"'In America,' said the calm Andrew Elliott, of Boston, 'people glory in the name and only desire to enjoy the liberties of Englishmen.'

"Before the Battle of Lexington, Franklin had 'never heard of the least expression of a wish for a separation,' and John Adams declared that the charge that 'any pant after independence' was a 'slander on the Province.'

"'Before the 19th of April, 1775,' relates Jefferson, 'I never heard a whisper of a disposition to separate from Great Britain.'

"In 1774 Washington wrote, 'No such thing as independence is desired by any thinking man in America,' and two years later he asserts, 'When I first took command of the Army I abhorred the idea of independence; but now I am fully convinced that nothing else will save us.'

"The author of the Bill of Rights, George Mason, aptly expressing the opinions of his compatriots, declared that prior to the wasting of their fields, the devastation of their cities and massacre of their sons he had been 'well affected to the King personally and to his Government; one who adored the wisdom and happiness of the British constitution and preferred it to any that then existed or ever had existed.'

"It was not to overthrow this 'constitution' or to supersede it that the Continentals took up arms, but as free Englishmen to retain and maintain their 'unalienable rights' under it.

"'We will,' swore the minutemen, 'to the utmost of our power and abilities defend all and every of our charter rights, liberties, and privileges, and will hold ourselves in readiness at a minute's warning, with arms and ammunition thus to do.'

"What were those precious 'charter rights,' liberties, and privileges for which the ragged Continentals with their flint locks stood ready 'at a minute's warning' to do and to die?

"They are the 'unalienable rights' of the Declaration of Independence, they are the body of the Constitution of the United States, they are the Bill of Rights, the 'holy of holies' of that instrument, without which the Colonies would never have adopted it. They are Magna Charta, the Petition of Right, and the Declaration of Right all in one. They are the sum of the solemn guaranties of every government proud scions of the Saxon race have ever acknowledged or obeyed in a thousand years, for which here and beyond the seas, from Yorktown to Runnymeade, they have stood willing and ready to fight, and, if need be, gladly to die.

"As their valor maintained them then, O God of nations and of battles, may our wisdom preserve them now, inviolate and eternally ours.

"Liberty to the Saxon is not the dream of some doctrinaire obscured in a philosophic haze; it is not without, it is within him—a vital, living, pulsating thing, a part of his very soul. It is concrete. It is sensitive to the touch and, like his body, to threaten or profane it is an intolerable degradation.

"This passionate, jealous, indomitable devotion to personal liberty and personal independence is the very hall mark of the race. To it is due its puissance in war and its moral grandeur in peace. It glorifies all its history, and when history is lost in the twilight of tradition it lends dignity to the savage and illumines the hut and the hearthstone of the barbarian in the wilds of Schleswig and Friesland.

"The institution of trial by jury had its genesis in this stubborn maintenance of the inviolate sanctity of his person and the privacy of his home, forever free from any form of governmental intrusion save by the consent of his fellows and his peers.

"The basis of their society was the freeman"—

"Says Green.

"He alone was known as 'the man' or 'the churl.' He was 'the free-necked man,' whose long hair floated over a neck that had never bent to a lord.

"According to Tacitus—

"Each dweller within the settlement was jealous of his own isolation and independence among his fellow settlers.

"Older than our civilization, older than our faith, are these institutions, cherished by our Scandinavian forbears still clad in the tawny hides of wild beasts and the worshipers of Thor and Woden. Upon the independence of the individual, upon the sanctity and security of the home, upon local self-government, Saxon civilization is builded, and to it that civilization owes the dominance of the world and the highest measure of freedom ever enjoyed by the children of men.

"The Saxon conquest of the British Isles was not the invasion of a hostile army; it was the exodus of a whole people.

"War was not sooner over—

"Says Green—

"than the warrior settled down into a farmer, and the home of the peasant churl rose beside the heap of goblin-haunted stones that marked the site of the villa he had burnt. Little knots of kinsfolk grew together in 'tun' and 'ham' beside the Thames and the Trent as they had settled beside the Elbe or the Weser, not as kinsfolk only, but as dwellers in the same plot, knit together by their common holdings within the common bounds. Each little village-commonwealth lived the same life in Britain as its farmers had lived at home. Each had its own moot hill or sacred tree as a center, its 'mark' as a border; each judged by witness of the kinsfolk and made laws in the assembly of its freemen, and chose the leaders for its own governance, and the men who were to follow headsman or ealdorman to hundred court or war.

"For 10 centuries has he cherished these institutions with an idolatrous devotion, defending them with dauntless bravery, and in defeat and disaster, still precious as life, he has still clung to them in the midst of servitude and of chains.

"Magna Charta is in its essence the embodiment of 'unalienable rights,' temporarily denied by a Norman conqueror and restored perforce by his reluctant and degenerate son.

"Perfected by experience, developed by civilization and by culture, these rights assumed a more definite and concrete form.

"Our Anglo-Saxon ancestors," says Chief Justice Taft, "hammered out their civil liberty by securing from their would-be royal oppressors not general declarations of principles of freedom, like a French constitution, but distinct and definite promises that certain rules, not of substantive but of adjective law, should obtain. * * * Run through the Magna Charta of 1215, the Petition of Right of 1625, the Bill of Rights of 1688, the great charters of English liberty, and you find in them an insistence not on general principles but upon procedure.

"In the maintenance of these 'inestimable privileges,' hoary with the prescription of centuries, the colonists went from reform to rebellion and from rebellion to victory. Even at this hour we are lost in wonder and in admiration at the valor, the moderation, and the wisdom of that band of heroes and of sages who at a nation's birth pledged it eternally to the inviolate preservation of these ancient, these 'unalienable rights' sacred as life itself, and, like life, they come not from governments but from God.

"Well might the great Chatham exclaim—

"I have read Thucydides and have studied and admired the master States of the world—for solidity of reason, force of sagacity, and wisdom of conclusion under a complication of difficult circumstances, no nation or body of men can stand in preference to the General Congress at Philadelphia.

"The very apostles of human liberty, profoundly learned in the history and character of all the despotisms of the past, their sagacious vision penetrating mere forms, dissected the very essence of government and exposed all the hidden arts by which avarice, ambition, or bigotry had ever deluded or enslaved mankind.

"In framing the Constitution they incorporated into the organic law all those 'checks and balances' which experience had shown were best calculated to prevent the unwarranted extension or abuse of Federal power and, above all, imperative and categorical inhibitions against the exercise of any authority by which a government in any form, State of Federal, might exercise an authority inimical to the 'unalienable rights' mentioned in the great Declaration.

"They reaffirmed the seasoned guaranties of the great English charters against every abridgment of the freedom of conscience, of speech, or of the press, against unlawful arrest, the imposition of excessive fines, or the infliction of cruel or unusual punishments. The person, papers, houses, and effects of the citizen were forever immune from unlawful searches and seizures. There was to be no denial of the writ of habeas corpus or the right of trial by jury. Local self-government was effectively preserved by vesting in the Federal Government only specifically delegated powers and by the further and sweeping assertion—

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

"And—

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

"The Constitution was a compend of the wisdom and the ripened fruit of the experience of 2,000 years of Saxon civilization.

"It is ours to proudly boast and justly maintain that the fathers of democracy were the authors and signers of the Declaration of Independence and the framers of the Constitution of the United States.

"The fundamental principles of freedom and the tenets of democracy form the woof and warp of our personal liberty and our national independence.

"The stability of our institutions, our national puissance, our territorial expansion, our amazing growth in wealth and population, and, above all, our long and unalloyed enjoyment of personal independence and domestic felicity, all are due to the fact that the administration of the law for more than half a century after the adoption of the Constitution was in the wise and strong hands of those who had fashioned that instrument, or of their successors who professed their political faith and emulated their illustrious example.

"From the inauguration of Thomas Jefferson to the Civil War, the Democratic Party lost but three elections, and no two

in succession; and from the adoption of the Constitution to the inauguration of the first Republican President, a period of over 70 years, there was but one attempt on the part of the Federal Government to invade the reserved rights of the citizen or the sovereignty of a State. This attempt by the authors of the alien and sedition laws to abridge the freedom of speech and of the press by conferring Federal jurisdiction over alleged seditious libels brought an instant anathema from the Sage of Monticello and from the alert and indignant democracy of the Nation.

"For—

"Says Jefferson—

"the Constitution of the United States, having delegated to Congress a power to punish treason, counterfeiting the securities and current coin of the United States, piracies, and felonies committed on the high seas, and offenses committed against the law of nations, and no other crimes whatsoever; * * * therefore the act of Congress passed on the 14th day of July, 1798 (the alien and sedition act), all other acts (which assume to create, define, or punish crimes, other than those so enumerated in the Constitution) are altogether void and of no force; and that the power to create, define, and punish such other crimes is reserved, and of right appertains solely and exclusively to the respective States, each within its own territory."

"The Republican Party, born in the throes of sectional hate and fratricidal strife, poisoned in its vitals by the virus of federalism, has, during all the years of its evil existence, never ceased to advance with steady and stealthy tread 'over the whole field of jurisdiction.' At this hour we are faced with a bald proposal to abandon all the sage precepts and principles of the fathers.

"For when you make a centralized government and not the citizen the source and repository of all power, you will not have amended, you will have abolished, the Constitution of the United States. You will have inverted the whole system upon which for a thousand years the structure of Anglo-Saxon liberty has rested.

"This disreputable political organization is at present torn by a number of warring factions, and of them all the so-called 'progressive' is the most ingenious inventor of new ways and means of invading the vested rights of the States and the liberties of the citizen; like a legislative ghoul, exhuming the dead and buried despotisms of the past, unmindful of the wise aphorism of Edmund Burke that 'all innovation is not progress.'

"The great trouble with these vociferous 'progressives' is that they are forever moving in the wrong direction. Their energy and ingenuity is in the main confined to the discovery of some new method by which a centralized and omnipotent power may extend its inquisitorial and ubiquitous authority over distant Commonwealths and remote communities and into every nook and corner of the moral, political, and industrial life of the citizen.

"From the crushing weight and the inordinate expense of this abominable system of endless and irresistible Federal interference there is no escape. Great States are to be stripped of all actual control over their penal, eleemosynary, and educational institutions. The citizen is to be left helpless and exposed to the prying interference and vexatious intermeddling of the delator and the spy, even in his most intimate and domestic relations.

"Weddings are to be supervised by a hygienic expert and marital rights determined by some eugenic fool.

"Babies are to be born by Federal aid and suckled under Federal supervision.

"You can not milk a cow without a Federal inspector at your heels. The factory, the mill, the counting-house, the office, and the home literally swarm with a horde of petty and pestiferous representatives of this paternalistic régime.

"Senator Foraker in 1907 bemoaned the multiplication of useless offices and officers in his degenerate day, declaring that—

"The little band of 167 special deputies, agents, and inspectors on the pay rolls of the Government 10 years ago has been swelled to an army of more than 3,000.

"Three thousand agents and inspectors! There are over 30,000 now.

"In an address recently delivered in this city, ex-Governor Haskell, of Oklahoma, indignantly declares:

"Less than a quarter of a century ago, in the greater enjoyment of individual rights and local self-government, our Federal authorities found it necessary to have upon the pay roll of the Federal Government fewer than 200 sleuths and special agents and inspectors to aid in the enforcement of Federal laws. Will anyone defend the policy of the Federal Government which to-day employs more than 42,000 inspectors, sleuths, and inquisitorial agents to dog the footsteps of him who should be, in the exercise of his constitutional rights, enjoying the hitherto dignity and freedom of an honest American citizen?

"From this depressing and sickening scene turn back with me to the dignity, the independence, the peace, happiness, and prosperity which for more than half a century marked the wise and just administration of national affairs by Presidents and parties reverent of the Constitution and obedient to its wise and manifest limitations.

"At home—

"Said Jefferson in his second inaugural—

"fellow citizens, you best know whether we have done well or ill. The suppression of unnecessary offices or useless establishments and expenses enables us to discontinue our internal taxes. These, covering our land with officers and opening our doors to their intrusions, had already begun that process of domiciliary vexation which, once entered, is scarcely to be restrained, reaching successively every article of produce and property. * * * It may be the pleasure and pride of an American to ask what farmer, what mechanic, what laborer ever sees a taxgatherer of the United States?

"The Federal Government was administered from the beginning of Jefferson's to the end of Buchanan's administration—a period of 60 years—for less than a billion dollars. That will not meet the expenses of special commissions incurred during a single year of the present administration.

"During the last 10 years the appalling cost of a hundred different commissions, boards, and bureaus, employing an innumerable army of deputies, inspectors, supervisors, spies, and political parasites, has actually exceeded by 400 per cent the total cost of the Federal Government for the first half century of its existence.

"This insatiate lust for inquisitorial power daily begets new boards and bureaus. The appetite for attending to other peoples' business grows by what it feeds on, and their devastating cost increases by leaps and bounds. We are told that this insufferable burden of taxation is the result of the war. A casual analysis of the receipts and expenditures of the Government explodes this groundless contention.

"For the fiscal year ending June 30, 1922, the amount appropriated for governmental purposes, not including the cost of the War and Navy Departments, pensions, Veterans' Bureau, or reduction of the national debt, is $1,115,517,366, an increase of 500 per cent over 1916 and within a few hundred thousand dollars of the total cost of maintaining the Federal Government from the inauguration of George Washington to the advent of the Republican Party.

"There is no limit upon Federal power and no bottom to the Federal Treasury, and, acting upon the preposterous assumption that national wealth can be multiplied by Federal taxation, Washington has become the Mecca alike of the visionary and the necessitous, each hour furnishing some new legislative nostrum or some new means of harrassing or plundering an outraged public. They glory not in the character but the amazing amount of grist turned out by the legislative mill.

"Mr. MONDELL, the leader of the majority in the House, has just blandly assured us that—

"This Congress has up to this time placed upon the statute books 398 separate laws, of which 311 are public and 87 are private, including claims. This is at the rate of 1¼ laws per legislative day for the entire session.

"And the worst is yet to come, for, notwithstanding this furious and indiscriminating grind, bills are now pending in the Federal Congress to regulate, supervise, censor, or control the public press, public utilities, the sale of securities, the mining of coal and minerals, and the weaving of cloth; horse racing, football, baseball, moving pictures, Sunday amusements, everything in fact from the birth of the baby to the burial of the corpse, and from the operation of a railroad to the setting of a hen.

"Under the terms of a bill proposing to regulate horse racing by censoring the mails and the press a lad at college writing to his mother and stating the odds on a football game is liable to a fine of $5,000 or imprisonment in the penitentiary for five years.

"Under the terms of Senate bill No. 23—

"any person who shall teach, incite, propose, aid, abet, encourage, or advise the unlawful injury or destruction of private or public property, etc., shall be guilty of a felony and shall be punished by imprisonment not exceeding 40 years or by fine not exceeding $50,000, or by both such fine and imprisonment.

"One act provides for the payment out of the Federal Treasury for all wheat, shell corn, or raw cotton or raw wool produced in the United States, and another supported by 1,425,295 alleged petitioners has just been read into the CONGRESSIONAL RECORD which imposes a fine of $10,000 and long terms of imprisonment upon any person or corporation running a freight or mail train, opening a post office, or publishing a daily newspaper on the Sabbath Day.

"There is still another bill proposed but not yet introduced boasting the approval of 91,000,000 supporters which denies the right to hold any National, State, or municipal office, either elective or appointive, to vote, own bonds, stocks, securities, mortgages, etc., or to hold any meeting or meetings, service or services whatsoever, other than by persons acknowl-

edging and proclaiming the doctrine of the Trinity and the divinity of Jesus Christ.

"There is not at this hour left a single 'inestimable privilege,' one 'unalienable right,' mentioned in the Declaration of Independence and secured by the Constitution of the United States which is not openly invaded or secretly undermined by some paternalistic project or socialistic propaganda.

"In the enforcement of this insane and pernicious saturnalia of socialistic legislation, the honest toilers of America are being literally devoured by a veritable army of hungry political parasites.

"Even the Dearborn Independent is appalled by the number of pensioners upon Federal bounty.

"Not more than 30,000,000 persons"—

"Says this paper—

"are actually engaged in producing and distributing goods, clothing, and other necessities of life. Every two actual producers now maintain, in addition to dependents and other nonproducers who draw from production, the equivalent of one individual that is maintained by Government expenditure of some sort. Do you know, furthermore, that 10 per cent of the national earnings now go for governmental operation, etc.?"

"In short and in fine, we have come to the parting of the ways. The Old Guard, impotent and discredited, is left to the mercy of the Nonpartisan League and a triumphant socialistic organization masquerading under the emblem of the Bull Moose.

"Is the spirit of democracy dead in America? Is constitutional government to be despised and forgotten? Shall the followers of Jefferson and Jackson and Tilden sit idly by or tamely and silently submit to the clamorous and turbulent determination by an organized mob of the right to review the decisions of courts and to supervise and to determine the most intimate relations of our social and domestic life? Shall every constitutional restraint and every constitutional limitation be removed at the whim of omnipotent numbers maddened by the blatant appeals of blind fanatics and flannel-mouthed demagogues? Then, have we passed from democracy to mobocracy, from a government by laws and courts and Congresses to a government by hysteria and a government by emotion, from order to chaos?

"There is no better place than here, no better time than now, to sound a trumpet call to the spirit of a once undefiled and invincible democracy, to rally to the preservation of the Constitution and the salvation of the country on this, freedom's holy Sabbath Day, on the 4th of July, and amidst the unterrified braves of Tammany Hall."

RAIL CONDITIONS AT WINSLOW, ARIZ.

Mr. ASHURST. Mr. President, I have just received a telegram from officers of the Confederated Crafts, of Winslow, Ariz., which I desire to read in order that it may appear in the RECORD:

WINSLOW, ARIZ., *July 4, 1922.*

Hon. HENRY F. ASHURST,
United States Senator from Arizona, Washington, D. C.:

As officers of the Federated Crafts of Winslow, Ariz., on the Santa Fe Railroad, sincerely believe that the time has arrived when you as a representative of the people of the State of Arizona should be informed of the existing condition of motive power at this point used in the handling of interstate commerce is in such condition as to jeopardize the lives of the employees as well as the traveling public, and it is our earnest request that this be placed before the Interstate Commerce Commission and brought to the attention of Congress.

D. E. MORRY.
A. O. DANIELS.
A. O. HURT.
C. E. MEABLES.
W. H. MYCKOFF.
J. H. HUGHES.

I move that the telegram be referred to the Committee on Interstate Commerce.

The motion was agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. ASHURST. Mr. President, in accordance with the cloture rule proposed to be invoked, I now send to the desk certain proposed amendments to the pending tariff bill, and in accordance with the rule ask that they be read. I must have them read in order to comply with the rule.

Mr. KING. Mr. President, I hope we may dispense with the requirement of the rule, because——

Mr. ASHURST. It will be remembered that I called attention yesterday to the fact that in view of the cloture movement, which motion I think is most unfortunate and to be deplored, every Senator is driven to the necessity of preparing and offering and having read all amendments which he proposes to submit to the bill, and these amendments must be read before 12 o'clock to-morrow. The amendments which I now offer are vital.

Mr. KING. I have something like a thousand amendments to offer to the chemical schedule.

Mr. ASHURST. Then the Senator should prepare his amendments and have them read before 12 o'clock to-morrow, unless he is certain the cloture motion will fail. I ask that the amendments which I have sent to the desk may be read before any further discussion is had.

The VICE PRESIDENT. The amendments will be read.

The reading clerk proceeded to read Mr. ASHURST's proposed amendments.

Mr. HARRISON. Mr. President, I ask unanimous consent that the amendments may be considered as having been read.

Mr. ASHURST. I know that it is a friendly move the Senator is making, but I ask to have the amendments read.

The VICE PRESIDENT. The Chair understands that there is objection to the request of the Senator from Mississippi.

Mr. ASHURST. I do not want my constituents to be deprived of the right to have these amendments presented and voted upon. I am not going to be guilty of any default or remissness. I ask that the amendments may be read, as the rule requires.

The VICE PRESIDENT. The reading will be resumed.

The reading clerk resumed and concluded the reading of Mr. ASHURST's amendments, which are as follows:

On page 113, line 16, after the word "state" and the comma, insert the following: "one-fourth of."

On page 213, line 17, after the word "matter" on said line 17, strike out the period and insert the following: "20 per cent ad valorem."

On page 113, line 16, after the word "state" and the comma, insert the following: "one-half of."

On page 120, line 19, strike out the numeral "7" and insert in lieu thereof the numeral "10," so that the paragraph as amended shall read as follows:

"PAR. 900. Cotton having a staple of 1⅛ inches or more in length, 10 cents per pound."

On page 120, line 19, strike out the numeral "7" and insert in lieu thereof the numeral "12," so that the paragraph as amended shall read as follows:

"PAR. 900. Cotton having a staple of 1⅛ inches or more in length, 12 cents per pound."

The VICE PRESIDENT. The amendments will lie on the table and be printed.

Mr. JONES of Washington. Mr. President, on yesterday I asked to have inserted in the RECORD a statement and petition with reference to the facilities at Ketchikan and the accompanying guaranty. The petition and statement were printed, but the names were omitted from the RECORD. I intended to have the names inserted in the RECORD, because of the character of the document. I ask now that the names may be inserted in the permanent RECORD, following the body of the petition.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. HARRISON. Mr. President, to-morrow under the rules of the Senate we are to vote on the question of cloture, which, if adopted, will limit debate to one hour for each Senator and restrict the further offering of amendments. I am a little surprised that some Senators on the other side of the Chamber should take this step, especially in view of their past convictions touching cloture and the votes they have cast heretofore when the rules of the Senate were attempted to be amended. I desire to bring to the attention of the Senate certain speeches, and more especially do I call them to the attention of certain Senators who uttered the speeches at the time previously when cloture was attempted in this body. They are very interesting.

The Senator from Massachusetts [Mr. LODGE] on yesterday followed his usual course of practicing parliamentary "jiu jitsu" by changing his past performances touching cloture. He is keeping up his stride of changing his position upon every question that comes before the Senate. I read from a speech which the Senator from Massachusetts made—and I am sorry that he is not now in the Chamber—in June, 1918, touching on cloture. The Senator from Massachusetts then said:

I now come to the bill which I believe is proposed as the official cause of this rule, and I think it is worth examining—

That happened to be at that time a revenue bill, the same as the pending bill—

That is the revenue bill. A bill for raising revenue, which includes, of course, tariffs as well as taxation, as far as my experience goes, and I think I have been taking part in framing something like seven or eight, always takes a longer time, both in the House and in the Senate. It is inevitable that it should. It is composed of a multiplicity of items, and whether it is to raise revenue by duties on imports or by taxation, it affects all the business of the country, and every business has a right to protest if it thinks that it is discriminated against or unfairly affected.

This revenue bill differed in no respect from others. It took a long time to get it through both Houses and turn it into law. As we are told that this is needed in order to shorten debate, especially on that bill, I want to analyze the time occupied in that bill.

It was taken up by the subcommittee of the House, as nearly as I can get the exact date, on the 15th of last April. It was taken up by the full committee on May 1. It was reported to the House on May 9. It was 24 days in the House committee. It was 14 days in the House. It then came over to the Senate on the 23d day of May. It was 74 days in the Senate committee. I can testify as a member of that committee that no time was lost, and no committee within my knowledge ever did harder or more incessant work than they did on that bill.

The House had had no hearings, and the result was that everything was pressed upon the Senate committee.

That is not different from this bill except as to the length of time that the Senate committee considered this tariff bill, which was much longer than the committee considered that revenue bill.

The Senate committee had the great pleasure and privilege of having all its colleagues here in session at the same time, and almost all of them felt that they ought to be heard. That, of course, was something the committee could not refuse. They brought, as they had a right to do, their constituents before the committee, and by the hardest possible work—and that includes the time when the bill was recommitted—74 days were taken by that committee.

* * * * * * *

After 74 days in the committee the bill came to the Senate and was 35 days before the Senate—more than a month. That seems a long period of debate. I had charge once here of a bill which was the organic act of the Philippines. It was seven weeks before the Senate. It was a very important measure, but I was in charge of the bill, and I thought it took a long time. People in charge of a bill usually do. It was before the Senate for 35 days. It was 31 days in conference. In debate in the two Houses on that bill 49 days were occupied, and in conference and in committee 129 days were occupied. Is it any wonder I say this is utterly needless?

This is not the place where the delays come. I look at this history of appropriation bills on the back of the calendar. The legislative, executive, and judicial bill was reported to the Senate on the 9th of April last. It was not taken up for several days, because my memory is that it passed in two or three hours one morning. At all events, it went out of the Senate on April 16 and went into conference April 19. Where is it? It has stopped where? Has the delay on that bill occurred in this body? I am not blaming the conferees of either House. I am showing the utter needlessness of this rule.

The Senator from Massachusetts further said:

My objection to it, however, is an objection of principle. I do not like to see this attempt to break down the freedom of debate in the Senate, which, whatever its defects may be at certain moments, in the main is, I think, extremely important to the country, and which certainly since the beginning of the war, as I have demonstrated by the time spent in debate, has produced no harm whatever and been no cause of delay. I relieve the majority of responsibility, because I can not see that they have the slightest gain to make by it; and I have not observed any greater reluctance to take time on the other side of the Chamber than on this.

Now I desire to read from another distinguished leader of the Republican Party. He is to-day the President of the United States. He spoke against cloture in this body when he was a Senator. He voted against the rule which sought to limit general debate to one hour and a half, but which permitted 20 minutes debate on every amendment that might be offered. The present President of the United States, at that time a Senator, thought that that was too much restriction on debate; that it defeated freedom of expression in this body; that it destroyed the cherished principles of the United States Senate. Here is what he said, in part:

You can not expect the Senate to limit its debate by an arbitrary rule.

* * * * * * *

But the reformation of the Senate has long been a fad. I came here myself under the impression that there ought to be cloture and limitations on debate; and the longer I sit in this body, the more convinced do I become that the freedom of debate in the United States Senate is one of the highest guaranties we have of our American institutions.

I have a speech here from the junior Senator from Minnesota [Mr. KELLOGG], one of the crusaders in the cause of cloture—one of the real apostles of the present day for restricting debate and limiting freedom of speech and action in the Senate. I have here a speech of the senior Senator from Michigan [Mr. TOWNSEND], who is another one of the leaders on the other side of the Chamber who would strangle debate in the Senate. I shall not quote from these speeches, but merely call the attention of the Senate to them. I have here also a speech from the distinguished junior Senator from Maine [Mr. HALE]. I wish I had the time to read it as well as these others to the Senate, but I shall not trespass too much upon the Senate's time. The Senator from Maine [Mr. HALE] is employing much of his energy these days in trying to strangle the United States Senate and to restrict freedom of debate here.

I see the benign countenance of my friend from Indiana [Mr. WATSON] over there. He is strong for this cloture rule. He is an adroit politician; he is as smart as they make them. He knows that the pending bill will not stand the attacks from this side of the Chamber. He wants to restrict debate, to forestall these assaults, to put through something here so that the people will never know the infamous character of some of the provisions of this bill. He knows that when the sugar schedule is reached we, on this side of the Chamber, are going to expose the deal that was attempted to be put over by a distinguished member of the Finance Committee, the senior Senator from Utah [Mr. SMOOT], by writing a letter to General Crowder, a representative of this Government to Cuba, and trying to induce Cuba to enter into a contract to restrict the production of sugar in Cuba to two and one-half million tons annually.

The Senator from Indiana knows that all that will be exposed. One of the conditions of the proposed contract was that if the Cubans should restrict their crop of sugar, the tariff on sugar would not be so high in this bill. The Senator from Indiana desires to keep that from the American people, and the adoption of this cloture rule will so limit debate that we on this side of the Chamber, who propose to discuss that matter, would not have time even to have read the letter written by the senior Senator from Utah to General Crowder or the contract which was attempted to be negotiated. The Senator from Indiana knows that if cloture is adopted the infamous schedule on wool which will place a tax anywhere from two hundred million to three hundred and fifty million dollars upon the American people can not be fully discussed. He knows that the provisions of this bill touching the powers granted to the President to raise and lower tariff duties can not be debated in the time which will be permitted for debate under the rule.

Mr. CARAWAY. Mr. President, will the Senator allow me to interrupt him?

Mr. HARRISON. I will yield in a moment.

The Senator from Indiana knows that those provisions touching the tax on leather and hides and shoes and boots, which will increase the cost of shoes to the little children and the men and women of the country, can not be discussed within the hour allotted to Senators under the rule. Now I yield to the Senator from Arkansas.

Mr. CARAWAY. Mr. President, as the Senator is referring to the Senator from Indiana, I wish to suggest to the Senator from Mississippi that the Senator from Indiana did not expect this cloture rule to be adopted, because the Senator from Indiana knows when this bill shall have passed the Senate it must go to conference, and the Senator from Indiana voted to permit the House of Representatives to adjourn subject to reconvening on the 15th day of August.

Mr. HARRISON. Yes.

Mr. CARAWAY. He knew that the bill was not to be passed before that time, else he would not have voted to permit the House to adjourn until the middle of August, so that the tariff bill could not be sent to conference if it were passed to-day.

Mr. HARRISON. The Senator is eminently correct. The whole procedure is a piece of sham and deception, pure and unadulterated hypocrisy. Here is what the Senator from Indiana said when he was opposed to a cloture that permitted an hour and a half of general debate and 20 minutes discussion on every amendment, without any restriction on the presentation of amendments. He grew eloquent, as he always does, and said:

Mr. President, the Senator from Alabama said before taking his seat that the greatest speeches that have been made in the Senate of the United States in the past have been comparatively short ones. That is true as to some of them, but I call the attention of my honorable friend to the fact that if this rule had been in force in the Continental Congress—

He harked away back to history—

many of the great historical utterances that laid broad and deep the enduring foundations of the Republic and pointed the inevitable pathway of the future would have been but partially delivered.

The Senator from Indiana delivered a splendid speech. It was all right, unless the printer got it wrong.

I quote further from the remarks of the Senator from Indiana on the occasion referred to:

If this had been the rule of the United States Senate after the adoption of the Constitution and the formation of the Union, many of the great orations that challenged the attention of mankind and fashioned the policy of the Republic would have been but partially delivered. If this had been the rule of the United States Senate for the first 50 years of its existence, John C. Calhoun would not have been able to thunder forth the doctrines in which he believed; Hayne could not have announced on the floor the ideas which he so eloquently espoused.

How beautiful!

Henry Clay would have been unable to deliver in full any one of the score of speeches that accomplished so much for his country; and Daniel Webster, imperious orator of American history, could not have blazed the pathway of the future in that historic utterance in which he announced the essential policies of the Republic if its institutions ar

to endure, for on the floor of the United States Senate and in the open forum of debate he in a sense shaped the destiny of the Republic and molded the future of the Nation.

Then Senator Gallinger, of New Hampshire, interrupted to say that Webster spoke for eight hours, and the adroit and smart and eloquent Senator from Indiana said:

And eight hours, the Senator from New Hampshire informs me, he spent in delivering that masterful oration.

If this had been the rule of the United States Senate before and during the Civil War Charles Sumner could not have sounded forth his great philippic against the barbarism of slavery, nor could any one of the masterful orators or statesmen who then occupied seats in this Chamber have voiced the sentiments of the sons of freedom that inspired the mighty North to action and led great armies to the fields of strife, for the principles of the perpetuity of the Union and the freedom of the slave were fought out upon the floor of the Senate before they were fought out upon the crimson fields of battle.

Further on in the same speech the Senator from Indiana said——

Mr. FERNALD. Read it all; it is good reading.

Mr. HARRISON. It is fine reading, and yet Senators on the other side will vote contrary to the admonition contained in the eloquent speech of the Senator from Indiana.

Why, Senators, we are not children; we are men. We are not playing with castles of cards; we are dealing with fundamental problems. We are not engaged in some sport in which a man is limited to a certain number of strikes; we are Senators, chosen because of supposed ability, fitness, and character to measure up to the great demands of statesmanship, to grapple with the eternal verities that underlie all progress and all enduring government, and why should it be thought that we must place a limitation upon ourselves else we shall trample upon the rights of the people by too great speech? The whole thing is to me the very height of the preposterous.

The Senator was friendly then with Senator Harding, just as he is friendly now with President Harding. They worked hand in hand and they will go down to destruction together—I mean politically.

The then Senator from Ohio, Mr. Harding, interjected, and the Senator from Indiana said:

I yield to the Senator from Ohio.

Mr. Harding said:

I want to call the attention of the Senator from Indiana to the fact that we completely changed the policy of the last tax law, due to the convictions that were evolved through the debate.

Oh, how true with regard to present-day conditions! How this bill has been changed from the time it was presented to the Senate in its original form! The Senator from Indiana the other day said that the Senate Committee on Finance had proposed 87 amendments, I believe, or 95 amendments, reducing the rates in the bill from its original form. So Mr. Harding must have been a prophet as well as stating facts at that time. He knew that this condition would probably come about in the future.

The Senator from Indiana said, in answer to that—

I thank the Senator for the suggestion. It is very appropriate and timely, because it is true that from the time the debate began on the last tax law until it was completed in this body the policy of that law was changed, and, I believe, changed to the good and changed in the interest of the people of the United States. I thank the Senator for his suggestion.

Yesterday when the Senator from Alabama [Mr. UNDERWOOD] was talking the Senator from Minnesota [Mr. KELLOGG] called attention to the fact that it took but seven weeks to pass through the Senate the Underwood-Simmons tariff law, and that already we have talked on this bill some seven or eight weeks, I do not know which. The Senator overlooked the fact that that was a good bill; that that was a bill in the interest of the people. There were provisions in it that the Republicans could not attack, and some of them voted for them. Even the Senator from Washington [Mr. POINDEXTER] in those days was termed a Bull Mooser, and he not only voted for the provisions of the bill but he voted for its final passage; and yet all through the consideration of this bill the rates have never been high enough for him. He has throughout the consideration of this measure voted with the reactionary element.

I do not know what it is that you gentlemen apply to these former Progressives and Bull Moosers that makes them become so reactionary, but you certainly have got something. My friend from Illinois [Mr. MCCORMICK] never called himself a Bull Mooser, but he had the horns and all the other characteristics of a Bull Mooser; but as soon as he gets here and comes under the hypnotic influence of the Old Guard he and the others soon become reactionary and forget their former promises.

I proceed further. Other Senators who are now in the Senate spoke at that time against cloture—one of them a great leader on the other side. I refer to the Senator from Utah [Mr. SMOOT]. He spoke against it. He said:

The passage of this resolution means that running debate will be closed in the future, and I say now that there has been more information given to Senators, actual information, information that affected the votes of Senators, more real information gained in a running debate where questions are freely asked than there is in all the set speeches that were ever made in this body.

Then the Senator who now offers this cloture made a speech, the distinguished Senator from North Dakota [Mr. MCCUMBER], who is in charge of this bill. He spoke. He now offers the cloture, although he voted against the cloture that limited general debate to one hour and a half and 20 minutes on each amendment, without restriction with regard to the presentation of amendments. He spoke against that kind of cloture, but on the bill that he fathered, of which he was the author in part, he now says to the Senate, through the presentation of this cloture, "You must not discuss it in all, with all the Senate committee amendments, with all its provisions, over an hour; and you shall not be permitted, after one hour following the convening of the Senate to-morrow, to present a single amendment to any part of my bill." Here is what he said then:

So I can see no good reason in the world for attempting to stifle the voice of Senators upon the many subjects that may be brought before us.

* * * * * * *

Mr. President, I am against this resolution for another reason. All of the arguments that have been made by the proponents of the resolution, all of the arguments that have been made in favor of it by others have not enlightened us as to why the resolution should be brought before us now. On the contrary, Senators have stated again and again that it is not necessary. The Senator from Alabama declared that the Senate had not abused the privilege of discussion since this war began; he declared that there was no danger that the Senate would abuse the privilege of unlimited debate during this war. Mr. President, if Senators have not done so, and if they will not do so, then, in the name of heaven, give us one solitary, honest reason why it is necessary to shackle Senators in their discussion of any subject before the Senate of the United States? And why will they not abuse the right of debate? Because there is not a Senator in this Chamber, there is not a Member of this body who is not patriotic; and any Senator of the United States who would obstruct, by longer discussion than would be necessary, a bill that would affect our war progress would be a traitor to his country; he would be guilty of an act of treason; and he should be and would be immediately expelled by the patriotic Members of the Senate body. Then, why bring in this resolution now?

He said:

I know there has been some criticism on the part of the press about Congress delaying legislation, but every Senator knows it is not true. We know that we have not delayed legislation in any respect whatever. Then, why this resolution? It is a reflection upon the honesty, the patriotism, the ability of the individual Senators of the United States.

Those were the utterances only a few years ago of the men who now attempt to stifle debate in this body; and the only reason that can be advanced for their change of front is that your bill is so bad, so odious, so indefensible that you are afraid of full and legitimate discussion of it. You cringe under the assaults that are made on it. You tremble under an honest analysis of its provisions—the poor, bleeding, wounded, lacerated thing. The attacks upon it have been so many and so constant that it groans with pain and pleads for treatment. Its temperature is high. Its respiration low. Its system is all run down, and never in all history did a thing need to be operated on or treatment applied more than in this instance. And yet you deny us, through the application of this proposed cloture, to administer to this now fatherless and deserted and orphan child.

Now, does the Senator want to ask me a question?

Mr. MCCORMICK. Although the Senator is lost in the maze of the metaphors of the Senator from Mississippi——

Mr. HARRISON. The Senator does not seem to be lost.

Mr. MCCORMICK. He would suggest that if the bill be breathless, that is not true of the Senators on the other side of the aisle.

Mr. HARRISON. No; and they will not be breathless from now on until November.

Mr. MCCORMICK. Until after election.

Mr. HARRISON. Oh, until after election? We will keep you breathless until after election, and there will not be any part of you left, politically, after the election. It is a godsend for himself that the Senator does not come up in Illinois this year.

Mr. President, speaking dispassionately, I want to appeal to the common sense and fairness and justice of Senators on the other side. You know that when this rule is adopted to-morrow, if it should be, your Finance Committee, that have met daily, as the Senator from Indiana and the Senator from North Dakota says, looking over these paragraphs, constantly making changes, offering modifications to the various provisions upon the floor, will be estopped in the future, except by unanimous consent, from offering those amendments. I submit that it is not fair to the American people. If your bill is odious, as it is—it has met the lashes and the criticisms and the condemnation of the Republican and independent press throughout the

country—if it is bad, do you think that is going to help you with that press? No. When you tie up this situation with a cloture that will prevent you, except by unanimous consent, from modifying its obnoxious and iniquitous provisions, you will roil that press still more, and you will cause more condemnation to be showered upon your heads, not only by the press but Americans everywhere, whether Republicans or what not.

Mr. KELLOGG. Mr. President, will the Senator give me the date of the speech I made on the cloture?

Mr. HARRISON. The Senator was speaking at that time against the resolution offered by the Senator from Alabama [Mr. UNDERWOOD] on either June 12 or June 13, 1918, and in opposition to the amendment offered by the Senator from Idaho [Mr. BORAH].

Mr. KELLOGG. Mr. President, I have not looked at the speech, but my recollection is that I voted for the present two-thirds cloture rule, which was brought in by the Democratic leader, and adopted, I believe, some time in 1918. It is true that the Senator from Alabama [Mr. UNDERWOOD] at some time desired to procure a majority cloture; but a two-thirds cloture rule was finally adopted, and I am sure the Senator will find that I voted for it. I remember that after months of debate I voted for and advocated cloture on the Versailles treaty.

Mr. HARRISON. Mr. President, if the Senator will permit, if he will look on page 7728 of the CONGRESSIONAL RECORD of June 13, 1918, he will see that he is recorded in the negative on the resolution proposed to limit general debate to one hour and a half and to limit debate on each amendment to 20 minutes.

Mr. KELLOGG. I am speaking about the cloture rule now in existence. I am sure I voted for that rule. But whether I did or not, I came to the Senate as a member of a minority party, and I had some high ideals about the duties of Senators, and about this great legislative body, of which I had read, and to which I had looked up for many, many years. I had heard of the names of great Members of the Senate which adorn the pages of American history. But I have lost some of that enthusiasm, and many of those bright ideals have been dimmed in the last six years.

I presume I did believe at that time that a two-thirds cloture was all that was necessary, because during the time that I was a member of the minority party there was no filibustering. The minority party during that time loyally supported the President and the majority, and no sign of a filibuster was evidenced during that period. Since I have commenced speaking this morning I have been informed that there were only three votes in the Senate against the proposed Democratic cloture rule which has been invoked for a vote to-morrow. It is of Democratic origin. Democratic Senators should not complain that it is invoked after 10 weeks of debate. They originated the principle of the cloture rule, and now it is not at all surprising, in view of what has taken place, that they writhe under the prospect of voting against it and going to the country with a filibuster which has lasted for months.

I was saying that during the time I was a member of the minority party they loyally supported the President, and did not try to delay legislation by filibustering; but the filibuster started in the Senate the day President Harding called an extra session—over a year ago. There were delays and delays and delays on the tax bill, on the prohibition bill, on any number of other bills. Look at the RECORD. The tax bill alone was in the Senate for two and a half or three months, and the Democratic Senators occupied about double the time the Republicans did.

The four-power treaty was in the Senate last winter for debate nearly two months. Look at the RECORD and see who occupied the time. The leader on the Democratic side said last night that we now have before us a bill with 2,000 amendments and that each one should be debated. The Senator well knows that many of those amendments are merely technical, and many of them would apply to a single section, which would involve but one principle. The Senator well knows that Senators on the other side have occupied three, four, and five hours continuously talking about one amendment which anybody could discuss intelligently in 15 or 20 minutes. The Senator well knows that the ranking Democratic member on the Finance Committee has parceled out the defense—or the filibuster. The Senator from Massachusetts [Mr. WALSH] was selected to fight the agricultural schedule because the other Senators would not or dared not do it and wanted to vote for it. Another Senator would be selected for something else, three or four of them at a time, to keep the thing going while the others were resting up during the night sessions. You can not make this country believe that those debates, day after day, day after day, on single amendments were not debates for the purposes of delay.

I am not in favor of cutting off reasonable debate. I am not in favor of denying to any Senator the opportunity to discuss any amendment and let the country know what the amendment is. I have discussed one.

The Senator from Alabama said yesterday that there had not been much debate except on the bill. There have been days and days and days spent in debate on every conceivable subject except the bill. I was looking over the RECORD the other day and counting up the speeches, and I found that one distinguished Senator, up to March 2, had made 18 speeches on the Federal Reserve Board, and I do not know how many he has made since March 2; I have not counted them. Can it be said that those were upon the subject before the Senate?

Mr. President, I have never seen such an exhibition of waste of time in any deliberative body, unlimited and useless argument on single items of a bill, as I have seen upon this, and every Senator knows that at the rate at which the debate has been going it would not be finished in three years.

I said at one time that this is the only great national legislative body in the world where business could be done only by unanimous consent, and where a Senator or a number of Senators could talk at any time on any subject, and at any length, and read any book, however irrelevant to the subject. No other such body exists. Senators, the American people are sizing up the Senate, and I want to say here that the opinion of the people is not flattering to this body. We are lowering the dignity of this great deliberative legislative body. Especially since the war, which swept nearly all the civilized world with a consuming flame, the demand upon the Congress for legislation has been so great, questions of such surpassing importance are coming up every day for solution, that we must choose whether we will do the business of the public or whether we will not. I say that a rule which allows 10, 15, 20, or 30 days' general debate on any bill, and then an hour on the bill and 15 or 20 minutes thereafter on any amendment, permits debate enough to bring out all the merits or demerits of the bill and acquaint the country with all the questions involved. That we ought to have. Some such rule as that I have proposed several times in the last two years. It may not pass now, but I shall continue to propose it, and I believe that it will pass. I believe that the Senate will determine some time that there must be a reasonable limitation upon debate, so that the majority may be able to do business. That is all I ask. That is all I think we should have.

It was said yesterday that it was unreasonable to ask for an agreement to fix a date for voting upon this bill. I would not ask to fix a date, but I do not think it is unreasonable to ask that some limitation be placed upon the debate, the length of time which a Senator may occupy in general discussion of the bill, and the length of time he may occupy on any amendment. I am sure that all Senators could, with 15 or 20 minutes debate upon an amendment, and a reasonable time upon the bill, elucidate every question which is necessary for the decision of this body, and which is necessary to go to the country.

I am not afraid of going to the country. I am perfectly willing to take responsibility for every vote I cast. I do not want to shut off reasonable debate; but there should be some limitation upon this endless, endless talk, which is evidently being engaged in for a purpose.

This bill has been before the Senate now for 10 or 11 weeks, with night sessions some 3 or 4 weeks, longer than any tariff bill has ever been before any legislative body in this country, so far as I can find out.

Mr. POMERENE. Mr. President, the Senator is generally fair, and will he not be fair in making the statement that this tariff bill has been longer before the Senate than any other tariff bill? Will the Senator not add to that that it was longer before the Finance Committee and longer before the Ways and Means Committee, and longer before a Republican House, than any other tariff bill in the history of the country?

Mr. KELLOGG. I think that is quite true; I think it was.

Mr. POMERENE. Then it would seem that while we on this side of the Chamber may be charged with certain responsibility for the delay, the Republicans on the other side of the Chamber are also chargeable with very much greater delay.

Mr. KELLOGG. Oh, no; I would not admit that. The Senator must remember that the time during the entire last session was taken up until Thanksgiving with the tax bill. The Senator must remember that about the time the tariff bill was ready to be reported treaties of very great importance to this country and to the world came before the Senate and occupied nearly two months' time. The tariff bill was re-

ported to the Senate on the 10th of April. The committee gave 10 days thereafter for the leaders on the other side to prepare for the debate. That was not unreasonable, of course. The debate started on the 20th of April and has lasted now for 10 or 11 weeks and only some 300 or 400 amendments have been adopted.

Mr. EDGE. Mr. President——

Mr. KELLOGG. I yield to the Senator from New Jersey.

Mr. EDGE. I think the Senate is not alone concerned with the time that has already been consumed but with the prospect that in the future it would seem there is no possible limit to the time to be consumed and when a vote may be taken.

Mr. KELLOGG. I am coming to that. The Underwood law was before the Senate only seven weeks and disposed of some 600 amendments, which the committee made, and of the bill itself. Here we have disposed of some 300 or 400 amendments alone in over 10 weeks, and at this rate it would take 50 or 60 weeks to dispose of the bill.

Mr. POMERENE. Mr. President——

Mr. KELLOGG. I yield to the Senator from Ohio.

Mr. POMERENE. I notice in this morning's paper that the Finance Committee on yesterday had agreed upon a good many amendments to the cotton schedule very greatly reducing the rates. I am very glad that they have awakened to the necessity of making some reductions in those rates. While the Senator from Minnesota is complaining about the time taken on this side of the Chamber, will he not tell us how many more changes the Republican members of the Finance Committee are going to recommend? Possibly we can tell something then about the length of time that will be required on this side of the Chamber.

Mr. WALSH of Massachusetts. May I say that 700 amendments have already been considered?

Mr. KELLOGG. I am informed by Senators who have been here during other tariff debates that in every instance the Finance Committee has reported many amendments while the tariff bills were under consideration in the Senate. I have not had much legislative experience myself.

But, Mr. President, I did not rise to discuss the merits of the bill. I hope the Finance Committee will make amendments where they think they should be made. I certainly shall not vote for amendments, wherever they shall originate, if in my opinion the rates proposed are too high. I have voted against a good many such already. I do not expect every Senator to agree with me.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. SHORTRIDGE in the chair). Does the Senator from Minnesota yield to the Senator from Massachusetts?

Mr. KELLOGG. I yield.

Mr. WALSH of Massachusetts. I understand that between 700 and 800 amendments have already been considered. The Senator states that he is willing to vote for a decrease in the rates when in his opinion the rates fixed by the committee are too high. How many times has he voted against committee amendments?

Mr. KELLOGG. Oh, I could not say. I have voted a good many times.

Mr. WALSH of Massachusetts. Has the Senator voted more than three times against committee amendments?

Mr. KELLOGG. Oh, yes; I have voted against committee amendments a good many times since the debate started.

Mr. WALSH of Massachusetts. The roll-call records do not show that Senators on the other side of the aisle have voted very frequently against committee amendments.

Mr. KELLOGG. Well, I think I have done so.

Mr. President, what I started out to say was purely on the question of the reasonableness of the debate that has been going on. I do not think the cloture would cut off reasonable debate. I think, with the general debate which has been had upon the entire bill, that if each Senator can discuss it an hour more, it is a reasonable time to discuss the bill and to bring out all those features and lay them before the country. I want to be fair. I hope the Senate some day will adopt a more reasonable rule that will, after a certain length of time, allowing each Senator full opportunity to debate the merits of the bill and each amendment, bring to a close that debate.

Mr. SPENCER. Mr. President, on the 16th day of May the junior Senator from Mississippi [Mr. HARRISON], in speaking of the delay upon the tariff bill, with great vehemence and earnestness declared that the fault was upon the Republican side of the Chamber and that the Democratic Senators were exceedingly anxious to vote on the tariff bill and to get through with it. He said on the 16th of May:

> Of course, we—
>
> That is, the Democratic side—
>
> understand that the plan of the majority is to allow consideration of the pending bill to occupy a long time in the Senate, to permit it to drag along for months and months, and then the bill will go to conference, and it will then stay in conference during and until after the election.

The Senator from Mississippi declared that such was the purpose and the plan and the intention of the Republican majority. Then he continued:

> I wish to say, however, that if this tariff bill must be passed and forced upon the American people, we want to see it gotten out of the way, and if the Senator from Utah and his colleagues on the other side of the Chamber will stop filibustering and unnecessarily delaying the bill, we will let them pass it and we shall get away from here, so that they will not be allowed to carry out their scheme of letting the bill die in conference while they extort from the large interests campaign contributions in order to elect the House of Representatives.

After the Senator from Mississippi had concluded, I asked then for unanimous consent that a vote should be taken upon the tariff bill on the 1st day of June, which was about two weeks in advance of the day upon which the Senator from Mississippi was speaking. Promptly there rose upon the Democratic side first the Senator from Georgia [Mr. WATSON] and then the colleague of the junior Senator from Mississippi [Mr. WILLIAMS], each objecting to any such unanimous consent for the fixing of a day upon which the bill shall be voted upon.

Since that time, Mr. President, in seven weeks of debate, we have passed upon about 200 out of 2,000 amendments. The total number of amendments already acted upon will not equal more than one-third or one-half of the total amendments to the bill. So far as progress is concerned, we have made no progress. There is no end in sight. We have already consumed about three months in the consideration of the bill, which came to the Senate on April 11, a longer time by far than was consumed with regard to the Underwood tariff law, which came to the Senate on July 11 and passed the Senate on September 9, 1913, or with regard to the Payne-Aldrich law, which preceded the Underwood law and which came to the Senate on April 19 and passed the Senate on July 8, 1909.

Mr. President, I hazard again the challenge to my friend from Mississippi that he join with me now in a request for a unanimous-consent agreement to vote upon the bill and upon all pending amendments and upon all amendments that may be offered on the 1st day of August next. I now suggest the absence of a quorum and shall renew my request for unanimous consent to fix a day upon which to vote on the pending tariff bill when a quorum is secured.

Mr. ROBINSON. Mr. President, I object. It will not be necessary for the Senator to suggest the absence of a quorum.

Mr. SPENCER. I withdraw the demand for a quorum call, because obviously the objection of the senior Senator from Arkansas [Mr. ROBINSON] prevents any such unanimous consent as I hoped to secure.

Mr. STERLING. I submit an amendment intended to be proposed by me to the pending bill, which I ask may be printed and lie on the table.

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. CARAWAY. Mr. President, among the names signed to the petition for cloture are those of Senators who have been absent so much that I doubt if the doorkeepers knew them when they returned.

The Senator from Minnesota [Mr. KELLOGG], to show how time ought not to be wasted, repeated one statement five different times in the lecture he read the Senate to-day.

The Senator from Minnesota [Mr. KELLOGG] discussed the bill once. The chairman of the committee, the Senator from North Dakota [Mr. MCCUMBER], then apologized when the Senator was through because he talked about matters not before the Senate. He said the Senator from Minnesota wanted to discuss the particular schedule because he was going away. He had come in, you know, and wanted to make a political speech and catch the next train out. As I said, the chairman of the Finance Committee apologized when the Senator from Minnesota was through with a speech which the Senator from Minnesota made out of order in discussing matters not before the Senate.

Mr. KELLOGG. Mr. President——

Mr. CARAWAY. I yield to the Senator from Minnesota.

Mr. KELLOGG. I discussed the agricultural schedule. Does the Senator say that was not before the Senate?

Mr. CARAWAY. The schedule before the Senate was the chemical schedule. I suppose the Senator did not know it, because I do not think he had been here often. He was only interested for political reasons in the agricultural schedule.

Mr. KELLOGG. That is an entirely gratuitous and insulting remark, and the Senator knows it.

Mr. CARAWAY. Was the Senator here for a week before he made his speech?

Mr. KELLOGG. The Senator knows I was here every day.

Mr. CARAWAY. Was the Senator here for a week or 10 days before he came in to make his speech?

Mr. KELLOGG. I was here.

Mr. CARAWAY. Did the Senator leave that day?

Mr. KELLOGG. I did not.

Mr. CARAWAY. When did the Senator go away?

Mr. KELLOGG. I was only away two days.

Mr. CARAWAY. I did not ask how long the Senator was away. When did the Senator go away—the next day?

Mr. KELLOGG. Two or three days afterwards. I was away two days and that was all.

Mr. CARAWAY. I am not complaining, because I do not think the country lost any great thing when the Senator was away.

Mr. KELLOGG. I made a speech on the agricultural schedule.

Mr. CARAWAY. I know what the Senator made his speech about, and I know that that schedule was not before the Senate at the time. Now the Senator complains about Senators talking and talking and talking. I know and the Senator knows, if he was here, which I doubt, that yesterday and the day before the time of the Senate was taken up largely in discussing nuts. I know of no better subject for the Senator to have stayed here and engaged in the discussion of, but he was not here, evidently. I know that for hours the time of the Senate was consumed in discussing that question, and yet the Senator says any question can be discussed intelligently and fully in 10 minutes. All of the discussion on the subject of nuts was by Senators on the other side of the Chamber. The junior Senator from California [Mr. SHORTRIDGE], who now so elegantly graces the chair, made several speeches, eloquent speeches, learned speeches, and his colleague, the senior Senator from California [Mr. JOHNSON] addressed the Senate many times on that subject. The Senator from Oregon [Mr. MCNARY] addressed the Senate on the same subject and many others discussed that subject intelligently.

Mr. KELLOGG. May I ask the Senator a question?

Mr. CARAWAY. Certainly.

Mr. KELLOGG. Was the Senator from California talking about the schedule that was before the Senate?

Mr. CARAWAY. Yes, sir; he was doing what the Senator from Minnesota did not do. He was talking about the matter before the Senate; but when the Senator from Minnesota talks it is about something else. That is what I am referring to.

Mr. KELLOGG. Did the Senator from Washington [Mr. JONES] talk about something that was not before the Senate?

Mr. CARAWAY. No. He did what an intelligent Senator usually does. He talked about fish when the subject of fish was before the Senate. The Senator from Minnesota when the chemical schedule was before the Senate talked about agriculture. That is what I am complaining about, that the Senator from Minnesota should read Senators a lecture about intelligently discussing schedules before the Senate when the only tariff speech I have heard him make was about a schedule weeks in advance of its being reached in the consideration of the bill.

Mr. KELLOGG. The agricultural schedule was reached within a few days.

Mr. CARAWAY. Oh, if the Senator will look at the date of his speech, which he has evidently forgotten, and the date when we reached the agricultural schedule he will find that he is no more accurate about the statement he has just made than he was about who was running a filibuster in the Senate.

Mr. KELLOGG. Did the Senator from Arkansas say that I was not here yesterday?

Mr. CARAWAY. I did not say that the Senator was not here on yesterday.

Mr. KELLOGG. Very well.

Mr. CARAWAY. I did not miss the Senator. If he had been absent I should have been just as happy and the Senate would have been just as enlightened, because the question before the Senate was discussed, and when that is done the Senator from Minnesota never takes part in the discussion.

Mr. KELLOGG. There are others who would not have been missed, Mr. President.

Mr. CARAWAY. I know that. There are three or four Senators on the other side of the Chamber, for instance, the chairman of the committee, who brought in a monkey show here when that was not before the Senate by any rule of the Senate, though there were some exhibits that evidently were in order; and the Senator from Indiana [Mr. WATSON] also had a cuckoo clock and a monkey show when that schedule was not before the Senate. I am sorry the Senator from Minnesota has got to rush off now, but he is in a hurry. [Laughter in the galleries.]

The PRESIDING OFFICER. The Senate will be in order and the galleries will observe the rule of the Senate.

Mr. CARAWAY. I do not like to charge the Senator from Minnesota with bad faith. Yet I know if the Senator had been here he would have voted to permit the House to adjourn until the 15th day of August. If Senators on the other side should secure the adoption of a cloture rule and should pass the pending tariff bill to-morrow, the Senator from Minnesota knows that that bill could not be sent to conference until the 15th day of August. If Republican Senators in fact wanted to pass this measure, as they now say they do, why was it that the President of the United States, why was it that the leaders of the Senate and of the House, by unanimous consent, agreed that the House should adjourn until the 15th of August? Such action is in bad faith and the country knows it, if this bill is desired passed now.

The Senator from Minnesota said he was willing to go to the country. The Lord knows he will go to the country, and the country will be glad when it gets a chance to speak. The Senator from Minnesota knows when he is talking about the country wanting action that he consented that there should be no action on this tariff bill in conference before the 15th day of August. I know that the country knows that because the country knows the Senator from Minnesota consented that there should be an adjournment of the House until the 15th day of August. The Senator from Minnesota knows and the country knows that with the House of Representatives not in session there can be no conference on the pending bill. Therefore the cheapest kind of gallery playing that I have seen is when the Senator from Minnesota talks about his anxiety to get immediate action, and the Senator from Missouri [Mr. SPENCER] asks unanimous consent for a vote on the 1st day of August, when each of them assented that there should be no conference on this bill before the 15th of August.

Oh, why waste all this time to call the attention of the country to the fact that Senators on the other side of the Chamber know the bill is bad and they do not want to pass it. I do not care what individual Senators say. They may go back and count the time consumed in debate, as disclosed by the RECORD for the last week or 10 days, and they will find that three-fourths of all the discussion—all the time wasted—has been on the other side of the Chamber. I said "time wasted." I will take that back, Mr. President. I do not know that the time was wasted. The party in power, which is going to the country, ought to have an opportunity to exhibit its incapacity to the country so that the country may pass upon it. The people are doing that.

The Senator from Minnesota said in his brief stay with us, just before he was ready to leave, that the country had weighed the Senate and was tired of it. Well, that is one statement to which the country is going to say "amen." Since the Senator from Minnesota became a Member of the Senate—I will not say it is solely on his account—but since he has become a Member of the Senate he says that the Senate has sunk lower in the respect of the country than ever before. He is right about that; and until the party now in power gets out there never will be any respect for the Senate nor for the administration. There is reason for that statement of the Senator from Minnesota, though there was not much for some others he made. Of course, the country is tired of the Senate; it is tired of the House of Representatives; it is tired of the administration; and it is showing every time it gets a chance that it is going to have a change.

I say, and say it with all courtesy, for I sincerely like the chairman of the Committee on Finance who brought in this bill—I know he is honest; I know he is courageous; he is able, and yet, with all the prestige acquired in 24 years of service in this body, with the administration back of him, with everything in his favor except public opinion, he went down in defeat last week, not by a restless city constituency but by the sturdy farmers of North Dakota. It was not because they did not love him personally, for I am persuaded that everybody who knows him loves him and respects him; but he was linked up with a bad cause; he stood shoulder to shoulder with a discredited party and suffered by reason of that fact and nothing else.

Mr. President, sometimes I am astonished that intelligent men should think that they can fool the people all the time. I think it was the great Abraham Lincoln who said you could not do that—that you could fool all of the people a part of the time and some of the people all the time, but you could not fool all the people all the time. The effort that is put forth by the majority party, with the full knowledge that it will fail, to pretend that they want cloture in the considera-

tion and vote upon the pending bill is not going to fool any of the people any of the time.

The Senator from Minnesota said he thought the four-power pact was before the Senate for six weeks or two months—I do not remember the exact length of time—but the treaty of Versailles, with his help, remained before the Senate for a year. He said that the revenue bill was before the Senate for a number of weeks, and that is true; but most of that time was taken up by Senators on the other side of the Chamber "jockeying" with each other about whether they should support one provision or another; and finally they got their President of the United States, Mr. Harding, to write a letter to the House to make it reject the amendment to reduce high surtaxes. The House, however, refused to follow the President, but followed the Senate.

Mr. KELLOGG. Mr. President, will the Senator yield to me?

Mr. CARAWAY. I yield with pleasure.

Mr. KELLOGG. Did I understand the Senator to say that most of the time consumed in the consideration of the revenue tax bill was occupied by Republican Senators?

Mr. CARAWAY. Yes.

Mr. KELLOGG. The RECORD shows that the remarks of Republican Senators occupy 281¾ pages of the CONGRESSIONAL RECORD, while the remarks of the Democrats occupy 411¼ pages of the RECORD. Of course, the Democrats may have talked very fast; I do not know as to that; but that is what the RECORD shows.

Mr. CARAWAY. Yes; and I think very likely they talked with more sense. I hope the Senator will read that debate, because he did not stay here and hear much of it at the time.

Mr. President, having ended this little pleasantry, which I have enjoyed so much, with the Senator from Minnesota, because, you know, everybody loves him, I am going to make a few remarks. I want to be accurate. They do not bear on the tariff bill; they do not have to do with cloture; but are suggested by a speech which was made by the President of the United States on the 4th day of July. They call attention to a condition that exists by reason of the President's sanction. It will take but a few moments.

PROHIBITION ENFORCEMENT.

Mr. President, the man responsible for the most open, flagrant violation of the eighteenth amendment and the Volstead Act is the President of these United States.

With the stroke of a pen he could close more barrooms than was ever given to any other one man to do within the history of the world.

Whether the Constitution and the law follow our flag when it goes to sea is a matter now some profess to doubt. Conceding for argument sake that it does not, the President could instruct the Shipping Board to close the saloons on all ships operated by the Emergency Fleet Corporation. If he believes in law enforcement, if he wants the sale of whisky prohibited, if he earnestly desires that all should stand equal before the law, he would say to Mr. Lasker, "We will not quibble about whether the law prohibits or permits the sale of liquor on American ships; the American people are opposed to the sale of liquor for beverage purposes. It is forbidden by the Constitution, which I took an oath to uphold. It is forbidden by an act of Congress, which I signed, and therefore these bars must be closed."

The President knows, all know, that were he to give such an order Mr. Lasker would obey it, for the Shipping Board and Mr. Lasker, its chairman, are the creatures of the President's creation, and as such take his orders and execute them. No apologist for the President, however partisan he may be, can deny this. Therefore, every ship that sails beneath the American flag, owned, operated, or leased by the Shipping Board sells whisky by the express or implied permission of the President of these United States. To-morrow all of them would be dry if he willed it. To-morrow all of them will sell whisky over their bars because he wills it. These criticisms of the President are particularly apropos, because he is quoted in his speech at Marion, Ohio, on July 4 with having given utterance to the following sentiment, which is copied from the Washington Post:

> The eighteenth amendment denies to a minority a fancied sense of personal liberty, but the amendment is the will of America and must be sustained by the Government and the public opinion, else contempt for the law will undermine our very foundations.

It is fair to presume the President spoke after deliberation and with full knowledge. Therefore, can the President escape this conclusion? Can his apologists deny that he connives at the breaking down of public morale? That he does not seek to prevent the destruction of the confidence of the people in law and order?

Oh, how different it is if the violator of the law happens to be an insignificant and perhaps friendless individual. In the same paper and on the same page where this declaration of the President appears urging that the eighteenth amendment be enforced I find the following article:

REARREST WAR VETERAN.

> Charged with unlawful possession of liquor, Floyd E. Tomlinson, 30 years old, an overseas veteran who was injured in the Argonne Forest, completed a brief term in Baltimore this morning for unlawful possession of corn liquor and was promptly rearrested and brought to this city by Detective Bagby King.
>
> Following his arrest in Baltimore, it is charged, revenue agents searched his room in this city and seized a quantity of the corn product. It is stated that Revenue Agent George Fowler, jr., was hired to drive Tomlinson to Baltimore to make the purchase, agreeing to bring the passenger and liquor here.

Here, an ex-soldier, a young man who went 3,000 miles from home and bared his breast to shot and shell in his country's defense, shed his blood in the Argonne Forest, wanted whisky. He was aided and abetted in this desire to get whisky by an agent, an employee of the Revenue Department, who doubtless suggested to him the place where the whisky could be bought. He bought it and was arrested and imprisoned in Baltimore for the possession of it. When his term of imprisonment expired, he was brought back to this city, the Capital of these United States, and again will be tried, convicted, and imprisoned because in his room which was searched in his absence was found whisky. What a commentary on this, the greatest Government in the world, when a former soldier is imprisoned for the possession of a quart, while the President of the United States licenses and permits the sale of thousands of gallons of whisky upon Government-owned property, both subject to the same Constitution, both amenable to the same laws.

Again, the Republican Party has posed as the friend and guardian of the negro. It is always extremely solicitous for his welfare when election time approaches. The Senate has been treated recently to the spectacle of the Committee on the Judiciary, by a partisan vote, reporting out the Dyer bill, simply to give Senator LODGE the negro support in his race for reelection. They are very, very solicitous indeed of the negro; but one negro here in the District of Columbia, inspired no doubt by the example of the President, seemed to think that whisky could be legally possessed on board ship. He is the owner of a boat, the *Madison Hall*. He was giving an excursion Tuesday evening to the people of his color. In the bar was 2 gallons of liquor. It is conceded that the owner was not aboard the vessel; there is no positive knowledge that he even knew the liquor was on board; yet he is to pay the penalty by the loss of his boat, worth a hundred thousand dollars. What was his offense? He in a small way imitated the methods that are pursued by American ships, and sought to attract traffic to his boat by the sale of liquor. He could urge, no doubt, the same excuse that Lasker pleads when he violates the law—that you can not run a boat without the sale of liquor. Why should that defense be good when urged by the Government of the United States, upheld by the chairman of the Shipping Board and by an alleged oral opinion given by Mr. Schlesinger, attorney for the Shipping Board, that liquor could be legally sold aboard American ships? But who is Mr. Schlesinger? He was of the firm of Schlesinger & Mayer, who were of counsel for all those who opposed temperance legislation. Mayer—Levy Mayer—is the man in whose hands a million dollars was placed to prevent the passage of the eighteenth amendment and the enactment of the Volstead law. Schlesinger was no doubt chosen by Lasker and the President, not because of his knowledge of maritime law but because, like the sea, he, too, is "wet." Why should this plea of necessity in behalf of the Shipping Board be concurred in by the President of the United States, and yet fail a negro, who is a citizen of the same country, subject to the same Constitution, and amenable to the same laws?

Oh, Mr. President, the President of the United States spoke more wisely than he knew when he said that violation of the law, when condoned and permitted, breeds contempt for law.

What a pity it is that those who are charged with the enforcement of law seem to think that they have discharged their full duty when they have imprisoned the weak and punished the ignorant!

The Secretary of War, Mr. WEEKS, a man of long and distinguished public service, recently said that the sale of light wines and beer should be permitted. No one doubts but that he spoke the sentiments of his chief. He must have expressed the views of the President of the United States. I am more persuaded of that fact after having read the views of two

Senators of the United States, both Republicans. I read from a paper of recent date the following:

WEEKS'S LIQUOR ADVOCACY RILES TWO SENATORS—FRELINGHUYSEN AND WILLIS SAY REMARKS OF WAR SECRETARY HURT G. O. P.

[International News Service.]

The "flare-back" from Secretary of War Weeks's recent utterances in favor of beer and light wines, and the abolition of the primary, is to-day causing considerable perturbation among Republican Senators who are candidates for reelection.

Senator Frelinghuysen (Republican), of New Jersey, who is facing a hot primary contest, is especially bitter in outspoken condemnation of the injection by Weeks of issues into this year's Congressional campaign, by which he has "made unnecessary trouble."

Senator Willis (Republican), of Ohio, said Weeks's advocacy of beer and light wine and attack upon the primary had been "exceedingly hurtful to his party at this juncture, and particularly to these Members of the Senate and House who are candidates for reelection."

In New Jersey, where Senator Frelinguysen is standing for absolute enforcement of prohibition, and is being supported by the drys, it was stated the wets of both parties were already making political capital out of Weeks's favoring modification of the Volstead Act so as to permit the manufacture and sale of beer and light wines.

Frelinghuysen exclaimed he was now being charged by his opponents with "flying in the face of the administration" because of his championship of law enforcement, while Weeks was being pointed out as the real spokesman for the administration in urging beer and light wines, and deprecating the Volstead Act as it is now constituted.

The New Jersey Senator declared the "wet" propaganda, coupled with Weeks's name which is now being broadcasted in his State, is proving helpful to Governor Edwards, running for Senator on a "wet" platform, and "decidedly harmful" to himself.

If it be not impertinent, I should like to ask the President of these United States, the Attorney General, the chairman of the Shipping Board, and the leaders of the Republican Party in both Houses of Congress if it is a part of their program, when they shall have put through a ship subsidy and have transferred all of the vessels now owned by the Government to private ownership, to give to the purchasers of the vessels so transferred a guaranty that they shall have with the ship and the subsidy, wrung from the taxpayers of America, a license also to sell intoxicating liquors? All know that it is the intention of this administration, so long as it is in power, to permit the sale of liquor upon American-owned ships within and without the 3-mile limit as long as these ships belong to the United States. Certainly, then, the administration would not contend that it itself could violate the law, but it would refuse to permit the violation of this law as soon as these ships became the property of private owners. In other words, the President of the United States and the administration could not afford to say that it is lawful, that it is right, that it is just and necessary, and therefore permissible to sell whisky upon a Government-owned vessel, and wrong and illegal and therefore not permissible to sell whisky upon privately owned vessels. Therefore, the American people must know that as long as this administration continues in power whisky will be sold upon American-owned vessels within and without American territory. Yet I want to repeat what I said the other day, that no one can honestly contend that every American ship that now sells whisky within and without the 3-mile limit is not violatng the eighteenth amendment and the Volstead Act. The Shipping Board at one time recognized that it was so, and denied that liquors were being sold upon American vessels. It has since changed its attitude, admits the sale, and rather boasts of it. The present Attorney General filed a brief in a case then pending in the Supreme Court of the United States in which the following correct enunciation of law was made:

The plain object of the eighteenth amendment and the Volstead Act was to destroy all traffic in or dealing with intoxicating liquor.

The amendment and act clearly were intended to prohibit the possession or transportation of liquor for beverage purposes, whether for consumption within the United States or not.

The proceedings in Congress evidence the legislative intention to prohibit all possession and all transportation except as specifically authorized.

It was the unanimous view of Congress that all transportation of liquor should be banned.

The prohibition on transshipment of liquor will not be read out of the act on the ground that as applied to such transshipment it has extraterritorial effect.

The Supreme Court, in a case handed down May 15, 1922, Grogan against Walker, said:

The eighteenth amendment meant a great revolution in the policy of this country, and presumably and obviously meant to upset a good many things on as well as off the statute books. It did not confine itself in any meticulous way to the use of intoxicants in this country. It forbade export for beverage purposes elsewhere. True, this discouraged production here, but that was forbidden already, and the provision applied to liquors already lawfully made. See Hamilton v. Kentucky Distilleries & Warehouse Co. (251 U. S. 146, 151 N. 1). It is obvious that those whose wishes and opinions were embodied in the amendment meant to stop the whole business.

In the case of Cornelli against Moore, on January 30, 1922, appears this language:

Section 3 is comprehensive in its prohibition, and it takes pains to provide that it shall have such liberality of construction as to achieve its declared purpose.

In the case of Wilson v. McNamee (102 U. S. 572) appears the following:

A vessel at sea is considered a part of the territory to which it belongs when at home, and the jurisdiction of the local sovereign over her and over those belonging to her is, according to the law of nations, the same as when she is in the home port.

The former Acting Attorney General, William L. Frierson, rendered this opinion:

(2) The eighteenth amendment by its terms applies to the United States and to "all territory subject to the jurisdiction thereof." The national prohibition act does not contain any language limiting the territory within which it is to be in effect. It simply enacts that certain transactions with respect to intoxicating liquors shall be unlawful, and provides "that any person" who violates its provisions shall be punished. It is clear, therefore, that this legislation prescribes rules of law which shall be in force wherever the laws of Congress are applicable. By virtue of the eighteenth amendment Congress is empowered to legislate on this subject without regard to State or other lines, and with respect to all territory subject to the jurisdiction of the United States. Except, therefore, as its operation in particular possessions of the United States may be limited by special statutes applicable to those possessions, the national prohibition act is in force throughout the jurisdiction of the United States. The question, then, is whether it furnishes rules of law which govern those on board an American vessel. That it does not apply when the vessel is in American waters I think no one will doubt. The question, then, is whether it applies when the vessel is on the high seas or in foreign waters. This question, I think, can now present no serious dispute. It was said in St. Clair v. United States (154 U. S. 134, 151):

"A vessel registered as a vessel of the United States is in many respects considered as a portion of its territory, and 'persons on board are protected and governed by the laws of the country to which the vessel belongs.'"

It follows, therefore, that persons on board an American vessel, wherever that vessel may be, are governed by the laws of the United States to which they would be subject if within the United States. Indeed, the jurisdiction of the Federal Government over them is much broader than when they are within the United States. In the latter case, with respect to the great bulk of criminal laws, they are subject to the jurisdiction of the various States and not to that of the United States. The various States, however, have no jurisdiction even of their own citizens when on the high seas. For this reason Congress may enact, and the Federal Government may enforce, criminal laws for the purpose of punishing offenders for offenses committed while on the high seas which it would not be within the power of Congress to make applicable to the same offense if committed within one of the States. Thus, Chapter III of the Revised Statutes, beginning with section 5339, contains a long list of offenses which, if committed within one of the States, would be beyond the power of the Federal Government to punish, and provides that when committed upon the high seas they shall be punished by the Federal Government. In such cases it was, of course, necessary to have a special statute, for the reason that Congress has no power to enact laws for the punishment of murder and other offenses mentioned in Chapter III of the Revised Statutes to be applicable generally throughout the United States. Any law, however, enacted by Congress within its power and made of general application is a law to which persons within the criminal jurisdiction of the United States are subject. The criminal jurisdiction of the United States is necessarily limited to their own territory, actual or constructive. After making this statement Mr. Justice Field, in United States v. Smiley (6 Sawyer, 640, 645), stated the rule of law determining the territory subject to the criminal jurisdiction of the United States as follows:

"Their actual territory is coextensive with their possessions, including a marine league from their shores into the sea. * * * The constructive territory of the United States embraces vessels sailing under their flag; wherever they go they carry the laws of their country, and for a violation of them their officers and men may be subjected to punishment."

It was for this reason that the Supreme Court said, in St. Clair v. United States, supra, that persons on board a vessel are protected and governed by the laws of the country to which the vessel belonged.

The eighteenth amendment empowers Congress to enact laws applicable wherever the jurisdiction of the United States exists. The national prohibition act is a law of such general application. I can not doubt, therefore, that it applies to those on board American ships, whether in American waters, on the high seas, or in foreign waters, equally with those in any of the States of the United States.

Respectfully,

WILLIAM L. FRIERSON,
Acting Attorney General.

THE SECRETARY OF THE TREASURY.

That remains the correct interpretation of the law, because no court has held to the contrary. But this administration puts itself in the humiliating position of declaring that an American ship is not subject to American laws, not amenable to any act of Congress. It would follow, of course, that American commerce upon the seas is not entitled to the protection of the law. One inevitably follows the other. This administration declares in its acquiescence in the conclusion that a ship is above the law; that it is a sovereignty within a sovereignty, and owes no allegiance to the Constitution and the laws.

The following sample of advertising that is now flooding the country foretells what is to follow such a course. Here is a sample:

EUROPE BROUGHT TO NEW YORK CITY.

We reiterate that the purpose of this vessel is to make available to this community samples of European entertainment; a world novelty of fascinating interest brought close to New York City. The first and only opportunity for millions of Americans to experience for themselves the atmosphere of Paris, London, Madrid, and Pekin truly represented.

If the serving of genuine wines, beers, and champagne is a natural and lawful part of such entertainment, such serving will not constitute the object of the American recreation vessel, but it would be an appro-

priate incident in an atmosphere of festivity, enchanting orchestrations, the most beautiful of Europe's women, selected for their artistic ability as exponents of classic and fancy dancing and operatic singing, and a feast prepared by the best chefs from abroad.

Consider the viciousness of the entertainment that they offer. All of these pleasures are for the rich. The sale of liquors, the bacchanalian dance, the immorality and lewdness implied, are for those who are able to go down to the sea in ships. The workingman, the farmer, the soldier, the ignorant negro, who seeks to convey to his home a quart of liquor and provide his friends with a drink, is sentenced to jail, the chain gang. The dignity of the law must be upheld, for the President of these United States in his Fourth of July declaration proclaims that the violation of the eighteenth amendment breeds contempt for all law; but no doubt he gave utterance to that noble sentiment with the reservation that the violation of this law by the poor, the ignorant, and the helpless is to be condemned, but the violation of this law by the rich, powerful, and pleasure loving, the social élite, is to be commended. The President of these United States provides a prison for the one and a ship loaded with fine liquors for the other, and yet he is the President of these United States and of all the people therein—the rich, the poor, the high, the low. He smiles on one, however, and smites the other. One man is ordered to jail for possessing a quart; the other may reel in his drunken revelry on board ship owned and operated by the United States and under the control of the President of the United States and be commended.

Such is law and such is sentiment as long as Warren G. Harding is President of the United States and Harry M. Daugherty is the Attorney General. But against this all Christian Americans protest.

Mr. McCUMBER. Mr. President, I have deemed it inappropriate for me at this time to give any expression whatever concerning the late primary election in my State, but the statement of the Senator from Arkansas [Mr. CARAWAY] just made to the effect that this election reflected any view upon the pending tariff bill was so wide of the mark that I feel I can not let it go by without correction.

I desire to state now that the tariff bill and the tariff question were never considered in the slightest degree in the recent contest in the State of North Dakota, and you will look in vain through the press of the State or through public utterances for any indication that was an issue in the State.

Mr. President, there are some things that are worth more to an honorable man than the retention of a seat in the Senate, and one of them is the retention of a clear political conscience and the realization that he has stood by what his judgment and sense of right indicated was the proper course. That course I have followed, and I am expressing no regret whatever that in choosing between the two my decision was in favor of retaining my own convictions of right and propriety. There may be a time when I will express what the real issue was in my State, but if I do it will only be because it may have some bearing upon questions of general public interest.

Mr. FRELINGHUYSEN. Mr. President, I ask unanimous consent to have printed in the RECORD and referred to the Committee on Finance certain resolutions adopted by the Vineland Central Labor Union and indorsed by various other labor organizations in favor of a protective tariff.

There being no objection, the resolutions were referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

CENTRAL LABOR UNION OF VINELAND, N. J.,
AFFILIATED WITH THE AMERICAN FEDERATION OF LABOR,
Vineland, N. J., June 28, 1922.

Senator JOSEPH FRELINGHUYSEN,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: At the regular meeting of the Vineland Central Labor Union, held Thursday, June 29, the following resolution was adopted:

"Whereas many workers of this country have been out of employment for many months; and

"Whereas cheap goods are coming into our ports from Europe in competition with American-made goods, but sold to the consumers at a psice below American manufacturing cost; and

"Whereas, if those conditions are allowed to continue, our workers will still be in the army of unemployed, causing untold suffering to our workers and their families and lowering the American standard of living by low wages and long hours: Therefore be it

"*Resolved*, That we go on record favoring the speedy enactment of the tariff bill now pending in the United States Senate based on American valuations; and be it further

"*Resolved*, That a copy of this resolution be sent to Senator JOSEPH FRELINGHUYSEN and Senator WALTER EDGE with a request to vote for this bill."

This resolution was indorsed by the following local unions of Vineland:

Local Union No. 44, American Flint Glass Workers, 340 members; Local Union No. 132, American Flint Glass Workers, 280 members; Local No. 620, Carpenters and Joiners, 210 members; Local No. 40, Masons, Bricklayers, and Plasterers, 180 members; Local No. 473, Electrical Workers, 190 members; International Lady Garment Workers, Local No. 119, 320 members; Local No. 208, Amalgamated Clothing Workers of America, 515 members; Local No. 119, United Shoe Workers, 260 members; Local No. 129, United Shoe Workers, 220 members; Stage Employees, Local No. 673, 80 members; Local No. 595, Musicians of America, 310 members; Laborers and Helpers, Local No. 470, 330 members. Guy Cavaganaro, vice president; Estrella Cummins, secretary.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Washington [Mr. JONES] to the amendment of the committee, which the Secretary will state.

The ASSISTANT SECRETARY. On page 102, line 19, in the committee amendment relative to fish, after the words "2 cents per pound," it is proposed to insert the following proviso:

Provided, That from and after 90 days after the enactment of this act no fresh or frozen halibut, salmon, or swordfish from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country, except when the same shall be in bond from an American port.

Mr. KING. May I inquire of the Senator from Washington whether that is prohibitory of the importation of those fish?

Mr. JONES of Washington. Not at all.

Mr. KING. They have to be received in bond?

Mr. JONES of Washington. Yes; to come in in bond if coming from an American port. In other words, if fish are gathered at Ketchikan, they can be bought there and sent to Prince Rupert and on over the Canadian Pacific in bond to the eastern market.

Mr. KING. I am not sure that I understand the significance of the amendment. As I interpreted it, as it was read by the Secretary, it would seem to prohibit the importation of any of the class of fish referred to unless they come in bond.

Mr. JONES of Washington. They come through a foreign country in bond to the United States. They must start in bond from an American port.

Mr. McCUMBER. When they are caught, if they are sold in a Canadian port they can not be shipped into the United States at all.

Mr. JONES of Washington. Certainly; they must be taken to an American port.

Mr. McCUMBER. They must be taken to an American port out there.

Mr. JONES of Washington. That is exactly what we want to have done. That is what the Canadians have been doing in reference to their ports for a good long while.

Mr. KING. As I understand it, if an American fisherman should catch fish opposite Canadian territory and take them there and have them cured or salted and ship them to the United States they could not be received at all except in bond, to be transshipped to some other country, even should he pay the tariff?

Mr. JONES of Washington. He can take them to an American port; the American port is nearer the fishing grounds than any Canadian port.

Mr. KING. Suppose an American fisherman, or a Canadian fisherman, for that matter, should make a catch of fish, land the fish, and cure them upon Canadian soil, intending to ship them to the United States for use in the United States after they were cured. As I understand the amendment, he would be forbidden from doing that, even though he were willing to pay the tariff.

Mr. JONES of Washington. He probably would not land them there. He would land them at Ketchikan. Of course, if this amendment is adopted, if he saw fit to land them at Prince Rupert he could not send them into the United States in bond.

Mr. KING. But could he send them into the United States for use in the United States by paying the tariff?

Mr. JONES of Washington. No. All he would have to do would be to go to Ketchikan, which is the nearest place for him, as far as that is concerned. The halibut fisheries, as the Senator knows, are deep-sea fisheries. They are not along the coast; they are out in the ocean, and, really, the nearest place to land them is Ketchikan. So it would not work any hardship on anybody. If this amendment is adopted, what the Senator stated would be true—they must be shipped in bond from an American port, or they could not come in bond into the United States.

Mr. KING. It practically provides, then, that an American, or a Canadian, or anybody else, who catches fish and lands them upon Canadian soil or Mexican soil, where they are cured, may not ship them into the United States, even by the payment of the tariff duty?

Mr. JONES of Washington. Yes; that is what it provides. That is exactly what the amendment says.

Mr. KING. What becomes of the Senator's idea of some sort of freedom of action, freedom of contract, freedom of trade, when you are willing to pay the tariff duties which are imposed?

Mr. JONES of Washington. Mr. President, there can be no practical difficulty about it.

Mr. KING. But it is the principle involved. It seems to me it is a monstrous proposition to say that, although I am willing to pay the tariff, if I happen to land the fish which I caught in Newfoundland or some other part of Canada, or Mexico, or in Cuba, and they are cured or iced, and I am willing to pay the tariff imposed by law to ship into my own country, I can not do it.

Mr. JONES of Washington. I think probably I made my statement a little too broad. If they are imported from Canada, entered at the customhouse there, without being shipped in bond, there is nothing to prohibit them from coming in after paying the tariff. It is only when they are shipped in bond that they are prohibited, except as they come from an American port.

Mr. KELLOGG. The amendment provides that they can not be shipped here at all, except in bond, from an American port. That is the point. It absolutely prohibits any importation of fish from Canada unless they first come into Canada from an American port in bond. That is what the amendment says.

Mr. JONES of Washington. I ask that the amendment be read.

Mr. KELLOGG. If the amendment had named Canada, which is intended, of course, it would be a violation of every treaty we have.

Mr. JONES of Washington. It is no more in violation of a treaty than the action of Canada is in violation of a treaty. It is a very strange thing that foreign countries can do things to us and not be violating a treaty, but we can not do things against them without violating a treaty.

Mr. KELLOGG. With all that the Senator read, he has not read a single article that I have heard which indicated a prohibition of the importation of fish into Canada.

Mr. JONES of Washington. I read many discriminations. Of course, I am not trying to find just the specific example of action upon the part of Canada exactly like ours. I would like to have the amendment read. I want the Senator to note the exact language of it.

The VICE PRESIDENT. The Secretary will read the amendment to the amendment.

The ASSISTANT SECRETARY. On page 102, line 19, after the words "2 cents per pound," in the committee amendment, add the following proviso:

Provided, That from and after 90 days after the enactment of this act no fresh or frozen halibut, salmon, or swordfish from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country, except when the same shall be in bond from an American port.

Mr. JONES of Washington. The amendment expressly declares that they shall not be admitted into the United States through a foreign country except when they are bonded from an American port. That is exactly what we desire to do. It is exactly what our Democratic friends sought to do in the Underwood-Simmons Act when it was pending here, and it was a very patriotic thing, in my judgment.

Mr. HEFLIN. Mr. President, more important than the protection of fish in the Pacific Ocean is the protection of the rights of the American people in this body. We have to-day witnessed a strange spectacle. The Republican Party, in control of the Congress and the executive branch of the Government, comes here with a resolution to suppress free speech in this body. It has been the boast for a long time that measures might be hastily considered in the House, but in the Senate there was full, free, and unlimited discussion; that this was, indeed, a deliberative body. But we now find the cohorts in control growing impatient, seeking to apply House rules to the Senate and to destroy this as a great deliberative body, to suppress free speech, if you please, for that is what it means.

When we were in the majority the present Democratic leader, my colleague [Mr. UNDERWOOD], offered a suggestion to limit debate at a time when this country was involved in war. Rights and liberties of the people were involved and imperilled. It was sought then to make it possible to secure speedy action on war measures because the boys on the battle front were entitled to have war supplies sent to them in abundance. It was necessary to keep them supplied with the sinews necessary to win that war. The suggestion was made, I say, in time of war, that some form of limitation be placed on debate. But what do we find to-day? In the aftermath of the war, in peace times, if you please, we find the Republican side invoking cloture to hasten the action of the Senate upon the most obnoxious, the most objectionable, the most oppressive and tyrannical tariff measure ever presented to any legislative body.

Who invokes this cloture in the Senate? Is it the American man and woman who is going to have money taken out of his pocket or her pocket by the operation of this law? Is it the masses of the people who, by the provisions of this bill, have the very salt that goes in their bread taxed? Are they asking for cloture that you may hasten this pillage and plunder of them? No, Mr. President; not they in the rank and file out yonder, who are never consulted by your party. It is the tariff barons, who are going to contribute to your campaign funds the sinews of political war for the coming election. They are bidding you invoke cloture in this Chamber.

The Senator from Minnesota [Mr. KELLOGG] told us this morning that the question was whether we would do the business of the people or continue to drag along. The issue squarely up to the Senate is whether you are going to do the bidding of the boodle bosses in America or stand by the ancient landmarks which have preserved law and order in this country on many occasions in the past.

Bolsheviks are made by your administration, by the injustice that you show through governmental favoritism to one class to the great injury of another class, by the employing of the taxing power to enrich one group of people to the impoverishment of another. Anarchists are springing up, socialists are multiplying, Bolsheviks are increasing, and here you are undertaking to increase still further their number by shutting off free speech and putting through under whip and spur this miserable and monstrous tariff legislation.

Senators, this performance will rise up to haunt you in the years to come. It will be a specter that you will point to many times and say, "We did wrong when we invoked the cloture rule to tax one class to enrich another." Why are you invoking it? Are you invoking it to pass a bill that will require those who control the fiscal policy to let money sufficient go out where it is needed and credit be extended to those who must have it to carry on their business? Not a bit of it. In whose name do you invoke it? You invoke it in the name of 4,000 tariff barons, 4,000 men who are going to be made as rich as Crœsus by the operation of this proposed tariff law.

Mr. President, the Republican leader of the House boasted the other day in a newspaper statement that they had saved or taken off of certain taxpayers $900,000,000. When I read those lines I said, "Yes; they have taken off of the big millionaires, those most able to pay taxes, $900,000,000 and more, and they are undertaking in this very bill to put that and much more upon the backs of the people who are least able to pay taxes." I would that the American people knew exactly what is going on here. There never has been a time in the history of this Government when the graft gang held high carnival in the Nation's Capitol as it does to-day. I would to God that the people knew the absolute truth.

Look at your newspapers, just filled up with column after column of propaganda demanding a ship subsidy. Here you are with a bill which seeks to put upon the backs of the American masses more than $3,000,000,000 of taxes upon the necessaries of life. You take the taxes off of luxuries and you are putting them upon the common necessities. You are driven now to great lengths in your desperation. Fearing that those who hold the purse strings for your campaign fund will not give you money to go out and try to buy seats again, they are able to make you come into this body, into this historic Senate Chamber of the United States, and invoke the cloture rule to cut off free speech, to kill debate, to suppress amendments, to tie the hands of those who dare to speak in this body for the rank and file of the American people.

That is what we witness here, Mr. President. The Senator from Massachusetts [Mr. LODGE] told us that in his long service here he had witnessed eight tariff discussions, but that this one had extended over a longer period of time than any other. Well, Mr. President, that is easily accounted for. There never has been a bill that had so many objectionable features jammed into it as has this bill. Look how long it took on the House side to frame this thing up. It was a monstrosity when it came over from the House, and here you are with your committee sitting for months and months and months behind closed doors, with not a Democrat present, working out your scheme, agreeing upon your schedules, putting them in the

bill, and bringing them into this body. We never knew what was in it until you submitted it. We have been reading it and trying to change it, and have changed it in some instances, and we want an opportunity to show where you are wrong, to show the people whose Government this is that you are oppressing and robbing them, and now we have you whipped to a standstill in the forum of fair debates in the Senate. You are whipped before the American people. A large portion of the press is lashing you for the provisions contained in the bill, and now in order to jam the thing down the throats of the American people you are going to pull down the curtains, blow out the lights, and ram it down their throats without letting them know what is in it. Then you will go to the country and try to fool the people by saying that you have done this thing in the interest of the people.

Here you come into this Chamber asking for a cloture rule at the behest of the tariff barons who have always flourished when your party was in control, while the masses of the people were made to suffer in many ways. You make it difficult for them to get the common necessities of life. You take the tax off of the luxuries, you take the taxes off of the back of the big income-tax payer, and then with a flourish of trumpets boast that you have relieved them of $900,000,000. Then you come in here without the slightest tinge of regret or shame upon your faces and write into a tariff bill taxes that will wring from the masses of the people more than $3,000,000,000 a year. You have taken it off of those most able to pay it and put it upon the backs of those least able to pay.

Mr. President, the Senator from Minnesota [Mr. KELLOGG] said the American people are sizing up the Senate. Thank God for that. They are sizing up the Senate! It is time that the American people were waking up to what is going on in their Senate. Sizing up the Senate? What will their judgment be of this cloture move on your part? Cloture rule? You sat here with your lips sealed and your arms folded and permitted the House, a Republican House, to adjourn and go off to look after its political fences, playing politics when we are here wrestling in the heat of the summer with the most damnable tariff measure ever foisted upon a free people. Yet you permitted the House to adjourn. They are gone for a month and a half. When you know the House can not consider this bill until the 15th of August, even if we should pass it, we find you bringing in here a cloture program to kill debate in this body.

The Senator from Minnesota says the people are sizing up the Senate. They are. I want them to continue the sizing-up process. The more they size you up the fewer of you there are going to get back here.

Mr. President, the junior Senator from Mississippi [Mr. HARRISON] threw out a suggestion this morning that deserves serious consideration. What mysterious power is it that is employed on the Republican side to take a man who comes in here a red-hot progressive, with a good many Democratic convictions and principles in his make-up, and cause him to be hypnotized and go to sleep, and when he wakes up he is a hard-and-fast reactionary, hard-boiled standpatter? What is it? What power is it, Mr. President, and who is it that can wave the magic wand over the eyes of those who come in this fashion and put them into the long sleep that brings complete obedience to the commands of the standpatters who control the Senate to-day? Talk about progressivism. It is dead in this body on the Republican side except for a handful, as we see it, in four or five Senators over there. We do not hear progressive notes and forward march orders sounded now except on the Democratic side. There are only a few progressives left on the other side of the Chamber. Most of them are old-time, standpat reactionaries. They just sit there and when the big interests say, "Cloture," they say, "Cloture" is the word, and they all "clote" at once. [Laughter.]

Bob Taylor used to tell a story about nine brothers who all slept in one big bed, and when they got ready to turn over one of them would holler "Spoon!" and they would all turn the same way at the same time. He said one day one of them was out on a springboard reaching out over the river where the water was 10 feet deep. He had gone out there fishing and was lying on his chest and had gone to sleep. One of the boys on the bank saw him out there and hollered "Spoon!" and he turned over and went head over heels into the water. [Laughter.]

That is the way you Republicans do. A good progressive comes in here and you proceed to teach him to "spoon." You first make him doze and then you put him to sleep and holler "spoon" and over he goes into the tariff barons' pond.

Mr. President, I called attention here one day, in replying to the Senator from Indiana [Mr. WATSON] and the Senator from Ohio [Mr. WILLIS] when they said that the tariff bills away back yonder were disposed of in 10 days' time or two or three weeks, and another in a month or five weeks, that one of those bills had only 100 items in it, and another one a hundred and fifty items or two or three hundred items, or something like that. Here we have a bill with 4,000 items in it and over 2,000 amendments that you have suggested yourselves, and then you talk about somebody on this side trying to filibuster. We are not filibustering. We are simply making a game fight against the nefarious and obnoxious and oppressive provisions of this very bad bill.

Mr. President, complaint is made that a good deal of time was consumed in discussing candy and nuts, and candy with nuts in it. I saw you Republicans put an almost prohibitive tax on those items. I thought of the saying, "It is like taking candy from a child." I saw the Republican Party literally take candy from thousands and hundreds of thousands of the children of the United States. The price will go up and up. You have made times so hard that they can hardly get bread and meat, and when they want a little something sweet with some of these delicious nuts, the heavy tax hand of the Republican Party is laid upon that item, and because we protested against it and fought for the children of America, millions of them, you criticized and scolded us.

Mr. President, what should we do? Should we sit down here and say, "All right, go ahead and pass your bill; we know it is wrong; we know it is wrong for you to tax salt; we know that salt ought to be as free from taxes as the air that we breathe; you ought not to be permitted to put a tax upon the salt that saves and seasons meat and goes into the people's bread." Are we to sit here and say nothing and permit you to do it without entering our protests? Should we permit you, without making a protest, to tax the knife and fork with which the man and the woman and the boy and the girl must eat? Why should you be permitted to take money out of my pocket for a knife and a fork with which to eat in order to sustain life that God has given me, in order to make the man who manufactures the knife and fork a billionaire in the United States? What right have you got to do that by law? If I permit a man to do that to me in a private transaction that is quite different, but any party that will employ the taxing power to make one man rich and another man poor deserves to die at the hands of the American people. What right has the Republican Party to do that?

The Senator from Minnesota [Mr. KELLOGG] said that the opinion of the American people of the Senate was not flattering. Are Senators surprised at that? I saw Senators on the other side of the Chamber vote to sell a seat in this body; they bartered it just like a man would sell a commodity in the market place. Are Senators surprised that the opinion of the American people of a party that will do that is not flattering?

Mr. President, the seats in this body are supposed to be occupied by two Senators from each of the sovereign States of this Union. Those Senators are supposed to stand here and defend the rights and the interests of their people and to protect this body and this Government against all enemies, both foreign and domestic. When somebody buys a seat in the Senate and the question is put to the Senate and the Senate ratifies the sale, do Senators blame the American people for having a poor opinion of the Senate that did that? The party that will do that ought to be driven out, and I pray God they will be when the election time comes. Is it any wonder that the people have a poor opinion of the American Senate when it will do that?

Following that, what do we see? We see a tax bill brought here, after the tariff barons have gathered like vultures on the battle plain, where the soldiers stricken down, their lifeblood oozing out, with nobody to defend them, lie helpless against the assaults of these vicious vultures. There they gathered. One could hear the whir of their wings; the air was thick with them, and the sky was black as they gathered for the feast. That is what we witnessed here in the gathering of these hungry and merciless tariff barons. The Senate Finance Committee met in the committee room. These men swarmed up and down the corridors; they hovered around the doors of the committee room. They were admitted. Each one told what he wanted. Where were the poor fellows out yonder upon whom these men were going to pounce and take from their hard earnings? Who was there to speak for them? Nobody. The door was shut and the committee said, "Mr. Tariff Baron, what do you want?" "Why," he says, "I want this rate. I will show you who I am. There is a check that I contributed to your last campaign fund." "Have a seat; have two seats." [Laughter.] He takes the seat and he gets exactly what he wants written into the pending bill. Then the committee let him out and another one comes in. He says, "I am of the

same order, except that I gave two checks." Then the committee said to him, "Have as many seats as you like." And he was seated. "What do you want?" "Why," he said, "I want this rate (naming it)." The committee said, "That is pretty high, isn't it?" Every now and then a member of the committee would say that until the other members would nudge him. "That is pretty high, isn't it?" Another member of the committee would say, "Do not say anything to this fellow; he furnished the main sinews of war."

But there was nobody speaking for the masses out yonder. The tariff barons were getting ready like the vultures to pounce down upon the helpless people and say, "Hold up there!" A consumer asks, "Why are you holding me up on the highway? I am buying this stuff with which to feed my wife and children, to keep them from starving. What right have you to take my substance from me?" "Why," the tariff baron says, "I do it by law; Congress gave me the right to pillage and plunder you; I have got a license; here it is. It is written in the law. Congress passed it; the President signed it; and I am here by authority of law. I am the tax gatherer of the Republic, made so because I contributed to the campaign fund of the Republican Party; and I made them use the taxing power of a hundred million people to enrich me and to impoverish you."

Senators on the other side of the Chamber do not dare to meet us on this side in open debate; they do not dare to stand face to face in this forum and fight this contest out in order that the debate may go into the RECORD each day and the American people may see and know what is going on here. Senators on the other side of the Chamber are seeking now to put out the light, to shut off debate, to close the RECORD to the truth, to jam this bill through, and again fool the American people.

Oh, Mr. President, has the Senate become a bargain counter? In 1909, standing on the other side of the Chamber but a little distance from where the senior Senator from Utah [Mr. SMOOT] now sits, Dolliver, intellectual giant and big-hearted, brave American patriot from Iowa, stood amongst his brethren like Saul, head and shoulders above them all, and said, "Senators, I say it with regret, but Congress has become a bargain counter."

Oh, Mr. President, what an arraignment was that! A bargain counter! The good women who sit in the galleries know what a bargain counter is. It is a place where goods are exposed for sale and where you can go with your purse and buy what you want and get a bargain when you buy it. And Dolliver, one of the greatest of Republican Senators who ever sat in this body since I have been in Congress, said that Congress had become a bargain counter. He said that when the Payne-Aldrich tariff law was under consideration; he said that when you had increased the tariff rates higher than ever before; he said that when fewer items were proposed to be taxed than will be taxed under this bill.

What would he say if he could look down from the parapets of the sky and see this Chamber in which he stood four square to every wind that blew, defying everybody and everything that sought the injury of his country; what would he think to look back in this Chamber where he performed so magnificently in the days gone and his eloquence rang like a trumpet call through these corridors; what would he say if he could look back now and see you taxing the salt that goes into the people's bread, the swaddling clothes of the infant, the wearing apparel through life, the winding sheet of the dead, the coffin, and the tombstone that stands over the dreamless dust of the departed? What would he think if he could come back now and behold 52 Senators on the other side of the Chamber signing the death warrant of free speech and an open forum in the Senate?

Oh, Mr. President, and for what purpose? Is the enemy at the gates of the Republic? Is an invading army threatening from a foreign land? Is that why free speech is to be suppressed and a deliberative body destroyed? Is that why Senators are driven to this extremity? Is that why they have grown desperate and wish to invoke cloture? No. But what is the noise then that we hear if it is not that of an invading army? It is the noise of the tariff barons of the Republic, hungry for the fleshpots of Egypt, hungry for the feast time such as they used to have when they drank up the substance of the American people, flourished in their evil doing, clipped their coupons, and grew rich in a little while.

Who are they? The tariff barons. And what do they demand? They demand that debate he shut off. What do they say? They say: "You are not going to get this bill through, and not only that, but the Democrats may carry the House in the coming election, they may cut down your number in the Senate, and the whole thing may be tied up and this bill defeated after we have spent the enormous sums of money we did in helping to elect you in 1920, and we want action; we demand action."

The Senator from Minnesota said the question is whether we will do the business of the people. The question is, I repeat, whether we will do the bidding of the bosses; that is the question. Mr. President, after this measure has been thrashed out and the items gone over and debated and the objections to them pointed out and called to the attention of the people, it is all right if in the final showdown the majority shall pass the bill. We shall not then complain, because we will have had an opportunity to tell the truth about the bill to the people whom it affects, but when you undertake to shut off debate and make it impossible to offer an amendment then a different question is presented. That is what your cloture will do, for under it not an amendment may be offered. If it were to be shown to the other side by this side that the present rates ought to be changed, if the proposed cloture rule shall be adopted, the Senate will be powerless to undo a wrong perpetrated against the American people. Then you wonder why we should oppose your cloture rule.

Mr. President, the Senator from Massachusetts [Mr. LODGE] yesterday afternoon grew impatient that the minority was vigorous and was consuming more time than he thought we ought to consume. The country now knows that the money power of this Republic is seeking absolutely to control this body and to suppress criticism of any of their reprehensible doings. Yes; they are trying to do that. The Senator from Massachusetts intimated that both sides ought to get together and just let this bill go through. It will be a sad day for the American people, God knows, when they do control this body to that extent when neither Democrats nor Republicans will speak out against the evils seeking to be practiced upon the people.

Mr. President, that day never will come with the Democratic Party. That party never yet has bowed the knee to Baal, and it never will. Thank God, it believes in an open field and a fair fight for the rights and liberties of the American people. No wonder it opposes your cloture rule, which seeks to shut off debate and keep the country from knowing the truth about this measure. Suppose Congress should finally adjourn and we should all just fold our arms and say, "All right, go ahead; the weather is hot; we should like to get away." I would love to go to visit some of the springs and summer resorts in my State and be amongst the best people in all the world. It would be exceedingly pleasing to me personally; but, Mr. President, if I am willing to stay here and some of the Senators on the other side are willing to stay here and prolong this debate, because they feel that it is their duty to do so in the interest of right and justice to the whole people of the United States, why should you be permitted to come in here with a cloture rule to shut off free speech, to kill debate, and jam this thing through?

Mr. President, I frequently think about the Scripture:

> Choose you this day whom ye will serve. Ye can not serve God and Mammon.

That question, in a little different form, is up to the Senate. "Choose you this day whom ye will serve"—the American people, right, truth, justice, or the emissaries and agencies of Mammon. That is the issue in this body. Do you not know that you would not bring in that cloture rule here if the tariff barons were not urging it? Do you not know that they are afraid that we will carry the House and reduce your number in this body, and endanger the passage of this thing finally if it is delayed? Do you not know that they see a Democratic minority, with a little aid from the other side, standing between the American masses and the hungry taxgatherers of the Republican Party? They know that.

Mr. President, the people are not going to be deceived. It is hot and it is hard work to have to condemn these things and point out these doings to the American people, but it is our duty to do it.

In conclusion I want to say a word about the Senator from Missouri [Mr. SPENCER]. He asked unanimous consent that we just go ahead and proceed to vote on the bill now. Would not that have been a delightful situation? He will refer to that, or somebody else will, that we did not want a vote; that he asked unanimous consent and the Senator from Arkansas [Mr. ROBINSON] objected. Of course he did. Why not object? Do you think we will give you consent to vote on provisions in that bill that we know are wrong; that we know have no place in this legislation; that we know will be oppressive to the people that they affect and make rich those who are the instigators of the items? Why, certainly not, Mr. President; so the Senator from Missouri suggested that we have unanimous consent to put it up to us on this side to say whether or not we wanted to close debate.

Mr. President, we have a right to debate those items. Who is involved? To whom will these items be applied? Who must

pay the bill? While these tariff fiddlers fiddle, who has to dance? It is the mass of the American people. After this bill is passed and the President has approved it, it will be too late to talk about it then. The die will be cast, and the Rubicon will be crossed. It will be too late then, and then the Senators on the other side would rise up, if the Senator from Missouri [Mr. SPENCER] could have his way, and say: "Why should you object to this item and that? You did not open your mouth against it. You did not even protest against it. You gave consent that we might pass them all in a bunch, and now you are estopped from complaining." That is what you would tell us if we were to consent.

Mr. President, the Republican Party has the power, it has the votes in this body, I presume, to pass this cloture measure, and for what purpose? I repeat, for the purpose of writing into law the most obnoxious tariff tax bill that has ever been written in the history of the Government. Senators, I know you are hard pressed, you are anxious to get out amongst the people and see if you can not explain some of these doings that you have indulged in here, but the day will come when you will regret this cloture business. Mark my words to-day: There are more Bolsheviks in this country than you think, and you created them by your party's conduct. The socialists are rejoicing at some of your policies, because they say you have multiplied their numbers. The anarchist rejoices at some of your policies, because he says you are helping him by what you do. Then, who is the great enemy of the Republic? He is the man that defeats justice. He is the man that will destroy free speech. He is the man who will take a whole-hearted 100 per cent American citizen and fill him with doubt and with indifference as to his Government. He is the enemy of the country.

Mr. President, this Government must be so fair and just in the exercise of the powers vested in it that every citizen beneath the flag will love it and every hand stand ready to defend it. I appeal to you to throw this cloture rule in the wastebasket; abandon this cruel course that you have mapped out in this historic lawmaking body; regard and preserve the rights of this institution that safeguards the rights and liberties of the American people; spurn those who would take away these rights from them, who would invoke this doctrine and this rule for the purpose of serving evil ends, for the purpose of making one class rich and another class poor. It was never intended by the founders of the Government that any of its instrumentalities should be used for such a purpose.

Mr. LENROOT. Mr. President, I think the record ought to show that but two Democratic Senators have sat in the Senate Chamber and listened to the eloquent speech of the junior Senator from Alabama.

Mr. HEFLIN. And two Republicans, I believe.

Mr. LENROOT. No; there were more than that. Five Republicans did the Senator the honor of listening to him, but only two Democrats did so.

Mr. President, I deeply sympathize with the junior Senator from Alabama in his feeling that to invoke this cloture rule would be an outrage. I do not know of any Senator in this body who would feel it a greater hardship to be cut off from his daily speech than my friend the junior Senator from Alabama.

There was handed to me a little while ago a record of the speeches of the distinguished Senator from Alabama, and this record shows that, beginning on the 15th day of last August and up to the 2d day of March last, he had made his Federal reserve speech 18 times; and I do not doubt that when the record is completed from the 2d of March to the present day that record will be doubled. I can understand, Mr. President, the feelings of the Senator from Alabama in being denied for the period of two weeks—because if the cloture rule should be adopted it will take probably two weeks to pass the bill—the right to speak more than one hour, in being denied the right of repeating that speech, so well known to us all, about Wall Street and the Federal reserve banks. But, Mr. President, while we can all appreciate the feelings of the Senator and sympathize with him, I think the Senator from Alabama should recognize the fact that if every Senator in this body took the time of the Senate in speech making that he takes it would be impossible to pass any kind of legislation at any time.

The Senator from Arkansas [Mr. CARAWAY] undertook this morning to charge the delay in this tariff bill to the Republican side, and then proceeded for nearly an hour to make a political speech that had nothing to do with the tariff bill. The Senator from Arkansas has taken such time upon extraneous matters since this bill came before the Senate that if every other Senator exercised the same right—and it is a right—not only would there be no opportunity to vote upon the tariff bill but there would be no opportunity even to discuss it.

I do not blame these Senators. They have a right to make these speeches. They have the right to filibuster this bill—to filibuster it to death—and they have the power to do so under the present rules of the Senate; but, Mr. President, the majority has a responsibility, and the country, I think, well understands that under the rules of the Senate, as they are now framed, the majority party may solemnly promise to the country legislation which the country expects. But under the present rules there is always a reservation that "we promise you this legislation provided the minority party will consent to it, but if there be objection upon the part of the minority we will not carry out our promise."

Mr. President, with the present majority of 24 that the Republicans have, the country expects the Republican Party to legislate; and I am frank to say, for one, that I do not believe that the country will accept the excuse that "the Democrats would not let us legislate." This body has the power to modify the rules of the Senate so that the majority can do business. It is the duty of the majority so to amend the rules of the Senate that when debate is abused, whether it be upon one side or upon the other, when Senators occupy hours and days in the discussion of extraneous matters, there shall be a power in the majority, whether that majority be on this side of the aisle or on the other side, to carry out its promises to the people and enact the legislation which it has promised to enact.

Now, a word with reference to the charge that has been made by the Senator from Mississippi and other Senators that if this cloture rule should be adopted to-morrow there would be no opportunity for the Finance Committee to bring in amendments from time to time, as it has been doing of late, reducing the rates it originally proposed. I am frank to say I do not like this cloture rule. I would much rather have a rule or an agreement that at least during certain hours of the day all debate should be confined to the bill, and that speeches upon amendments should be limited to 15 or 20 minutes. May I say in passing, Mr. President, that if that were done there would be some real consideration of the questions before the Senate and upon which Senators vote. There is none to-day.

What happens? An amendment is proposed; it is debated; half a dozen Senators listen to it—no more; a vote is taken, and Senators come in and follow the committee, as a rule, if they are on this side of the aisle; and they are against the committee, as a rule, if they are on the other side of the aisle. But not 10 per cent of the Senators who vote upon these various amendments know the first thing about the subject they are voting upon.

I do not blame Senators for that. So long as it is understood that if Senators sit here they must sit and listen by the hour to the discussion of every subject under the sun except the subject that is actually before the Senate, they can not be expected to sit in this Chamber when they have other and real work to do.

But, Mr. President, if there were a real limitation of 15 minutes upon amendments you would find the seats in this Chamber full, you would find Senators listening to the discussions, you would find Senators listening to the debates, and I want to say to the other side of the aisle that if that were done some of the increases—which I do not defend—could be defeated; but they can not be so long as the present custom and situation prevail.

If this cloture rule is adopted, will it or will it not tend to prevent any further decreases in the rates proposed by the Finance Committee? In my judgment, while the committee will be foreclosed under the cloture rule from bringing in new amendments reducing the duties, there will be more of the Senate amendments voted down and the House rates accepted if there be no opportunity to bring in amendments than we will get in reductions when they do bring in amendments.

So far as the time is concerned, each Senator would have an hour. It would compel each Senator, then, instead of taking the time of the Senate upon little, inconsequential items, to so divide his time that he would devote it to items of importance, and it would compel him to confine his discussion and say as much as possible in the least possible time, instead of, as to-day, saying as little as possible in the greatest possible time.

I have just had handed to me, in response to the charge that a great proportion of the time consumed in discussion of the bill has been taken upon this side, a compilation which shows that, eliminating debates or discussions of extraneous matter, which have been almost wholly confined to the Democratic side, in the

debate upon the bill itself the Republicans have occupied 408 pages and the Democrats 721 pages, and when you add to that the time that has been occupied in extraneous speeches, like those of my good friend, the Senator from Alabama, and of the Senator from Arkansas and others, it will be shown that the time occupied upon the Democratic side was very much more than that.

Mr. SMOOT. Mr. President, it seems to me, if the Senator will permit me, that this would be a very good time to have put in the RECORD the figures as to the time taken up to June 30 in the discussion of extraneous subject matter and by whom the time was taken. If the Senator has no objection, I shall ask unanimous consent that the statement be put in the RECORD at this point.

Mr. LENROOT. I yield for that purpose.

The PRESIDING OFFICER (Mr. BRANDEGEE in the chair). Is there objection?

Mr. HARRISON. What is the statement?

Mr. SMOOT. It gives the names of Senators who have spoken upon subjects other than tariff matters, beginning with April 21 and running to June 30.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

(H. R. 7456, Sixty-seventh Congress, second session. April 20, 1922. Unfinished business.)

HARRISON; April 21 (p. 5813), one-half page. (Address of Senator Moses in New York.)
CARAWAY; April 21 (p. 5794), one-half page. (Civil service.)
WALSH of Massachusetts; April 25 (p. 5929), 2½ pages. (Adjusted compensation.)
KING; April 26 (p. 5988), one-half page. (Bureau of Internal Revenue investigation.)
DIAL; April 26 (p. 5989), 1½ pages. (Pensions and adjusted compensation.)
LA FOLLETTE; April 28 (p. 6041), 7½ pages. (Naval oil reserve leases.)
LA FOLLETTE; April 29 (pp. 6096 and 6101), 3 pages. (Naval oil reserve leases.)
HITCHCOCK; April 29 (p. 6097), 1 page. (Naval oil reserve leases.)
POINDEXTER; April 29 (p. 6098), 1 page. (Naval oil reserve leases.)
NORRIS; April 29 (p. 6099), 3 pages. (Naval oil reserve leases.)
PITTMAN; May 1 (p. 6128), 3 pages. (Extension of War Finance Corporation.)
SIMMONS; May 1 (p. 6131), 2 pages. (Extension of War Finance Corporation.)
FLETCHER; May 1 (p. 6133), 1 page. (Extension of War Finance Corporation.)
HEFLIN; May 1 (p. 6134), 2 pages. (Extension of War Finance Corporation.)
CARAWAY; May 2 (p. 6174), 5 pages. (Dismissal of ex-service men from civil service; attack on Attorney General Daugherty.)
HARRISON; May 2 (p. 6179), 2½ pages. (Miscellaneous subjects.)
STERLING; May 2 (p. 6181), 1 page. (Miscellaneous subjects.)
JONES of New Mexico; May 2 (p. 6185), one-half page. (Miscellaneous subjects.)
CARAWAY; May 3, 4, and 5 (pp. 6245, 6306, and 6363), 6 pages. (Attorney General Daugherty.)
PHIPPS; May 5 (p. 6377), 2½ pages. (District of Columbia appropriations.)
HARRISON; May 5 (p. 6380), 2 pages. (District of Columbia appropriations.)
CARAWAY; May 6 (p. 6446), 1½ pages. (Attorney General Daugherty.)
ASHURST; May 6 (p. 6441), 4½ pages. (Hospitalization.)
BORAH; May 6 (p. 6485), 1½ pages. (Russian ambassador.)
HARRISON; May 8 (p. 6482), 2 pages. (Nat Goldstein.)
BORAH; May 8 (p. 6484), one-half page. (Russian ambassador.)
PITTMAN; May 8 (p. 6491), one-half page. (Good roads.)
HARRISON; May 9 (p. 6555), 1 page. (Nat Goldstein.)
DIAL; May 9 (p. 6556), one-half page. (Daylight saving.)
SPENCER; May 10 (p. 6634), 2 pages. (Nat Goldstein.)
HARRISON; May 10 (p. 6635), 2 pages. (Nat Goldstein.)
KING; May 10 (p. 6638), one-fourth page. (Governor of Porto Rico.)
MCCORMICK; May 12 (p. 6782), one-fourth page. Visit of 1881 class to Japan.)
ROBINSON; May 12 (p. 6782), one-fourth page. (Visit of 1881 class to Japan.)
LA FOLLETTE; May 12 (p. 6782), 4½ pages. (Merger of steel companies.)
KING; May 12 (p. 6797), 1 page. (Affairs in Haiti.)
MCKELLAR; May 13 (pp. 6867 to 6893), 2 pages. (Oil.)
POMERENE; May 13 (p. 6871), 4 pages. (Election of Senators.)
WATSON of Georgia; May 13 (p. 6869), 6 pages. (Education of the South.)
LA FOLLETTE; May 13 (p. 6893), one-half page. (Oil.)
HEFLIN; May 13 (p. 6895), one-fourth page. (Mothers' Day.)
BORAH; May 15 (pp. 6945 to 6950), 2½ pages. (Genoa conference.)
KING; May 15 (pp. 6945 to 6950), 1½ pages. (Genoa conference.)
HITCHCOCK; May 15 (pp. 6945 to 6950), 1½ pages. (Genoa conference.)
WATSON of Georgia; May 15 (pp. 6945 to 6950), one-fifth page. (Genoa conference.)
FRELINGHUYSEN; May 17 (p. 7096), one-fourth page. (Personal privileges.)
HARRISON; May 17 (pp. 7100–7101), 1½ pages. (Eight-hour day for Government employees and drift of recent elections.)
WATSON of Georgia; May 18 (p. 7170), two-thirds page. (Court-martial.)
CARAWAY; May 20 (pp. 7316 to 7321), 4 pages. (Thomas B. Felder.)
WATSON of Georgia; May 20 (p. 7320), 1 page. (Thomas B. Felder.)
WADSWORTH; May 20 (p. 7320), one-sixth page. (Thomas B. Felder.)
WILLIS; May 20 (p. 7321), three-fourths page. (Thomas B. Felder.)
BORAH; May 22 (p. 7363), one-half page. (Russian situation.)
CARAWAY; May 22 (p. 7375), 2¾ pages. (Thomas B. Felder.)
EDGE; May 23 (p. 7439), 1 page. (Russian situation.)
BORAH; May 23 (p. 7439), 1 page. (Russian situation.)
WATSON of Georgia; May 23 (p. 7460), 1½ pages. (Russian situation.)
CARAWAY; May 24 (p. 7523), 4¾ pages. (Attorney General Daugherty.)
ASHURST; May 24 (p. 7558), 1 page. (Policy of reclamation.)
FRANCE; May 24 (p. 6450), 3½ pages. (Present and future welfare of American farmer.)
BRANDEGEE; May 25 (p. 7621), one-half page. (Investigation into alleged unlawful hanging of soldiers.)
WATSON of Georgia; May 25 (p. 7622), 3½ pages. (Policy of present administration—Morse case.)
HARRISON; May 25 (pp. 7621, 7625), 1¾ pages. (Business of the Senate.)
MCCUMBER; May 25 (p. 7626), three-fourths page. (Business of the Senate.)
UNDERWOOD; May 25 (p. 7626), 1 page. (Business of the Senate.)
NORRIS; May 25 (p. 7627), one-fourth page. (Business of the Senate.)
SIMMONS; May 25 (p. 7628), 1¾ pages. (Business of the Senate.)
KELLOGG; May 25 (p. 7628), one-half page. (Business of the Senate.)
HEFLIN; May 25 (p. 7629), 1¾ pages. (Business of the Senate.)
LA FOLLETTE; May 25 (p. 7636), 1½ pages. (Operation of General Electric Co.)
LENROOT; May 26 (p. 7710), one-fourth page. (Attorney General Daugherty.)
CARAWAY; May 26 (p. 7710), 1 page. (Attorney General Daugherty.)
CARAWAY; May 27 (p. 7772), 5 pages. (Attorney General Daugherty.)
WATSON of Georgia; May 27 (p. 7714), three-fourths page. (Attorney General Daugherty.)
HARRISON; May 29 (p. 7840), one-fourth page. (Appointment by Executive order.)
CARAWAY; May 29 (p. 7843), 4¾ pages. (Attorney General Daugherty.)
LENROOT; May 31 (pp. 7895, 7914), 1¾ pages. (Letter from Secretary Hoover.)
WATSON of Georgia; May 31 (pp. 7913, 7915), 1½ pages. (Letter from Secretary Hoover.)

HEFLIN; June 30 (p. 9747), 3½ pages. (Distribution of speeches by Federal reserve banks.)

Mr. LENROOT. Mr. President, a word in conclusion with reference to the rates in the bill. I am satisfied, as I have said, that if there were a limitation of debate there would be greater reductions in the rates in this bill than will be made if the present course shall be pursued. I feel just as certain of that as I do that I am standing here to-day.

With reference to these rates, as the Senate knows, I have thus far opposed what I believed to be excessive rates, and I shall, in the future, oppose others which I believe to be excessive, and I am willing, if this cloture rule be adopted, to say all I have to say with reference to those excessive rates in the space of one hour, dividing my time as I shall see fit. But it is only fair to say, with reference to these rates, that I think Senators very often forget, and I do not think the country understands, that what is an apparent increase in a rate found in the bill as it passed the House, an increase made by the Senate may in fact be, and very often is, an actual decrease.

Every ad valorem rate in this bill which has not been increased by the Finance Committee has actually been very greatly reduced. I wonder if all Senators understand that. I am sure the country does not.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Massachusetts?

Mr. LENROOT. I yield.

Mr. WALSH of Massachusetts. I can not speak for all the rates fixed by the Finance Committee, but I have some knowledge of the rates fixed in the agricultural schedule, and I say without hesitancy that the Senate Finance Committee have increased the rates over the rates of the bill as it passed the House in 10 instances to 1 where they have decreased them.

Mr. LENROOT. Let me ask the Senator, where the Senate committee has made no change whatever in the House rate, does the Senator count that an increase or a decrease or as remaining the same?

Mr. WALSH of Massachusetts. As remaining the same.

Mr. LENROOT. Does not the Senator see that where it is an ad valorem rate, he is very greatly mistaken, in all cases where there are ad valorem rates?

Mr. WALSH of Massachusetts. I have in mind the difference between the American valuation and the foreign valuation in the two bills.

Mr. LENROOT. And that is very substantial.

Mr. WALSH of Massachusetts. The statement I made is not changed by the fact that there are changes from the American valuation to the foreign valuation in the Senate committee amendments. Nearly all the changes have been in specific rates.

Mr. LENROOT. I think that is true.

Mr. WALSH of Massachusetts. The changes have been invariably to increase the rates. I made the statement on the floor yesterday, which I repeat, that only yesterday five rates were increased over the Senate committee amendments, and every day we have been making increases. There were some decreases made in the metal schedule, and I understand the committee are getting ready to make some in the cotton schedule, but so far as the agricultural schedule is concerned, there were more increases than decreases.

Mr. LENROOT. I agree with the Senator as to the agricultural schedule, but taking the bill as a whole, if he thinks that the tendency of the Finance Committee is to increase rates rather than decrease the rates, the cloture rule will prevent further increases, will it not?

Mr. WALSH of Massachusetts. I assume that is true, because the committee seems to be holding daily sessions at the present time, and the recommendations they make each day seem to be for increased rates. So if we apply the cloture rule to-morrow, I understand the committee can make no more changes, and therefore there will be few increases made.

Mr. LENROOT. Does not the Senator think that would be a good thing?

Mr. WALSH of Massachusetts. Very decidedly.

Mr. LENROOT. I am glad the Senator approves some features of the cloture rule.

Mr. WALSH of Massachusetts. I would like to say to the Senator that there have been 141 amendments acted upon since June 28th, and I think that is a pretty good record we have made during the last 10 days, at least in this Chamber. I do not see how you can expect to speed up the work on the bill at a greater rate than that.

Mr. LENROOT. Even assuming that to be true, will not the Senator admit that if we make the same rate of progress in the future as we have during the time the Senator has mentioned, we can not pass the bill this year?

Mr. WALSH of Massachusetts. If we can pass 141 amendments in a week, there is no reason why we can not pass this bill within the next four weeks.

Mr. LENROOT. Does the Senator think there will be no individual amendments offered to the bill?

Mr. WALSH of Massachusetts. I expect there will be.

Mr. LENROOT. Does the Senator not think there will be a great many?

Mr. WALSH of Massachusetts. Yes; I think there will be.

Mr. LENROOT. So the Senator does not count upon the completion of the bill with the disposition of the committee amendments within the next four weeks?

Mr. WALSH of Massachusetts. I do not see how there can be very much discussion of the amendments, because it would be going over matter already discussed; but individual amendments can not be offered now.

Mr. LENROOT. Unless we have the cloture rule, will not each individual Senator desire to and will he not discuss each amendment he offers, naturally?

Mr. WALSH of Massachusetts. Certainly.

Mr. LENROOT. I would like to ask the Senator how long he thinks the debate will last upon the valuation features of the bill?

Mr. WALSH of Massachusetts. It is my opinion that the bill will be ready for a final vote before the middle of August.

Mr. LENROOT. If it is, the Senator must admit that his side proposes in the future to take very much less time than it has in the past.

Mr. WALSH of Massachusetts. It is my opinion that the committee amendments will be completed in two weeks.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Utah?

Mr. LENROOT. I yield.

Mr. SMOOT. I want to say to the Senator from Massachusetts that, barring the agricultural schedule, where most of the rates are specific, and are higher than the House rates, I admit, I think the Senator will agree with me that there is not a schedule in the bill as reported in which the rates are not lower than the House rates.

Mr. WALSH of Massachusetts. I regret that I can not confirm what the Senator says. I can only speak for the agricultural schedule, which I have studied in some detail. I think the junior Senator from Utah [Mr. KING], in charge of the chemical schedule, and the Senator from New Mexico [Mr. JONES], in charge of the metal schedule, could enlighten us on the matter. My impression has been that even in those schedules the committee have recommended very many increases over the House rates.

Mr. SMOOT. Very few, Mr. President, and there were a few increases over the House rates voted by the Senate as against the recommendations of the committee.

Mr. WALSH of Massachusetts. I would like to ask the junior Senator from Utah if he confirms the statement made by his colleague about the Senate committee amendments in the

chemical schedule being generally reductions over the House rates?

Mr. KING. I think that many of the rates in the chemical schedule have been reduced from those found in the bill as it came from the House.

Mr. SMOOT. Particularly when you take into consideration the American valuation, there is not a rate that has not been reduced.

Mr. KING. I am assuming that.

Mr. SMOOT. There is not a rate, unless it was a specific rate, which remained as it was in the House text and as to which there was not a reduction.

Mr. KING. If the Senator will pardon me, there is authority given in the bill for the President to increase the rates.

Mr. SMOOT. Yes; and to decrease them.

Mr. KING. There will be no decreasing.

Mr. SMOOT. I am not sure of that. In fact, I think there will be more decreases than increases.

Mr. KING. It is purely prophecy, and I shall not indulge in prophecy.

Mr. SMOOT. Whatever is said along this line is prophecy, whether it comes from the senior Senator from Utah or the junior Senator from Utah. No one can say what the President will do. I only express my opinion, and I believe it with all my soul.

Mr. KING. Mr. President, will the Senator yield?

Mr. LENROOT. I yield.

Mr. KING. In view of a statement which was made since I came into the Chamber, I wish to say that I do not agree with the Senator from Massachusetts [Mr. WALSH] that every amendment which will be offered by the minority, or by the majority for that matter, will be debated. I have a large number of amendments which I shall offer to the chemical schedule. In the general debate upon the chemical schedule and in the consideration of the amendments offered by the committee, questions were discussed then which are directly involved in the amendments which I shall tender. I do not expect to discuss perhaps more than one-tenth of the amendments which I shall offer to the chemical schedule. I feel sure that many of the amendments which will be offered by the minority will not be discussed, but in their view it is important that those amendments should be offered in the hope that judgment by that time will have been restored to the other side of the Chamber, and they will concede that many of the amendments should be adopted and reductions made.

Mr. LENROOT. Mr. President, judging from the accretions to the number of advocates of the rates from the Senator's side of the Chamber, I do not feel very optimistic about that proposition, because there seem to be more and more Democrats adhering to the committee rates as time goes on.

I want to make a point in conclusion that I do not think Senators always remember, because I want to be fair to the Finance Committee, that where no change in rate is imposed in the House bill, in every case where it is an ad valorem rate it is in fact a reduction, and in many cases where the Finance Committee have recommended an increase in the ad valorem rates, so far as the rate is concerned, it is in fact a reduction from the House rates. To illustrate, the very next paragraph that the Senate will consider is upon sardines, where the House rate is 26 per cent ad valorem. The Senate Finance Committee recommends an apparent increase to 30 per cent ad valorem. Naturally one would conclude that was an increase in the rate or in the tariff duty to be imposed, but in fact it is a reduction. I simply take it for illustration. As a matter of fact, based upon the last figures that I have of importation and domestic production of sardines, the 26 per cent ad valorem rate based upon American valuation would have imposed a duty of 91 cents a case upon sardines, while the 30 per cent duty recommended by the Finance Committee, an apparent increase in the rate, upon the foreign valuation would make a duty of only 84 cents a case. So that while the House rate of 26 per cent would impose a duty of 91 cents a case, the Senate committee rate of 30 per cent would impose a duty of only 84 cents a case, or 7 cents a case less than the rate imposed by the House.

I think there are times when none of us bear this point in mind. While, as I have said very often, I think there are rates proposed by the Finance Committee that can not be justified, and I shall vote against them as we come to them, as I have voted against them in the past, nevertheless wholesale condemnation ought not to be made of the bill.

Mr. BORAH obtained the floor.

Mr. HEFLIN. Mr. President, will the Senator yield to me a moment?

Mr. BORAH. I yield.

Mr. HEFLIN. Mr. President, the Senator from Wisconsin [Mr. LENROOT] has taken me to task, as well as other Senators on this side, for opposing the cloture rule and for asking for time to discuss the tariff bill which we say is full of inexcusable and indefensible provisions. On yesterday, the 5th day of this month of July, the day following our Independence Day, the birthday of our liberty, the Senator from Wisconsin, speaking against one of these very provisions, said:

> Mr. President, I am opposed to the pending committee amendment because I do not believe that it can be justified from any standpoint.

That is one of the provisions in the bill which is full of provisions like it which the Senator from Wisconsin said "can not be justified from any standpoint." Again he said:

> Mr. President, I submit that the distinguished senior Senator from California [Mr. JOHNSON] and his colleague, the junior Senator from California [Mr. SHORTRIDGE], have not made out a case for the increase of duty which is now proposed by the committee—which is an increase of 275 per cent over the existing rate and an increase of 150 per cent over the Payne-Aldrich rate. I submit they have not made out their case upon their own showing, because in the speech of the senior Senator from California upon Monday he demonstrated that under the existing rate of the Underwood law the acreage planted in almonds in 1921, at the very lowest ebb of the industry, so far as the market was concerned, had increased almost 12½ per cent.
>
> Mr. President, in the face of the growth of this industry during the existence of the present Underwood law, an increase of 275 per cent in the tariff duty can not, I submit, be justified by anybody.
>
> * * * * * * *
>
> I have not made up my mind as to whether, when we come to a final vote upon this bill, I shall vote for it or not. I want to do so if I can. I want to resolve all doubts in favor of the bill; but if such rates as this are to be voted into this bill to any considerable extent, I want to say very frankly that I shall not support the bill when it comes to final passage.

>
> Mr. President, I hope that I shall be able to support this bill when it does come to a final vote. The vote upon this amendment, of course, will not be the deciding factor, but it will be one of them; and if many such are voted into the bill, I repeat that—giving credit to every other Senator for the same high purpose and motives in voting for the bill that I believe actuate me—I shall reserve the right to vote against it unless some of these duties be brought down somewhere within reason.

That is the bill I am condemning. That is the bill I want time to discuss. The Senator says I have occupied a good deal of time. I am occupying that time in the interest of the American people, and I am not speaking for the tariff barons of this Republic. I want time to condemn the bad provisions of the measure which the Senator from Wisconsin admits can not be justified from any standpoint.

Mr. SMOOT. Mr. President, will the Senator from Idaho yield to me just a moment?

Mr. BORAH. I yield to the Senator from Utah.

Mr. SMOOT. I happened to be out of the Chamber when the Senator from Mississippi [Mr. HARRISON] was speaking this morning, but my attention has been called to a part of his remarks, reading as follows:

> I see the benign countenance of my friend from Indiana [Mr. WATSON] over there on the other side of the Chamber. He is strong for this cloture rule. He is an adroit politician. He is as smart as they make them. He knows that the pending bill will not stand the attacks from this side of the Chamber. He wants to restrict debate, to forestall these assaults, to put through something here so that the people will never know the infamous character of some of the provisions of this bill. He knows that when the sugar schedule is reached we on this side of the Chamber are going to expose the deal that was attempted to be put over by a distinguished member of the Finance Committee, the senior Senator from Utah [Mr. SMOOT], by writing a letter to General Crowder, a representative of this Government to Cuba, and trying to induce Cuba to enter into a contract to restrict the production of sugar in Cuba to 2,500,000 tons annually. The Senator from Indiana knows that all that will be exposed. One of the conditions of the proposed contract was that if the Cubans should restrict their crop of sugar the tariff on sugar would not be so high in this bill. The Senator from Indiana desires to keep that from the American people, and the adoption of this cloture rule will so limit debate that we on this side of the Chamber, who propose to discuss that matter, would not have time even to have read the letter written by the senior Senator from Utah to General Crowder or the contract which was attempted to be negotiated.

Mr. President, I have listened to the Senator from Mississippi make reference to this matter three or four times in the Senate, but I paid no particular attention to it. I want to say to the Senator from Mississippi that he can not keep the Senator from Utah from calling the country's attention and the Senate's attention to the letter that I wrote to General Crowder. When the country knows the situation and conditions existing at that time and what was the intention of certain interests in the country to do to the sugar industry of our country, I want to say that there will be quite a different opinion toward the sugar producers of the country than seems to be manifested by the Senator from Mississippi. There is nothing to conceal. I read the letter to the Finance Committee, and I intend to read it to the Senate. I am going to show the

Senate of the United States what a strangle hold the sugar refiners and the bankers of New York had on the sugar industry of the United States. I admit that rather than have it killed outright, I would undertake to do almost anything honorable to save the industry.

Mr. HARRISON rose.

Mr. SMOOT. I want the Senator from Mississippi to understand that the letter is going to be read and it is going to be explained when the sugar schedule is up for consideration.

Mr. HARRISON. I am delighted.

Mr. SMOOT. There was no deal put over by the Senator from Utah that he is not perfectly willing that all the world should know about, and when the world knows it I will say that some of the sugar refiners of the country and the banks which advanced money to the Cuban sugar producers will take notice and there will be quite a different sentiment in the country in relation to the rates of duty upon sugar and the sugar industry of the country than we are lead to believe by the remarks and insinuations of the Senator from Mississippi [Mr. HARRISON].

Mr. HARRISON. May I ask the Senator a question before he takes his seat, because the Senator alluded to my remarks and I was sorry he was not present to hear them. The Senator, I understand, will produce the letter which he wrote to General Crowder?

Mr. SMOOT. I am going to read it, and the Senator from Mississippi can not keep me from reading it.

Mr. HARRISON. Is not the Senator willing to have it read now?

Mr. BORAH. No; not in my time.

Mr. SMOOT. I have not a copy of it with me. This is no time to do it. When the sugar schedule is reached I intend to discuss the sugar schedule and then will be the time to read it, not now.

Mr. HARRISON. May I ask whether in the letter General Crowder was authorized to restrict the Cuban crop to 2,500,000 tons?

Mr. SMOOT. No; he was not.

Mr. HARRISON. On the theory that the tariff would be lower?

Mr. SMOOT. General Crowder was not authorized to do anything. I had no authority to authorize him to promise any rate of duty on sugar.

Mr. HARRISON. That is what the Senator was trying to get General Crowder to effect in Cuba, was it not?

Mr. SMOOT. I am not going to take the time of the Senator from Idaho now to discuss the matter. I shall tell the Senate the whole story at the proper time.

Mr. HARRISON. But our curiosity is all excited.

Mr. SMOOT. I know; the Senator's curiosity is always excited.

Mr. HARRISON. Then the Senator will not tell us now?

Mr. SMOOT. Not in the time of the Senator from Idaho.

Mr. BORAH. Mr. President, the colloquy between the Senator from Mississippi [Mr. HARRISON] and the Senator from Utah [Mr. SMOOT] illustrates how unwise it would be to undertake to apply cloture in the consideration of the tariff bill. The last bill that ought to have cloture applied to it is the tariff bill. We can possibly stop debate in the Senate, but we can not stop it in the country. Every one of the schedules in the bill will be debated for the next two or three years and perhaps the next ten years throughout the country. The best way that we could possibly expend our time here is to make just as few mistakes as we can before the bill goes to the people.

The debate in the Senate has not been intensely interesting perhaps to all of us, because we are not all tariff experts. But the debate which is going on in the country is intensely interesting. Strangely enough, they seem to know more about the bill than we do. I presume it is because they have to apply it daily, and they are studying the possible effect of it.

In my humble opinion, when the sugar schedule is undisposed of, when the woolen schedule is undisposed of, when the embargo proposition is undisposed of, when the glove, the potash, and all the other important schedules over which the fights have always been made in the past are undisposed of, to apply cloture would be a very serious thing. Not only would it result in injury to the country but it would result in tremendous injury to the Republican Party. Whether you view it as patriot or as partisan, sometimes synonymous, but not always so, it would be a great error to force these schedules through without most thorough debate. The people, I venture to believe, will be greatly benefited by debate.

Mr. POMERENE. Mr. President——

Mr. BORAH. I yield to the Senator.

Mr. POMERENE. I noticed a little while ago an article in the New York Tribune which would indicate that at a certain dinner held last night members of the Finance Committee themselves had very grave doubts as to whether cloture should be invoked. If the Senator from Idaho will pardon me, I should like to read a sentence or two from the article:

> While the Senate leaders propose to try the adoption of cloture in connection with the tariff bill under the existing two-thirds rule, sentiment was expressed at to-night's meeting that it was unwise to try to force cloture now, before the wool and sugar schedules are disposed of, lest it give rise to a charge that an effort is being made to gag the Senate in the discussion.

Mr. SMOOT. Mr. President, I wish to say to the Senator from Ohio that while some of the members of the Finance Committee may have attended the meeting, I assure him that I was not there.

Mr. BORAH. The article refers to leaders of the Senate, so a number of us were not expected.

Mr. POMERENE. The dinner was at the home of the senior Senator from Massachusetts [Mr. LODGE], and among other Senators who are named is the Senator from North Dakota [Mr. MCCUMBER], the chairman of the Finance Committee; the Senator from Kansas [Mr. CURTIS], who is the Republican whip; the Senator from Indiana [Mr. WATSON]; the Senator from Connecticut [Mr. BRANDEGEE]; the Senator from Oregon [Mr. MCNARY], and several others; and, of course, I assume they were all Republicans.

Mr. SMOOT. I desired merely to correct the statement the Senator from Ohio made in the first place, that the Finance Committee was there. The Finance Committee was not there.

Mr. POMERENE. I do not know whether I said the "Finance Committee" or "members of the Finance Committee."

Mr. SMOOT. I thought the Senator said "the Finance Committee."

Mr. BORAH. Of course, Mr. President, it would be perfectly suicidal for the Republican Party to shut off debate upon these schedules. It would be ruinous to us as a party, but, what would be still worse, it would be injurious to the country.

I have always been opposed, Mr. President, to cloture; and it has been extremely interesting in the years during which I have been here to observe how cloture has been sought to be applied by the two sides of the Chamber. When the Republicans are in the majority, they want cloture; when the Democrats are in the majority, they want cloture; and when either side is in the minority, it protests against cloture. We have that situation now. I think it would be extremely unwise to apply cloture at this time. However, Mr. President, I should be tempted to vote for cloture in this instance if it were not for the two considerations, one of which I have just mentioned, that I think we can not stop debate upon a measure by stopping debate here in the Senate. The second reason why I am opposed to cloture is because of that which lies ahead of us.

We are greatly mistaken if we think that the people are in a hurry to have us legislate along the lines on which we are proposing to legislate. The people are not at all dissatisfied to slacken haste in the matter of adding increased taxes upon the people and increased obligations and burdens upon the Government.

For instance, Mr. President, what are our friends proposing to do immediately after they pass the pending tariff bill? What is the next measure to be taken up? The next bill on the program is one to impose an indebtedness or an obligation upon this country of from $4,000,000,000 to $6,000,000,000. That will be the first hasty step we will take after we shall have concluded the consideration of the tariff bill. I am speaking now of the entire Congress; but do Senators think, in view of the conditions in this country at this time with reference to taxes, with reference to indebtedness, with reference to national obligations, that the people are desirous that we hasten to impose additional burdens on the Government of from $4,000,000,000 to $6,000,000,000. If there were a different program confronting us, if there were a different outlook, there might be some desire for haste, but in view of what confronts us I doubt very much if there is any considerable excitement in the country to have us move along with our program.

After we have disposed of the bonus proposition, which will add from $4,000,000,000 to $6,000,000,000 to the indebtedness of the country, what is the next measure upon our program? The ship subsidy bill. Do Senators think the people of the country are in great haste to have the débris cleared away—if I may call the tariff bill that—to make way for a ship subsidy bill, a measure which will draw from the Treasury all the way from fifty million to one hundred million and some say as high as three hundred million dollars; which will exempt some of the people of the country from the payment of a portion of their

taxes; which will select a few and give them an opportunity to succeed in the midst of the distress which presses down upon the remainder of the people? I do not think, Mr. President, that the people are in any haste to have us pass that kind of a measure.

Then, after we pass the ship subsidy bill and the bonus bill, both of which will constitute drains upon the Treasury and involve additional taxes and an increase of Government obligations, we propose to take up the bill for the creation of 24 Federal judges, which will be another drain upon the Federal Treasury. Perhaps we might justify the creation of 10 or 12 additional Federal judges. I think we might do so; but to create 24 additional Federal judges at this time, in my opinion, after having examined the matter as best I may, is intolerable and inexcusable and the imposition unnecessarily of a further burden upon the people of the country. And after we shall have passed the Federal judges bill, there will come what is called the Liberia loan bill. We propose to go into the Treasury of the United States, despite its condition, and loan to Liberia $5,000,000, at a time when the people of the United States are bled white, when they are absolutely without money to initiate enterprises, and when the great reclamation projects of the West are standing as they have stood for the last seven or eight years. With the Treasury unable to meet the demands of our own people, it is proposed to go into the Treasury and loan $5,000,000 to Liberia.

Not a single one of the measures upon the program which is now before us but draws upon the people for an additional sum and weighs upon them in the form of additional taxation and increases the obligations of the Government not only by millions but by billions of dollars.

Mr. President, therefore, while I have sat here and listened to this debate, or while I have known that it was going on, I have not felt the impatience which I otherwise would if I knew that there would follow the tariff bill measures which would, in my judgment, afford real relief to the country. I ask our friends who are meeting at the headquarters of our leaders if there is a single item in this program that does not increase the taxes of the people of the country? Is there a single part or parcel of the program that does not increase the obligations of the Government? It is the character of the program which makes hesitancy and delay in the consideration of the tariff bill a virtue.

Mr. President, we know that there is already great discontent throughout this country, and when discontent is widespread it is never without justification. That condition is apparent in the United States and it exists throughout the world.

It is evident that the burden which governments continue to impose upon the people is becoming unbearable. It is getting, as it were, upon the nerves of the public. The first underlying cause in my judgment of the world-wide unrest, of the almost universal criticism which we hear against governments, is exorbitant and unconscionable governmental expenditures, and particularly the outlook that these expenditures are not being diminished to any appreciable extent. Indeed, I do not believe that the burdens already placed upon the people are so disturbing, so fruitful of dissatisfaction and discontent, as those burdens which present policies indicate are yet to come. The present demands are sufficient to take the people's earnings, but the proposed policies take away their hope for better days.

The protest upon the part of the people is now being manifested in this country and throughout the world. It makes itself known in strikes, through the ballot box, and finally in rioting and in bloodshed. The most prolific source of misery and crime is oppressive taxation, and when you stop to think of the load now carried by the masses, we can not be surprised at the disorder and lawlessness everywhere prevailing.

In some countries it seems to be believed that this discontent and hunger can be fed up on repression and executions. In other countries, particularly in our own, the belief seems to prevail that the remedy is in still greater appropriations, increased national obligations, and necessarily higher taxes.

Let us examine in detail the weight under which the people are now bending and also examine some of the proposed measures of relief, some of the schemes which would start new enterprises and find employment for the idle through increased appropriations and still greater obligations of government! We will find that the late Doctor Rathenau was not far wrong when, a few days before his unfortunate death, speaking of the economic situation in Europe, he said:

> Chained in our galley we hew one another to pieces, although it is our bark which we are rowing and our struggle on whose behalf it is set forth.

We are told from time to time that the situation is encouraging; that we will get relief by reason of the fact that there are large sums of money owing to us from foreign governments, a part of which we may get and the interest of which we will surely get from some of them. These statements make it important for us to examine the conditions in those countries from which we are to get interest or aid, as we are told, to relieve the constantly increasing burdens of this country. I take up first the condition of Great Britain.

Some time ago there was a budget committee appointed in England, having for its object the investigation of the expenditures of the Government and the increase of taxes in that country. It was known as the Geddes committee. It would be well for those who are interested in this subject to recur to the report of that committee and read it. The committee present about as gloomy an outlook for the economic and financial future of England as could possibly be conceived this side of absolute bankruptcy. I have not the report upon my table, but I have here a discussion of the subject by one of the leading members of the commission, Lord Inchcape, who was speaking to a conference gathered for the purpose of discussing governmental expenditures and taxation. This is what he said:

> It was up to the entire Nation to insist upon drastic reductions in public expenditure. If they allowed this vital issue of economy to be made the football either of party politics or of departmental pride and intrigue, they were done. * * *
>
> I felt that if expenditure and taxation were not reduced—
>
> I feel so now—
>
> that we should land ourselves in national and individual bankruptcy.
>
> * * * * * * *
>
> The Geddes committee, which, after six months of strenuous work, suggested economies of £87,000,000 in the public spending departments, told His Majesty's Government that another £13,000,000 could be saved without difficulty and without impairing the practical efficiency of the defense and administration of the country.
>
> * * * * * * *
>
> So we go on—
>
> Says Lord Inchcape—
>
> and, as far as can be seen, the revenue of the current year, even at the present rate of taxation, will not be equal to the expenditure. By juggling with figures and bringing into revenue realizations from the sale of surplus stores and ships, and by annexing the post-office surplus, which ought to be devoted to cheapening communications by letter, telephone, and telegram, the Government may be able to present a balanced budget; but what will happen in 1923–24, when they won't have the proceeds of sales of war materials to help them and when three years of low average of income tax will materially reduce the returns from that source, no one knows.

That is quite similar to the situation in this country. We have been able to make a showing which is somewhat encouraging by reason, I will not say of juggling of figures, as he says here, but, as the report of the Treasury Department itself says, by heroic effort, and by having at hand the proceeds of sales of war supplies, and so forth; but when we face the future those things must be eliminated, and within a short time we must face the proposition of meeting our indebtedness and our expenditures not by surplus war sales but by actual burdens upon the people.

Again, says Lord Inchcape:

> It is up to you; it is up to the entire nation to press for and to insist upon drastic reductions in public expenditure. If you don't, if you sidetrack this matter, or treat it as of secondary moment, then, in my judgment, you are done.
>
> * * * * * * *
>
> The wealth of the country does not belong to the Government. It is the property of the people, of those who have worked and saved, either for themselves or for those who are to come after them. * * *

How sound a statement; yet how heedlessly regarded by parliaments and congresses. This Government gets its money from the people. The money in the Treasury is money we have compelled them by law to pay over to the Government. If we should more conscientiously remember that, we would not deal so liberally with this money.

> I suggest to you that the first line of a country's defense, and of the defense of civilized life, is solvency. If a man's expenditure exceeds his income, if he is wise, he reduces his expenditure. If he is foolish, he goes on spending and borrows on his assets, pledging them for his loans, until he can borrow no longer, and then he is ruined. We are at the parting of the ways. We must reduce our expenditure and cease borrowing or we will come to grief.

Let me quote one more paragraph from this discussion:

> At present we are slithering down an incline plane of prodigality and indebtedness that will land us, unless we act promptly and resolutely, in the ditch. * * * If this goes on, our whole social and industrial fabric will go to pieces.

The report bears out the unhappy statement of this English statesman. I suppose some English politician might regard him as pessimistic, but my opinion is he was both wise and brave and also a patriot.

Mr. President, that is not the only feature of the tax situation in England which is of moment to us who are inclined to rely upon the interest upon the indebtedness which Great Britain

owes us to help us out. I find here a statement from the Outlook, of London, of May 7, 1922, which says:

On March 31, 1919, there were arrears of income tax * * * amounting to £55,000,000. In 1920 the figure had risen to £73,000,000. By 1921 it was £86,000,000, and this year it had reached the gigantic total of £110,000,000.

The condition of Great Britain is no different from that in many other leading countries. In other words, while expenditures increase, while outlays increase, the sources of taxes are drying up. Who is there that can say to the people of this country as we begin to legislate on this program which is to follow the tariff bill that a part of it will be taken care of by collecting from Great Britain her debt to us, or the interest upon it? The fact is that every dollar which we lay upon the people of this country for the next 10 or 15 years will in all probability be met by the people of this country alone, and there is no use blinking the proposition.

Let us look for a moment at the condition in France. France has her immense indebtedness and she is increasing it from day to day. Her sources of taxes are drying even more rapidly than those of Great Britain. I read here a statement from an ex-member of the French Assembly in which he says:

The new French budget, presented to Parliament by Mr. Charles de Lasteyrie, minister of finances, brings interesting precisions on one side of the problem. On the German side intelligent explanations are presented by Mr. Georg Bernhard, editor of the Vossiche Zeitung.

French taxes amounted to 5,000,000,000 francs in 1913. In 1919 they reached 9,700,000,000; these grew to 15,000,000,000 in the following year. For 1923 they will reach over 19,000,000,000 francs.

Five years after the war has closed, and after our antagonists have been reduced to practical helplessness, and after the signing of the four-power treaty, and after every appearance of peace, they have increased their expenditures from $15,000,000,000 francs to 19,000,000,000 francs for 1923. Then says the same writer:

The cost of living has increased by 300 per cent since 1913. French military expenditures compared to 1913 have grown by 266 per cent, while Italy shows an increase of 372 per cent, the United States of 340 per cent, and Japen of 332 per cent.

* * * * * * *

Thus we see, Mr. President, in these two great leading countries, whose indebtedness to us is very large, the constantly increasing expenditure, the constant increase of taxes, the constant decrease of returns of taxes or the drying up of taxes, and in all instances the rise in the cost of living and the constant increase of the burden of armaments.

I do not pause to survey the financial and economic conditions in other parts of Europe. Russia is in collapse; famine stalks her streets. In Germany the assassin's face haunts her public men and reparations dull the energy and blast the hopes of the people. Austria, Hungary, Rumania—why recount them, for we must know that bankruptcy is everywhere threatened.

Who could doubt what effect these conditions have upon the great mass of the people? Is there any surprise that there is discontent, not only throughout those countries but spreading into all other countries adjacent thereto? The fact is that the constant increase of governmental expenditure has reached the point where it breeds revolution. Everywhere men are denouncing or criticizing their governments—here and elsewhere. The people's faith and the people's patience are nearing exhaustion.

It seems to me, under these conditions, that the first and prime duty of a party which has the future of this country in its charge is at all hazards to refrain from increasing these obligations, these expenditures, and if possible to decrease them.

Now, Mr. President, let us look for a few moments at our own country.

We have at this time an indebtedness of about $22,000,000,000. Our Budget is running from $3,500,000,000 upward. According to the report of Mr. Mellon, the Secretary of the Treasury, the sources of taxes in this country are drying quite as rapidly as in Great Britain. We have a deficit for 1923 estimated at $500,000,000. That is the situation presented to us, not as a speculative proposition but by actual figures. At the close of the Civil War we had an indebtedness of about $2,674,815,356. By 1915 we had reduced the indebtedness of the Government to $1,090,148,006. In other words, during the space of 50 years we had reduced our public indebtedness something over a billion dollars. If we are to judge the future by the past, we now have an indebtedness which it will take us more than a thousand years to lift, to say nothing of the constantly increasing burden in the way of increased taxes from year to year by reason of the increased budgets; and it is proposed, in addition to that which we already have, to lay on an extra indebtedness, which I am going to discuss in a few moments.

Mr. President, the time may come, and in my opinion it is very likely to come, when the United States will have to stand, as it were, at the Marne on this question of preserving financial civilization. The time may come when our reserves, economic and financial, will have to be called upon as our reserve of man power was called upon in 1917, and it behooves the American people and the American Congress to prepare for that as we prepared for the great conflict which confronted us in 1917. The nation which will lead in the future, which will control and dominate, will not be the nation of armies, not the nation of navies, but the nation of economic power, of prosperity at home, of financial reserve, of means to take care of those things. It behooves us, therefore, not only by reason of the call which will be made upon us here in this country but by reason of the condition which surrounds us throughout the world, to conserve and reserve all the economic and financial power that we have in order to meet that exigency when it comes.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me to interrupt him to make a suggestion, if we had owed $22,000,000,000, as we do to-day, when the war broke out in 1917, it would have been financially impossible for us to have put 2,000,000 men in France.

Mr. BORAH. I quite agree.

Mr. UNDERWOOD. The weakness is evidenced as much in financial weakness as it is in loss of man power.

Mr. BORAH. Quite so. There is another element to which I want to refer in connection with this, and that is the constant outlay for armaments. I have on my desk here the figures of the increase in the budget of France for 1923 for armament. Both war and navy appropriations are increased over this year's budget, the former 234,000,000 francs and the latter 323,000,000 francs. This is under date of May 16, 1922. In other words, notwithstanding the financial situation in France, for some reason unexplained, or not understandable, at least, by the outside world, she is increasing her army and her navy outlay over that of 1922.

Let us make a comparison with our country. For 1916, the year we started the large naval building program, we expended $154,727,556.36 for the Navy. For 1923 we have appropriated $328,000,000, in round figures.

The total appropriation for the Army in 1916 was $170,836,324.69. In 1923 it was $320,000,000. A like increase could be shown with reference to England.

I have called attention to this situation, which may seem somewhat irrelevant at first, but I am coming to the proposition of what should be the attitude of the American Congress toward these obligations which it is proposed we shall incur.

I look upon it somewhat in the light as if we were preparing for actual war. I think to drain our resources, to burden our people, to increase our obligations at this time is shortsighted, to say the least. It may be disastrous. It is a time when every citizen should feel toward his Government and its expenditures just as he would feel toward his Government if he knew that an outside enemy were threatening. Every man and every citizen should be willing to make the sacrifice, to economize, to deny himself or herself the same as we did during the Great War. There can be no possible doubt as to the task which confronts us, and there can be no doubt but what it will call for all we have under our control in order to meet it.

Notwithstanding that fact, Mr. President, we are told it is proposed as soon as this bill is out of the way to take up the ship subsidy bill. I am not going to discuss that to-day. I propose to do so in the near future. But it will be a drain upon the Treasury; it will establish a vicious system of tax exemption; it will not grant relief, and it will burden the future, in my judgment, quite as much as it would to actually vote bonds or obligations of the Government.

Secondly, we propose to take up what is known as the soldiers' bonus bill. I am perfectly well aware that both sides of the Chamber are in favor of that proposition to a large extent. We are now paying out over $1,000,000 a day for the disabled veterans; about $436,000,000 for this year will be paid, more than a million dollars a day. If we calculate the obligations which we owe to those men—and if they are disabled it is an obligation which we must meet at whatever cost—it will cost this Government, upon the ratio that it cost us after the Civil War, in the next 50 years over $65,000,000,000. Some estimate it higher. But, add that to the $22,000,000,000 which we already owe and the immense Budget which we have, and you have about all that the American taxpayer will be willing to carry during these coming years.

But it is proposed out of hand to lay upon the American people at this time an extra burden of from four to six billion dollars, almost twice as large as the debt which we had at the close of the Civil War; and if we pay it in the same way and at the same rate that we paid the debt after the Civil War, it will take us 250 years to pay off the debt which we propose to lay in a few weeks for the purpose of meeting this supposed obligation.

Mr. President, the discussion heretofore of this bonus measure has ranged principally about the present condition of the Federal Treasury and the immediate burdens of the taxpayer. These are matters of vital concern. But it must be apparent from the whole situation that underlying this question is a deeper problem touching not only this particular measure but the whole trend of legislation and the entire policy of reconstruction. The Treasury may run dry, but if the pride and the energy and the manhood and the womanhood of the Nation remain, it will again be replenished. The immediate burdens imposed by heavy taxes may sterilize industry and press down upon labor, but if faith in the Government and confidence in its policies remain, business in time will revive and labor again enjoy its rightful heritage. Language is inadequate to portray what a people will endure in the way of fiscal burdens so long as they believe that the policies obtaining are just and wise. But when a people begin to lose confidence in the wisdom and permanent policies of a government, it is time to look deeper than the mere significance of a pending measure.

The bonus measure is but a single expression of what seems to be a deep-rooted tendency—a tendency born of feeble policies and irresolute leadership. If this measure stood alone, if it were single in its import, we could look upon it with less concern. It is conspicuous, however, only because of the amount involved; there are any number of measures pending before the Congress of the same general nature. If you care to search the files of the Congress or survey the activities of State legislatures, you will no longer doubt the peril which confronts us as a people.

There are measures enough before the Congress, and lately in State legislatures, to bankrupt this, the richest Nation on the globe. If all the money were appropriated which, by bills, has been suggested, or if all the debts were created which such proposed measures would entail, it would place a mortgage upon the brain and the energy of our people which a thousand years could not lift. No statistician whom I have been able to find can tell us to-day the amount of indebtedness in the world. They approach with some supposed accuracy the debts of the different governments, but when you seek to tabulate the debts of the subdivisions of governments and then the private debts, the human mind staggers and computation breaks down. This fearful load resting like a blighting mildew upon the aspirations and the hopes and the energy of the people everywhere is now being increased at a rate which benumbs calculation. Even in this comparatively new land of ours we have reached already the era of embargoes, subsidies, gratuities, bonuses, and finally that sinister invention of American politics—50–50 between the States and the Government—that is, the States will exploit the taxpayer for 50 per cent and the Government for the other 50 per cent, thus dividing responsibility and augmenting extravagance, unmindful, apparently, that while the taxing power are two, the taxpayer in both instances is one and the same. The great task of legislation to-day is to ascertain how one class can benefit at the expense of another class—the taxpayer always the victim.

Mr. President, in times of adversity, in a severe economic crisis, a people, like individuals, must recur to first principles, return to the simple homely virtues, the only secure basis for either individual prestige or national power. Two roads were open to us and to all the world at the close of the Great War—that of waste, extravagance, taxes, and debts or that of economy, frugality, work, and self-denial.

The former leads inevitably to increased worry, greater misery, and ultimate ruin; the latter to contentment, prosperity, and strength. So far we have chosen the former course. When we have heard of unrest or political discontent, we have readily and generously tendered an appropriation. When the taxpayer has protested too earnestly, we have bravely put the burden upon posterity. Like economic cannibals, we are preying upon one another, and, going the cannibal one better, we are now preying upon our children and our children's children. Prosperity we assume is to come, not through individual sacrifice and individual effort, through self-exertion and personal initiative, but through the open door of the Public Treasury. Although the sources of taxes are drying up, yet those who are not making their way from the Public Treasury with what they could get are wending their way toward it to see what is left. If I were going to open the Treasury to any people, or if I were going to support a continuance of this policy, I would not turn the soldier away. But the road over which we are traveling means industrial distress and ultimate disaster from which the soldier himself can not escape. People simply can not and will not much longer carry the load which we are imposing upon them. We have already tested their patience to the breaking point. The multitudes, it has been said, in all countries are patient to a certain point, but no statesman has ever yet been wise enough to foretell the particular point at which that patience ceases.

I grant you that if this policy is to continue there is no argument by which you can exclude the American soldier from participating in its temporary advantage; but it should also be said that there is no logic by which you can exclude him from its permanent disadvantages. No one is more deeply concerned in getting back to right principles and sound policies than these young men. No one is more vitally interested in the future welfare of the country. The unwisdom of the course we are now pursuing will fall more heavily upon these young men and theirs in coming years than upon those who are now in places of authority. It may be vain in this mad hour of political exigency and reckless appropriations to urge these views, but the inevitable hour will come when the soldier himself will regret, deeply regret, he ever consented to become a part of any such scheme. It may be idle—it may even be thought presumptuous—at this time to speak for a different standard, but I doubt not at all that in later years the soldier himself will rue the heedless hour when he exchanged a noble heritage for less than a mess of pottage. The thing which he gave, and stood ready to give, was without money and without price. The thing which he earned, the glory which was his, transcends the miserable values of the market. He does not rightfully belong in this futile scheme to rebuild civilization and reconstruct a bankrupt world through subsidies, bonuses, appropriations, taxes, and debts.

You will all recall the uneasiness, the anxiety, with which we followed the American soldier across the sea and onto the battle line in Europe. He had been hurriedly called from the farm and the workshop, from school and college, and, practically unseasoned, undisciplined, and untrained, sent forward to meet the ordeal of war. His countrymen awaited the result with mingled feelings of fear and faith, and the whole world speculated on how he would meet the test.

We were told that this would be the real test of democracy—could a republic devoted to peace stand against the onslaught of centralized and thoroughly trained and highly militarized powers? We all know the result. The pride and the exultation we experienced over those first encounters of our troops no tongue can tell. They had met the test. They had vindicated our whole theory of government. They had justified our standard of civilization. They had checked and were soon to turn back the armies which had brought three great nations to bay. They had demonstrated that there was something after all higher and more masterful than sheer force—than mere organization. Behind the gun was character. Behind the weapons of destruction was unbought, unpurchasable love of country. Such service, sir, is the only security a republic can ever know. Such service spurns the idea of compensation, eludes all estimate, and defies the sordid rules of arithmetic. Let those disposed to do so trifle with the future by attempting to write across this glorious record "adjusted compensation."

But stern as was the task of the American soldier in war and unstinted as was the praise he won, a yet more inexorable obligation and a great opportunity awaited his return to civil life. The course which we are now pursuing will prove in the long run more dangerous to our Government than a foreign foe. A proud, strong nation may suffer a reverse in arms, but time may still find it triumphant. An independent and self-reliant people may be overcome by the fortunes of war, but time fights on their side to final victory. But a nation whose citizenship has been drugged and debauched by subsidies and gratuities and bonuses, who have surrendered to the excesses of a treasury orgy, has taken the road over which no nation has ever yet been able to effect a successful retreat.

Before we can come back as a people we must change our standards and adopt a different policy. Who will set up the new standards? Who will contend for the new policy? If these young men fail to do so, where shall we look for leadership? If great tasks and great opportunities be the things for which strong men yearn, this is the most coveted hour in the whole history of our Republic. The glory of Flanders Field and the deathless courage of Chateau-Thierry will not surpass

the glory and the courage of the young men who see their duty and do it now.

The Great War threw back upon society its most stupendous task. Nothing like it in all the history of the world. The whole social and economic fabric had been shaken from center to circumference. Many of the most sacred traditions of the race, some of the most precious rights of the citizen, seemed imperiled. Old precedents were discredited. New policies were now at hand. To the ordinary citizen the world seemed steeped in debt, the future filled with drudgery and toil. It was a stricken world—hunger, disease, crime, suicide, insanity—stricken, it would seem, by one to whom alone vengeance belongs. But in spite of this fearful catastrophe the people bore up, carried the load with marvelously little complaint—carried it because they were promised on all hands and from every quarter by all political parties and all public servants that there was to be a new and nobler era in governmental affairs. Their interests were to be zealously guarded, sympathetically and vigilantly protected. We were all to cooperate to lift the load and lighten the burden. Are we keeping the promise made? Are we fulfilling the pledge? Are we lifting the burden? The faith of the citizen is after all the sole source of power in a free government. To destroy it is the most reckless offense of which the public servant can be guilty.

Is there any doubt, Mr. President, that there is a political revolution on in this country? We may not feel it in all its effects in Washington, but it has reached here to some extent. The people are resentful of the fact that the promises to lift the burden have not been kept. They are striking at men in office, in power, in order to reach systems and policies and programs. Business men are borrowing money to pay their taxes. I have examined the lists in 10 of the great agricultural States of the Union and thousands of farms are for sale for taxes. While this condition confronts us, and while labor is dissatisfied and the farmer is discontented and business discouraged, we propose without hesitation, it seems, to lay upon the American people an additional burden of from $4,000,000,000 to $6,000,000,000.

The Republican Party is now in power. Others may vote with the party to lay on these increased taxes and burdens, but the responsibility is fixed and inescapable; it is with the party to whom has been intrusted the reins of authority. For the sake of our common country, for the sake of peace and happiness among the millions who must bear the awful load, who can not pass it on, will not the old party of so many noble victories rise to meet the occasion and stop once and for all this orgy of extravagance, this saturnalia of expenditure, until the people can redeem our country from discontent and strife and bring it back to prosperity and power?

Mr. STANLEY. Mr. President, I wish most reverently to turn just for a moment from the graphic picture painted by the truly great Senator who has just addressed us, great not only in his prescience and vision but in his superb courage in speaking the truth no matter whom it hurts, in hewing to the line in his own party or in mine, letting the chips fall where they will, in his masterly denunciation of the most abominable heresy in all political economy, the pernicious delusion, that by the jugglery of taxation we can increase wealth by taking it, that we can lift the burdens from the backs of a people by increasing them, that we can add to their independence by making them pensioners and parasites upon the Public Treasury instead of depending upon their own initiative and their own energy.

I would turn from that vivid picture he has just painted, one which I shall remember with delight as long as I live, to a country under a patriot and a sage who believed that governments were made for men and not men for governments, that the source of wealth was in labor and not in law. In his last inaugural Thomas Jefferson used these remarkable words, which now find their echo in the clarion tones of the Senator from Idaho [Mr. BORAH]:

At home—

Said Jefferson, in his second inaugural—

fellow citizens, you best know whether we have done well or ill. The suppression of unnecessary offices, or useless establishments and expenses enables us to discontinue our internal taxes. These covering our land with officers and opening our doors to their intrusions had already begun that process of domicilliary vexation which, once entered, is scarcely to be restrained, reaching successively every article of produce and property. * * * It may be the pleasure and pride of an American to ask what farmer, what mechanic, what laborer ever sees a taxgatherer of the United States?

The ardent hope of the Senator from Idaho may yet find its realization when God in his goodness gives another Thomas Jefferson to this distracted and plundered country where greed, folly, and fanaticism rule supreme for the hour and the hour only.

Mr. McCUMBER. Mr. President, a moment ago all was darkness and gloom, but this moment God's sunlight is shining above us. I still have faith in humanity, that in some way it will find the pathway cleared for the future and that the sons will be worthy of their fathers. In that faith I think that we can go on with the business of the country in the confidence that all of the wisdom, all of the greatness on the face of the earth is not behind us, and none gleaming to-day to lighten our pathway.

Mr. President, the world has met conditions before. The country has met conditions perhaps not quite as dark and gloomy as they appear to the Senator from Idaho to-day, but conditions which, measured by its ability to meet them, were far more burdensome than those which are imposed upon our shoulders to-day. The Senator from Idaho looks with apprehension upon the slightest increase in the indebtedness that we are to meet next year. Why, Mr. President, notwithstanding the fact of the mighty obligations that were imposed upon us at the close of the Great War, notwithstanding the fact that we did not at that time half realize the burden that had been placed upon our shoulders, within the last few years we have reduced our national indebtedness more than three and one-half billion dollars. We shall meet our future obligations. Though the outlook may at times seem somewhat dismal, I have no fear that with our mighty resources, many of which are scarcely half developed, we shall fail to have the courage and the intelligence to meet those future obligations as we have met our obligations in the past.

Mr. BORAH. I quite agree with the Senator that we shall meet them if we thoroughly understand them; but will the Senator tell me how we obtained the money to pay $3,500,000,000 of our indebtedness?

Mr. McCUMBER. I suppose we got it from taxation.

Mr. BORAH. We did not; we got it principally from selling surplus war materials.

Mr. McCUMBER. Yes; we sold a little of war material, but we did not get all the money from that source.

Mr. President, even the Underwood tariff law is bringing us in a revenue for which we did not look. In anticipation of a heavier tariff the goods began to come into the country as rapidly as the ships could bring them here and demand could be made for them. Instead of our customs revenue under the pending bill being $350,000,000, it will probably reach $400,000,000. The Actuary of the Treasury Department in his first estimate of the receipts from the revenue law of 1921 for the fiscal year 1922 came within $1,000,000 of absolute accuracy, and in the estimate which he is now making as to the future revenue to be derived from the proposed tariff law which we have before us he estimates now that it will run nearer $400,000,000 than $350,000,000.

Mr. President, conditions are not quite so gloomy as some might imagine after listening to the most eloquent address of the Senator from Idaho. We sometimes acquire exaggerated ideas and notions as to the real situation in the country. For instance, the Senator stated that the bill providing for the soldiers' adjusted compensation would cost from four billion to six billion dollars. The Actuary of the Treasury, in whom I have the greatest confidence, after the most thorough investigation of the probable draft upon the Treasury to be made by the compensation bill, estimates that about $3,800,000,000 might possibly be paid in 40 years. The country will grow, Mr. President, in population and in wealth during the next 40 years, and, in my opinion, if we are owing an honest debt to these men we ought to pay them even if it causes a little drain upon our pocketbooks. God knows those who have remained at home made enough here in the United States while they were serving their country without added compensation to enable us to pay forty times over the debt we owe them. I do not think we ought to complain if we are called upon to divide a dollar here and there, when we made thousands of dollars, in order to adjust the compensation of the men who fought our battles. I can not quite understand how Senators can stand here and vote for a good roads measure that will cost $125,000,000 in a single year and yet feel that they are committing an offense against the country if they vote for a bill which will require an appropriation of only $78,000,000 for our soldiers during the next year.

Mr. KING. Mr. President, will the Senator from North Dakota yield?

Mr. McCUMBER. I yield to the Senator from Utah.

Mr. KING. The able Senator from North Dakota has just made the observation that if we owe the soldiers we should pay them; that we should pay our honest debts. The impli-

cation was that we owed the soldiers, and therefore should pay them. I should like to ask the Senator what standard he has invoked in determining our monetary obligation to the soldiers; and, if he has invoked a monetary standard, how is he satisfied with the moderate sum which he has stated of three billion five or six hundred million dollars?

Mr. McCUMBER. Mr. President, if the Senator from Utah were an autocrat, as he is not, and if he had two men working for him whom he was paying $3 a day, and he said to one man, "Shoulder your gun, fight my battles, go down to death, if necessary, and I will continue your pay at $3 a day," and he told the other, "Stay at home out of danger and help me furnish materials to your brother who has gone to war, and I will pay you $9 a day for doing that, but, as I have not got that extra $6, I will borrow it and turn it over to you, and you will have to give me your note and you will have to sign to that note the name of your brother who is over fighting my battles." The man who was sent to battle would not get one penny of the increase of $6 a day, but when he came home he would have to shoulder the obligation. Now, I insist that there is something to adjust between those two men.

Mr. KING. If I understand the Senator's position, he puts it on the basis of a day's work?

Mr. McCUMBER. I do not care on what basis it may be put. In the eyes of some it may be based on the day's work of those who labored, but more appropriately on the enormous profits of those who were contractors and who bled the Government white and then levied that indebtedness in the form of a great bonded debt on the shoulders of future generations. It matters little how it came about; the fact is that when the soldier came home he found that his brother coworker had participated in all of these advantages, had reaped the higher wage, had enjoyed enormous profits, and then left the debt for him to pay. I say, yes, there is an obligation.

I support the adjusted compensation measure upon the theory that there is a moral obligation, and if it were an obligation resting on individuals instead of a nation any court of justice on the face of the earth would enforce an accounting that would give to the soldier something like fair and equal compensation with his stay-at-home brother. We do not all look at this matter of the soldiers' compensation in the same light, and I have no quarrel with those who take a different view. I justify myself because I feel that there is justice in the soldiers' claim.

Mr. President, I do not believe that we are all going to the bow-wows because of our extravagance. It is a bad element; it was incident to the time of the war when money was free and flowed like water. It takes a nation years to reform its extravagant methods growing out of war; but we are bringing about that reformation not so rapidly as the Senator from Idaho and I would like, but we are retrenching, and we will continue to do so, and we will pay our honest debts while we are doing it.

Mr. President, I realize that it is rather discomforting to listen to an eloquent address upon great national and world issues and then be compelled to drop down to dry fish, pickled and in brine, but that is the practical situation; we have got to meet it; we have got to get back to our dried fish and do something with it. I am not going to make a speech on the tariff bill in general; I think we ought to give our attention to the particular schedule before the Senate, but I want to answer one statement which has been iterated and reiterated here again and again, but which is erroneous.

The committee has not been frightened into reporting any lower rates, nor has it been frightened into increasing any rates by anything which has been said in the Senate. One might think from the arguments on the other side of the Chamber that the committee had reported changes after Senators on the other side had discussed the schedules. We did not make one of the changes after they had discussed them. We had occasion when we reported the bill in the first instance to say that conditions as to values were chaotic throughout the world. We admitted the almost impossibility of making a rate to-day which we were certain would be right to-morrow. So we stated fairly and openly that the committee would continue in session every day and that we would report from time to time such amendments as new conditions as disclosed by new sources of evidence would justify. We have followed that rule; we will continue to follow it to the very end. On the whole, such amendments as the committee have reported have been downward. Why? Because I think the low cost of production has reached its limit in the Old World and is going upward, while on this side of the Atlantic the high cost has reached its limit and is going downward, and as these two extremes more closely approach each other we need a different rate to be fair and just and sufficient, with all, to take care of the difference in the situation.

We will meet the conditions which develop as we go along with these schedules, and we will raise rates if we think we ought to raise them, and we will lower them if we think they ought to be lowered; but I want to say with reference to the tariff in general as it appears to-day that, measured by the spread between foreign production and sales and sales of comparable articles in the United States, this tariff bill gives a less rate of protection than any other Republican tariff bill that has been passed in the last 50 years.

When we impose a duty on wool of 33 cents per pound upon the scoured content we are compelled to give a compensatory rate to the manufacturer of woolen goods. That we have done, and have gone no further than the compensatory rate plus a very small protective duty, less than in previous tariff bills when we compare the difference between wages of the competitor, wages on this side of the ocean, and the other elements that enter into a determination in the competitive field.

Mr. President, I hope now that we can go on with our tariff bill. We will vote upon the cloture matter to-morrow; and if it is defeated we will, of course, go on in our patient, long-suffering way and hope some time to bring the matter to a final decision.

Mr. SIMMONS. Mr. President, I dislike very much to interfere with the return by the Senator from North Dakota, as he desires, to the pending schedule of the bill; but I feel compelled to make some observations upon the pending motion upon cloture. While I am hardly physically able to speak this afternoon, I am constrained to do so, because I fear that if I defer it until to-morrow I shall not have an opportunity during the only hour that is set apart before the vote.

Mr. President, before I approach the question of cloture I want to say that I am quite sure that the Senator from North Dakota was correct in his statement a little while ago with reference to the changes made by the committee in the tariff bill, so far as he is personally concerned, that nothing has been done through fear. The Senator from North Dakota is one of the boldest men I have ever known in public life, and I am sure that, personally, he does nothing through fear. I am also sure, and I want to say it now because I feel it, that there is not in public life to-day a more upright and a more independent statesman than the able Senator from North Dakota; and there is nobody in this Chamber who will personally regret more than I shall, when his term expires, to part with him as a colleague in the Senate.

Mr. President, I propose merely to talk about this cloture motion this afternoon and shall not, if I can avoid it, speak upon it in the usual way in which we speak in this Chamber.

The Senator from Minnesota [Mr. KELLOGG] saw fit in his remarks this morning to indulge in some criticisms which I take as rather personal to myself, because they referred to the distribution of the work on this tariff bill upon the floor of the Senate among the members of the minority of the Finance Committee, assisted by certain other Senators upon this side.

The Senator was severe in his characterization of the purpose of that distribution. He attributed it to a desire and an intent upon this side of the Chamber to prolong the discussion and to take up unnecessary time in the consideration of the tariff bill.

I desire to assure the Senator from Minnesota—for he is my friend, and I would say nothing offensive to him—and I want to assure the Senate and the country that nothing was further from my thought in making this distribution as ranking member of the minority of the committee than the motive assigned to my action by the Senator from Minnesota. As chairman of the Finance Committee during the Wilson administration when we brought in the Underwood bill and presented it to the Senate, I realized then, as I have realized in the consideration of this bill, that I then as chairman and now as ranking member of the committee, would not be able alone to give to all the items of these bills the consideration and attention necessary to an intelligent and an adequate understanding of them in order to present them to the Senate and the country as they should be presented; and at that time I hit upon the plan of distributing the schedules among subcommittees of the minority, and I found that the plan worked admirably. When this bill came in, after consultation with the other members of the minority, it was decided that the same course should be again pursued. The object was not, as the Senator seems to think, to prolong discussion, but it was to curtail discussion by a better and more thorough grasp of the individual subjects to be discussed. I think my plan has again worked very well.

Mr. President, I do not wish to thresh over old straws, but I submit that if there is a proper understanding of the situation which confronted the minority with respect to this bill it will not be believed or thought that we have taken more time than

has been reasonably necessary to accomplish the object that we set out to attain—that of giving the country and the Senate our viewpoint with reference to the various taxes imposed in this bill. The Senator from Ohio [Mr. POMERENE] this morning interrupted my good friend the Senator from Minnesota [Mr. KELLOGG] when he was discussing the number of amendments that have been already discussed, and comparing the amendments in this bill with the Senate committee amendments of past tariff measures, and the time that had been taken in the discussion of this bill as compared with the time that was taken in the discussion of former bills, with the statement that this particular bill had taken longer in all of its stages than the Underwood bill or any other tariff bill; that it had taken longer in the Committee on Ways and Means of the House than any other; that it had taken longer before the Committee on Finance than any other; and he added that it carried 2,000 amendments, or something over three times as many amendments as were contained in the Underwood bill.

Mr. President, he might have added and still have been within the limits of truth that this bill contains a larger number of amendments than all the tariff bills that have been passed by the Congress since the Civil War taken together.

I have not made an exact calculation, but calculating as far back as I have personal knowledge of, and getting some information in regard to events even further back than my personal knowledge goes, I am quite sure that if I am not altogether within the limit of accurate statement I am very nearly within the limit when I say that this bill carries more amendments made by the Senate committee than all the other tariff bills together that have been before the Senate since the Civil War. If the Senator from Alabama, who has great experience and information in these matters, thinks I am incorrect in that statement, I would be very glad to have him correct me.

Mr. UNDERWOOD. As far as my knowledge goes, the Senator is correct.

Mr. SIMMONS. Mr. President, it is admitted that we have now been discussing this bill as long as we discussed the Underwood bill, and we have acted upon as many amendments already as were attached here to the Underwood bill. We have acted upon 700 amendments already, and I do not think the Senate Finance Committee made quite 600 amendments to the Underwood bill. But outside and independent of the number of committee amendments, I want to call the attention of the Senate to the fact that there is a radical difference with respect to the time which would reasonably be expected to be taken in discussing these amendments and the time spent in discussing the amendments to past tariff bills, especially the last two tariff bills.

The rates in the Underwood tariff bill were based upon a definite policy. Those rates were levied for the purpose of raising revenue. It was an easy matter to test those rates and determine whether the subject under consideration was one upon which a revenue duty might with propriety be imposed. It was easy to determine whether the revenue duty imposed was too great or too small to carry out the general policy upon which the bill was framed. Hence, Mr. President, not much discussion, not much investigation, not much statement of facts were necessary in connection with the discussion of those amendments.

The Payne-Aldrich bill was based, or was supposed to be based, upon a definite and specific policy in the fixing of the rates. It was based upon the Republican theory of the difference in the costs of production here and abroad. The Finance Committee which prepared that measure had investigated those differences and ample data had been furnished the Senate by which we might easily and readily determine and test the adequacy or the inadequacy, the justice or the injustice, of the rates by the principle upon which they were laid.

But when we approach this bill we find that a different situation exists. It is not a bill framed upon revenue principles. It is not a bill framed upon the difference in cost of production here and abroad; it does not pretend to be either. Its sponsors and advocates do not claim that it is. They admit frankly that they sought no such information and got no such information. It is framed upon the theory of the difference in the selling prices of the foreign products and the American products; and it has been disclosed in the course of these discussions—practically not denied; indeed, virtually admitted—that the committee is not itself in possession of the necessary information to enable it to determine whether the duties correctly measure the differences or not.

There was no governmental investigation of that question or of the factors in that problem. In most instances the committee took the statements of witnesses personally interested in the subject matter as to one or the other of these essential factors in making that determination; and then, when the committee brought in its bill, it furnished us with books claimed to contain information necessary to enable us to test these duties; and yet, when you turn to those books, I defy any Senator to point out, in the summaries which are given with reference to the 2,000 amendments in this bill, any data or any information at all adequate, indeed, or of consequential importance, in connection with the very fundamental questions lying at the basis of the rates. That is a vital thing that is omitted.

We could not discuss these rates, we could not test these rates, until we had sought and found these essential data in the best way we could and presented them to the Senate for the first time, because they were not to be found anywhere in the published evidence or the published statements of the committee.

Mr. KELLOGG. Mr. President, so far as cost of production in Germany is concerned, the Senator has not produced anything except the sale prices, nor can he.

Mr. SIMMONS. So far as the committee was concerned, when it dealt with Germany it undertook to determine everything by the wages paid, or which were alleged to be paid, to German laborers, with full knowledge of the fact, I assume, because they ought to have had knowledge of the fact, that in Germany in very many instances the labor costs, for purposes of comparison, can not be ascertained by the amount of wage paid in one country or the other. We have not been able to get the information in many instances, but we have tried the best we could to get it; and the point I am making is, not that we had to shuffle about to get information but when we got the information it took time to present that information to the Senate, because the Senate did not have that information——

Mr. KELLOGG. Nobody could get the information.

Mr. SIMMONS. The Senate did not have it, as we have heretofore had the essential information to enable us to test rates as it appeared in the published statements of the committee.

I contend that if you take into consideration the difficulties under which we have had to labor, and these differences in conditions, we have done a very remarkable thing in having been able to discuss as many of these amendments as we have discussed. I concede that we have discussed a greater number of these items specifically than is ordinarily done in the case of a tariff bill, but we were considering a bill framed upon a new principle, and the minority of the committee was entirely satisfied that the rates levied by the committee were ascertained in a most haphazard sort of a way, and that it was our duty to the people of this country, and to the Senate, not only to investigate but to bring facts before the Senate and the country which would enable Senators and enable the people to test these rates for themselves. That has been our labor.

I know we have passed tariff bill after tariff bill when the discussions have not been sufficient to enlighten the people at all and when the law was finally enacted without the people knowing what was in it. We would have been derelict in our duty if we had permitted that to happen under the circumstances which now environ us. We have tried to carry the information to the people, and we have succeeded, with the aid of an efficient press that felt about this matter just as we felt about it and that from the beginning up to the present time has given us most helpful and most cordial cooperation.

For the first time in the history of this country, I want to say, the people of this country, even those living in the remote sections, not only the city people but the country people, are reading real facts about a tariff bill, because the papers are publishing facts about it and are discussing it intelligently. The people are reading about it. They are beginning to understand it as they never heretofore have understood a tariff bill, and I say now, from my experience in mixing recently with people living out in the country, where I myself am living, I have never known the people to be as well informed as to what a tariff bill meant to them as they are to-day with reference to what this bill means to them, and when you charge that the time we have devoted to bringing to the people the knowledge of what this bill means has been wasted you are speaking far wide of the mark.

If you do not appreciate the value of these discussions and the information that has been disclosed and carried far and wide throughout the country to the people of this country, to the people who have to pay the taxes, let me tell you that the people of the country appreciate it. You may think it has been time wasted, but the people of the United States do not think so. The people of the country and the press of the country think that no time has ever been occupied in the Senate of the United States to better advantage in the interest of the people

than the time we have taken to expose this measure in those particulars in which it is so unjust and unfair to the taxpayer.

Mr. President, I know there has been a great deal of extraneous talk during the seven weeks we have been discussing this measure, but there never have been seven weeks when the Senate was in session when there was not just about as much extraneous talk as we have had during the consideration of this bill, which has come about equally from this side and the other side.

Some Senator—I do not recall just which one—undertook a little while ago to present a catalogue of the number of hours which have been taken up on this side of the Chamber as compared with the number of hours which have been taken up on the other side of the Chamber in the discussion of this bill. I do not know, nor do I care, about the number of hours. I suppose we have taken more time, because we were the protesting parties. First we took upon ourselves the laboring oar. You were willing to sit in your seats and say nothing. You were willing to rely upon the party votes you have.

We were dissatisfied with the bill. You were satisfied with it. The burden of pointing out its inequities and its iniquities fell upon us. Necessarily we took the greater amount of time. But more important than that, when you come to comparing the number of hours taken upon the two sides, is the fact that when we were discussing the question item by item and paragraph by paragraph, trying to get information from those on the other side of the Chamber, and being unable to get it, trying to induce Senators on the other side of the Chamber to discuss it with us and were unable to do it—while we were engaged in that effort for three long weeks, Senators on the other side of the Chamber, following the lead of the members of the committee, sat practically mute in their seats and refused either to give us information or to join in discussion with us, and gave us to understand that if anything was to be done here except to vote and record the majority on the other side it must be done by this side without any help or answer from the other side of the Chamber. Of course, under those circumstances we have consumed a greater amount of time than those on the other side of the Chamber have consumed.

Mr. President, I do not think there is a man in the Senate who is more earnestly and more sincerely anxious to get through with the bill than I am. For more than a week I have been thoroughly exhausted and thoroughly worn out with it, physically unable, even when I wished to do so, to discuss it. I want to see it finished, not only for personal considerations but for public considerations. I agree that it ought to be passed as speedily as it can be done with justice to the people who are entitled to know the taxes that are being imposed upon them. I sympathize with the desire of the majority to expedite action. So far as I am concerned—and, I know, so far as my associates on this side of the Chamber are concerned—that within the limits of our convictions as to our duty in the premises we are just as anxious as those on the other side of the Chamber to curtail the discussions and finish with the bill.

I do not know whether you expect to be able to command a sufficient number of votes to adopt the cloture rule or not. If I were looking at the question of cloture purely and simply from a partisan standpoint, I would bid you Godspeed in your efforts to adopt it. I think it would be the end of your party, so far as success in the next election is concerned. I think it would be the most egregious blunder, if it could be carried to success, that a political party ever made. But, Mr. President, I do not look at it from that standpoint. I look at it from the standpoint of the public interest. Looking at it from that standpoint, I feel it my duty to interpose all the efforts within my power to defeat the scheme.

What would it mean? It would mean that for the first time in our history cloture had been applied to a measure containing thousands of provisions imposing taxes upon the American people, and in this case taxes which, together with the incidental increase in prices which would have to be paid by the people, would place a burden upon the American public amounting to billions of dollars, not only during this year but throughout the life of the measure.

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. SIMMONS. I yield.

Mr. KELLOGG. Did not the Senator apply for cloture in 1917, and after a cloture rule was presented make an agreement to vote on the tax bill?

Mr. SIMMONS. I do not remember. I do not recall whether I made the agreement or not.

Mr. KELLOGG. I think the Senator presented a cloture petition.

Mr. SIMMONS. No; I have never presented a cloture petition. I have presented a great many unanimous-consent requests, but I never have presented a cloture rule. We have had unanimous-consent agreements with reference to all sorts of bills, and under those agreements we have made arrangements with reference to the division of time and the amount of time and all that sort of thing, but that was a matter of agreement, that was a matter of unanimous consent, that was an agreement which was so adjusted and arranged that everybody was satisfied and everyone had all the time that he felt was necessary to enable him to discharge his duty to his constituents and to his country.

Mr. KELLOGG. In one of those cases the agreement was not made until after the Senator had presented a petition for cloture.

Mr. SIMMONS. I do not recall that. Does the Senator mean on a tax bill?

Mr. KELLOGG. Yes; I think it was.

Mr. SIMMONS. I do not think I have ever in my life even so much as considered the proposition of applying a cloture to a tariff bill.

Mr. KELLOGG. A tax bill.

Mr. SIMMONS. I am talking about tariff bills. What does it mean as applied to a tariff bill? The cloture that is provided for in our rules, if it were applied to a bill carrying one general proposition like that of the soldiers' bonus, like that of a ship subsidy, I think would not be a very great hardship, because each Senator would have an hour to discuss the single proposition. But it is different when cloture is proposed to be applied to a bill which carries 4,000 separate and distinct items, which already has had attached to it 2,000 amendments, 1,200 or 1,500 of which have not yet been acted upon or discussed, a bill that probably might be subject to several hundred additional amendments. When you undertake to apply our cloture rule, which limits discussion by each individual Senator on the bill and all amendments to only one hour in the aggregate, you have to my mind presented a proposition that is unthinkable and impossible and that can not be differentiated from a plain effort and purpose to gag Senators and to suppress real discussion.

Further, Mr. President, there are probably 2,000 paragraphs in the bill which have not been subjected to amendment by the committee, in many of which the rates are just as excessive and vulnerable as in any of the amendments offered by the committee. If the cloture prevails, Senators representing those who will have to pay the taxes imposed in those unamended paragraphs and sections of the bill will have no opportunity to offer upon the floor of the Senate any amendment to correct the wrong. So we would have possibly between a thousand and fifteen hundred separate and independent taxes imposed upon the people of the country just as the committee had written those taxes and brought them in here, without any discussion in this body, without any opportunity to amend a single one of them. When before did it ever happen in a free country that it was proposed that men should have their property taxed, with a heavy taxation, too—not taxation for the benefit of the Government; no; but mostly for the benefit of private interests—and the only consideration that was to be given to that law by which their property was to be in large part confiscated for private interest was the consideration given to it in the committee, while the men whom the people had selected and sent here to guard and protect their interests were, by force of the majority, if the cloture prevailed, to be denied the poor privilege of uttering a word of protest or offering an amendment in behalf of their constituents and the taxpayers. I say, when we get to the point that it can happen in a free country that a man's property can be taken away from him and given to private interests without his representatives in the tax-levying body having an opportunity to be heard, either by way of discussion or amendment—when we come to that situation in the United States, I say that the liberties of the American people will be jeopardized unless in their might they rise up then in revolt against any such outrages upon their constitutional and inalienable rights as citizens of a free Nation.

Mr. President, I have done just exactly what I did not expect to do. I have put too much physical effort into what I have said, and I am somewhat weary as the result. Rather hurriedly this morning I prepared some observations of a general character which I wish to make with reference to the proposal to invoke the cloture rule.

Mr. President, it is significant that this motion for cloture on the tariff bill follows so very closely upon the heels of certain disasters to the party in power in recent party primaries. The result of this discussion and the light thrown upon the inequities and the iniquities of the pending bill no doubt admonished those in charge of the measure that the time had come to close the doors against a further inspection by the people. The

presentation of this motion, practically to foreclose debate on the remaining 2,000 amendments and the other thousands of unamended items in the bill, does not mean that the Republican Party in the Senate or outside of the Senate are yearning for the passage of the bill.

Mr. President, they are not. The country knows they are not. It simply means that they have determined that reasons of safety call for the summary throttling of the disclosures and exposures of the outrages, hidden and otherwise screened, in the various paragraphs and schedules of the bill.

There has not been a moment, Mr. President, since Warren G. Harding was installed in the White House, now nearly a year and a half ago, that the campaign promises made to the men who organized and financed the Republican campaign in 1920 for immediate revision of the tariff in their interest has not been a nightmare to the administration and its leaders in Congress; when the thought of the revision of the tariff at this time did not fill them with fear and trembling; and when they have not looked upon it as a thing to be dreaded and avoided if it might be. There is not a Republican leader of grasp and vision in the Senate or outside of the Senate who does not feel and know that this is not an opportune time to revise the tariff and that such a revision as those who ask and insist upon as a thing promised, due and demanded, is fraught with danger both to the country and to the Republican Party.

Boies Penrose, the greatest leader the Republican Party has had in the Senate in recent years, saw this and fully appreciated and appraised its import. In these circumstances the task of those responsible for action was to devise ways and means discreetly to postpone action to a more propitious time and not to expedite action. These are the reasons that this bill lay fallow in the committee for nearly a year; these are the reasons that it was laid on the shelf for months while a $100,000 commission spent months in roaming around the world investigating the absurd so-called American valuation proposition. Thus it will be seen that if we are to have a tariff bill at this time, the proponents of this measure wasted a whole year in backing and filling, in going forward and then going backward, in useless wranglings and discussions, in trying to determine whether anything should be done or nothing should be done, in dilly-dallying and "sparring for time" with the men to whom their party was mortgaged and who wanted their "pound of flesh," regardless of whether the season was propitious or the time expedient. When at last it was determined to yield to the demands of the interests and make the final leap in the dark, with danger and threatenings of disaster impending, there were more long months of delay. The time which it was estimated it would take to do the work was doubled and trebled before it was finished.

What was the cause, Mr. President, of these long-drawn-out deliberations? What blocked speedy action by the committee on the bill? What discussions were going on in the committee room? Were they important or were they trivial? Were they necessary to the framing of a bill satisfactory to the interests or the drafting of a bill good for the people? We know what those discussions were, and we know they were not participated in by the people who will have to pay the taxes. They were carried on with the people present who will receive the benefits of the taxes to be laid.

First, there was the question of what sort of a tariff should be written and what should be the basis of valuation. Should the bill be drawn on the cost of production theory? No. Should it provide for the American valuation? No. The one was unsatisfactory to the committee and the other was unsatisfactory to the interests with whom they were conferring during these long months. These men who were there asking that the people be taxed in their behalf did not want the taxes levied upon the basis of the difference in the costs of production. That was not the sort of a tariff for which they were looking.

The committee, of course, was helpless. It did not have the facts; it could not get the facts, as it admits, to base the tariff upon the difference in the costs of production. Therefore that theory of tariff taxation was thrown overboard. The interests wanted and insisted upon tariff taxation so levied as to maintain their present profiteering prices and afford an opportunity to increase those prices hereafter; and that is what they got. That was the subject of the wrangling for months, Mr. President. It finally terminated in the committee scrapping all the theories of their party with reference to tariff taxation and giving to the interests, who had their ear from day to day, who swarmed around the committee room, who had their experts here with volumes of data, the kind of tax they wanted, although new in our history, although containing great wrong and oppression, although calculated and intended to maintain prices at the present high levels, when the people are praying for and demanding lower prices, and although it provides the easy and transparent method by which those interests at will may further advance their prices and yet enjoy immunity from foreign competition, such as they have provided for themselves against domestic competition by combination and monopoly. That is what was given to them.

I say that no such boon at the expense of a great people was ever conferred upon a special class as that conferred by this bill upon the special interests which came before the committee and stayed there with their lobbyists and their experts and their accountants until they got exactly what they wanted written into the bill.

Mr. President, I, therefore, say the men who are asking that this taxation be laid upon the people for the benefit of private business had their full day in court. That day extended through almost a year, if one considers the time when the tariff negotiations and the tariff conferences began between the committee in the other House and ended in the committee in the Senate. They had free entrance for themselves and their retainers, and they took advantage of it at every step of the proceeding, which ran through a whole year. I repeat, they have had their day in court. If ever a litigant was given a full and a sympathetic hearing, they were given a full and a sympathetic hearing.

But, Mr. President, where were the other parties to this transaction? Where, during all of these long months when the beneficiaries of this bill were enjoying the conferences and the confidence of the committee framing this measure, were the other parties to that transaction? What was the nature of the transaction? It was a proposition to impose a tax, chiefly for the benefit of certain favored individuals and corporations in this country, and only incidentally for the benefit of the Government, upon whom, Mr. President? Upon the 110,000,000 of people in this country, and upon practically everything that 110,000,000 of people buy and consume. Scarcely anything escaped. Where were the victims of these taxes? What opportunity have they had to be heard upon this question of imposing levies upon their property, not for the public benefit but for private interest?

The people upon whom these taxes were to be levied and collected were not there. The case of the tariff tax levy of 1922 against the people is now in the court of last resort. The taxpayers were denied their day in court, or at least they did not have it. They did not ask it, and if they did not ask it it was because they trusted to their representatives here to take care of their interests. It probably was because they were not seekers after special privileges, like these gentlemen who appeared before the committee, but were at home, attending to their private affairs, working in the shops and in the factories, working and toiling in the fields and in the stores and the countinghouses and in all the different channels of employment and activity in the country, attending to their business, that business in the main being to secure the necessaries upon which to support the life of themselves and their families.

Mr. President, the people who are to pay these taxes are in the main people who deal with the necessary things of life, who spend their time trying to accumulate the simple things that are necessary to sustain life in a civilized country. They were not before the committee. Their case is here to-day. They are represented here by their representatives, asking that they be heard in their behalf before the final decree is rendered against them, and before the writ of execution upon their property is ordered placed in the hands either of the Government or of the private beneficiaries of these taxes.

Mr. President, here is to be written the decree either in behalf of the people or against the people, and here is to be written not only the decree for levying taxes, but the decree for collecting the taxes here imposed upon the people.

The people have had no opportunity to be heard up to this time. Their representatives upon this floor stand here to-day asking that they be heard in the only tribunal to which they can now appeal for a hearing. They could not get anything like an adequate hearing in the House, because of the parliamentary situation there and its rules; but here, Mr. President, is a forum in which they had the right to suppose that through their representatives they would be given full and fair and adequate hearing, and that nothing necessary to protect their rights would be denied to them. But what do we have here? A proposition coming from the other side of the Chamber, a proposition coming from the committee that drafted this bill imposing these taxes upon these people that have never been heard, denying the right of the people's representatives upon

the floor of this Chamber to stand here and debate these taxes, and to offer amendments for their alleviation or for their removal if wholly unjust. You now propose to deny that right.

How are you going to stand before the American people in advocacy of such a proposition as that? When, until this day, has the American citizen had his day in court, or his opportunity to be heard upon this bill? When is he to be heard if he is not heard here through his representatives, if my mouth is closed and if the mouths of these other gentlemen over here who stand for him and the mouths of those over on the other side who stand for the consumer and the taxpayer are to be closed and gaged, and only an hour allowed to discuss 2,000 amendments, those acted upon and those that it is assumed will be offered here in the taxpayers' interest, largely—only an hour to discuss them all or to discuss the bill, and then the right of his representatives and spokesmen here to offer amendments in his behalf is denied?

Mr. President, it is very strange that this motion comes at this particular time.

These charges of filibustering have been made here for a month, and now, just as we are reaching probably the most important schedules in this whole bill so far as the taxpayers are concerned, just as we are reaching the cotton schedule and the wool schedule and the silk schedule and the sundries schedule—all matters of deep and profound importance to the taxpayer, every item in them of consequence to him—we are suddenly halted here with this proposition and told that there must be no further adequate discussion of these schedules; that there has been enough discussion about "small" and "trivial" matters.

Mr. President, what one man calls a small and trivial matter may be a big matter to another man. I want to say to the Senator from Massachusetts [Mr. LODGE], who was making his point yesterday, that that which seems small and insignificant and trifling to the man of great wealth becomes a matter of deep and profound consequence to the poor, struggling man who is making his living by the sweat of his brow; and it is the masses of this country who make their living by the sweat of their brows who are going to have to pay the high taxes that are imposed in the schedules that we are just about to reach. These schedules involve practically every thread of clothing which is to cover the bodies of themselves and their families, and upon those clothes are to be imposed unheard-of and unprecedented taxes.

Mr. President, Schedule K—alias Schedule 11 in this bill—Schedule K, under its alias, is about to be reached; Schedule K of infamous fame; Schedule K, which imposed its cruel burdens upon the people of this country until there rose here in the United States Senate a man who, although he was a Republican, in the name of the people had the courage to assail it, whose unequaled eloquence in defense of the people against the cruel burdens and exactions of Schedule K shook the Capitol from foundation to Dome and thundered over this broad land from ocean to ocean and from the Canadian border to the Gulf, arousing such indignation among the people of this country against Schedule K as resulted in the most remarkable political upheaval that has ever taken place in the United States from the day of the birth of the Republic.

Here we have Schedule K magnified, Schedule K standing there by the side of Schedule 11, its alias, a dwarf skulking behind his overshadowing giant companion. We are not to be permitted to discuss Schedule K. It might be too dangerous to the Republican Party to permit us to discuss Schedule K, or Schedule K's alias. We are to be gagged. The people's representatives are to be silenced by the brute force of votes corraled by the committee by all sorts of methods of logrolling.

We have seen one State given high protective duties upon practically everything it produces, high enough to force the 110,000,000 people of this countly, living in every part of the United States, to pay for their products a half more than they would have to pay if they were permitted to buy elsewhere, although the freight on them across the continent amounts to as much as the things themselves are worth. In a short time that State ought to be the richest State in the Union, with practically everything it produces protected by a prohibitive duty, and all the balance of the country forced to buy its products, regardless of distance and freight costs.

Another item in this bill in which the South and the West are interested, of which they are the chief consumers, carried a high duty. They use the article taxed in raising their cotton, in raising their tobacco, in raising their corn, and in raising their truck. It was a tax upon production. It was an unwarranted tax. It was an unprecedented tax. Those sections appealed to the committee—I know the section from which I come did—to have that burden taken from the struggling agriculturists of our sections of the country, but we made no headway. The appeal was ignored and unheeded. It happened that one little State, using about $300,000 worth of that product in the growing of potatoes, was to have a senatorial primary, and the appeal of one Senator was sufficient to secure the removal of a duty which the combined appeals of constituencies that use from $15,000,000 to $20,000,000 worth of the product were not able to accomplish.

Mr. President, it may be that this gag will be placed upon us. It may be that we shall not be able to offer any amendments in behalf of our constituents. It may be that we will not be permitted to debate any of the amendments which are pending. I do not know whether this motion will prevail or not. If it prevails, it will not be the end of our discussions; it will not be the end of our exposures. There are other bills to come before the Senate which will probably be called up for action during this session of the Senate. There is the ship-subsidy bill, a bill which practically gives the American merchant marine to a favored few and then requires the Government practically to pay the expenses of the operation, so that they may have most of the profits clear and have their property without cost. That will come up.

If we are not permitted to discuss the iniquities of Schedule K and of the cotton schedule and the silk schedule while this bill is before the Senate, let me warn the gentlemen who seek to get rid of these discussions which we are making here in behalf of the people of this country, the taxpayers, the men who are to pay the taxes you are imposing upon them, instead of getting rid of them they will simply postpone them, for just as soon as the next bill is called up, if we are not permitted to discuss the iniquities of these taxes now, we will discuss them then. If the gag is applied on the soldiers' bonus and applied on the ship subsidy bill, and we can not discuss those bills, as we will have been denied the opportunity to discuss this bill, then I promise that even though denied a hearing in this august body, in this last Chamber and tribunal of deliberative legislative work, if denied by these revolutionary tactics of the majority the right to discuss these things in this Chamber, then we promise you that the people shall know the iniquities of this thing, for we will take their cause to the hustings from one end of this land to the other, we will take it through the press, and we will take it through every channel of publicity that can be commanded. We tell you that you shall not impose these burdens upon the people, shall not impose these taxes for private purposes upon the struggling masses of this country, without an opportunity on their part, through their representatives, to be heard in this Chamber of this free American Government, not only in the way of opposition and protest but in the way of amendment and amelioration.

Mr. NORRIS. Mr. President, I have often said, since the proposition for cloture was suggested two or three weeks ago, that I expected to vote for the cloture rule, and since I have reached a different conclusion it seems to me only fair that I should briefly state my reasons to the Senate.

I have reached the conclusion that I ought to vote against cloture from an examination, first, of the cloture rule itself, and then on account of the condition of the bill to which cloture is to be applied under that rule, if it is applied at all. When I take those two things into consideration, I can not bring myself to the conclusion that it would be just to apply cloture to the pending tariff bill.

The rule if adopted and applied to a bill of this kind would practically end debate. It provides that after the rule is adopted no Senator shall talk more than one hour in the aggregate upon the bill and all amendments thereto. Not half of the committee amendments have been acted on. Some of the most important features in the bill are yet undisposed of. The rule prohibits the offering of any amendments unless the amendments are read in the Senate before the rule is adopted. It is an impossibility for Senators to propose amendments to some portions of this bill, with any intelligence, at least, until after the committee amendments have been disposed of, and when I looked into it with reference to some amendments I wanted to offer myself I say that I could not prepare the amendments with any intelligence until I knew what the final action on the committee amendments would be. Therefore the adoption of this rule would, in effect, prohibit the offering of amendments to the bill.

I have not been satisfied with the way time has been taken up in the discussion of this bill. To my mind a considerable portion of the time has been wasted. We have devoted days to unimportant and irrelevant matters, and I confess that I have felt that we would be justified in adopting some rule that would bring about an end to this almost endless turmoil. When I look, however, and see where that rule is going to land us

with the bill in the condition in which it now is, I feel that I would be jumping out of the frying pan into the fire.

Personally, it is my contention that we ought to have some regular standing rule of the Senate which would automatically control debate on the various amendments as we proceed. But when we see that the wool schedule, the sugar schedule, the authority in the bill conferring more power than has ever been conferred upon a President in regard to the tariff, are all undiscussed, none of them yet reached in the bill, and when I realize that the steel schedule is yet subject to individual senatorial amendments, I confess that I am compelled to admit, notwithstanding the fact that the rule of the Senate has been so liberal that the right to talk has often been extended and misused, that to adopt this particular rule and curtail debate just as this would curtail it would be something that to me, when I consider the facts and come face to face with them, would be obnoxious and something that I could not conscientiously sustain or defend. I have reached the conclusion, Mr. President, that the rule ought not to prevail.

Mr. KING. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Nebraska yield to the Senator from Utah?

Mr. NORRIS. I yield.

Mr. KING. I want to call the Senator's attention, if it would not be disturbing to him, to the fact that notwithstanding numerous provocations in the past, for considerably more than 100 years the Senate has resisted every effort made to limit debate. It was tried during the Civil War. It was tried in the days following the Civil War when it was alleged that the Democrats were frittering away time and were resorting to dilatory tactics and procedure. The Republicans, irked and irritated, suggested upon frequent occasions amendments to the rules. Men like Mr. Morrill, of Vermont, and Mr. Wilson, of Massachusetts, eminent Republican Senators, suggested amendments to the rule, but they never were reported out of the committee.

It was felt, as was stated by former Senator Hoar in an article which he wrote, that there ought to be one place where there was free and unlimited debate. So, notwithstanding, I repeat, the provocation which often confronted honest men, they concluded there was danger in the rule, and the Senate has gone on from 1806 with free and untrammeled debate. The Senator, I am sure, in looking back over the history of his country, will feel that there has been no serious abuse; and that when there has been a filibuster, so charged, in nearly every instance it has been vindicated and the people have approved of the course of those who have resorted to the filibuster.

Mr. NORRIS. I know the theory of unlimited debate is a good one, and this Chamber has been the means, by reason of the fact that there has been unlimited debate, of developing a great many things through the instrumentality of that debate. But I have reached the conclusion that it is going to be necessary for some kind of a limitation to be placed upon debate, even in the Senate.

Mr. ASHURST. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska——

Mr. ASHURST. I know there will be a certain tone of ungraciousness in what I am about to say, but I think I should say it, nevertheless. It will be remembered that one of the most able presiding officers who was ever in the chair in this body was the former senior Senator from Arkansas, Mr. Clarke. He always contended that if the presiding officer would but enforce the rule we would need no cloture. Let me read the rule to the Senator.

Mr. NORRIS. I am familiar with the rule.

Mr. ASHURST. I doubt if we are familiar with it. Let me read it to the Senator.

Mr. NORRIS. Let the Senator read it to himself. I do not care to hear it, because I know what it is.

Mr. ASHURST. I want every other Senator to know what it is. I want the Presiding Officer to know what it is.

> No Senator shall interrupt another Senator in debate without his consent, and to obtain such consent he shall first address the presiding officer; and no Senator shall speak more than twice upon any one question in debate on the same day without leave of the Senate, which shall be determined without debate.

Senators speak ten times in the same day upon the same question, but presiding officers sit in the chair and never think of saying "The Senator has already spoken twice." What we need is not a cloture rule, but an application of the rules that have been in existence for a long time. I thank the Senator.

Mr. NORRIS. The Senator's own interruption illustrates the difficulty——

Mr. ASHURST. That is what I was trying to illustrate—the difficulty.

Mr. NORRIS. The Senator has illustrated the fact that the written rules can not be enforced. He read a rule which said that to interrupt another Senator he should address the Chair and obtain his permission. When he interrupted the Chair for the purpose of reading the rule, I, having the floor, taking advantage of the privilege which I think I possess, said I did not want to have the rule read, but he read it anyway. That is the way the enforcement of the rules of the Senate has gone on.

Mr. ASHURST. I was only demonstrating how Senators do violate the rules.

Mr. NORRIS. The Senator is again violating the rule. Everyone here knows that the very rule to which the Senator referred has been invoked many times in the Senate. It was sought to be invoked just the other day by the Senator from Wisconsin [Mr. LENROOT]. It has been invoked and enforced many times since I have been in the Senate, but that does not affect unlimited debate.

There must come a time—it ought to come automatically under the rules of a legislative body—when the majority should have its day. There ought to come a time when the majority could rule, and it is no defense to that proposition to say that two or three men have filibustered and prevented the majority from having its way and that afterwards those two or three men were vindicated. That, in my judgment, is no defense. The majority in the end ought to be allowed to rule. If they rule unjustly, if they abuse the confidence placed in them by those who sent them here, it is for the people to remedy it rather than for Senators to resort to a revolutionary proceeding. I am not finding fault with the men who filibuster. I have done it myself. I would not hesitate to do it again, because the rules of the Senate permit it. I am not finding fault with a man if, for the purpose of defeating a measure, he talks all day and all night. The rules of the Senate permit it. We have no right to censure any Member of the body as long as he is obeying the rules. What I am complaining about is that we ought to have a sort of cloture rule which automatically would end the debate. As to the bill that we have here, if we had a rule that would require us, when we reach the consideration of amendments, to discuss the question before the Senate, and if on those amendments every speech was limited to 15 minutes, we would get a more intelligent discussion of the bill than we have been getting thus far.

Mr. President, the Senate devoted three days of its time to a discussion of the paragraph in regard to a tariff duty on log chains. For three days the Senate was in chains, and I think sometimes it is in chains yet. Ten minutes of intelligent discussion would have permitted the reader or the person who searches the RECORD and examines it to find all the arguments pro and con, while now he will have to read volumes, if he ever gets through with it.

So it is not because I think this interminable debate ought to cease that I am opposed to applying the cloture rule. If there were but one question or two or three questions involved, I would not hesitate to vote for it, but the rule itself, especially in its application where we are seeking to apply it, would, in my judgment, do more damage and more hurt than has been done or will be done by a continuation of the policy that has been going on in the past.

I was interested in some provisions in regard to the steel schedule. When the proposition was first made to offer a cloture I intended to vote for it, but I commenced to look into it and then commenced to realize that the rule, unless the amendments were prepared and read before the rule was adopted, would not permit even the offering of them, and also that we had unconsidered in the bill probably the most important schedules of all. It seemed to me I would rather bear those ills we have than fly to others that we know not of.

Personally—it may be that I am affected somewhat by it, but I am not conscious of it if I am—I am opposed to the tariff bill. It could not get my vote unless it was reconstructed from bottom to top. I think it is based on a wrong principle. I think its tendency will be to keep up the present high cost of living, because to quite an extent at least the information on which it is based is the selling price here and abroad rather than the cost of production here and abroad. I am not finding fault with those who framed it on that account. I have said before that I think they were up against an impossible task. I think the mistake is that we should try to pass any general tariff bill at the present time. No man living, either in this body or outside of it, can secure the evidence, either in this country or abroad, upon which to base the levying of a tariff duty if they are following the principle of trying to find the difference in the

cost of production here and abroad. The world is out of joint. We must wait until we get back to earth.

When we base a tariff on prices, or when to any extent we base it on prices, we are treading on the most dangerous possible ground. In the first place, if a man wants a tariff raised on his product all he has to do is to raise his prices and he gets it. But the principle is wrong. We are all crying out against the present high cost of living. If we base the tariff on the difference in the selling prices here and abroad, then the tendency of that tariff is to keep those selling prices intact and hold up the high selling cost of articles in America, and thus preserve the statu quo, the present high cost of living. It seems to me that is indefensible.

So far as I am personally concerned, I would be glad to see the bill defeated. I hope, however, that I am broad minded enough to say that even though I was opposed to it, if the majority of the Senate thought it ought to pass, I ought to bow in submission to that majority. For my part, I do not want to throw any unreasonable straw in their way. I would defeat the bill if I could by any legitimate means, but I do not believe that I would be justified, even if I could, in continuing indefinite debate to bring about its defeat.

Some Senators think that that would be a good thing to do and that indefinite debate may result in that. I have sometimes thought, in view of the slow progress we were making, that unless we adopt some way to push the bill along faster our terms of office would expire, that this Congress would end by limitation before the measure could be passed, and that might occur without any debate taking place that did not apply directly to the bill. Here is a bill containing thousands of committee amendments and several thousand items which are subject to amendment by individual Senators when the committee amendments shall have been disposed of. It would take a long time to dispose of those amendments legitimately. I wish we could have some rule by which upon the various amendments a limitation upon the length of time which Senators could speak might be imposed.

Mr. President, I dislike to see this endless debate proceed, but, as I have previously stated, when I come face to face with the proposition to vote for a rule that will end debate and practically end the right to offer amendments to the pending bill, particularly in view of the fact that the measure is of vast importance, broad in scope, and universal in application, I can not bring myself to the conclusion that I ought to support such a rule.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock a. m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JONES of Washington. I have several amendments to the pending bill which I desire, under the rule, to offer and have read; but if we might, without further debate, secure a vote on the amendment pending, I should be perfectly willing to withhold the presentation of those amendments until the vote shall have been taken. The amendments which I desire to offer will have to be read.

Mr. TRAMMELL. I also have an amendment which I desire to have read under the rule in order that it may be pending if the cloture rule shall be adopted to-morrow. The amendment I desire to offer is a short amendment. It will take only a moment or two to present it and have it read.

Mr. UNDERWOOD. Mr. President, I have no objection to taking a vote on the pending amendment; but it is late in the evening and a good many Senators are absent who desire to be present. The amendment is important, and I think that we should have a quorum call if we are going to vote on the amendment this evening.

Mr. JONES of Washington. I should desire a yea-and-nay vote on the amendment.

Mr. UNDERWOOD. I am afraid that if we undertake to consider the amendment at this late hour we may prevent Senators who desire to offer amendments before a vote takes place on the cloture rule from doing so.

Mr. JONES of Washington. Of course, I should not desire to do that. I take it, then, that we shall not have an opportunity to vote on the amendment to-night.

Mr. McCUMBER. I think there are enough Senators present to vote without calling for a quorum if Senators are ready to vote on the amendment.

Mr. UNDERWOOD. It is not a question of a quorum; but I do not think that Senators were expecting to vote on the amendment this evening. I think we should have a quorum call to give them an opportunity to come to the Senate.

Mr. McCUMBER. There is time enough remaining if the Senate votes right away on the amendment and if there is going to be no further discussion.

Mr. UNDERWOOD. I did not intend to discuss the amendment; but if the cloture rule is adopted to-morrow—and I do not think it will be—it will cut off all Senators from offering amendments to the bill, and it seems to me that with only 40 minutes left no Senator will take the responsibility of refusing to allow other Senators who desire to propose amendments to do so.

Mr. JONES of Washington. I do not desire to prevent the presentation of amendments.

Mr. UNDERWOOD. I understood the Senator.

Mr. JONES of Washington. I thought, however, if we could have a vote it would take probably 10 minutes to call the roll, and the amendment would be disposed of. I do not want to prevent that, but I have certain amendments which I wish to present and have read, so that they may come under the rule.

Mr. McCUMBER. I will say to the Senator that we should still have an hour to-morrow in which to present amendments, if it should be so desired, before there would be any vote.

Mr. UNDERWOOD. That is, if some Senator did not take the floor and debate the hour out.

Mr. McCUMBER. I am assuming that if any Senator had an amendment to offer no other Senator would be so discourteous as to prevent his doing so.

Mr. JONES of Washington. I think I had better present my amendments and have them read under the rule. I understand that under the proposed rule the amendments must be read. If, however, by unanimous consent the amendments may be considered as having been read and may be printed in the RECORD, I have no objection to that being done.

Mr. UNDERWOOD. I have no objection to that, if that be in conformity with the rule.

Mr. McCUMBER. I have no objection, but I really do not think the rule requires it.

Mr. JONES of Washington. My recollection is, though I may be mistaken, that the cloture rule requires amendments to be read.

Mr. McCUMBER. I do not think the rule uses that language.

Mr. JONES of Washington. I ask unanimous consent that the amendments which I send to the Secretary's desk may be considered as read and having been offered, and may be printed in the RECORD.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments intended to be proposed by Mr. JONES of Washington are as follows:

At the proper place insert the following:

"On all articles the products or manufactures of any noncontiguous foreign country, imported into the continental United States through a contiguous foreign country, or which, being entered at a port of the United States moves in transit through a contiguous foreign country to a United States destination, there shall be levied, collected, and paid, in addition to all other duties as provided in this act, a sum equal to the charge or proportional charge for transportation of such articles within the foreign contiguous country."

On page 32 strike out lines 18 to 24 and insert the following:

"SEC. 204. Lime, in cooperage, 50 cents per 100 pounds, gross weight; lime, in bulk, 30 cents per 100 pounds, gross weight; hydrated lime, 40 cents per 100 pounds, gross weight; limestone, broken or crushed, in bulk, 15 cents per 100 pounds; ground limestone, in bags, 7½ cents per 100 pounds; ground limestone, in bulk, 5 cents per 100 pounds, including in every case the weight of the container."

Insert a new section, as follows:

"SEC. —. That a duty of 6 cents per net ton, not to exceed in the aggregate 80 cents per net ton in any one year, is hereby imposed at each entry by sea on all vessels which shall be entered in any port of the United States from any foreign port or place in North America, Central America, the West India Islands, the Bahama Islands, the Bermuda Islands, the coast of South America bordering on the Caribbean Sea, or Newfoundland; and a duty of 12 cents per net ton, not to exceed in the aggregate $1.20 per net ton in any one year, is hereby imposed at each entry by sea on all vessels which shall be entered in any port of the United States from any other foreign port or place, not, however, to include vessels in distress or not engaged in trade."

Insert a new section, as follows:

"SEC. —. Hereafter all goods, wares, and merchandise imported in vessels other than vessels of the United States shall be subject to a duty of 5 per cent ad valorem in excess of the duties herein imposed, and all goods, wares, and merchandise, excepting tea and coffee, so imported which are otherwise admitted free under this act shall pay a duty of 2 per cent ad valorem: *Provided*, That the foregoing provisions shall not go into effect as to goods, wares, and merchandise if imported in the vessels of those nations with which we have treaties which said provisions contravene until the expiration of one year from the date when this act becomes a law, at which time said treaties are hereby declared to be duly abrogated unless the same are sooner abrogated by notice given by the President under the terms of such treaties."

Insert a new section, as follows:

"SEC. —. That when used in this section—

"The term 'Secretary' means the Secretary of Commerce;

"The term 'public corporation' means a State, a legal subdivision thereof or a municipality, or a lawfully authorized public agency of a State or a municipality;

"The term 'applicant' means a public corporation applying for the right to establish, operate, and maintain a foreign trade zone;

"The term 'grantee' means a public corporation to which the privilege of establishing, operating, and maintaining a foreign trade zone has been granted.

"The term 'zone' means a 'foreign trade zone' as provided in this section.

"The Secretary is hereby authorized, subject to the conditions and restrictions of this section and of the rules and regulations made thereunder, upon application as hereinafter provided, to grant to public corporations the privilege of establishing, operating, and maintaining foreign trade zones in or adjacent to ports of entry under the jurisdiction of the United States. Not more than one zone shall be authorized in or adjacent to any port of entry, except that when a port of entry is located within the confines of more than one State a zone may be authorized in each State in the territory comprised in such port of entry.

"Foreign and domestic merchandise of every description, except such as is prohibited by law, may, without being subject to the customs laws of the United States, except as otherwise provided in this section, be brought into a zone and there stored, exhibited, broken up, repacked, assembled, distributed, sorted, refined, graded, cleaned, mixed with foreign or domestic merchandise or otherwise manipulated, and be exported, and foreign merchandise may be sent into customs territory of the United States therefrom, in the original package or otherwise; but when foreign merchandise is so sent from a zone into customs territory of the United States it shall be subject to the laws and regulations of the United States affecting imported merchandise: *Provided*, That when the privilege shall be requested the collector of customs shall supervise the unlading of foreign merchandise in the zone, cause such merchandise or any portion thereof to be appraised, and the duties liquidated thereon. Thereafter it may be stored or manipulated under the supervision and regulations prescribed by the Secretary of the Treasury, and within two years after such unlading such merchandise, whether mixed with domestic merchandise or not, may be sent into customs territory upon the payment of such liquidated duties thereon.

"The Secretary of the Treasury shall assign to the zone the necessary customs officers and guards to protect the revenue and to provide for the admission of foreign merchandise into customs territory.

"Vessels entering or leaving a zone shall be subject to the operation of all of the laws of the United States, except as otherwise provided in this section, and vessels leaving a zone and arriving in customs territory of the United States shall be subject to such regulations to protect the revenue as may be prescribed by the Secretary of the Treasury.

"Each application shall state in detail—

"(1) The location and qualifications of the area in which it is proposed to establish a zone, showing (a) the land and water or land or water area or land area alone if the application is for its establishment in or adjacent to an interior port; (b) the means of segregation from customs territory; (c) the fitness of the area for a zone; and (d) the possibilities of expansion of the zone area;

"(2) The facilities and appurtenances which it is proposed to provide and the preliminary plans and an estimate of the cost thereof, and the existing facilities and appurtenances which it is proposed to utilize;

"(3) The time within which the applicant proposes to commence and complete the construction of the zone and facilities and appurtenances;

"(4) The methods proposed to finance the undertaking;

"(5) Such other information as the Secretary may require.

"The Secretary may, upon his own initiative or upon request, permit the amendment of the application. Any expansion of the area of an established zone shall be made and approved in the same manner as an original application.

"If the Secretary finds that the proposed plans and location are suitable for the accomplishment of the purpose of a foreign trade zone under this section, and that the facilities and appurtenances which it is proposed to provide are sufficient, he shall make the grant. If the Secretary refuses the grant, the applicant may appeal to a board consisting of the Secretary of Commerce, the Secretary of the Treasury, and the Secretary of War, whose decision shall be rendered within three months from the filing of such appeal and be final as to the grant of the application.

"The Secretary shall prescribe such rules and regulations not inconsistent with the provisions of this section or the rules and regulations of the Secretary of the Treasury made hereunder and as may be necessary to carry out this section.

"The Secretary shall cooperate with the State, subdivision, and municipality in which the zone is located in the exercise of their police, sanitary, and other powers in and in connection with the free zone. He shall also cooperate with the United States Customs Service, the Post Office Department, the Public Health Service, the Bureau of Immigration, and such other Federal agencies as have jurisdiction in ports of entry described in the seventh paragraph of this section.

"For the purpose of facilitating the investigations of the Secretary and his work in the granting of the privilege, in the establishment, operation, and maintenance of a zone, the President may direct the executive departments and other establishments of the Government to cooperate with the Secretary, and for such purpose each of the several departments and establishments is authorized, upon direction of the President, to furnish to the Secretary such records, papers, and information in their possession as may be required by him, and temporarily to detail to the service of the Secretary such officers, experts, or engineers as may be necessary.

"If the title to or right of user of any of the property to be included in a zone is in the United States, an agreement to use such property for zone purposes may be entered into between the grantee and the department or officer of the United States having control of the same, under such conditions approved by the Secretary and such department or officer, as may be agreed upon.

"Each grantee shall provide and maintain in connection with the zone—

"(a) Adequate slips, docks, wharves, warehouses, loading and unloading, and mooring facilities where the zone is adjacent to water; or, in the case of an inland zone, adequate loading, unloading, and warehouse facilities;

"(b) Adequate transportation connections with the surrounding territory and with all parts of the United States, so arranged as to permit of proper guarding and inspection for the protection of the revenue;

"(c) Adequate facilities for coal or other fuel and for light and power;

"(d) Adequate water and sewer mains;

"(e) Adequate quarters and facilities for the officers and employees of the United States, State, and municipality whose duties may require their presence within the zone;

"(f) Adequate inclosures to segregate the zone from customs territory for protection of the revenue, together with suitable provisions for ingress and egress of persons, conveyances, vessels, and merchandise.

"(g) Such other facilities as may be required by the Secretary of Commerce, the Secretary of War, and the Secretary of the Treasury, acting jointly.

"The grantee may, with the approval of the Secretary of Commerce and the Secretary of the Treasury, and under reasonable and uniform regulations for like conditions and circumstances to be prescribed by them, permit private persons, firms, corporations, or associations to erect such buildings and other structures within the zone as will meet their particular requirements: *Provided*, That such permission shall not constitute a vested right as against the United States, nor interfere with the regulation of the grantee or the permittee by the United States, nor interfere with or complicate the revocation of the grant by the United States: *And provided further*, That in the event of the United States or the grantee desiring to acquire the property of the permittee no good will shall be considered as accruing from the privilege granted to the zone: *And provided further*, That such permits shall not be granted on terms that conflict with the public use of the zone as set forth in this section.

"Each zone shall be operated as a public utility, and all rates and charges for all services or privileges within the zone shall be fair and reasonable, and the grantee shall afford to all who may apply for the use of the zone and its facilities and appurtenances uniform treatment under like conditions, subject to such treaties or commercial conventions as are now in force or may hereafter be made from time to time by the United States with foreign governments.

"No person shall be allowed to reside within the zone except Federal, State, or municipal officers or agents whose resident presence is deemed necessary by the Secretary.

"The Secretary shall prescribe rules and regulations regarding employees and other persons entering and leaving the zone. All rules and regulations concerning the protection of the revenue shall be approved by the Secretary of the Treasury.

"The Secretary may at any time order the exclusion from the zone of any goods or process of treatment that in his judgment is detrimental to the public interest, health, or safety.

"No retail trade shall be conducted within the zone except under permits issued by the grantee and approved by the Secretary. Such permittees shall sell no goods except such as are brought into the zone from customs territory.

"The form and manner of keeping the accounts of each zone shall be prescribed by the Secretary.

"Each grantee shall make to the Secretary annually, and at such other times as he may prescribe, reports containing a full statement of all the operations, receipts, and expenditures, and such other information as the Secretary may require.

"The Secretary shall make a report to Congress on the first day of each regular session containing a summary of the operation and fiscal condition of each zone and transmit therewith copies of the annual report of each grantee.

"The grant shall not be sold, conveyed, transferred, set over, or assigned.

"In the event of repeated violations of any of the provisions of this section by the grantee, the Secretary of Commerce, the Secretary of War, and the Secretary of the Treasury, or a majority of them, may revoke the grant after four months' notice to the grantee and affording it an opportunity to be heard. The testimony taken before the Secretaries shall be reduced to writing and filed in the records of the Department of Commerce, together with the decision reached thereon.

"In the conduct of any proceeding under this section for the revocation of a grant, the Secretaries may compel the attendance of witnesses and the giving of testimony and the production of documentary evidence, and for such purpose may invoke the aid of the district courts of the United States.

"An order under the provisions of this section revoking the grant issued by the Secretaries shall be final and conclusive, unless within 90 days after its service the grantee appeals to the circuit court of appeals for the circuit in which the zone is located by filing with the clerk of said court a written petition praying that the order of the Secretaries be set aside. The clerk of the court in which such a petition is filed shall immediately cause a copy thereof to be delivered to the Secretaries, and they shall forthwith prepare, certify, and file in the court a full and accurate transcript of the record in the proceedings held before them under this section, the charges, the evidence, and the order revoking the grant. The testimony and evidence taken or submitted before the Secretaries, duly certified and filed as a part of the record, shall be considered by the court as the evidence in the case.

"On such appeal the court shall review the record of proceedings before the Secretaries; and if a decision of said Secretaries shall be supported by evidence, shall only make decision on errors of law.

"That in case of a violation of this section, or any regulation of the Secretary under this section, by the grantee, any officer, agent, or employee thereof responsible for or permitting any such violation shall be subject to a fine of not more than $1,000. Each day during which a violation continues shall constitute a separate offense.

"That if any provision of this section or the application of such provision to certain circumstances be held invalid, the remainder of the section and the application of such provisions to circumstances other than those as to which it is held invalid shall not be affected thereby.

"That the right to alter, amend, or repeal this section is hereby reserved."

In line 13, page 29, after the word "nitrite," strike out "3" and insert "5."

PART —.—ESTABLISHMENT OF FOREIGN TRADE ZONES.

Insert a new section as follows:

"SEC. —. The Secretary of the Treasury, upon the recommendation of the Secretary of Commerce, may grant to public corporations the privilege of establishing, operating, and maintaining foreign trade zones in or adjacent to ports of entry in the jurisdiction of the United States.

"Foreign and domestic merchandise of every description, except such as is prohibited by law, may, without being subject to the customs laws of the United States, except as otherwise provided in this act, be brought into a zone and there stored, manufactured, exhibited, broken up, repacked, assembled, distributed, sorted, refined, graded, cleaned, mixed with foreign or domestic merchandise or otherwise manipulated,

and be exported, and foreign merchandise may be sent into customs territory of the United States therefrom, in the original package or otherwise; but when foreign merchandise is so sent from a zone into customs territory of the United States it shall be subject to the laws and regulations of the United States affecting imported merchandise.

"The Secretary of the Treasury, with the cooperation of the Secretary of Commerce, shall prescribe such regulations as may be necessary for the purpose of selecting locations for foreign trade zones, maintaining adequate facilities for the transaction of business therein, protecting the revenue, and regulating the entry and clearance of vessels into and from foreign trade zones, and shall prescribe the conditions for the granting of a concession for the establishment of a foreign trade zone, as well as the conditions for revoking such a grant, and also any other regulations which may be necessary for carrying into effect the provisions of this section."

Mr. McCUMBER. I wish to correct what I stated a moment ago. On examination, I see that the rule does require that proposed amendments shall be read.

Mr. TRAMMELL. I present an amendment and I ask to have it read and considered as pending if the cloture rule shall be adopted to-morrow morning.

The PRESIDING OFFICER. The amendment intended to be proposed by the Senator from Florida will be read.

The READING CLERK. On page 230, beginning in line 4, it is proposed to strike out all of paragraph 1635 and insert in lieu thereof:

PAR. 1635. Potassium chloride or muriate of potash, potassium sulphate, kainite, wood ashes, and beet-root ashes, and all crude potash salts not specially provided for and the actual potash (potassium oxide) content of all the foregoing shall be admitted free of duty.

The PRESIDING OFFICER. The pending amendment will be stated.

The READING CLERK. On page 102, line 19, the Senator from Washington moves to amend by inserting after the word "pound" the following proviso:

Provided, That from and after 90 days after the enactment of this act no fresh or frozen halibut, salmon, or swordfish from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country, except when the same shall be in bond from an American port.

Mr. UNDERWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McNary	Sheppard
Ball	Heflin	Moses	Sutherland
Broussard	Jones, Wash.	Nelson	Trammell
Bursum	Keyes	New	Underwood
Capper	King	Norbeck	Wadsworth
Caraway	Ladd	Norris	Walsh, Mass.
Curtis	La Follette	Oddie	Warren
Dial	Lenroot	Overman	Watson, Ind.
Frelinghuysen	McCumber	Pepper	Willis

The PRESIDING OFFICER. Thirty-six Senators having answered to their names, a quorum is not present. The Secretary will call the names of the absent Senators.

The reading clerk called the names of the absent Senators, and the following Senators answered to their names when called:

Fernald	Kendrick	Rawson	Spencer
Hale	McKinley	Shortridge	
Harris	Pittman	Smoot	
Kellogg	Poindexter	Sterling	

The following Senators entered the Chamber and answered to their names:

Cameron	Edge	Nicholson	Simmons
Dillingham	Lodge		

Mr. HARRIS. I wish to announce that my colleague [Mr. WATSON of Georgia] is absent on account of illness.

The PRESIDING OFFICER. Fifty-five Senators having answered to their names, a quorum of the Senate is present. The question is on the amendment offered by the Senator from Washington [Mr. JONES].

Mr. JONES of Washington. I ask for the yeas and nays.

Mr. POINDEXTER. Mr. President, before the vote is taken I want to say a word in favor of the amendment offered by my colleague.

The fisheries of Alaska, only partly developed, constitute one of the most valuable natural sources of wealth in the possessions of the United States. They can be made the means of the development of a great American industry, American in the true sense of the word, not only giving employment to Americans in the various branches of the work of catching and preparing and shipping this great food product for the market of the United States, which is the greatest population consuming valuable food fish in the world, but they can be made the means of developing what we need probably more than any other element in our national life, and that is a seafaring population, affording to the merchant marine a supply of sailors, and a resource for the manning of our Navy in time of war.

The purpose of the amendment of my colleague is to preserve this industry for Americans, to develop it as an American resource instead of a Canadian one. So far as I am concerned, when that is the issue I do not feel disposed to be punctilious about the exact form of the language, or, where there is a doubtful question as to whether some benefit is to come to the United States or to a foreign country, to hesitate about resolving that doubt. I feel disposed, upon issues of that kind, to give the benefit of the doubt to my own country. When we see the example of the means which have been taken—and properly taken, as has been said by my colleague—by the Government of Canada to prefer their own merchant marine, to promote the registry of vessels under the British flag, I see no reason why we should hesitate to take any proper, legitimate, honorable means for preferring our merchant marine, for encouraging the keeping of vessels in American registry instead of encouraging their transfer to British registry.

There are, as it seems to me from an examination of the showing which has been made upon this question, two ways in which that can be accomplished. One of them is along the lines proposed in the amendment offered by the senior Senator from Washington [Mr. JONES], which will have the effect of requiring fish caught in the North Pacific waters which are to be marketed in the United States—that is where our jurisdiction and our right comes in, the control of our own markets—in the imposition of restrictions upon imports to that market and upon the manner in which the products, even of American industry itself, shall be placed upon that market—to require that fish caught in North Pacific waters for the American market shall be shipped from an American port. The consequence of adopting this amendment will be to develop the fishery industry of the North Pacific at the town of Ketchikan—that seems to be the most convenient town—which has already a considerable industry attached to the catching and the marketing of halibut and other North Pacific fishes; or, if it is defeated, to leave the industry to a foreign port, Prince Rupert, the terminus of the Grand Trunk Pacific Railroad in British Columbia.

Prince Rupert is some 600 miles north of Seattle. Ketchikan, Alaska, is approximately 100 miles north of Prince Rupert. The fisheries from which this great supply of fish come are several hundred miles still farther north of Ketchikan.

Mr. President, when these fish are caught by American fishermen, wherever they may be caught—most of them are caught outside of the 3-mile limit, and consequently do not, strictly speaking, come from American waters, because outside of the 3-mile limit the fisheries are open to all nationalities of the world—it is regarded as an American fishery, notwithstanding the fact that the fish are packed for shipment in a foreign port and transported to market over a foreign railroad, giving to the foreign country the labor which is engaged in that business and to the railroads the proceeds of that transportation, and come into our market free of the tariff which is imposed upon fish imported from a foreign country; and by reason of the advantages which Prince Rupert has as the terminus of this railroad, of course it would get the entire fishery industry. It would be developed there instead of at an American port.

I agree entirely with the principles which have been laid down by the chairman of the Committee on Finance in discussing this amendment in so far as the premises which he stated are concerned, differing with him entirely, however, in the conclusion which he reached. I think he is right in saying that these fishermen ought to be allowed to go to the most convenient market, whether it is a domestic market or a foreign market; but if they go to a foreign port, give their business to a foreign country, employ foreign labor and foreign capital, and transport their goods over a foreign railroad, if that is to be allowed, as it is allowed unless some such amendment as that proposed by my colleague is to be adopted, then they should take the burden that is imposed upon the products of a foreign country, and American labor and American railroads should receive the benefit of a tariff which is imposed to give the preference to our own industry.

Mr. KING. Mr. President, will the Senator yield? I desire to ask a question for information.

Mr. POINDEXTER. I yield to the Senator from Utah.

Mr. KING. As I understand this amendment—and I confess that I do not understand it, but as it was read and as I interpret it—it means than an American fishing in Pacific waters and contiguous to the Canadian shore, or remote from it, it is wholly immaterial—if he takes his fish to a Canadian port and there cures the fish may not bring them into the United

States. Though he is willing to pay all the tariff that we impose, he is absolutely prohibited from bringing them here.

There would be very much in the Senator's argument, if my premise is correct, if we should penalize him for going into the Canadian port with his fish by imposing a heavy duty; but to prohibit him absolutely from bringing into the United States his product after it is cured or iced seems to me——

Mr. POINDEXTER. We do not prohibit him from bringing it into the United States. We allow him to bring it into the United States according to the amendment offered by the Senator from Washington, but we require him to ship the fish from an American port as a condition or restriction upon getting the benefit of the American market. He can bring them into the American market; and for the purpose of developing a great fishing industry in this country, and in the interest of the merchant marine and of a source of supply of the Navy in time of great emergency, I see nothing unreasonable in imposing such a condition as that upon this industry. It is not a hard condition. Why should not these men go to Ketchikan instead of to Prince Rupert?

Mr. WALSH of Montana. Mr. President——

Mr. KING. If the Senator will pardon me, then, as I understand the Senator, he does admit that if the fisherman goes to the Canadian port first he may not then bring his product into the United States?

Mr. POINDEXTER. That is true.

Mr. KING. No matter if he is willing to pay the tariff that we impose upon other fishermen or other countries, he can not bring that catch into the United States?

Mr. POINDEXTER. But we do not impose a tariff.

Mr. KING. Well, suppose we did.

Mr. POINDEXTER. If we did, it would be an entirely different question. If we did, then the result that is sought by the amendment of my colleague would be reached in another way; and if that amendment is defeated I expect to offer an amendment, at least for the purpose of making a record, and have the Senate vote upon it, to impose the duty provided in this bill upon fish imported from a foreign country, upon fish, wherever they may be caught, that are packed and prepared for shipment in a foreign country, by foreign labor, and shipped over foreign railroads.

The suggestion of the Senator from Utah, however, does not apply at all as the bill is now framed, or as the existing law is, that they are subject to the penalty of paying a tariff upon the shipment of fish to the United States. They are regarded as a domestic product. The Treasury decisions are to the effect that even where fish caught by American fishermen operating vessels of American registry are prepared for shipment upon some foreign territory—as, for instance, upon the coast of Labrador—and are shipped from that point into the United States, they pay no tariff, because they are regarded and decided under the Treasury rulings to be the product of American fisheries.

Mr. WALSH of Montana. That was what I desired to inquire of the Senator. Under the existing law the Alaska fisherman may bring his fish into the port of Prince Rupert and dress them there, ice them there, or dry them, and ship them over the Canadian railroads in bond into the eastern markets without the payment of any duty.

Mr. POINDEXTER. Not Canadian fishermen but American fishermen.

Mr. WALSH of Montana. Yes; American fishermen, either from the States or from Alaska.

Mr. POINDEXTER. Without the payment of any duty. Of course, no duty is paid on that fish now; but that would also be the condition even under this bill, should it be enacted in its present form.

Mr. McCUMBER. I want the Senator to make no mistake as to what the amendment is. The amendment reads:

> *Provided*, That from and after 90 days after the enactment of this act no fresh or frozen halibut, salmon, or swordfish from the North Pacific Ocean or its tributary waters shall be admitted into the United States through any foreign country, except when the same shall be in bond from an American port.

That is clear and specific.

Mr. POINDEXTER. That is what I stated.

Mr. McCUMBER. If a Canadian fishing fleet goes out from Prince Rupert and catches fish and brings them back into Prince Rupert, it is an embargo against them. They could not bring them in under this amendment. They could not even bring them into the United States by paying a duty.

Mr. POINDEXTER. All that they would be required to do in order to bring them in would be to take them into Ketchikan.

Mr. McCUMBER. In other words, take them there, and then take them to Ketchikan.

Mr. POINDEXTER. That is a hundred miles nearer the fisheries than Prince Rupert.

Mr. McCUMBER. But they can not send them over the Canadian Pacific——

Mr. POINDEXTER. I am not so concerned about the Canadian Pacific.

Mr. McCUMBER. They can not send them to Minneapolis and St. Paul, across the line——

Mr. POINDEXTER. Yes.

Mr. McCUMBER. Just a moment. I will tell what the fisherman has to do. He has to send them to an American port——

Mr. POINDEXTER. It is the purpose of this amendment to require him to do that. It is our market. It is our country. We can lay down such conditions as we choose on those seeking to enjoy its benefits.

Mr. McCUMBER. I had not finished my sentence. He has to send them to an American port. What port? Ketchikan. After he gets them to Ketchikan, what is he going to do with them? He has to bring them back to Prince Rupert, ship them back again, or else he has to go to Seattle and if two or three days out from Seattle his fish are ruined by reason of the long trip, he has to send them second or third class. That is really what it means.

Mr. POINDEXTER. No; that is not what it means at all.

Mr. McCUMBER. The Senator can not make it mean anything else.

Mr. POINDEXTER. I will show you why you can not make it mean that. The trouble with the Senator from North Dakota—and it is not to be wondered at, with the vast multitude of paragraphs and items in this bill—is that he has not a very clear idea of the geography of these ports and the fisheries which are seeking this benefit. The Senator talks about taking fish from Prince Rupert to Ketchikan and then bringing them back to Prince Rupert. The fish are caught two or three hundred miles north of Ketchikan, and they reach Ketchikan from the fisheries a hundred miles before they get to Prince Rupert. There is no question about taking them to Prince Rupert and bringing them back again to Ketchikan and then taking them from Ketchikan to Prince Rupert.

Mr. McCUMBER. I am assuming that a fleet go out from Prince Rupert and catch some of these fish; they may catch them nearer Prince Rupert or they may catch them farther away, but the testimony of those who are engaged in fishing is that, even if they had to go to Ketchikan, they would still have to go back to Prince Rupert and send them through that way to get them to the Canadian and American markets.

Mr. POINDEXTER. They do not have to go back to Prince Rupert, because they do not come from Prince Rupert. Under those conditions Prince Rupert would be merely a way station on the way from the fisheries to the market.

To show how entirely practicable it is for them to carry on their fishery industry at Ketchikan instead of at Prince Rupert, let us take the figures for 1921 of the halibut shipments from Alaskan waters, as they are called; they are called North Pacific waters, more properly, in the amendment of my colleague.

In that year there were received at Ketchikan 5,923,000 pounds of halibut. So evidently it is feasible and practicable to deliver halibut at Ketchikan, prepare them there for market, and ship them from there to the market. But there are greater advantages under the present system in taking them to Prince Rupert, under the orders in council of the Dominion of Canada, intended for the purpose of bringing that industry there, of employing Canadians, and of giving business to Canadian railroads. So at Prince Rupert in that year there were received 20,342,000 pounds. At Vancouver, British Columbia, there were received 3,934,000 pounds, and at Seattle there were received 11,650,000 pounds. So in 1921 there were 16,000,000 pounds of halibut taken from the fisheries to American ports—5,000,000 of them to Ketchikan, 11,000,000 to Seattle. Under those conditions why is it impossible or impracticable to encourage the taking of these fish to American ports and to develop the industry there instead of allowing it all to go, as the tendency now is, as is also shown by the figures I have cited, to Prince Rupert?

What is the objection made? There is an objection made by some of our own people, who, I suppose, will read what I am saying here. The owners of those boats apparently care very little about which port they go to. They go to the most convenient port. They go to the port where they can make the most money under present conditions, and when they are asked to join in building up this great industry, which is carried on by American citizens and which ought to be developed in all of its various branches by American labor by bringing the fish to an American port, their objection is that there are not

sufficient transportation lines between Ketchikan and Prince Rupert and between Ketchikan and Seattle; that there are not sufficient cold-storage houses and icing plants at Ketchikan.

When it is pointed out to them that there is no occasion to operate shipping lines between Ketchikan and Prince Rupert, and between Ketchikan and Seattle, to accommodate this business under present conditions, when three-fourths of the business is going to Prince Rupert; that if the business is required to go to Ketchikan as a condition of getting the benefit of the American market, transportation lines will be established to accommodate it, as a matter of course; that icing plants will be put up; that cold-storage houses will be established—they have nothing to say, except a mere statement that that will not be done or that it will take a year to do it, and they ask what will become of the business during that year.

That is a very feeble answer.

A year is not a very long time, even if their supposition is true that it would take that long to develop those facilities at Ketchikan, or greater facilities for marketing these fish at Seattle. That is not a very great obstacle to overcome, when we have in view the great object of making this an American industry, developing it in American ports and employing in it American labor.

Another objection they make is that if they undertake to establish ship lines between Ketchikan and Prince Rupert, they will have to cross Dixon Entrance, and that the water there is very rough; that the winds blow into that broad entrance from the Pacific Ocean. They say that it will require large steamships, and that the business will not justify the investment and the expense of operating those large steamships, which they say, in the brief which they have submitted to the committee, would be necessary to cross these rough waters, particularly in the wintertime, to carry the fish, after they have been iced and after they have been packed at Ketchikan, to the terminus of the Grand Trunk Railroad at Prince Rupert.

To show how easy it is to puncture an argument if one happens to know the conditions to which it applies, it is only necessary to point out that these very men, the owners of these shipping vessels, are doing now throughout the fishing season the very thing which they say it would be impossible to do. They have small fishing vessels. They are not using great ocean steamships, which they say would be necessary to make the trip from Ketchikan to Prince Rupert. They are engaged in the fisheries in the inland waters of Alaska, hundreds of miles north of Ketchikan. Ketchikan is 97 miles north of Prince Rupert, to be exact, situated on Revillagigedo Island. They come from the fishing banks with their schooners loaded with halibut at all seasons of the year, particularly in the wintertime, which is the best fishing season; go by Ketchikan, within sight of the docks and wharves, and from there to Prince Rupert to have their fish packed and shipped over the Grand Trunk Railroad. Yet they say it can not be done because of rough water.

Mr. President, this is simply another instance of the reluctance of people who are enjoying a present condition to have that condition changed unless they themselves see some immediate benefit in it for themselves. They are not taking the public viewpoint; and I am not criticizing them. They may not be expected to take the public viewpoint. Congress is expected to do that. They will be doing very well, perhaps, if they look after their own individual interests. They are not thinking of the broader policy of building up American seafaring occupations, of affording a supply of sailors for a merchant marine which we are talking so much about developing, of getting young men to learn the ways of the sea, as they will learn them if they engage in these great fisheries, and so be prepared to come to the aid of the country in time of war to man our war vessels. They are not thinking about those things. It makes very little difference to them, apparently, whether you build up Ketchikan or build up Prince Rupert. Yet the object of this amendment is to build up Ketchikan, and it seems to me to be a very substantial and a very justifiable purpose, such as we ought to have in framing this bill.

Now I want to call attention to one decision, the United States against Redding and others, by the Court of Customs Appeals. They were dealing with the question of what an American fishery is. The trouble about the condition of affairs to which my colleague's amendment relates is that this industry, which at least is partly foreign in the course of its conduct and its development, is regarded as altogether domestic by the Treasury Department.

Mr. McCUMBER. Mr. President, I wish to ask the Senator a question, because it seems to me the Senator and I are approaching this matter from an angle which can not be brought together at any point. The Senator is not dealing in this amendment simply with American fishermen. It provides that any fish caught in the north Pacific Ocean, whether they are caught by a Canadian or anyone else, shall not be shipped into America unless brought to an American port. If a Canadian fisherman sends out his own vessel and brings the fish into his own port, under this provision he can not bring them into the United States at all, not even by paying the duty.

Mr. POINDEXTER. No.

Mr. McCUMBER. Let us suppose a Canadian fishing fleet. We have control over our own. We can say to our own, if we think it is the proper thing to do, "You must bring your fish to an American port first, and not to a Canadian port."

Here is the foreigner, a Canadian, who sends out his fleet from Prince Rupert. They catch fish and bring them into Prince Rupert. Then they load them on their trains in their refrigerator cars, distribute them along the route, and their cars go all the way to Minneapolis and St. Paul. But you say to them, "You can not bring a pound of that fish, no matter what duty you are willing to pay, into the United States." That is a foreign country. Do you think that is fair treatment of a foreign country to say that "because you see fit to catch your fish and bring them into your own country, you can not export them to the United States at all"?

Mr. POINDEXTER. We are not interfering in any way with their fish. We are simply protecting our market. All we say to them is, "You can not enjoy the American market under those conditions." We have a perfect right to do that. But suppose we adopt the suggestion of the Senator from North Dakota and make the amendment apply only to domestic fishermen, to American fishermen.

Mr. McCUMBER. I think the fishermen ought to have the right to sell where they can get the best market for their fish.

Mr. POINDEXTER. I understand the Senator's complaint is that this will apply to the Canadian fishermen as well as to the American fishermen.

Mr. McCUMBER. That was not the point. It was not a complaint. The point was that we not only attempt to control the American fishermen, which we have a right to do—while I do not agree with the system of controlling them—but we go over there and say we are going to control the Canadians.

Mr. LODGE. The Canadian refuses to allow us to send a pound of fresh fish at Prince Rupert to the people there.

Mr. McCUMBER. But we do sell them there.

Mr. JONES of Washington. Not for local consumption.

Mr. McCUMBER. That may be.

Mr. LODGE. They put an absolute embargo on our fish.

Mr. POINDEXTER. They do the very thing, so far as our own country is concerned, that in principle is proposed to be done by this legislation with the United States. They deny the Canadian market to the American fishermen coming into Port Rupert with their fish. We only propose to deny the American market to any Canadian fishermen, and likewise to American fishermen, bringing their fish from the northern Pacific waters into a foreign port. In principle there is no greater discrimination in the proposed American regulations than there is in the Canadian law.

Section 1624 of the bill provides that all fish and other products of such fisheries shall be on the free list. "All fish and other products of such fisheries," and the question is—and it seems to me that sooner or later it must be determined if we are to pursue the object of retaining this as an American industry—whether or not business carried on in a foreign country, transported to market through the foreign country, shall be regarded as a product of an American fishery.

I doubt very much, if it were properly presented as a legal proposition, even under the language of the bill, to the Court of Customs Appeals, whether they would hold, even in view of the precedents which have been established—and which have gone quite far, but do not exactly fit this case—that the conditions which I have already described under which the fish from north Pacific waters are carried to market, constitute an American fishery, and that the fish when brought to market are the product of an American fishery.

But if the amendment proposed by my colleague is voted down, I expect to offer an amendment which would clear up any doubt upon the question which I have just stated and make it perfectly clear in the law that an industry carried on in this way in a foreign country, fish caught in the open ocean, taken into a foreign port, prepared there for shipment by foreign labor, transported over a foreign railroad, shall not be regarded, when they come into market and compete with American industry and American labor, as a domestic production. That will very likely, to a very large extent, if not altogether, accomplish the purpose which my colleague has in mind in offering his amendment.

Mr. LENROOT. May I ask the Senator why that is not done instead of urging this very unusual embargo, when the Senator himself now says that to impose the ordinary tariff rate will accomplish all that he desires to accomplish?

Mr. POINDEXTER. It will not accomplish all that I desire.

Mr. LENROOT. All that any American ought to ask, it seems to me.

Mr. POINDEXTER. Some Americans ask more than others for their country. I ask a good deal when the question is whether we shall favor our own people or foreigners in the rivalry of trade.

The decision of the Treasury Department to which I have referred, in concluding, uses this language:

> The American fishing vessel took no part in the fishing operations in question here except to convey from the United States to Newfoundland certain fishing supplies. A portion of the fishing tackle so conveyed was used under the supervision and by employees of an American citizen temporarily at Bonne Bay, Newfoundland; but the fishermen engaged there for service apparently used their own boats and presumably obtained there their supplies. The fish so caught were cured on British soil and shipped to the United States in a British vessel. *Held*, the importation was not entitled to free entry as the product of American fisheries under paragraph 567.

Paragraph 567 corresponds to the paragraph that I have just read. There is a case parallel to the one we are discussing, where the fish are packed or frozen in a foreign port. Both processes are used. Fish for what is called the fresh-fish market, in eastern cities, must be marketed under regulations of the cities or the States, and I think also under regulations of the Federal Government, within a certain number of days after they are caught. If they can not be delivered within that number of days and be classed as fresh fish for the city market, they are frozen and kept in cold-storage houses in a frozen condition and are shipped when the market justifies it. Fresh fish, so called, are packed in ice in boxes and shipped into the eastern markets. The freezing, the warehousing, the furnishing of the boxes, the packing in the boxes, the supplying of the ice, all of the labor connected with those things and the bringing of the fish to market thousands of miles across the country, are done by foreigners upon foreign soil, and there is no reason why the result of this labor should be regarded as the product of a domestic industry.

I hope the amendment of my colleague will be adopted. If it should not be adopted, I shall offer the amendment to which I have referred.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Washington [Mr. JONES] to the amendment of the committee.

Mr. JONES of Washington. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. BALL (when his name was called). I have a general pair with the Senator from Florida [Mr. FLETCHER]. I transfer that pair to my colleague [Mr. DU PONT] and vote "nay."

Mr. EDGE (when his name was called). I transfer my pair with the senior Senator from Oklahoma [Mr. OWEN] to the senior Senator from Maryland [Mr. FRANCE] and vote "yea."

Mr. NEW (when his name was called). I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Maryland [Mr. WELLER] and vote "yea."

Mr. STERLING (when his name was called). I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Oklahoma [Mr. HARRELD] and vote "yea."

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Texas [Mr. CULBERSON] and vote "nay."

Mr. WALSH of Montana (when his name was called). I have a general pair with the Senator from New Jersey [Mr. FRELINGHUYSEN]. In his absence I withhold my vote.

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

The roll call was concluded.

Mr. SUTHERLAND. I transfer my general pair with the senior Senator from Arkansas [Mr. ROBINSON] to the senior Senator from Connecticut [Mr. BRANDEGEE] and vote "nay."

Mr. JONES of Washington (after having voted in the affirmative). Has the senior Senator from Virginia [Mr. SWANSON] voted?

The PRESIDING OFFICER. That Senator has not voted.

Mr. JONES of Washington. That Senator is necessarily absent and I promised to pair with him for the day. I find, however, that I can transfer that pair to the junior Senator from Michigan [Mr. NEWBERRY], which I do, and allow my vote to stand.

Mr. CURTIS. I wish to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY]; and

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES].

The result was announced—yeas 19, nays 32, as follows:

YEAS—19.

Ashurst	Jones, Wash.	Nicholson	Rawson
Bursum	Lodge	Norbeck	Sterling
Cameron	McKinley	Oddie	Warren
Edge	McNary	Phipps	Willis
Gooding	New	Poindexter	

NAYS—32.

Ball	Harris	Lenroot	Smoot
Borah	Heflin	McCumber	Spencer
Broussard	Kellogg	Moses	Sutherland
Calder	Kendrick	Nelson	Trammell
Capper	Keyes	Norris	Underwood
Caraway	King	Overman	Wadsworth
Curtis	Ladd	Pepper	Walsh, Mass.
Dial	La Follette	Sheppard	Watson, Ind.

NOT VOTING—45.

Brandegee	Frelinghuysen	Myers	Smith
Colt	Gerry	Newberry	Stanfield
Crow	Glass	Owen	Stanley
Culberson	Hale	Page	Swanson
Cummins	Harreld	Pittman	Townsend
Dillingham	Harrison	Pomerene	Walsh, Mont.
du Pont	Hitchcock	Ransdell	Watson, Ga.
Elkins	Johnson	Reed	Weller
Ernst	Jones, N. Mex.	Robinson	Williams
Fernald	McCormick	Shields	
Fletcher	McKellar	Shortridge	
France	McLean	Simmons	

So the amendment of Mr. JONES of Washington to the amendment of the committee was rejected.

The PRESIDING OFFICER. The question is on the committee amendment as amended.

Mr. POINDEXTER. I offer the amendment to the amendment of the committee which I send to the desk and ask that it may lie over until to-morrow. I ask, however, that the Secretary may read it.

The PRESIDING OFFICER. The amendment to the amendment will be read.

The READING CLERK. Amend the committee amendment in line 19, page 102, by inserting after the word "pound" the following proviso:

> *Provided*, That fish prepared or packed in a foreign country for shipment and shipped from a foreign country into the United States in a ship of foreign registry or over a railroad running through a foreign country shall be subject to the duties prescribed by this paragraph.

Mr. POINDEXTER. I ask for a vote upon the amendment which I have submitted to the amendment of the committee.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Washington to the amendment reported by the committee.

Mr. McCUMBER. Mr. President, I hardly think that we ought to vote on an amendment which we have scarcely had time even to read and to draw a conclusion as to what its meaning is. I hope the Senator will give us time at least to read it.

Mr. POINDEXTER. In the hope that the chairman of the committee will look with favor on the amendment and accept it, I accede to his request that it may lie over.

EXECUTIVE SESSION.

Mr. McCUMBER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

DEATH OF REPRESENTATIVE MOSES P. KINKAID.

Mr. NORRIS. Mr. President, it becomes my sad duty to announce to the Senate the death of Hon. MOSES P. KINKAID, for 20 years a Member of the House of Representatives from the State of Nebraska, who died in this city this morning.

I ask unanimous consent for the present consideration of the resolutions which I send to the desk.

The resolutions (S. Res. 318) were read, considered by unanimous consent, and unanimously agreed to, as follows:

> *Resolved*, That the Senate has heard with profound sorrow the announcement of the death of Hon. MOSES P. KINKAID, late a Representative from the State of Nebraska.
>
> *Resolved*, That a committee of six Senators be appointed by the Presiding Officer to attend the funeral.
>
> *Resolved*, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

The PRESIDING OFFICER, under the second resolution, appointed Mr. NORRIS, Mr. HITCHCOCK, Mr. JONES of Washington, Mr. ASHURST, Mr. JOHNSON, and Mr. NORBECK as the committee on the part of the Senate to attend the funeral of the deceased Representative.

Mr. NORRIS. Mr. President, as a further mark of respect to the memory of the deceased Representative I move that the Senate take a recess.

The motion was unanimously agreed to; and (at 6 o'clock and 25 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Friday, July 7, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 6 (legislative day of April 20), 1922.

UNITED STATES PUBLIC HEALTH SERVICE.

The following-named assistant surgeons to be passed assistant surgeons in the United States Public Health Service, to rank from the dates set opposite their names:

Ralph E. Porter from July 15, 1922.
Joseph W. Mountin from July 17, 1922.

These officers have served the required time in their present grade and have passed the necessary examination for promotion.

ASSISTANT DIRECTORS, BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

Louis Domeratzky, of Virginia, to be assistant director, at $4,000 per annum, in the Bureau of Foreign and Domestic Commerce, vice Leland Rex Robinson, transferred.

Thomas R. Taylor, of New Jersey, to be assistant director, at $3,500 per annum, in the Bureau of Foreign and Domestic Commerce, vice Louis Domeratzky, promoted.

PROMOTIONS IN THE REGULAR ARMY.

VETERINARY CORPS.

To be captain.

First Lieut. Sherman Robert Ingram, Veterinary Corps, from March 1, 1922.

CHAPLAINS.

To be chaplain with the rank of major.

Chaplain Stephen Richard Wood, from June 29, 1922.

To be chaplain with the rank of captain.

Chaplain Henry Jouette Geiger, from April 6, 1922.

APPOINTMENTS IN THE REGULAR ARMY.

INFANTRY ARM.

To be second lieutenants with rank from June 26, 1922.

Pvt. First Class Orestes Cleveland, Headquarters, One hundred and third Division, United States Army.

Pvt. Elbert Kelly, United States Army, unassigned.

FIELD ARTILLERY ARM.

To be second lieutenants with rank from June 26, 1922.

Pvt. James Harrison Dickie, United States Army, unassigned.

Pvt. Raymond Quinn Hennicke, United States Army, unassigned.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

ADJUTANT GENERAL'S DEPARTMENT.

Col. Joseph Frank Janda, Infantry, with rank from July 1, 1920.

Lieut. Col. Louis Stewart Chappelear, Coast Artillery Corps, with rank from July 1, 1920.

Lieut. Col. Richard Kerr Cravens, Finance Department, with rank from July 1, 1920.

Lieut. Col. Robert Whitfield, Infantry, with rank from July 1, 1920.

Maj. Andrew Jackson White, Infantry, with rank from July 1, 1920.

Maj. Eugene Ross Householder, Infantry, with rank from July 1, 1920.

Maj. Edward Roth, jr., Coast Artillery Corps, with rank from July 1, 1920.

Capt. William Anthony Woodlief, Infantry, with rank from July 1, 1920.

AIR SERVICE.

Maj. Paul Theodore Bock, Corps of Engineers, with rank from November 23, 1920.

REAPPOINTMENT IN THE REGULAR ARMY.

Maj. Gen. Clarence Charles Williams, Chief of Ordnance, to be Chief of Ordnance, with the rank of major general, for the period of four years beginning July 16, 1922, with rank from July 16, 1918. His present appointment will expire July 15, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 6 (legislative day of April 20), 1922.

UNITED STATES ATTORNEYS.

William T. Carden to be United States attorney, District of Hawaii.

W. Sherman Ball to be United States attorney, western district of Kentucky.

UNITED STATES MARSHAL.

James C. Tyler to be United States marshal, southern district of Mississippi.

PROMOTIONS IN THE NAVY.

To be commanders.

Lewis D. Causey.
Charles S. McWhorter.
Guy E. Davis.

To be lieutenant commanders.

Robert H. Bennett.
Robert E. Bell.
John F. Donelson.
Webb Trammell.
Walter A. Riedel.
Lucien B. Green, 2d.
Sherwood Picking.
Wells E. Goodhue.
Joseph L. Nielson.
Joseph M. Blackwell.
George A. Rood.
Van Leer Kirkman, jr.
Philip R. Baker.
Eugene T. Oates.
George D. Murray.
Harry R. Gogusch.
Carroll Q. Wright, jr.

To be lieutenants.

Thomas C. Latimore.
Sidney B. Blaisdell.

To be lieutenants (junior grade).

Albert R. Staudt.
Robert M. Dorsey.
George W. Brashears, jr.
Edgar R. Winckler.
William H. Meyer.

To be ensign.

Myron F. Eddy.

To be dental surgeon.

John R. Barber.

To be passed assistant dental surgeons.

Andrew L. Burleigh.
Robert H. Fladeland.

To be chief gunners.

Charles B. Bradley.
James A. Featherston.
Jack K. Campbell.
John M. Buckley.
John M. Kirkpatrick.

To be chief machinists.

John E. Sullivan.
Robert J. Kingsmill.
Charles B. Shackelton.
Emery Smith.

To be assistant surgeon.

Malory A. Pittman.

MARINE CORPS.

To be first lieutenant.

Edward F. O'Day.

POSTMASTERS.

MICHIGAN.

Frank O. Parker, Alma.
Albert W. Lee, Britton.

MINNESOTA.

Dora N. Ruud, Granite Falls.

MISSOURI.

Charles H. Herriman, Buckl.n.

OKLAHOMA.

Omer K. Benedict, Tulsa.

UTAH.

Beatrice E. Hemphill, Helper.

SENATE.

FRIDAY, *July 7, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. WATSON of Indiana obtained the floor.

Mr. CURTIS. Mr. President, will the Senator yield that I may make the point of no quorum?

Mr. WATSON of Indiana. I yield for that purpose.

Mr. CURTIS. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	McLean	Robinson
Ball	Hale	McNary	Sheppard
Borah	Harreld	Moses	Shortridge
Brandegee	Harris	Nelson	Simmons
Broussard	Harrison	New	Smith
Bursum	Heflin	Newberry	Smoot
Calder	Johnson	Nicholson	Spencer
Cameron	Jones, N. Mex.	Norbeck	Stanley
Capper	Jones, Wash.	Norris	Sterling
Culberson	Kellogg	Oddie	Sutherland
Curtis	Kendrick	Overman	Townsend
Dial	Keyes	Owen	Trammell
Dillingham	Ladd	Pepper	Underwood
du Pont	La Follette	Phipps	Walsh, Mass.
Edge	Lenroot	Pittman	Walsh, Mont.
Ernst	Lodge	Poindexter	Watson, Ind.
Fernald	McCormick	Pomerene	Willis
Frelinghuysen	McCumber	Ransdell	
Gerry	McKinley	Rawson	

Mr. HARRIS. I wish to announce that my colleague [Mr. WATSON of Georgia] is detained on account of illness.

The VICE PRESIDENT. Seventy-four Senators have answered to their names. A quorum is present. The Senator from Indiana has the floor.

Mr. McCORMICK. I ask unanimous consent to present for publication in the RECORD a resolution adopted by Aurora Post, No. 20, Grand Army of the Republic of Illinois.

Mr. WATSON of Indiana. I yield to the Senator from Illinois and to other Senators who have risen to present routine business.

PETITIONS AND MEMORIALS.

Mr. McCORMICK presented a resolution adopted by Aurora Post, No. 20, Department of Illinois, Grand Army of the Republic, which was referred to the Committee on Pensions and ordered to be printed in the RECORD, as follows:

JUNE 9, 1922.

To the United States Senate, greeting:

Resolved, That we, Aurora Post, No. 20, Department of Illinois, believe the Senate should no longer delay action on the pending Bursum bill granting $72 a month to all Civil War veterans and $50 to Civil War widows.

We respectfully ask Congress to consider the fact that large numbers of old, brave veterans who helped to save this Government from dissolution are now in want for the actual necessities of life.

Flood sufferers and foreign sufferers have been well provided for by Congress; their claim, to say the least, is only a common one, while the claim of the Civil War soldier is a just debt for services rendered, and if not paid soon will remain a debt forever unpaid, and future generations will regret it.

The vast majority of the people are willing and anxious to have the Bursum or the Morgan bill passed at once.

H. J. MULHOLLAND,
J. M. CONWAY,
Committee.

Mr. SHORTRIDGE presented letters and telegrams, in the nature of petitions, from Dr. Charles Landis, Memorial Church, Stanford University; Rev. Charles T. Lewis, Vermont Square Methodist Episcopal Church, Los Angeles; Rev. Francis J. Van Horn, First Congregational Church, Oakland; Rev. Eugene B. Smith, Union Congregational Church, Calipatria; Rev. Herbert Booth Smith, Immanuel Presbyterian Church, Los Angeles; Rev. Wilfred Kent, Methodist Church, Fullerton; Rev. Roscoe D. Douglas, Saratoga; Rev. Roy H. Barrett, First Baptist Church, Petaluma; Rev. A. Craig Bowdish, Richmond Congregational Church, San Francisco; Rev. Carl F. Henry, Throop Memorial Church, Pasadena; Rev. Edwin Walker, Public Community Service, Ben Lomond; Rev. Hamilton Lee, St. Matthews Church, Berkeley; Mrs. E. L. Tench, Long Beach; Mrs. Elizabeth Minarian, San Diego; Miss Ethel A. Latimer, Long Beach; Mrs. Sarah T. Boardman, Bell; H. H. Davis, San Gabriel; Mrs. E. M. Lyman, Long Beach; Mr. and Mrs. D. M. Utter, Los Gatos; Herbert C. H. Lake, R. D. Sands, W. S. Pugh, Alhambra; Charles D. Blaney and Isabel W. Blaney, Saratoga; R. Franklin Ray, Alameda; Elia Gilbert Williams, Mr. and Mrs. G. A. Wood, Grace E. Hanchett, and W. A. Vickery, of Saratoga; M. J. Gergussen, Los Angeles; Mrs. Abby McKinnon, Long Beach; Mr. George Curtiss, Soledad; Mrs. L. J. Hanchett, Saratoga; Joseph Overton, Los Angeles, and sundry citizens, all in the State of California, praying that relief be granted the suffering people of Armenia, and protesting against Turkish sovereignty over and alleged atrocities to the Armenians, which were referred to the Committee on Foreign Relations.

Mr. ROBINSON presented petitions of sundry citizens of Fort Smith, Ark., praying that only a moderate duty be imposed in the pending tariff bill on light-weight gloves, which were referred to the Committee on Finance.

Mr. WILLIS presented a petition of sundry citizens of Toledo, Ohio, praying for retention in the pending tariff bill of the proposed specific duties on silver black foxes, which was ordered to lie on the table.

He also presented a petition of the department of public service of the city of Cleveland, Ohio, praying for inclusion in the pending tariff bill of protective duties on vegetable oils, which was referred to the Committee on Finance.

He also presented memorials of the Cleveland Wet Wash Association and sundry laundry companies, all in the city of Cleveland, Ohio, remonstrating against inclusion in the pending tariff bill of proposed duties on vegetable and animal oils and praying that such oils be placed on the free list, which were referred to the Committee on Finance.

REPORT OF COMMITTEE ON IRRIGATION AND RECLAMATION.

Mr. McNARY, from the Committee on Irrigation and Reclamation, to which was referred the bill (S. 3709) to provide for an examination and report on the condition and feasibility of a reclamation project at Hope, Eddy County, N. Mex., reported it without amendment.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DIAL:

A bill (S. 3791) for the relief of William R. Bradley, former acting collector of internal revenue for South Carolina; to the Committee on Claims.

By Mr. PITTMAN:

A bill (S. 3792) to provide for the protection and development of the lower Colorado River Basin; to the Committee on Irrigation and Reclamation.

By Mr. WATSON of Indiana:

A bill (S. 3793) to authorize the Gary Tube Co. to construct a bridge across the Grand Calumet River in the State of Indiana; to the Committee on Commerce.

By Mr. KENDRICK:

A bill (S. 3794) to amend section 35 of the act entitled "An act to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain," approved February 25, 1920; to the Committee on Public Lands and Surveys.

By Mr. CALDER:

A bill (S. 3795) for the relief of Joseph Gilbert; to the Committee on Claims.

By Mr. FRELINGHUYSEN:

A bill (S. 3796) to amend section 4 of the act entitled "An act to incorporate the National Society of the Sons of the American Revolution," approved June 9, 1906; to the Committee on the Judiciary.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. EDGE. I submit an amendment intended to be proposed by me to the pending bill.

The VICE PRESIDENT. Does the Senator desire to have the amendment read?

Mr. EDGE. Not at this time.

The VICE PRESIDENT. The amendment will be printed and lie on the table.

Mr. WATSON of Indiana. Mr. President, the first national platform ever to mention the subject of cloture was that adopted by the Democratic National Convention in 1916. As one of its provisions, this language was incorporated:

> We favor such alteration of the rules of procedure of the Senate of the United States as will permit the prompt transaction of the Nation's legislative business.

That was a very concise and emphatic declaration in favor of limitation upon debate in this body. It will be recalled that in the campaign that year Woodrow Wilson, the then candidate for the Presidency on the Democratic ticket, referred on several occasions to this plank in the Democratic platform, and insisted that some limitation should be placed upon debate in the Senate,

Evidently the plank had been received with so much favor throughout the country in that campaign that the Democratic Party in convention assembled thought it worth while to repeat it in the platform of 1920, and that year, in exactly the same language, the same plank again was incorporated. So that so far as a solemn declaration of purpose is concerned nothing could be more emphatically stated than the intention of the Democratic Party, thus announced in two conventions, and also the unequivocal declaration of the candidate for the Presidency upon a platform insisting that this promise should be redeemed in good faith.

Evidently with the intent of carrying out that provision in the Democratic platform the late Senator Martin, of Virginia, the then Democratic leader in this body, introduced into the Senate on the 8th day of March, 1917, a resolution providing for the rule which we now invoke. This was presumably done for the purpose of carrying out the Democratic platform. It was debated in this body with more or less vigor for two days, and in that debate the able and popular Senator from Ohio [Mr. POMERENE], who honors me with his presence, made use of this language:

Mr. President, I had hoped that this rule might be so drawn as to make it a little more drastic during the last few days of a session. My belief has been that a majority, or at least two-thirds vote of the Senate, should have the right to further limit or conclude debate in the closing days of a session. I am satisfied, however, and I have talked the subject over with a number of Senators, that the rule presented by the Senator from Virginia is perhaps the best that can be obtained now. For this reason I earnestly hope that the proposed rule will be adopted, if we can get nothing better.

My very eloquent friend from Mississippi [Mr. HARRISON] yesterday charged me with inconsistency; but, Mr. President, I voted for that resolution, and I am now seeking to invoke its operation in this body. My friend the Senator from Ohio voted for the resolution, and he is now against invoking its operation in this body. Therefore if either of us can be charged with inconsistency, that charge does not lie at my door. I am not so squeamish on the question of inconsistency as some people may be, unless applied to a fundamental principle or to a fixed and established policy of government. As to a mere method of procedure there may be more or less of inconsistency, because—

New conditions teach new duties,
Time makes ancient good uncouth.

If conditions arise in the Senate which imperatively demand the change of its rules we ought to have the courage to meet the conditions which confront us and adopt rules which, in the language of the Democratic platform of 1916, "will permit the prompt transaction of the Nation's legislative business" in the Senate of the United States.

Senators, when the vote was taken on the Martin resolution on the 8th of March, 1917, 45 Democrats voted for it and 21 Republicans voted for it. Of the 45 Democrats who voted for the resolution, who were sitting in the Senate of the United States at that time, led by the Democratic leader of their own choosing, following the advice of the Democratic President, elected on a platform containing a declaration on the subject of cloture, 23 of them are yet Members of this body; and I venture to say that all 23 of them to-day will vote against the application of the rule which they helped to pass at that time in obedience to a platform declaration of their party and the mandate of their candidate for the Presidency. Of the 45 Democrats, 23 yet remain; 22 of them have gone hence; some laid low by the hand of death, but more of them mowed down by the remorseless scythe of public opinion.

Of the 21 Republicans who voted for that resolution, 21 yet remain in this body, and of that 21 who voted for the resolution then, I venture the prophecy that the 21 to-day will vote in favor of the application of the cloture rule as a rule of procedure in this body. So that no charge of inconsistency may be laid at our door on the subject in hand.

Mr. PITTMAN. Mr. President——

Mr. WATSON of Indiana. I yield to my friend from Nevada.

Mr. PITTMAN. I was one of the Democrats who voted for the rule to which the Senator from Indiana has referred, and I voted for it because I think, when two-thirds of this body feel that debate has gone far enough on a pending subject, that they have a right to limit the debate from that time on. The question now involved, however, is not whether a Senator favors that rule, but the question is whether two-thirds of this body think that this debate has gone far enough. For one, I do not think that it has gone far enough, because there are some two or three thousand new items which have been placed in the bill, each one in itself being in the nature of a separate bill.

I wish to say to the Senator from Indiana that if the pending bill were such a bill as the bonus bill, which involves merely one question, then I would be one Senator who would say that the debate had gone far enough, and I would be one of the two-thirds to invoke the rule on the bonus bill as soon as the debate on the tariff bill shall have been concluded; but I think that the Senator's criticism of Senators on this side who formerly voted for a cloture rule, but who are now going to vote not to invoke the rule is entirely illogical; indeed, it is almost absurd, when made by a Senator of the intelligence of the Senator from Indiana. It is not a question of whether a Senator favors a cloture rule; but it is a question of whether or not the time has arrived for invoking the rule; and the Senator from Indiana will learn at 12 o'clock noon to-day that there are not two-thirds in this body who feel that the time has arrived to invoke the cloture rule.

Mr. WATSON of Indiana. I think, probably, that the last statement of the Senator from Nevada is true; but if the cloture rule is ever to be invoked, why should it not be now?

Mr. POMERENE. Mr. President——

Mr. WATSON of Indiana. We have had here day after day and week after week debate which everybody knew was engaged in very largely for the purpose of delay. The American people can not be fooled. Everybody understands that there has been a filibuster on here; one which has been very adroitly conducted; one that has gone on here from day to day in a manner so as almost to deceive the very "elect"; and yet to one who has listened to the speeches made and the subjects discussed it comes home with irresistible force that these talks have been made largely for the purpose of delay. The mantle of prophecy has not descended on my shoulders, but I understand something of the methods of some of my astute friends on the other side of the Chamber, and I predicted on this floor nine months ago that the Democrats never intended that this bill should pass before the 1st of October next.

They do not intend that it shall pass before the 1st day of October and they do not intend that any cloture rule shall be applied that will enable us to pass it before the 1st day of October, because they intend to carry on their propaganda against it; they intend to fill the newspapers with all of their mistaken ideas—I do not speak in disrespectful terms—in regard to the effects of the bill when it shall be carried into operation, and then force us to go to the country on the bill with only 30 days in which to explain it, and when the bill itself shall have had no opportunity whatever to justify or vindicate its provisions. Senators on the other side of the Chamber know that just as well as they know that I am talking to them. The smart, astute leaders over there have purposely formulated this program. I am not complaining. They may denominate it good politics and it may be good partisanship, but I do not want them to undertake to induce the country to believe that it is statesmanship when it is pure unadulterated, undefiled partisanship with no other basis and no other foundation.

Mr. POMERENE. Mr. President——

Mr. WATSON of Indiana. I yield to my friend from Ohio.

Mr. POMERENE. Mr. President, a remark which the distinguished Senator from Indiana made a moment ago prompts me to ask a question. I do not desire that he answer it if he feels that he can not do so with propriety. However, the New York Tribune of yesterday referred to the hospitality which was extended by the very great and very distinguished leader of the majority the other evening, and among the names of the distinguished guests was that of our friend from Indiana. Further, the paper reported that it was the judgment of a number of the guests that evening that the cloture rule should not be pressed now lest the charge might be made that it was being attempted to gag the minority in the discussion of this question. My question—and I repeat that I do not want the Senator to answer it unless he feels that he can do so with propriety——

Mr. WATSON of Indiana. I will answer it, whatever it is.

Mr. POMERENE. Is it, or was it, the opinion of the distinguished Senator from Indiana that it was not opportune now to press this cloture rule?

Mr. WATSON of Indiana. Mr. President, I am very glad to answer the question of my friend from Ohio, who is always a fair-minded man and deals open handedly in the Senate. The Senator who sits before me, and whose guests we were on that occasion, and my friend the chairman of the Committee on Finance, on my right hand, who also was present, both spoke to me while the Senator from Ohio was asking his question, saying there was not a solitary thing said upon that subject, and, of course, there was not. I want to say to the Senator that I would not behind closed doors say that it was not opportune to invoke the cloture rule and then stand up here and advocate it.

Mr. POMERENE. Then, Mr. President, it would seem that the newspaper writer simply anticipated what ought to have been the opinion of those present rather than what was in fact expressed.

Mr. WATSON of Indiana. The probabilities are that the writer consulted some Democratic Senator as to what happened there instead of consulting some one who was present. No such discussion was indulged in; no such thought was entertained by anybody who was present on that occasion.

Mr. HARRISON. Mr. President——

Mr. WATSON of Indiana. I yield to my genial friend always.

Mr. HARRISON. Mr. President, I want to ask the Senator from Indiana if he does not think that this delay has been caused by the fact that there have been too many prima donnas and headliners on the other side of the aisle in the discussion of the tariff bill, and that the President in his speech yesterday in Ohio in speaking to the Glee Club when he employed this language had in mind Senators on the other side?

> The trouble in public life and in our party is that basses insist on attracting attention to themselves instead of singing for public good and party good, instead of singing in harmony. I don't care to be a soloist because I am President, but somebody has to do the directing.

Does the Senator think that the President had the Senator from Indiana and other Senators in mind on the Republican side when he made those remarks?

Mr. WATSON of Indiana. Mr. President, really I am not advised as to that, but I quite concur in the opinion expressed by the President and in the sentiment announced by him. I think, perhaps, there is too much of what he described. I think, perhaps, there is too much talking when we are not talking about the subject in hand. I do not care how much Senators speak, provided they speak to the subject in hand and finish the debate that is before the Senate, come to a conclusion, and either vote the pending proposition up or vote it down. That is the business of the Senate of the United States.

Of course, there are individual players here, as everywhere else, and I may say to my friend that I think, in part, it is due to the primary system. Senators come here with an individual mandate; they do not come here feeling that they are under great obligations to the party, because each individual has gone out as an individual and won his nomination and won his election, and so he does not come here imbued with the idea of teamwork, as used to be the case when party obligations sat more heavily upon the shoulders of public men than they do now. So I think in a way that has something to do with the individual soloist of whom the President spoke so feelingly yesterday. I have not had an opportunity to read his speech this morning, but I am very glad that that passage from the President's speech has been put in the RECORD.

Mr. OWEN. Mr. President——

Mr. WATSON of Indiana. I yield.

Mr. OWEN. Mr. President, will the Senator permit an inquiry to be made?

Mr. WATSON of Indiana. Yes.

Mr. OWEN. I have favored majority cloture continuously. In 1912 and 1913 I fought for it. I favor it now—a majority cloture. The American people gave a mandate to the Republican Party by a majority of 7,000,000 votes, authorizing them to make the laws of this country. Does the Senator think that, having that mandate, his party should permit a rule to obtain or remain in the Senate by which the Democrats could, if they wanted to, as alleged by the Senator, carry on a filibuster that would deny the majority the right to rule?

Mr. WATSON of Indiana. I do not.

Mr. OWEN. Is the Senator in favor, then, of majority peremptory cloture?

Mr. WATSON of Indiana. I am in favor of peremptory cloture; but I know, if we were to set aside the tariff bill and take up the cloture and discuss it and adopt it here, that Senators on the other side would filibuster that question just as long as they will filibuster the tariff bill, and our last state would be worse than our first.

Mr. OWEN. I will say to the Senator I will favor both by vote and by action and speech on this floor peremptory majority cloture now, but I will not favor a two-thirds proposal such as is now proposed, either in principle or in application to this debate. The principle of a minority ruling the majority is fundamentally wrong, and the present proposal is an inexcusable makeshift.

Mr. WATSON of Indiana. In other words, my friend, like the native of Maine, is in favor of prohibition but "agin its enforcement"; he is in favor of any proposition that is not now pending before the Senate. We have here a definite, specific proposition before the Senate. The Senator is in favor of cloture, but he is against the only thing that is offered now.

Mr. OWEN. I will say to the Senator that when the question of cloture arose on this side a very large majority of Democrats were in favor of peremptory cloture, and they signed a call to that effect. I have that call, and, with the consent of the Senate, I will put it in the RECORD.

Mr. WATSON of Indiana. They voted for it right here.

Mr. OWEN. I ask permission to put it in the RECORD.

Mr. WATSON of Indiana. That will be all right; I shall be very glad if the Senator will show how many Democrats favor cloture but are against its enforcement.

Mr. OWEN. I ask the Chair if I have consent to print the call in the RECORD?

Mr. WATSON of Indiana. I shall be very glad to have it inserted in the RECORD.

The VICE PRESIDENT. What is it the Senator from Oklahoma desires printed?

Mr. OWEN. I desire to have printed in the RECORD the roll of those who favored cloture by a written call.

The VICE PRESIDENT. When?

Mr. OWEN. It was at the time the vote was taken on invoking cloture—I do not remember the exact date, but it was in 1915.

The VICE PRESIDENT. The Chair merely wishes to understand exactly what the Senator from Oklahoma desires printed in the RECORD in order that it may be identified.

Mr. OWEN. I will send for the roll and present it.

The VICE PRESIDENT. Without objection, the matter will be printed in the RECORD.

The matter referred to is as follows:

UNITED STATES SENATE,
Washington, D. C., February 23, 1915.

To Hon. JOHN W. KERN,
Chairman of the Democratic Conference.

DEAR SIR: We the undersigned respectfully request that you appoint a committee of five Democratic Senators, of which the chairman of the Democratic conference shall be one, to prepare a revision of the rules of the Senate for the consideration of the Democratic conference at its first meeting after the 4th of March, 1915, with a view to giving the Senate greater power over the transaction of its business, ending filibusters and dilatory tactics, etc.

Yours very respectfully,

Robt. L. Owen.	Duncan U. Fletcher.
Thomas S. Martin.	Key Pittman.
Atlee Pomerene.	T. J. Walsh.
John F. Shafroth.	C. S. Thomas.
Henry F. Hollis.	Jos. E. Ransdell.
Geo. E. Chamberlain.	B. F. Shively.
Harry Lane.	H. L. Myers.
Francis G. Newlands.	Jas. Hamilton Lewis.
Claude A. Swanson.	Jas. K. Vardaman.
Henry F. Ashurst.	C. A. Culberson.
Charles F. Johnson.	F. M. Simmons.
James E. Martine.	Wm. J. Stone.
Willard Saulsbury.	John Walter Smith.
Morris Sheppard.	Joe. T. Robinson.
Jas. A. Reed.	Mark A. Smith.
Luke Lea.	James P. Clarke.
W. E. Chilton.	J. A. O'Gorman.
Francis S. White.	Jno. K. Shields.
Wm. Hughes.	Blair Lee.
Ollie M. James.	John S. Williams.
Wm. H. Thompson.	

(The above names were copied from original signatures.)

Mr. STANLEY. Mr. President——

The VICE PRESIDENT. Does the Senator from Indiana yield to the Senator from Kentucky?

Mr. WATSON of Indiana. I yield, of course, to my neighbor from Kentucky.

Mr. STANLEY. Mr. President, may I respectfully and affectionately suggest to my good friend and neighbor from Indiana that the trouble with this sepulchral glee club, this doleful chorus, of which the President spoke, is not that one man is doing all the singing, but that two many are singing and singing in different tunes. For instance, whenever the President sings in falsetto the powerful voice of the Senator from Idaho [Mr. BORAH] is heard in a deep and discordant bass; and when the President wants to sing low the Senator from California [Mr. JOHNSON] persists in singing high; and when the President wants to sing a good old reactionary doxology the Senator from Nebraska [Mr. NORRIS] breaks out in a progressive anthem. It is not that there is only one singing, but that there are a half dozen singing at the same time and all singing in a different tune and on a different theme.

Mr. WATSON of Indiana. Mr. President, I am very glad to understand that the Senator thinks that there is discord over here instead of harmony. The fact is that we do take varying views on public questions, but after all, when it comes to the fundamentals underlying Republican politics and Republican policies, we stand as one, just as we did in 1920 and just as we shall on this vote, and just as we shall continue to do on the things that we regard as vital to the public welfare and the well-being of our citizenship.

My very good friend from Mississippi [Mr. HARRISON] yesterday did me the very great honor to read to the Senate a speech that I delivered on the subject of cloture. The very eminent Senator from Alabama [Mr. UNDERWOOD] had introduced a resolution providing for cloture, an hour and a half limitation on debate, and at that time I opposed that resolution, and the Senator read the speech that I made for the purpose of showing that I was inconsistent; that having been opposed to cloture then, I was advocating cloture now; but if the Senator had read further in the speech he would have found why I opposed it. I opposed it because the Senator from Alabama foresaw that a treaty of peace was coming into the Senate, and because he was seeking to limit debate on that treaty of peace that should be formulated at Versailles.

Mr. UNDERWOOD. Mr. President, I do not want to interrupt the Senator——

Mr. WATSON of Indiana. I want the Senator to.

Mr. UNDERWOOD. But I certainly do not want him to announce my thoughts when he is announcing them incorrectly. I have been a Member of the Senate for seven years, and there has not been an hour since I have been a Member of the Senate that I have not been in favor of a reasonable cloture rule in this body. You can not adopt a cloture rule in the midst of a party fight any more than when you are on the battle field you can enter into an agreement as to whether or not you shall use poison gas in war. You can not adopt it at this time.

My objection to the cloture rule that you propose to put on the Senate now is that it is not an intelligent one. You propose to cut off amendments. You propose to deny to the minority the opportunity to propose amendments, if this rule is adopted, after we have given you unanimous consent to consider your own amendments first. It is an outrageous proposition. It is unreasonable.

Mr. WATSON of Indiana. I will talk about the "outrage" a little later.

Mr. UNDERWOOD. But I do not want the Senator to say that when I favored cloture during the period of the war I had in view the ratification of a treaty of peace, because I did not. In fact, if I recall rightly—the Senator has brought me into this, and I hope he will pardon me for occupying a little of his time——

Mr. WATSON of Indiana. Oh, I am perfectly content, because I think the further the Senator goes in that respect the worse off he will be.

Mr. UNDERWOOD. I proposed this amendment to the rules on the 2d day of May, 1918. It was reported to the Senate on the 31st day of May, 1918. If the Senator will allow his memory to drift back to the 19th day of May, 1918, he will realize that the Germans had landed on the Marne, and, if I recollect aright, they were already in the Picardy sac, and they were threatening the channel ports; and there was not a man in the United States on the 19th day of May, 1918, who expected the war to be ended within two years. So the Senator will understand that I did not have in my mind anything to do with the ratification of a treaty of peace at that time.

A great many of my own party—and they are entitled to their own views—do not agree with me on the subject of cloture. I do not believe in an unintelligent cloture, one that is intended to be hitched up only for particular party purposes; but I favored then a rule that would allow each Senator to discuss a question that came before the Senate for one hour in general debate, and allow him 20 minutes to discuss every amendment, unless his time was extended by unanimous consent, and I would vote for such a rule now if it were proposed to the Senate—I mean, with general application.

I deny that there is a filibuster on this side to prevent a final vote on this bill, and I think it will be finally demonstrated that the Senator has made a mistake in making that assertion; but it is absurd to say because I favored a cloture rule in order that the Senate might expedite its business that I am contradicting my position because I will not vote for a rule that will cut off any opportunity for the members of the minority to offer amendments to the great tariff bill; that would limit us, with 1,200 amendments of the majority pending, to a time that would amount to half a minute apiece.

We oppose the pending rule because it is not fair, no matter whether you want to charge us with filibustering or not. If you want to propose something for action you must propose something that is reasonable and fair. When we gave you the right by unanimous consent to consider your amendments first you can not get the American people to say that it is fair for you to deny to us absolutely the right to have ours considered at all.

Mr. WATSON of Indiana. Mr. President, in answer to the Senator, on the 13th of June, 1918, in the course of the speech which my able and eloquent friend from Mississippi [Mr. HARRISON] read yesterday, I said:

> What I really wanted to ask the Senator was this: Is he not willing to amend this proposed rule so that it shall not apply to the consideration of treaties? To me the most repugnant feature of this proposed amendment to the rules is that it applies to treaties. I believe that when this war shall have been concluded the Senate of the United States will stand face to face with the greatest problems that have ever confronted any legislative body in the history of the world, because growing out of this war there will be new world relations of such overwhelming consequence and importance that the Members of this body ought not to be handicapped to one hour and a half of speech on questions of such prodigious import.

And I will say that my friend said no; he would not make any limitation or exception.

Mr. UNDERWOOD. Of course not.

Mr. WATSON of Indiana. It was bruited about on this side at that time and we well understood that what the Senator then had in mind was limitation on the debate with reference to a treaty that was bound to follow the conclusion of the war. Any number of Senators on this side will verify my statement.

Mr. UNDERWOOD. I can not help, I am not responsible for, what Senators say behind my back or what they think; but I say it is absurd to charge that I was thinking about a treaty of peace on the 19th day of May, 1918. I had no such thought. The reason why I objected to the rule not being made broad enough to cover treaties was that so far as the interests of the American people are concerned I do not think that a treaty is of any greater importance than a bill such as the one pending before the Senate at this hour, that carries the burden of taxation into every home of America.

Mr. WATSON of Indiana. The Senator says he did not think of the treaty. He certainly thought of it, because I called his special attention to it at that time.

Mr. UNDERWOOD. I am not talking about what occurred between the Senator and myself in debate. I am talking about the motive that was behind me when I introduced the resolution for an amendment of the rules.

Mr. WATSON of Indiana. What was the Senator's motive when he declined to make an exception of treaties?

Mr. UNDERWOOD. Because I do not think they ought to be excepted. That does not mean that I was introducing the proposed rule to enable the Senate to ratify a treaty that I did not have in thought. It merely means that if you brought in now and tried to adopt a cloture rule and it excluded treaties I would vote against the exclusion, because I do not think a treaty is entitled to any more rights than a tax bill.

Mr. WATSON of Indiana. Mr. President, I disagree entirely with the Senator from Alabama in that respect.

Mr. UNDERWOOD. That is only a matter of opinion.

Mr. WATSON of Indiana. Certainly. I think there is all the difference in the world between an act that we pass and that we can repeal any day, and a solemn treaty that carries us into new relationships with the nations around the world, and that we can not revoke of our own legislative will. Of course it takes a two-thirds vote to ratify a treaty, but, after all, when a treaty is ratified it becomes the highest law of the land and can not be revoked except in a very solemn manner. It might perhaps lead to such breach of faith and confidence as would result in war, whereas an appropriation bill lasts for two years at the most and a revenue bill may be repealed at the very next session of Congress.

Of course I shall not say that my friend had in mind the treaty that was to be formulated at the conclusion of the war, but I do know that we had it in mind, and, having it in mind, I rose to my feet and asked the Senator the question that I have just read, and the Senator declined to make the exception; and therefore that led us irresistibly to believe that the Senator had the treaty in mind, and we voted against the rule.

When the vote was taken on that question on the 13th of June there were 8 Republicans that voted for the Senator's hour-and-a-half limitation and 26 Democrats, while 12 Democrats and 29 Republicans voted against it; in other words, 34 voted for it and 41 voted against it; and I know that a number of Senators on this side who really believed in limitation of debate were led to vote against it because they believed that the Senator then had in mind a treaty that was to follow the war.

Mr. JONES of New Mexico. Mr. President——

Mr. WATSON of Indiana. We did not then intend, nor so far as I am concerned do I ever intend, to vote for cloture in the consideration of a treaty, which is the highest law of the land and the most solemn engagement that one nation can enter into with another.

Mr. UNDERWOOD. Mr. President——

The VICE PRESIDENT. Does the Senator yield, and if so to whom?

Mr. WATSON of Indiana. I yield to the Senator from Alabama.

Mr. UNDERWOOD. I am perfectly willing for the Senator to state what his viewpoint was; but except for the fact that the proposal was offered by the Senator from Idaho [Mr. BORAH], I think, to exclude treaties from the consideration of this rule, it never entered my head that there was opposition to the cloture rule from the standpoint of treaties. I know there was not in the Committee on Rules. The Committee on Rules reported the resolution I think by a very large majority, if not by a unanimous vote.

Mr. WATSON of Indiana. Will the Senator speed up a little? I have but 15 minutes remaining.

Mr. UNDERWOOD. Yes; I will. The suggestion that was made in reference to treaties was entirely independent of the subject matter; and I know that the Senators who were supporting my resolution for a cloture rule did not do so in contemplation of the ratification of a treaty of peace. They voted for it, because they believed that the Senate of the United States had grown to such large numbers that some reasonable termination of debate must be agreed to; but to talk about our trying to agree to termination of debate in the midst of this party fight is simply absurd. When this bill is passed, and the party fight is over, if the Senator will bring in a reasonable rule for cloture that extends to all matters before the Senate, not picking out just those that he wants it to extend to, I will support it; but if he intends to play favorites in proposing a rule, I will not give him my support.

Mr. WATSON of Indiana. Mr. President, it is said that the Senate for all these years has operated without a cloture; but we must remember that conditions confront the Senate to-day altogether at variance with any that have hitherto confronted it.

Mr. JONES of New Mexico. Mr. President——

Mr. WATSON of Indiana. I can not yield to my friend. I have but 15 minutes.

Mr. JONES of New Mexico. I merely wanted to suggest that, inasmuch as the Senator from Indiana would consume all the remaining time left for discussion——

Mr. WATSON of Indiana. The Senator from Indiana is not consuming half of it. Everybody else is consuming it.

Mr. JONES of New Mexico. I ought to have the privilege of at least asking the Senator a question. It bears upon the advisability of adopting this rule.

Mr. WATSON of Indiana. I will let the Senator ask it, of course.

Mr. JONES of New Mexico. My question is simple, and it is one which the Senators must have in mind at this time in voting on the motion.

Mr. WATSON of Indiana. Well, ask the question.

Mr. JONES of New Mexico. Does not the Senator believe that if this cloture rule is invoked at this time it will prevent any debate upon some important schedules of the bill; and will it not prevent the offering of amendments which Senators may feel in good faith should be considered by the Senate?

Mr. WATSON of Indiana. That is what cloture is for.

Mr. JONES of New Mexico. Mr. President——

Mr. WATSON of Indiana. The Senator has asked his question. I have the question. I understand what the Senator is driving at. The very object of cloture is to cut off debate. What else is it for? The Senator wants to know if I am in favor of cutting off debate. Certainly I am. That is why I was one of the proponents of this proposition to cut off debate. That is the very object of it. It is said that it is not fair; that it does not give them a chance to amend at liberty, and all that sort of thing.

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

Mr. WATSON of Indiana. The Senator knows that I have but a few minutes.

Mr. ROBINSON. I would like to ask the Senator whether he intends to consume the entire time for debate, the debate expiring, under the rule, at 12 o'clock?

Mr. WATSON of Indiana. I am trying my level best to say something, and the Senator understands that I have had no opportunity yet to present my own views on this proposition.

Mr. ROBINSON. Under the rules of the Senate the Senator having the floor can, of course, if he desires to do so, consume all the time that is available for debate. What I desire to know is whether the Senator intends to do that.

Mr. WATSON of Indiana. I intend to speak until 12 o'clock, unless I can have an opportunity to say what I desire to before that time.

Mr. ROBINSON. I merely want to say, with the Senator's permission, that it seems to me this is a fine illustration of the effect of cloture. The Senator proposing it obtains the floor and consumes all the time available for debate under the rule. I think it would be fair if the Senator would permit those who are opposed to cloture to have an opportunity of expressing themselves, at least that Senators on the majority side who intend to vote against it be given an opportunity to speak.

Mr. WATSON of Indiana. I am not going to yield any further. In the first place, my friend from Arkansas has already spoken one hour on this question.

Mr. ROBINSON. No; I did not speak exceeding 10 minutes. The Senator pays me a great compliment when he assumes that I consumed an hour. I consumed only 10 minutes.

Mr. SIMMONS. I suggest to the Senator from Indiana that he stop yielding.

Mr. WATSON of Indiana. The Senator from North Carolina suggests that I do not yield to anybody else. I accept the suggestion of the Democratic leader. I always like to be good-natured about things; but Senators will not permit me to go on with my speech.

Mr. ROBINSON. Will the Senator permit an interruption?

Mr. WATSON of Indiana. No; I will not permit it.

Mr. ROBINSON. The Senator certainly does not want——

Mr. WATSON of Indiana. I do not intend to yield further.

The VICE PRESIDENT. The Senator from Indiana declines to yield.

Mr. WATSON of Indiana. Mr. President, it is very evident that these gentlemen intend to filibuster me and my speech until 12 o'clock.

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

Mr. WATSON of Indiana. No; I will not yield to the Senator. I do not want to be discourteous to my friend, but he has already taken up much of my time. I decline to yield.

The VICE PRESIDENT. The Senator from Indiana is entitled to the floor, and he will proceed.

Mr. WATSON of Indiana. What I was saying was that if we go back to the days of Webster, Clay, Calhoun, Benton, Hayne, those great men who debated great problems in a great way on the floor of the United States Senate, no one of them ever dreamed of a filibuster and nobody ever conducted a filibuster.

Then, coming on down to the time of the Civil War, with all its bitterness, with all the hostility and strife which it engendered, with all the animosity it aroused, nobody ever thought of a filibuster on the floor of the Senate of the United States in those days. Sumner and Fessenden, and all the great men, Carpenter, those mighty debaters of that time, Conkling and Morton, and all those masterful men, day after day, and week after week, and month after month, stood here to debate great, fundamental propositions, involving the very life of the Nation and the continuity of republican institutions in this country. There never was a filibuster in those days. When those men had expressed themselves in their own way, they were quite content that the majority party should rule, and rule by the vote, and end the debate on a question.

But we have come now upon new conditions; different from those which obtained in the earlier and better days of the Senate. We have come to a time when men will filibuster and will take up time for the express purpose of prolonging debate, postponing action, and putting off a vote. We all understand that. I am opposed to a filibuster fundamentally.

This is a Government by the operation of political parties, and, just as my friend from Oklahoma suggested a moment ago, the Republican Party came here with a mandate backed by 7,000,000 American freemen, who charged us with the responsibility of action, and the majority in this body, representing that great majority of people throughout the country, is entitled to act in this body. It is infinitely worse for us to decline to act than it is that we should debate some measures here that perhaps may not be just as they would be if four or five months were consumed in their debate and discussion. In other words, while all the portions of this bill we have not yet considered may not be just as they would be if subjected to debate, because changes will occur, after all, in my judgment, it is far better that we adopt this rule, and that we end this debate, and that we pass this bill just as it is, than to continue this filibuster and take the time of the Senate and of the people up until and perhaps after election day.

In other words, over and above the bonus and over and above the ship subsidy and over and beyond the tariff is the question of the ability of the United States Senate to function, to legislate, to discharge its obligations, and to meet the requirements imposed upon it by the people of the United States. That

is the sovereign question, because, Senators, after these minor problems—and they are all minor, being mere incidents in the life of the Nation—shall have been settled, we will come to greater and larger problems, which are sure to confront us within the next very few weeks, or months at most, involving the very perpetuity of American institutions. Then there must be such a limitation on the debate here as will again reestablish the Senate of the United States in the good graces and in the esteem of the people of this Republic. I am more interested in that larger and more fundamental thing than I am in the passage even of the tariff bill, as much of an advocate of protection as I am and always have been.

Immediately after the convening of the Congress and our entry into the war the Senator from Nebraska [Mr. HITCHCOCK] presented a statement for cloture signed by 80 Members of the Senate, and at that time said:

> This is a statement which has been signed by nearly 80 Members of the Senate, and it embraces about all the names of Senators who can be reached this evening except 12. The statement is signed in this way by virtually all but 12 Members of the Senate here present, and it speaks for itself. It is desired to place it in the RECORD at this time in order that the country may know and a record may be made of the fact that practically nine-tenths of the Senate of the United States are anxious to proceed to a vote on the pending bill and that nine-tenths of the Senate desire an opportunity to place the bill upon its passage.

Then Senator Clapp said:

> The bill came into the Senate Friday afternoon and was displaced time and again by the party in control of the Senate, and now at this juncture, when Senators are waiting, with no purpose of delaying it, but simply for the purpose of presenting their views to the Senate and to the country, to put them in the attitude of being responsible for this situation I regard as unjust and unfair.

To which Senator HITCHCOCK responded:

> In order that this matter might be tested by the Senators who are so anxious, I remind the Senator from Minnesota that at 12 o'clock I asked his consent to proceed with the consideration of this bill, and that after six hours of debate all further debate cease, and that we come to vote upon the bill, and the Senator from Minnesota objected. * * *
>
> I am making my statement in reply to his. Therefore, at this hour, when the defeat of this measure by exasperating and procrastinating debate, simply for the purpose of delay, threatens to prevent Senators from going on record—at this hour, when that seems to be imminent, we propose by putting this statement in the RECORD to show that nine-tenths of the Senate are ready to vote and anxious to vote and want to vote for this bill, but that they are being prevented by 12 Senators, practically, of the Senate who refuse us an opportunity to vote.

Immediately the President of the United States, in caustic and vitriolic language, denounced the "willful 12" who declined to accede to the notions of the majority, or the other 80 Members.

Mr. NORRIS. Mr. President——

Mr. WATSON of Indiana. So you have a continuous line of procedure, so far as the Democratic Party is concerned? Yet, what is the situation which confronts us now?

Mr. NORRIS. Mr. President, will the Senator yield for a question?

Mr. WATSON of Indiana. I have only three minutes.

Mr. NORRIS. I do not think the Senator ought to put even the "willful 12" in an attitude where they can not make answer to at least the suggestion of the Senator.

Mr. WATSON of Indiana. I have here what President Wilson said, but I have not time to read it.

Mr. President, we come here with a mandate to pass a tariff bill. We put in the Republican national platform a demand for a protective tariff measure, for the Republican Party is either a protective tariff party or it is nothing. We owe it to the country to redeem that promise and to fulfill that pledge. Yet, what is the situation? Sixty Republicans, representatives of sovereign States, come into this body with their hats in their hands, and to half a dozen Democrats on the other side they humbly and meekly bow and say, "By your gracious consent, gentlemen, we should be pleased to pass a tariff bill. By your leave, Senators, we should be delighted to fulfill our pledges to the people, to redeem the promises we made to the Nation." That is precisely the attitude in which we are placed here, and I say that the great and overwhelming question above all other questions is as to the ability of the United States Senate to function and to perform its just and righteous duty.

Therefore, so far as this limitation is concerned, I intend to vote for it. It is not a perfect measure, I will say to my friends on the other side who are so much opposed to it. I know that some of these schedules will probably be changed. I know that many amendments will probably be offered. I know that many of them will probably be just. But, after all, as between the two evils, I choose the one that is vastly less than the other one, the greater evil being a continued filibuster on this bill until about the day of election, which is absolutely sure to happen, beyond all peradventure.

The next thing, over and above that, is to prevent still further lowering this great conservative legislative body in the estimation of the people of the United States, for to-day it rests under a condemnation that should make every Senator pause before he declines to vote for a measure that will rescue this body from the severe criticism to which it is everywhere subjected throughout the United States; criticism largely brought upon it because of these long and unnecessary delays in the prosecution of the public business.

I agreed to yield to the Senator from Connecticut [Mr. BRANDEGEE] for a moment.

Mr. BRANDEGEE. Mr. President, I ask whether, in view of the fact that the Senator has taken so much time and that there are some of us who would like to have at least one minute apiece to explain our votes, it would be in order now to ask unanimous consent that each Senator have not to exceed one minute to explain his vote. Would that be in order? That is my parliamentary inquiry. If the Senator yields to me for a minute——

Mr. WATSON of Indiana. I yield to the Senator for a minute.

Mr. BRANDEGEE. While the Chair is considering the parliamentary question, I will make a statement for one minute.

Mr. WATSON of Indiana. I will be very glad to yield to the Senator.

Mr. BRANDEGEE. I simply want to read the rule, or part of it. In a few minutes the Chair will be required to state to the Senate under Rule XXII:

> Is it the sense of the Senate that debate shall be brought to a close?

The rule further provides:

> And if that question shall be decided in the affirmative by a two-thirds vote of those voting, then said measure shall be the unfinished business to the exclusion of all other business until disposed of.
>
> Thereafter no Senator shall be entitled to speak in all more than one hour on the pending measure, the amendments thereto, and motions affecting the same, and it shall be the duty of the presiding officer to keep the time of each Senator who speaks. Except by unanimous consent, no amendment shall be in order after the vote to bring the debate to a close, unless the same has been presented and read prior to that time. No dilatory motion, or dilatory amendment, or amendment not germane shall be in order.

The VICE PRESIDENT. Does the Senator from Connecticut ask unanimous consent to extend the time?

Mr. BRANDEGEE. I asked whether it would be in order to ask unanimous consent that each Senator be allowed one minute to explain his vote. If so, I shall make the request at 12 o'clock.

Mr. WATSON of Indiana. That is to say; that those who desire to speak should speak immediately after 12 o'clock.

Mr. BRANDEGEE. To immediately follow after 12 o'clock. My question is whether the rule can be set aside to that extent by unanimous consent.

The VICE PRESIDENT. The Chair will rule that such unanimous consent may be given, and when given would be binding on the Senate.

Mr. BRANDEGEE. I ask unanimous consent that at 12 o'clock each Senator may have one minute to explain his vote and only one minute.

Mr. WATSON of Indiana. That does not mean that he is to take his minute now or three hours from now or to-morrow, as he may elect.

Mr. BRANDEGEE. No; I said immediately beginning at 12 o'clock.

Mr. WATSON of Indiana. To that I have no objection.

The VICE PRESIDENT. Is there objection to the request of the Senator from Connecticut? The Chair hears none, and it is so ordered.

Mr. BRANDEGEE. Now, I want my minute while I am on my feet.

The VICE PRESIDENT. The Senator from Connecticut will proceed for one minute.

Mr. BRANDEGEE. I read the rule in order that there may appear in the RECORD exactly what the proposition is before the Senate. The proposal is to apply the existing cloture rule, and that can only be done by a two-thirds majority. My objection to applying it at this time is that I am informed there are still pending about 1,200 committee amendments to the bill. If the rule should be applied now no Senator could speak longer than one hour on the entire bill, including those 1,200 amendments, and the rule provides that no further amendments shall be offered. So the whole Senate would be driven——

Mr. WATSON of Indiana. No further amendments can be offered except by unanimous consent.

Mr. BRANDEGEE. And the Senator from Indiana having announced that he is for the passage of the bill without modification, just as it is, without further debate, of course would not give unanimous consent that amendments might be received.

Mr. WATSON of Indiana. Oh, no; I did not say that.

The VICE PRESIDENT. The time of the Senator from Connecticut has expired.

Mr. ROBINSON. Mr. President, no Senator who votes for the cloture can explain his vote in a minute, a day, a year, or a lifetime. It is an abandonment of the function of the Senate to deprive itself of the right to consider amendments which may be pending or which ought hereafter to be offered. It is an abandonment of the function of the Senate to suspend or terminate debate when 1,200 committee amendments are still pending to the bill. Let Senators who attempt to apply cloture under existing conditions take a lifetime to explain their votes.

Mr. JONES of New Mexico. Mr. President, I asked the Senator from Indiana if the adoption of this rule would not have the effect to prevent any discussion on the very important provisions in the bill. He admitted that it would. He admitted also that it would prevent the offering of amendments in good faith upon which Senators would wish to have an expression by the Senate.

When the Senator from Indiana appeals to party loyalty upon a measure of this sort I desire to suggest to him that the rule was never framed for the purpose of being invoked by any political party. The Senator knows there are not two-thirds of those in this Chamber belonging to any one party, and when he makes the kind of a speech which he made to-day he shows that he does not expect the rule to be invoked even by appealing to party prejudice.

The VICE PRESIDENT. The Senator's time has expired.

Mr. OWEN. Mr. President, I favor majority rule. I believe the majority in this Chamber should pass its rules in accordance with sound sense and good principles. At all events, I believe the party in power is charged with the responsibility of governing. I am in favor of their taking charge of the Senate by a majority vote. I therefore favor a cloture by majority vote, leaving it then to the majority to say what shall be done on the floor of this body. Neither the Republican Party nor the Democratic Party has a right to make promises to the American people and then refuse to adopt rules by which they can pass the promised laws. To promise the people relief and then to connive at letting the minority defeat the promise is an indefensible fraud on the American people.

I demand of the Republican leaders a majority cloture and the discharge of their responsibilities. They have the majority—an overwhelming majority—and they have no right to say to the country, " The Democratic minority would not let us act."

Mr. WALSH of Massachusetts. Mr. President, a great many inaccurate statements have been made about the progress of this bill. I should like to have the RECORD contain the real facts about the time consumed in the discussion of this proposed legislation.

The bill was reported on the calendar day of April 11. Debate and consideration began April 20. There were 1,987 amendments reported by the committee to the bill. The first amendment was agreed to on May 1. Since May 1, 66 days have elapsed. Nine of those days have been Sundays. One of those days was July 4. On one of those days the Senate recessed to attend the dedication of the Lincoln Memorial. This leaves 55 days in which the bill might have been kept before the Senate. During those 55 days 700 amendments have been considered and have been disposed of in Committee of the Whole, an average of 14 amendments per day.

Mr. McCUMBER. Mr. President, we have many times in the Senate agreed by unanimous consent to vote at a certain time upon a given measure and that no amendments should be allowed after a certain time except by unanimous consent. We have never yet failed to get that unanimous consent upon a proper amendment. I have not any doubt in the world, if we should apply the cloture rule, that any material amendment could be received and would be received without objection.

The VICE PRESIDENT. The Chair lays before the Senate the motion, under the rule, which will be read.

The ASSISTANT SECRETARY. It reads as follows:

We, the undersigned Members of the United States Senate, move to close the debate on the bill (H. R. 7456)—Calendar No. 591—an act to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes, in accordance with the provisions of Rule XXII of the standing rules of the Senate.

And it is signed by 52 Senators.

The VICE PRESIDENT. The first action under the rule is to call the roll and ascertain if a quorum is present. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Frelinghuysen	McKinley	Sheppard
Ball	Gerry	McLean	Shields
Borah	Gooding	McNary	Shortridge
Brandegee	Hale	Moses	Simmons
Broussard	Harreld	Myers	Smith
Bursum	Harris	Nelson	Smoot
Calder	Harrison	New	Spencer
Cameron	Heflin	Newberry	Stanley
Capper	Johnson	Nicholson	Sterling
Caraway	Jones, N. Mex.	Norbeck	Sutherland
Culberson	Jones, Wash.	Norris	Swanson
Curtis	Kellogg	Oddie	Townsend
Dial	Kendrick	Overman	Trammell
Dillingham	Keyes	Owen	Underwood
du Pont	King	Pepper	Wadsworth
Edge	Ladd	Phipps	Walsh, Mass.
Elkins	La Follette	Pittman	Walsh, Mont.
Ernst	Lenroot	Poindexter	Warren
Fernald	Lodge	Pomerene	Watson, Ind.
Fletcher	McCormick	Rawson	Willis
France	McCumber	Robinson	

The VICE PRESIDENT. Eighty-three Senators have answered to their names. A quorum is present. Under the rule the question is, Is it the sense of the Senate that the debate shall be brought to a close? This question is to be determined by a yea-and-nay vote, and the Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. CAMERON (when his name was called). I have a pair with the junior Senator from Georgia [Mr. WATSON], who is absent on account of illness. Therefore I am compelled to withhold my vote. If at liberty to vote, I should vote "yea."

Mr. DILLINGHAM (when his name was called). I have a general pair with the junior Senator from Virginia [Mr. GLASS], who is necessarily absent. The senior Senator from Pennsylvania [Mr. CROW] if present would vote "yea." If permitted to vote, I would vote "yea." The Senator from Virginia [Mr. GLASS] if present would vote "nay." Therefore the senior Senator from Pennsylvania [Mr. CROW] and I stand paired with the Senator from Virginia [Mr. GLASS] on this question, and I withhold my vote.

Mr. SWANSON (when Mr. GLASS's name was called). My colleague [Mr. GLASS] is detained from the Senate on account of illness. On this question he is paired with the Senator from Vermont [Mr. DILLINGHAM] and the Senator from Pennsylvania [Mr. CROW]. If present, my colleague would vote "nay."

Mr. GERRY (when Mr. McKELLAR's name was called). The Senator from Tennessee [Mr. McKELLAR] is unavoidably absent. On this question he is paired with the Senator from Indiana [Mr. NEW] and the Senator from Oregon [Mr. STANFIELD]. If present, the Senator from Tennessee would vote "nay."

Mr. NEW (when his name was called). Together with the Senator from Oregon [Mr. STANFIELD] I am paired with the junior Senator from Tennessee [Mr. McKELLAR]. If permitted to vote, I would vote "yea," but being paired I am compelled to withhold my vote.

Mr. SIMMONS (when Mr. REED's name was called). The Senator from Missouri [Mr. REED] is unavoidably absent from the Senate. Upon this vote he is paired with the Senator from Vermont [Mr. PAGE] and the Senator from Iowa [Mr. CUMMINS]. If the Senator from Missouri were present and permitted to vote, he would vote "nay."

Mr. McNARY (when Mr. STANFIELD's name was called). My colleague [Mr. STANFIELD] is absent from the city. He is paired as has been announced. If he were present, he would vote "yea."

Mr. HARRIS (when the name of Mr. WATSON of Georgia was called). My colleague [Mr. WATSON] is absent on account of illness. He is paired with the junior Senator from Arizona [Mr. CAMERON]. If present, my colleague would vote "nay."

Mr. WATSON of Indiana (when his name was called). I have joined with the senior Senator from Rhode Island [Mr. COLT] in a pair with the senior Senator from Mississippi [Mr. WILLIAMS]. I am therefore compelled to withhold my vote. If voting, I should vote "yea."

Mr. GERRY (when Mr. WILLIAMS's name was called). The Senator from Mississippi [Mr. WILLIAMS], as has already been announced, is paired with the Senator from Indiana [Mr. WATSON] and the Senator from Rhode Island [Mr. COLT]. If present, the Senator from Mississippi would vote "nay."

The roll call was concluded.

Mr. UNDERWOOD. I desire to announce that the Senator from Nebraska [Mr. HITCHCOCK] is necessarily absent. He is paired with the junior Senator from Maryland [Mr. WELLER]. If present, the Senator from Nebraska would vote "nay."

The roll call resulted—yeas 45, nays 35, as follows:

YEAS—45.

Ball	Gooding	McKinley	Shortridge
Bursum	Hale	McLean	Smoot
Calder	Harreld	McNary	Spencer
Capper	Johnson	Nelson	Sterling
Curtis	Jones, Wash.	Newberry	Sutherland
du Pont	Kellogg	Nicholson	Townsend
Edge	Keyes	Norbeck	Wadsworth
Elkins	Ladd	Oddie	Warren
Ernst	Lenroot	Pepper	Willis
Fernald	Lodge	Phipps	
France	McCormick	Poindexter	
Frelinghuysen	McCumber	Rawson	

NAYS—35.

Ashurst	Harris	Norris	Simmons
Borah	Harrison	Overman	Smith
Brandegee	Heflin	Owen	Stanley
Broussard	Jones, N. Mex.	Pittman	Swanson
Caraway	Kendrick	Pomerene	Trammell
Culberson	King	Ransdell	Underwood
Dial	La Follette	Robinson	Walsh, Mass.
Fletcher	Moses	Sheppard	Walsh, Mont.
Gerry	Myers	Shields	

NOT VOTING—16.

Cameron	Dillingham	New	Watson, Ga.
Colt	Glass	Page	Watson, Ind.
Crow	Hitchcock	Reed	Weller
Cummins	McKellar	Stanfield	Williams

The PRESIDING OFFICER (Mr. LENROOT in the chair). On this question the yeas are 45 and the nays 35. Less than two-thirds of the Senators present and voting have voted in the affirmative, and the motion is not agreed to.

Mr. McCUMBER. Mr. President, the pending amendment to the bill is the amendment offered by the Senator from Washington [Mr. POINDEXTER]. I asked on yesterday that the amendment might go over until this morning, as I had had no opportunity to read it. The Senator from Washington expressed the hope that I would consent to the amendment. I have examined the amendment carefully and I think that it should be modified. I want to call the attention of the Senator from Washington to the fact that the amendment as he proposes it is general in its effect. The amendment proposed by the senior Senator from Washington [Mr. JONES] on yesterday, which was voted down, related only to those fish which were caught in the north Pacific waters. The amendment that is now proposed relates to fish which may be caught at any place upon the face of the globe. I wish to read the amendment, and I desire the attention of those Senators who are sponsoring it. The amendment, as I have stated, Mr. President, is as broad as the earth is broad and covers both the land and the water. It reads:

Provided, That fish prepared or packed in a foreign country for shipment and shipped from a foreign country into the United States in a ship of foreign registry or over a railroad running through a foreign country shall be subject to the duties prescribed by this paragraph.

Now, let us look at the amendment for a moment from the standpoint of the fisheries of the North Sea, which is between England, Scotland, and France. There are many fishing fleets—Norwegian, Danish, Dutch, English, and French—that are fishing in the North Sea. There are lines of vessels landing at Boston or at New York or at other Atlantic ports. The great majority of those which bring fish or other products land at the port of New York. Second to that port is the port of Boston. Those fish go inland, even to Canadian markets, over American railways. Under the provisions of the amendment, if the shipper of fish desired them to go to Montreal, to Ottawa, or to Winnipeg, it would be impossible to ship them in bond; it would be necessary to pay the duty, even though not a pound of the fish was to be consumed in the United States. I think it is hardly fair to the railways of the United States, nor is it fair to those foreign importers who desire to import into their own country and who also desire to use the American railways as a means of transportation, to deny them that privilege if it is for their convenience,

Suppose there are herring caught off the coast of Scotland by a fleet of British fishermen and they are taken into a port of Scotland and then sent to Winnipeg or to Ottawa by way of New York. That is the easiest, the most convenient, and most natural route of the shipment. By this amendment those fishermen would be denied that privilege because the amendment provides that fish may not be shipped even in bond over an American railway; so that they would have either to be shipped into Canada by way of the St. Lawrence or to enter a port that affords rail facilities from the Canadian coast to the Canadian interior. That is true of Norwegian, Swedish, Dutch, and French importations of fish into Canada. Again, I will read the amendment:

Provided, That fish prepared or packed in a foreign country for shipment and shipped from a foreign country into the United States in a ship of foreign registry or over a railroad running through a foreign country shall be subject to the duties prescribed by this paragraph.

If the fish are brought here in a ship of American registry and it is desired to sell the cargo in Winnipeg, what will be its status, as the Senator from Washington understands it, if I may ask him that question?

Mr. POINDEXTER. In that event, the fish would not be subject to this amendment at all, because they would be brought to the United States in a ship of American registry to be sold in a foreign country. The amendment would only apply to fish brought here in a vessel of foreign registry. I was waiting until the Senator had concluded his statement in order to make a few brief remarks. Some of the advisers of the committee have proposed certain modifications which will perhaps improve the amendment. I am not a stickler for the form, so long as we can accomplish the object. I may say in regard to the criticism of the amendment made by the Senator from North Dakota as to its alleged effect in preventing shipments in bond to the United States of fish caught in the North Sea, of course, if it would have that effect it ought to be changed, because it is not my purpose or desire to produce any such change in our bonding regulations as that. Although I confess I have not reflected upon that particular phase of it, I do not agree with the Senator from North Dakota that it would have that effect, but I am willing to modify it so as to avoid that contingency.

Mr. McCUMBER. Will not the Senator, then, be willing to pass the amendment over for the time being until he, with the experts and members of the committee, may draft it in a form which will meet the approval of the Senator and yet at the same time be certain not to cut off the right of transit in bond across the United States?

Mr. POINDEXTER. Yes.

Mr. McCUMBER. I will say that the amendment which has been suggested does not safeguard that point.

Mr. POINDEXTER. I am perfectly willing, if the Senator and the committee will give attention to it, to allow the amendment to go over until it may be considered by the committee.

Mr. McCUMBER. I thank the Senator, and I think we can probably prepare an amendment that will be satisfactory to the committee as well as to the Senator.

Mr. POINDEXTER. I thank the Senator very much.

Mr. McCUMBER. I ask unanimous consent, with the consent of the Senator proposing it, that the amendment be withdrawn for the time being.

The PRESIDING OFFICER. Does the Senator also request that the committee amendment may be passed over?

Mr. McCUMBER. I ask that the committee amendment may also be passed over.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JONES of Washington. Mr. President, in connection with the discussion with relation to the amendment passed upon yesterday, I have before me some data which I desire to have inserted in the RECORD at this point, so that it will appear following the discussion on the amendment of my colleague, the junior Senator from Washington [Mr. POINDEXTER].

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

[Night lettergram.]

SEATTLE, WASH., *February 23, 1916.*

H. C. STRONG,
Hotel Raleigh, Washington, D. C.:

We are operating from Prince Rupert entirely as a matter of necessity. In fact, we did not go there until forced to under present conditions, and we would still much prefer to operate from Ketchikan or Seattle—in other words, to make our investments and transact our business in American territory.

SAN JUAN FISHING & PACKING CO.

[Western Union telegram.]

CHICAGO, ILL., *February 19, 1916.*

H. C. STRONG,
Hotel Raleigh, Washington, D. C.:

Your letter in regard to duty on halibut and salmon from foreign countries is correct statement of situation excepting that you should make it stronger, if possible. Unless we receive governmental relief, we will be forced to expend a large sum of money at Prince Rupert and in all probability have our American boats discharge their cargoes in that port, and not only lose the business for American ports but force the tonnage over foreign railroads. Canadian Government has done and is doing everything in their power to force this business into Prince Rupert to great detriment of Ketchikan, Seattle, and other American ports, and immediate relief is required to prevent serious loss to American fisheries.

P. L. SMITHERS,
Manager Booth Fisheries.

[Night lettergram.]

SEATTLE, WASH., *July 17, 1916.*

H. C. STRONG,
Hotel Raleigh, Washington, D. C.:

Please file with Chairman KITCHIN, Ways and Means Committee, and Senators JONES and POINDEXTER, and through them with State Department, following protest:

Protest filed by the British Embassy with State Department against House bill 15839, to regulate importation into United States of halibut or salmon taken in north Pacific Ocean or tributary waters, now pending in Congress, has no just basis to rest upon. Assertion that Canada has made heavy investments for benefit of American fishermen is without foundation. Investments referred to as having been made by Canada for benefit of American fishermen are building of grand trunk railway and certain terminal facilities at Prince Rupert for handling fish, which, of course, were made not for benefit of American fishermen but for benefit of Canada and Canadian interests.

In the attempt to make these investments profitable to Canada and Canadian interests the Canadian Government is giving support to a policy of unfair competition to force American fishermen and north coast fishing fleet to abandon American ports and turn their business to Prince Rupert and Grand Trunk Railway. An examination of present situation will show that we are facing new application of dumping principle with Canadian Government and its orders in council backing that sort of competition. Proposed law does not bar fish caught in British waters from American markets. On contrary, they are allowed to be landed here free of duty while American fish are subject to duty when shipped into Canada.

Action of Canadian Government was deliberately undertaken to foster a Canadian port and Canadian railway at expense of the fishermen, ports, and railways of America. Bill against which British protest is made is intended to put American and Canadian North Pacific fishing interests on an equal footing, thereby preserving to American ports a business which legitimately belongs to them and which if not obstructed by foreign interference would continue to come to American ports and to sustain and increase the American fishing fleet. There is no more ground or justification for a protest by Great Britain against this proposed action on the part of United States than there would be for similar protest against a provision of our tariff laws.

SEATTLE CHAMBER OF COMMERCE,
THOMAS BURKE, *President.*

Number of trips landed	1,081

—

SEATTLE, WASH., *April 7, 1917.*

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: I have been actively engaged in the halibut business on the North Pacific coast ever since 1899. In 1899 I was part owner and captain of the schooner *Reef*. Since that time I have been part owner and captain also of the halibut schooners *Roosevelt* and *Panama*. From 1899 to 1915 I was actively engaged in halibut fishing itself, fishing on all of the known halibut grounds on the Pacific during those years. During the years 1915 and 1916 I was manager of the Fishing Vessel Owners' Association, which association comprises practically the entire independently owned offshore fleet of the North Pacific. By independently owned I mean boats not owned or operated by the wholesale fish houses.

During the past two years the Dominion of Canada through its orders in council and trade regulations has been trying to force to that country the entire halibut business and to force to that country the different American fishing vessels. That in trying to force the American vessels into Canada registry they have put restrictions on them in getting bait and put restrictions on the shipments of fish from Prince Rupert to Puget Sound, and have refused to allow American-caught fish to be sold in the Dominion of Canada, and American fishermen are treated in that country as though they were foreigners, and any slight infraction of their regulations is followed by heavy fines. As manager of the association I gave these matters close attention, and believe that it would be to the ultimate advantage of American fishermen and boat owners if a law were passed providing for the shipment of fish direct from American ports. It is my opinion that this law would force the Canadian houses to do their American business on the American side of the line and that the fishermen would have the same competition for the purchase of their fish on the American side of the line. Any of the ports of southeastern Alaska are nearer to the Alaska fishing banks, and it would be just as convenient, in fact more convenient, for the fishermen than the Canadian ports. I think that the bill would be both to the ultimate advantage of the independently owned fishing boats and fishermen and also to the American people, and is necessary if this country is not going to turn over the business to the Dominion of Canada.

Respectfully yours,
JOHN GIBSON.

—

SEATTLE, WASH., *April 11, 1917.*

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: The Fishing Vessel Owners' Association, of Seattle, on this date officially indorsed the halibut bonding measure, the same being signed by myself as manager for the association.

I wish to state further that I have been in the halibut fishing business, both as fisherman and boat owner, since its infancy on the North Pacific. During that time I have been interested in the American fishing schooners *Doncaster*, *Roosevelt*, and *Panama*. It was not until recently that the American fishermen were fully cognizant of the fate of this fishery built by them. There can be no doubt that unless the Government gives to American institutions the necessary relief to counteract the advantages under which Canadian concerns and fishermen operate that Canada will ultimately absorb the entire industry. We have no complaint as against the regulations that Canada makes for her own fishermen, but we do protest against the unequal advantages that Canadian fishing vessels and concerns have in competing in the American fish business. It seems to me to be self-evident that we can not successfully compete with institutions that are subsidized by a foreign government, that are protected by orders in council, while we are discriminated against by trade regulations, making it to our advantage to change our boats to Canadian registry. The American fishing fleet has withstood the open request of Canadian fish houses to change their boats to Canadian registry, but I fear that under the economic conditions artificially created by Canada the advantages of Canadian registry will become so apparent to American fishermen that Canada will secure all of the fleets, including that of this association itself. I think that Canadian concerns doing a purely American business and Canadian boats fishing for the American market should be compelled to operate under the equal laws of the United States. This is all we are asking, as we feel sure we can successfully compete under equal conditions.

Our association has been informed that you approve of the legislation requested, and we believe that nothing else could so adequately correct the existing evils.

Yours very truly,
M. JOHNSON.

—

SEATTLE, WASH., *April 11, 1917.*

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: At a meeting of the Fishing Vessel Owners' Association held this week it was decided that our association go on record formally indorsing the passage of a bill providing—

"That no fresh or frozen fish from the North Pacific coast, or its tributary waters, be admitted into the United States through any foreign country, except the same be in bond from an American port."

The Independent Vessel Owners' Association comprises in its membership practically all of the American offshore halibut fleet on the North Pacific. By independent we mean boats not owned or operated by the fish companies. Most of these boats are owned by captains and fishermen themselves.

We feel that this law is necessary if the United States is to preserve its Pacific coast fisheries as an American institution, and maintain that this country has a right to say how fish caught in American fishing vessels and consumed by the American people shall be regulated. We feel that they will not be able to hamper the development of the American fisheries by their orders and counsel and trade regulations and other restrictions. Their treatment of American fishermen has been decidedly unfair and for the purpose of forcing American vessels into Canadian registry. We feel that as a purely American institution we are entitled to the same protection from foreign subsidies, rebates, etc., that the American coastwise shipping trade is.

Yours very sincerely,
M. JOHNSON,
Manager Fishing Vessel Owners' Association.

—

KETCHIKAN, ALASKA, *October 27, 1916.*

COMMISSIONER OF FISHERIES,
Washington, D. C.

DEAR SIR: I wish to be of record in favor of the passage of a law aimed to preserve the fishing industry of the North Pacific Ocean for America.

I am a citizen of the United States, have followed fishing all of my life, and am now master of the power schooner *Knickerbocker* engaged in fishing off the coast of Alaska.

I firmly believe that Canada will secure all of the benefits of these fisheries if our Government does not soon pass a law worded the same as the Chamberlain amendment to the last revenue bill.

Truly yours,
THOS. P. QUINN,
Master Schooner "Knickerbocker."

—

KETCHIKAN, ALASKA, *November 3, 1916.*

COMMISSIONER OF FISHERIES,
Washington, D. C.

DEAR SIR: As an American citizen, with a family of seven residing in Alaska, which I am supporting by fishing, I am very anxious to see a law passed which will preserve for Alaska the fishing industry which we are now losing to Canada.

We need a law which will make it necessary for all boats, whether Canadian or American, to discharge their fish at an American port if they are to be used in the United States.

Without such a law Canada has the control of our fisheries.

I am 45 years old; have followed fishing all of my life. Am now master of the power fishing boat *Prospector*.

Very truly yours,
CAPT. A. J. ANDERSON.

—

This is not for publication, as I must continue to do business out of Prince Rupert under present conditions.

EGIN ERIKSON.

KETCHIKAN, ALASKA, *November 9, 1916.*

The SECRETARY OF COMMERCE,
Washington, D. C.

DEAR SIR: I am the managing owner and master of the power fishing vessel *Polaris*. I have followed fishing for many years and am now operating the above vessel on the North Pacific.

Since the completion of the Grand Trunk Pacific Railway to Prince Rupert I have operated out of there most of the time. The Canadian port has become the leading fish market on the Pacific coast, and it has been a case of selling our fish there or proceeding to Seattle, a distance of over 600 miles.

The location of Prince Rupert, together with its transportation facilities, gives an advantage to the packing and shipping firms, as well as the vessels operating from there, and these conditions make it necessary for all of us to go to Prince Rupert or suffer loss in both time and money.

We need a law making it necessary for all boats to discharge at an American port all the fish going to be consumed in the United States. This would cause the Canadian railway to reach over into Alaska to get the freight, and then the business would be centered in Alaska instead of Canada. The buying would be done in Alaska, and the value of the catch would be circulated in American territory instead of Canada, as it now is.

If this is not done, Canada will soon have entire control of the Pacific fishing and the only supply of halibut now within reach of American markets. The fishermen of the Pacific will have to do as Canada dictates, which will force them to become Canadians or go out of the business of supplying fresh fish from the Pacific Ocean for the markets of the United States.

I sailed from Prince Rupert yesterday, and before my departure I had the real situation impressed upon me more forcibly than ever. I have been buying my supplies at Prince Rupert, but for the past few trips I have tried to get some from American ports. Yesterday upon going to the Canadian customs officer for my clearance the collector called my attention to the fact that my manifest called for ship's stores, but that it had been brought to his attention that I was buying

but a small portion of them at Prince Rupert. He stated that I had better buy my supplies there.

On the same day at the office of the American consul I was told by the consul that it would be better for me to outfit my boat at Prince Rupert.

Every pound of fish I take to Prince Rupert goes to the United States, as none of it can be consumed in Canada. This all comes from the Alaska banks, but the business is getting to a point where neither Alaska nor American citizens will have anything to say about the Pacific fisheries, and their value, which is great, will all go to Canada.

Truly yours, EGIN ERIKSEN.

—

KETCHIKAN, ALASKA, *November 10, 1916.*

COMMISSIONER OF FISHERIES,
Washington, D. C.

DEAR SIR: I am a fisherman and have followed fishing on the Atlantic and Pacific since my boyhood. I have lived in Alaska for five years, where I own my home as well as my power fishing vessel, the *Alameda*, all of which I have paid for from my earnings in catching fish, principally halibut.

For over a year I have taken my fish to Prince Rupert, British Columbia, from where it is shipped to the United States. Nearly all of the fish now caught in our northern waters are taken to the Canadian port. The buyers for the American markets are there, and it is the center of the fishing industry, but it is better for Canada and the Canadian fishermen than it is for the United States and American fishermen.

If we can not get a law changing conditions, it will not be long until all of the deep-sea fishermen of the North Pacific will be Canadians, or at least residents of and producers of wealth for Canada.

To my knowledge, many American fishing vessels have this year taken out Canadian registers and more have the intention of so doing. This action is due to conditions and laws created by Canada and the lack of laws in the United States to cover the situation.

Practically all of the fish, whether caught by American or Canadian vessels in the North Pacific, go to the United States, but we are obliged to do our marketing at a Canadian port, as Canada lies between us and the United States.

We must have a law making it necessary that all fish from the Pacific Ocean going to the markets of the United States shall be landed by the fishing fleet at an American port. Our fish will then be worth as much at a port in Alaska as it now is in Canada, for the law will make it necessary for the buyers and transportation companies to take the fish from the American side of the line, if they are going to the United States through Canada. This will save the fishing fleet many miles of travel to and from Prince Rupert, and as the transportation company can cover this distance with one vessel, carrying all the fish at lower cost, it will be an advantage to the fishing fleet, the consuming public of the United States, and at the same time build up Alaska with our fishing industry instead of turning it over to Canada, as we are now doing.

I believe every American fisherman and citizen who understands the situation will do everything in his power to bring about the legislation above suggested.

Truly yours, STEVE SELIG.

—

KETCHIKAN, ALASKA, *November 11, 1916.*

COMMISSIONER OF FISHERIES,
Washington, D. C.

SIR: I am master and managing owner of the American fishing vessel *Constitution*, carrying a crew of 13 men. I have been fishing for the past 10 years and for the last 5 years have been master and owner.

Conditions have taken me to the Canadian port of Prince Rupert for the past 18 months. It has been practically necessary that I go there, yet American vessels are seriously handicapped at Canadian ports, where present conditions oblige us to do our business. We must have the help of a law which will put this business at American ports or we shall see the fishing business in this part of the country all go to Canada. This can be done without increasing the cost of fish, and it will center business in Alaska instead of Canada.

I want to live in America and keep my boat under the American flag, but now our laws are working against me, or the lack of American laws are driving the business to Canada and Canadian vessels.

Respectfully yours, CAPT. F. SORINSEN.

—

ORDERS IN COUNCIL.

(1914, 1915, 1916, 1917, 1918.)

In re American fishing vessels purchasing bait, shipping and selling fish in bond. Imports. British Columbia.

DEPARTMENT OF CUSTOMS,
Ottawa, May 15, 1917.

Memorandum.

The following are copies of orders in council passed in 1914, 1915, 1916, and 1917 with regard to the purchase of bait and shipping and selling of fish in bond by United States fishing vessels on the Pacific coast.

JOHN MCGONGALD,
Commissioner of Customs.

—

ORDER IN COUNCIL, DECEMBER 10, 1914.

For a period of 12 months from January 1, 1915, foreigners or foreign corporations bringing fresh fish in American bottoms to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transship the same in bond to any port in the United States (without the right, however, to sell in Canada any of such fresh fish so landed); and foreigners and foreign corporations bringing fresh fish in American bottoms to any port in British Columbia shall be permitted to purchase supplies at any port in the said Province of British Columbia, the whole under such regulations and conditions as the minister of customs may determine.

—

ORDER IN COUNCIL, MARCH 9, 1915.

During the present calendar year (1915) foreigners or foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transship the same in bond to any port in the United States, or to sell such fish in bond to such local dealer or dealers as may be properly and duly licensed therefor, under the regulations and conditions hereinafter mentioned, which dealer or dealers shall export the same in compliance with the bonding requirements (without the right, however, in either instance to sell in Canada for consumption therein, or otherwise except in bond, any of such fresh fish so landed); and such foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to purchase supplies and ship crews for such vessels at any port in the said Province of British Columbia, the whole under such regulations and conditions as the minister of customs may determine.

—

ORDER IN COUNCIL, JANUARY 31, 1916.

PURCHASE OF BAIT AND LANDING OF FISH BY FOREIGN VESSELS AT PORTS OF BRITISH COLUMBIA IN 1916.

The following provisions in the above matter are made by order in council of 31st January, 1916, viz:

"During the present calendar year (1916) foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transship the same in bond to any port in the United States or to sell such fish in bond to such local dealer or dealers as may be properly and duly licensed therefor under the regulations and conditions hereinafter mentioned, which dealer or dealers shall export the same in compliance with the bonding requirements (but without the right, however, in either instance, to sell in Canada for consumption therein or otherwise, except in bond, any of such fresh fish so landed); and such foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to purchase bait and supplies and ship crews for such vessels at any port in the said Province of British Columbia: *Provided also*, That such foreigners and foreign corporations before bringing fresh fish to a port in British Columbia may be permitted to purchase bait at any port in the said Province of British Columbia upon an undertaking to the satisfaction of the minister of customs that catches of fish made with any baiting so supplied shall be landed at a port on the mainland of British Columbia and be thence forwarded in bond to a port in the United States, the whole under such regulations and conditions as the minister of customs may determine."

—

ORDER IN COUNCIL, JANUARY 17, 1917.

During the present calendar year (1917) foreigners or foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transship the same in bond to any port in the United States or to sell such fish in bond to such local dealer or dealers as may be properly and duly licensed therefor under the regulations and conditions hereinafter mentioned, which dealer or dealers shall export the same in compliance with the bonding requirements (but without the right, however, in either instance, to sell in Canada for consumption therein or otherwise, except in bond, any of such fresh fish so landed); and such foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to purchase bait, ice, and supplies, and ship crews for such vessels at any port in the said Province of British Columbia: *Provided also*, That such foreigners and foreign corporations before bringing fresh fish to a port in British Columbia may be permitted to purchase bait at any port in the said Province of British Columbia upon an undertaking to the satisfaction of the minister of customs that catches of fish made with any baiting so supplied shall be landed at a port on the mainland of British Columbia and be thence forwarded to a port in the United States, the whole under such regulations and conditions as the minister of customs may determine.

—

ORDER IN COUNCIL, JANUARY 12, 1918.

PURCHASE OF BAIT AND LANDING OF FISH BY FOREIGN VESSELS AT PORTS OF BRITISH COLUMBIA IN 1918.

[The Canada Gazette, February 2, 1918.]

AT THE GOVERNMENT HOUSE AT OTTAWA,
Saturday, the 12th of January, 1918.

Present: His excellency the administrator in council.

His excellency the administrator in council, on the recommendation of the minister of the naval service, is pleased to order, and it is hereby ordered, as follows, with regard to the purchase of bait and the landing of fish by foreign vessels at ports in British Columbia during the calendar year 1918:

During the present calendar year (1918) foreigners or foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to land such fresh fish at such port without payment of duties and transhipment the same in bond to any port in the United States or to sell such fish in bond to such local dealer or dealers as may be properly and duly licensed therefor under the regulations and conditions hereinafter mentioned, which dealer or dealers shall export the same in compliance with the bonding requirements (but without the right, however, in either instance, to sell in Canada for consumption therein or otherwise, except in bond, any of such fresh fish so landed); and such foreigners and foreign corporations bringing fresh fish in vessels registered in the United States of America to any port in British Columbia shall be permitted to purchase bait, ice, and supplies and ship crews for such vessels at any port in the said Province of British Columbia: *Provided also*, That such foreigners or foreign corporations before bringing fresh fish to a port in British Columbia may be permitted to purchase bait and ice at any port in the said Province of British Columbia upon an undertaking to the satisfaction of the minister of customs that catches of fish made with any baiting so supplied shall be landed at a port on the mainland of British Columbia and be thence forwarded to a port in the United States, the whole under such regulations and conditions as the minister of customs may determine.

RODOLPHE BOUDREAU,
Clerk of the Privy Council.

Mr. ROBINSON. Mr. President, for almost two days the Senate has had under consideration the amendment of the Senator from Washington relating to fish. This amendment, in

practical importance, has a very narrow application. It is noticeable from an examination of the CONGRESSIONAL RECORD that the debate on this subject has proceeded entirely from the other side of the Chamber. After consuming almost two days in discussion of this relatively unimportant amendment, the majority have now withdrawn all amendments affecting the subject, and ask that the subject be carried over, presumably for further consideration and further debate.

I wonder if, after having this matter before the Senate for two days, the Senate is not able to conclude it. If the process of procrastination and delay illustrated by this proceeding on the fish amendment and the amendment relating to almonds is to continue indefinitely, the country can not escape the conclusion that the majority is filibustering against its own bill. The idea of taking two days to consider a relatively inconsequential amendment, and then, after the Senate has waited patiently for an opportunity to vote on it, withdrawing the whole subject and passing it over for future consideration! This, too, from the advocates of cloture.

I appeal to our friends on the other side of the Chamber, as these items are reached and considered and the Senate is prepared to act upon them, to give us an opportunity to do it. Let us make some progress in connection with this bill. After we have had debate, let us act upon our judgment and reach a conclusion, particularly concerning matters that are not of the greatest importance. Let us make some advance in connection with this bill.

Mr. McCUMBER. Mr. President, I do not think it is necessary at all to pass over anything more than the mere amendment that is offered by the Senator. I asked him to withdraw that because I think it conflicts with other sections, and does not do just exactly what he wants to accomplish by it, or, rather, it may accomplish more than he desires to accomplish by it. Therefore I asked that the amendment might go over; but that does not necessarily affect in any way the question of the rates and the amendments that we have made upon paragraph 718. The Senator can still, if we adopt that, offer his amendment to-morrow.

The PRESIDING OFFICER. May the Chair suggest that it would not be in order until the time came for individual amendments unless the committee amendment is passed over so that it can be offered as an amendment to the committee amendment.

Mr. McCUMBER. I would rather not pass over the committee amendment. I know that we can get unanimous consent for the Senator to offer his amendment. No one will object.

Mr. POINDEXTER. Mr. President, I simply want to suggest that there is another committee amendment on the same subject in the free list, to which my amendment could be added and accomplish the same purpose.

Mr. ROBINSON. Mr. President, I shall not make any objection to any request the chairman of the committee chooses to make respecting the subject; but I do hope that whatever action he finally decides to take will have the effect of putting this item behind us. We have already taken more time to consider it than its importance justifies, in view of the very important provisions in the bill which have as yet received no consideration.

The PRESIDING OFFICER. Without objection, the order just made is modified so that the Senator from Washington withdraws his amendment, and the question is upon the committee amendment.

Mr. McCUMBER. Mr. President, my heart is filled with gratitude at the suggestions made by the Senator from Arkansas, but——

Mr. JONES of Washington. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Washington?

Mr. JONES of Washington. I hope now that we can vote upon the amendment referring to paragraph 718. This is such an important thing that I can not see where we will gain anything by adopting the committee amendment without passing upon the other proposition. The committee proposes to take care of it. We can adopt an amendment to the committee amendment——

Mr. McCUMBER. I will say to the Senator that if he can draft the amendment so that it will avoid the question of forbidding an American railway from transporting fish caught by foreign fishing fleets and destined to Canada, I think we can vote on it now; but——

Mr. JONES of Washington. I think that can very soon be done. I think my colleague can do that in a very few minutes. I do not think that construction is justified by the language of the amendment. However, he can make it very clear, I am sure.

Mr. POINDEXTER. Mr. President, on this same subject I ask unanimous consent to turn to page 228, line 15, and offer at the end of that line the amendment which I send to the desk.

The VICE PRESIDENT. The Secretary will state the proposed amendment.

The ASSISTANT SECRETARY. On page 228, line 15, paragraph 1624 reads as follows:

Oils, animal: Spermaceti, whale, and other fish oils of American fisheries, and all fish and other products of such fisheries; and all cod and cod-liver oil.

It is proposed to add at the end of the paragraph the following words:

No fish packed or frozen in a foreign country shall be exempt from duty under this paragraph.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

The VICE PRESIDENT. The question now recurs on the committee amendment as amended.

Mr. JONES of Washington. Mr. President, I do not know about that. I suppose if we desire to reconsider the vote by which that was adopted there will be no objection to it?

Mr. McCUMBER. There will be no objection on the part of the committee.

Mr. JONES of Washington. Very well.

The VICE PRESIDENT. The question is on agreeing to the amendment as amended.

The amendment as amended was agreed to.

Mr. McCUMBER. Mr. President, I wish now to return to paragraph 718.

The VICE PRESIDENT. The amendment of the committee will be stated.

The ASSISTANT SECRETARY. The committee proposes, on line 18, page 102, to strike out the word "All" and to insert the following as amended:

Fish, fresh, frozen, or packed in ice: Halibut, salmon, mackerel, and swordfish, 2 cents per pound; other—

The amendment as amended was agreed to.

The ASSISTANT SECRETARY. On line 20 it is proposed to strike out the words "fresh, frozen, or packed in ice" and the comma.

The amendment was agreed to.

The next amendment was, in paragraph 719, on page 102, line 24, after the words "ad valorem," to strike out "fish, dried" and to insert "dried fish"; and in line 25, before the word "cents," to strike out "4¼" and to insert "1¼," so as to read:

Salmon, pickled, salted, smoked, kippered, or otherwise prepared or preserved, 25 per cent ad valorem; finnan haddie, 25 per cent ad valorem; dried fish, salted or unsalted, 1¼ cents per pound.

The amendment was agreed to.

The next amendment was, on page 102, line 25, after the word "pound," to insert "smoked herring, skinned or boned, 2½ cents per pound; all other," so as to read:

smoked herring, skinned or boned, 2½ cents per pound; all other fish, skinned or boned—

The amendment was agreed to.

The next amendment was, on page 103, line 2, after the word "boned," to strike out "including herring skinned."

The amendment was agreed to.

The next amendment was, at the beginning of line 3, to strike out "immediate containers weighing with their contents" and to insert "packages containing."

Mr. McCUMBER. I ask that the Senate reject that committee amendment.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

The next amendment was, on page 103, line 5, after the word "pound," to strike out "including the weight of the immediate container with the contents."

Mr. McCUMBER. On page 103, lines 5 and 6, the committee desires to modify the committee amendment so that it will read as follows: After the word "pound," strike out the comma and the words "including the weight of the immediate container with the contents," and insert in lieu thereof "net weight."

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

The next amendment was, on page 103, line 8, after the word "in," to strike out "immediate containers weighing with their contents," and to insert "packages containing," so as to read:

PAR. 720. Herring and mackerel, pickled or salted, whether or not boned, when in bulk, or in packages containing more than 30 pounds each, etc.

Mr. McCUMBER. I ask that the Senate disagree to that committee amendment.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. McCUMBER. On line 10, the committee proposes to strike out "30" and insert "15."

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to strike out "30" before the word "pounds," and in lieu thereof to insert "15."

Mr. WALSH of Massachusetts. Mr. President, will the Senator from North Dakota state why that change is made? Does it amount to doubling the rate?

Mr. McCUMBER. No; that has nothing to do with the per cent, but it simply has to do with the size of the package. There were a great many packages practically put in the same shape that were coming in under 30 pounds; and therefore we fixed upon 15 pounds as the proper minimum size of the package that should bear that particular rate, instead of 30 pounds.

Mr. WALSH of Massachusetts. I think I understand now why the change is made.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment was, in line 10, after the word "each," to strike out "1½ cents," and to insert "1 cent."

Mr. WALSH of Massachusetts. Mr. President, I find that under the Underwood law herring and mackerel, pickled or salted, were admitted free, and under the Payne-Aldrich law these products were taxed one-half of 1 cent per pound. The committee amendment lowers the rate named in the House bill which was 1½ cents per pound. Will the chairman of the committee inform me why this rate has been decreased and nearly all other rates in this schedule increased over the rate fixed in the House bill?

I would like to have the opinion of the Senator from North Dakota on this item. I would like to have the Senator inform me how this rate was fixed.

Mr. McCUMBER. This is exactly the same as the Underwood rate. There is no increase over that. That provided 1 cent per pound, and we are leaving it 1 cent per pound.

Mr. WALSH of Massachusetts. My information is that herring and mackerel, pickled or salted, were free under the Underwood law. I do not think there is any question about that.

Mr. McCUMBER. I want to correct myself. I was reading from the act of 1909. It is free under the act of 1913. The only purpose of the rate of 1 cent is to afford protection to American fishermen, and for revenue.

Mr. WALSH of Massachusetts. I am informed that these items are products used in the Maine sardine industry; it seems to me if this information is correct it would be in the interest of the consumer to have this rate carefully considered by the committee.

Mr. LODGE. Mr. President, this, like the other duties on fish, is of very great importance to all the fisheries, and particularly to those of the Atlantic seaboard. I am not going into an elaborate discussion of the fishing industry, for I do not desire to take the time; but Senators must remember that this affects the fishing industry, one of the oldest employments of man in the world. No great fortunes are ever made in it. This is to help the fishermen of the Atlantic seaboard particularly, where the herring industry more particularly is.

During the war the restrictions placed upon fishermen in all countries as to entering ports, touching trade, buying equipment, and so forth, were done away with, so that all our ports are open now to foreign fishermen, without any restrictions whatever.

Canada, which is our principal rival, of course subsidizes her fishermen. She pays one-third of the cost of storage and two-thirds of the cost of transportation, and it is utterly impossible for the fishermen of New England, who are especially affected by this clause, to compete with subsidized fisheries. It will lead inevitably to the transfer of our fleets from Gloucester, Provincetown, and Boston, as well as the large fleet in Maine, to the British flag. It is out of the question for us to maintain our fisheries unless we give them protection, when they are competing with a subsidized industry on the other side of the line.

I will not press the point further, because I do not wish to take time. This is a very moderate rate.

Mr. WALSH of Massachusetts. Mr. President, I did not desire to open up any discussion of the rate named on this product. I simply wanted some information from the committee as to why in this case the House rate was lowered.

I find, in looking at the tables since my colleague addressed the Senate, that a good deal of salted herring has been produced in this country, so that the pickled or salted herring industry is one, perhaps, entitled to some protection.

Mr. LODGE. It is very difficult to get exact figures of the different kinds of fish, for since 1908 we have not had any statistics provided. The catch of herring in 1908, the last one, I think, where they were divided, was 125,000,000 pounds, valued at $796,000. The mackerel catch was 12,000,000 pounds.

Mr. WALSH of Massachusetts. I think the Senator will find the figures on production on page 42 of the pamphlet known as "Fish Industries of the United States."

Mr. LODGE. How late are their statistics?

Mr. WALSH of Massachusetts. For 1920.

Mr. LODGE. Those are only partial statistics; they are not complete. They give the percentages, I know.

Mr. WALSH of Massachusetts. They give the figures as to the fresh and salted herring production as about the same—3,000,000 pounds.

Mr. LODGE. They do not keep the figures as to the different fish distinct. They give the figures for the 1920 imports of fresh fish, frozen or packed in ice. That does not include salted herring. I have not been able to find that stated, except in the figures of 1908, which separate the herring.

The 1920 figures give a classification of the imports, and the import of herring was 7.2 per cent, not a very large import, but quite equal to the export. It is very hard to get those figures exact. The New England fisheries, as well as all the other fisheries, require protection owing to the Canadian laws and the fact that we give them no subsidies and no privileges of any kind. On the Atlantic seaboard, from Maine to Florida, the total production is 1,400,000,000 pounds; Gulf district, 120,000,000; Alaska, 400,000,000; Pacific district, 280,000, 000; Mississippi River and Great Lakes, 250,000,000. The fisheries are spread all over the coasts of the United States and employ about 205,000 people, meaning that they furnish support to about a million people. The great mass of them are individuals engaged largely in inshore fisheries. There are firms, of course, which own "bankers," and there are many individual boats also. I think these duties are moderate, considering the conditions which now exist.

Mr. WALSH of Massachusetts. Mr. President, I find that the imports are very much larger than I expected. The tariff information summary gives the imports for 1914 as 93,000,000 pounds.

Mr. KING. Of herring?

Mr. WALSH of Massachusetts. Of herring. The production for 1919 in the United States and Alaska was 18,000,000 pounds. The total production of salted and pickled mackerel is given, but we are not discussing that. So that the imports are very much larger than the production.

Mr. LODGE. They are.

Mr. WALSH of Massachusetts. The amendment is a reduction from the House rate, but it seems to be an increase over the Underwood rate and also a slight increase over the Payne-Aldrich rate. I do not know that the article is one I care to say more about.

Mr. HALE. The Senator referred to herring used in the sardine business in the State of Maine. Those herring would not come under this section. Those herring are on the free list.

Mr. WALSH of Massachusetts. Will the Senator direct me to the section which provides that those herring shall be on the free list?

Mr. HALE. I will find it for the Senator.

Mr. WALSH of Massachusetts. I wish the Senator would direct me to that section. I got the impression, until my colleague spoke, that paragraph 720 dealt only with fish used in the sardine industry. I find I was mistaken in that. Can the Senator from Maine point me to that section?

Mr. LODGE. Sea herring and tuna fish, fresh, frozen, or packed in ice, are on the free list.

Mr. HALE. Those are the herring that we make up into sardines, and they are on the free list. That is paragraph 1645.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, in paragraph 720, page 103, line 10, after the word "pound" and the comma, to strike out the words "including the weight of the immediate container and the brine, pickle, and salt."

Mr. McCUMBER. I want to include in that proposed amendment the word "net weight," to be inserted in lieu of the matter stricken out.

The ASSISTANT SECRETARY. After the words "per pound" insert the words "net weight."

Mr. JONES of Washington. I have a memorandum prepared by the Delegate from Alaska with reference to this proposition, and also with reference to the reduction of the House rate. He thinks that the rate should be retained as it was fixed in the House. Did the committee have pretty substantial reasons for reducing the rate from 1½ cents to 1 cent a pound?

Mr. McCUMBER. There was a great deal of evidence, and an immense number of petitions on the subject, and protests against any rate at all. It was claimed by many that this is the poor man's food, and ought not to bear any rate of duty whatever. The committee, however, felt that the rate ought to be at least 1 cent a pound.

Mr. JONES of Washington. The Delegate does not give me any special reason why it should be higher, but I have a letter here in reference to the amendment, from the Pacific Cured Fish Association, which reads:

The original draft as proposed by the House provided a duty of 1½ cents per pound on the gross weight. We are now anxious to know whether the reduced rate of 1 cent per pound also applies on the gross weight or the net weight.

As I understand it, if the amendment of the committee is adopted, then there will be no duty upon the container.

Mr. McCUMBER. The Senator is right. It is neither upon the container nor the brine nor the pickle nor the salt.

Mr. JONES of Washington. Why does the committee strike that out?

Mr. McCUMBER. Because the committee were of the opinion that 1 cent per pound upon the fish itself was as high a rate of duty as ought to be imposed, and that we ought not to impose a duty of 1 cent a pound upon salt and brine and the weight of the container; that whatever duty was placed upon the product, it should be upon the product itself and not upon its container.

Mr. JONES of Washington. I have here the memorandum to which I have referred, and I ask that it may be inserted in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The memorandum is as follows:

The packing of Scotch-cure herring is becoming an important industry in Alaska.

This year 180,000 barrels will be packed.

In 1921 65,000 barrels were packed.

In 1921 the quality of imported herring was not as good as usual. It will probably recover this year.

The Alaskan product is just as good as the best European (Scotland).

The market for this article is in the large cities of the Atlantic seaboard. It is not a cheap article of food, as the method of preparation is expensive. It is consumed largely by the wealthier Russians and Jewish people.

Scotland is the largest exporting country.

The freight cost per barrel in refrigerator boats from Scotland to New York is $1.50.

The freight cost per barrel from Alaska to Seattle in ordinary freight space is $1.50.

The freight cost from Seattle to New York in refrigerator cars is $5.60 per barrel.

The Alaskan shipper must overcome the excessive transcontinental rate in order to compete with the Scotch producer in the American market.

The following quotation is from page 92, Pacific Fisherman Yearbook for 1922:

"As for the outlook, little can be said with assurance, except that any Alaska matjes herring of prime quality appearing before the Scotch herring season gets well under way should find a very good market. The Scotch failure last year was unprecedented, and there is no reason to think it will be repeated, and with normal importation from Scotland it will be impossible again to sell as much Alaska herring as was produced in 1921 without heavy loss. This can, of course, be avoided if the protective measure provided in the proposed tariff act is promptly made a law, which will give the Alaska producer something like an equal opportunity and warrant the further growth of the industry for which tentative preparations are being made."

Mr. KING. Mr. President, I would like to inquire of the chairman of the committee and the senior Senator from Massachusetts [Mr. LODGE] if they believe, in view of conditions in the United States and the importance of fish as a food, that aside perhaps from a revenue duty it is just to the great consuming public to impose a tariff upon fish. I have heard with great interest the statement of my friend from Massachusetts, and I confess it has been quite impressive, namely, that Canada has subsidized the fishermen of that country, paying a considerable part of their operating expenses. But it does seem to me that we ought to do everything we can in reason to furnish cheap fish and cheap sea food to the American people. If it is possible to reduce the rate upon fish of all kinds, it ought to be done. I would like to ask the chairman of the committee whether the committee in the consideration of the schedule took that matter fully into account.

Mr. McCUMBER. The committee did, but the committee believed as a protective committee that it is the matter of first importance to give the fisherman himself a living wage, and to give all the people an opportunity to work so they will have the money with which to buy the fish. It is our conviction that with that policy we will be able to pay 1 cent a pound more for the fish than we would if we had a policy allowing everything to come in free and at the lowest possible rate. If that were true, of course, we would all be consumers, except as to a few agricultural products, and would produce nothing in the United States outside of those. Therefore, we felt that the small duty of 1 cent per pound, which possibly upon the imported article would amount to from 12 to 15 per cent ad valorem, was not an excessive duty.

I want to call the Senator's attention to the fact that the importations are extremely heavy as compared with the production. In 1919 our production in the United States of these two kinds of fish was about 23,000,000 pounds. In 1920 we imported 69,000,000 pounds. I think that our importations under ordinary conditions are equal to about twice the home production.

Mr. KING. If the Senator will pardon me, I was not speaking of this particular kind of fish, but of the fish schedule generally. I notice that some of the fish bear a rate of duty of 2 cents per pound; some 25 per cent ad valorem; some 1½ cents per pound, the latter rate having been fixed by the committee where the House provided 4½ cents per pound; still other classes of fish at 2½ cents per pound; and fish, by whatever name known, packed in oil, and so forth, at 30 per cent ad valorem. In other words, the rates vary from 1 cent per pound up to a considerably higher amount than that.

Mr. McCUMBER. We must start our investigation and to a certain extent base our conclusions upon two facts: First, that the American scale of wages is $135 per month on the American fishing boats, while it is $45 per month on the Canadian boats. I do not think the duty of 2 cents would have anything to do particularly with the price of fish in the United States. This is upon fresh fish, and the price goes up or down very rapidly, depending upon the size of the catch. Fresh fish will not remain fresh very long. The only question and the real effect of it is to transfer the market to the American fisherman rather than the Canadian fisherman with no particular effect upon the price of the fish.

Mr. WALSH of Massachusetts. Mr. President, compared with other rates in the schedule, the fish rates are not high. The fact is that these paragraphs are a few of the paragraphs where the rates have been lowered rather than increased as compared with the House rate. There is nothing further I care to say on this item except that it is significant that the tariff agricultural bloc, which dominated the Finance Committee in fixing rates in this, the so-called agricultural schedule, took care to keep down the protective rates on fish, which that nonagricultural class known as fishermen would naturally favor keeping high. In other words, they were unwilling to give to that class who go out to sea for the product they sell what they demanded for themselves.

Mr. LODGE. Mr. President, in connection with what my colleague has said, I will state that the demand from the west coast was for 3 cents a pound, as against 2 cents a pound, while the demand from the Lakes was 2 cents a pound. It is not a merely local demand.

The PRESIDING OFFICER (Mr. JOHNSON in the chair). The question is on agreeing to the amendment proposed by the Senator from North Dakota [Mr. McCUMBER] to the committee amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The PRESIDING OFFICER. The next amendment will be stated.

The ASSISTANT SECRETARY. In paragraph 721, page 103, line 14, the committee proposes to strike out "26" and to insert "30," so as to read:

Fish (except shellfish) by whatever name known, packed in oil or in oil and other substances, 30 per cent ad valorem.

Mr. JONES of Washington. Mr. President, I wish to ask the chairman of the committee a question relating to a matter we have already disposed of. If an American citizen with his ship catches fish out in the ocean, takes them into Prince Rupert, and has them packed in ice and then shipped in bond to some market in the United States, would that be an importation of fish under the language of the bill?

Mr. McCUMBER. Not in bond for export?

Mr. JONES of Washington. No; that is not the proposition. This is the proposition, and I want it stated clearly——

Mr. McCUMBER. The amendment which was adopted this morning fixes that.

Mr. JONES of Washington. That is what I want to get at. I wish to get the Senator's opinion so that it may be in the RECORD with reference to the construction of the language. The first section of the bill provides that these duties shall be levied and collected and paid upon articles when imported from a foreign country. Then paragraph 718 provides for fish, fresh and frozen. I want the judgment of the Senator as to whether or not, under the language of the bill, fish caught by an American, taken into Prince Rupert, iced and packed, and then shipped in bond to a market in the United States would be considered as imported fish and subject to duty.

Mr. McCUMBER. Under the law as it now stands they would not be considered as imported fish.

Mr. JONES of Washington. But I want the Senator's opinion under the proposed law.

Mr. McCUMBER. Under the proposed law the same construction would be placed upon it. They would not be considered as imported fish. Under the amendment which was adopted this morning they would be made imported fish.

Mr. JONES of Washington. That is the Senator's opinion?

Mr. McCUMBER. Yes; that is my opinion.

Mr. JONES of Washington. Very well.

The PRESIDING OFFICER (Mr. STERLING in the chair). The question is on agreeing to the committee amendment in line 14, page 103.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment will be stated.

The READING CLERK. In paragraph 721, page 103, lines 17 and 18, the committee proposes to strike out "immediate containers weighing with their contents" and insert in lieu thereof "packages containing."

Mr. McCUMBER. I ask that the Senate disagree to the amendment.

The amendment was rejected.

The next amendment was in paragraph 721, page 103, line 19, to strike out "20" and insert "25" so as to read:

All fish (except shellfish), pickled, salted, smoked, kippered, or otherwise prepared or preserved (except in oil or in oil and other substances), in immediate containers weighing with their contents not more than 30 pounds each, 25 per cent ad valorem.

Mr. McCUMBER. Before taking up that amendment, I move to amend in line 19, page 103, by striking out "30" and inserting in lieu thereof "15," so as to read "not more than 15 pounds each."

The amendment was agreed to.

Mr. McCUMBER. Now I ask that the Senate agree to the amendment stated a moment ago in line 19, striking out "20" and inserting "25."

Mr. WALSH of Massachusetts. That amendment, I judge, amounts to a reduction of the House rate.

Mr. McCUMBER. Yes; it amounts to a reduction of the House rate.

Mr. WALSH of Massachusetts. From my examination of the paragraph I thought the rate was very high, in view of the fact that there is not very much competition between the imported sardines and the domestic produced sardines, but when I examined the Underwood law I found the rates to be about the same as named in this paragraph. I do not see how we could very strenuously object, therefore. I assume that the reasoning which led to the rate being imposed in the Underwood law is the same as in this paragraph, which was to the effect that the imported sardines are more or less of a luxury and that they could afford to bear a fair rate for revenue purposes.

I assume that the Senator from North Dakota agrees with that interpretation of the rate provided on this item. I am ready for the question to be put on the amendment, Mr. President.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was on page 103, paragraph 721, in line 20, after the word "in" where it occurs the third time, to strike out "immediate containers weighing with their contents" and to insert "packages containing."

Mr. McCUMBER. I ask that that amendment be disagreed to. As we have made other amendments which reduced the weight of the packages from 30 pounds to 15 pounds, the amendment is unnecessary.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. LODGE. One moment, Mr. President. I merely desire to suggest that, as I understand, disagreeing to the committee amendment leaves the language reading "in bulk or in more than 30 pounds each."

Mr. McCUMBER. The amendment which I have proposed reduces the size of the packages from 30 pounds to 15 pounds.

Mr. LODGE. I know that, but the way the Senator proposes to change it the language will read: "In bulk or in more than 30 pounds each." There must be some intervening words inserted.

Mr. McCUMBER. We have disagreed to the committee amendment so that now the language will read:

In bulk or in immediate containers weighing with their contents more than 15 pounds.

Mr. LODGE. I did not think that was the way the amendment was put. I thought that the entire clause was stricken out.

Mr. McCUMBER. No; rejecting the committee amendment reinstates the words "immediate containers weighing with their contents."

Mr. LODGE. Then, that is all right.

Mr. McCUMBER. In line 21, before the word "pounds," I move to strike out "thirty" and to insert in lieu thereof "fifteen."

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from North Dakota.

The amendment was agreed to.

The next amendment of the Committee on Finance was, on page 103, paragraph 721, line 22, after the word "pounds," to strike out the words "including the weight of the immediate container with the contents."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. McCUMBER. Mr. President, on behalf of the committee, I wish to modify the amendment by striking out the words "including the weight of the immediate container with the contents" and inserting the words "net weight," so that the amendment will be to strike out and insert.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from North Dakota to the committee amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. McCUMBER. Mr. President, I should like now to return to paragraph 728, in reference to rice. The paragraph is found on page 104. I think that the Senator from Louisiana [Mr. RANSDELL] is especially desirous of being present when that paragraph is discussed.

Mr. ROBINSON. I think that is true, and I will send for the Senator from Louisiana if the Senator from North Dakota will meantime have some other paragraph considered.

Mr. WALSH of Massachusetts. Why not now consider the paragraph in reference to black or silver foxes?

Mr. McCUMBER. Very well; suppose we take up paragraph 715?

Mr. ROBINSON. I think we might do that.

The PRESIDING OFFICER. The Secretary will state the amendment of the Committee on Finance, in paragraph 715.

The amendment of the Committee on Finance in paragraph 715, page 102, line 15, is, after the word "foxes," to strike out "$350" and to insert "$200"; so as to read:

PAR. 715. Black or silver foxes, $200 per head.

Mr. McCUMBER. I move to strike out the entire paragraph.

The PRESIDING OFFICER. The question is on the motion of the Senator from North Dakota.

Mr. JONES of Washington. Mr. President——

Mr. ROBINSON. I am in hearty accord with the motion of the Senator from North Dakota.

Mr. JONES of Washington. I think the Senator from Michigan [Mr. TOWNSEND] is interested in that paragraph. That Senator is not now present. He spoke to me in reference to the matter the other day. The Senator from North Dakota, however, knows better about that than do I.

Mr. McCUMBER. No; I had forgotten that the Senator from Michigan is particularly interested in the paragraph.

Mr. JONES of Washington. I can send for the Senator from Michigan.

Mr. McCUMBER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Bursum	Curtis	Edge
Ball	Calder	Dial	Frelinghuysen
Borah	Cameron	Dillingham	Gerry
Broussard	Capper	du Pont	Gooding

Hale	La Follette	Pepper	Swanson
Harreld	Lenroot	Phipps	Townsend
Harris	Lodge	Poindexter	Trammell
Harrison	McCormick	Ransdell	Wadsworth
Heflin	McCumber	Rawson	Walsh, Mass.
Johnson	McNary	Robinson	Walsh, Mont.
Jones, N. Mex.	Nelson	Sheppard	Warren
Jones, Wash.	New	Simmons	Watson, Ind.
Kellogg	Newberry	Smith	Willis
Kendrick	Nicholson	Spencer	
Keyes	Oddie	Sterling	
King	Overman	Sutherland	

The PRESIDING OFFICER. Sixty-one Senators having answered to their names, there is a quorum present.

Mr. McCUMBER. I note that I omitted to offer one amendment which should be proposed—on page 103, line 4. At that place in the bill I move to strike out "thirty" and insert in lieu thereof "fifteen."

Mr. WALSH of Massachusetts. I thought that we were considering paragraph 715, relating to the duty on black or silver foxes. What has become of that paragraph?

Mr. McCUMBER. I simply ask to recur to paragraph 719 before we proceed to consider paragraph 715, because of an amendment which was omitted by error. The committee propose to limit the packages to 15 pounds.

Mr. WALSH of Massachusetts. Pardon me; I have no objection to the amendment.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Dakota on behalf of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the amendment in paragraph 715 proposed by the Senator from North Dakota [Mr. McCUMBER] on behalf of the committee.

The READING CLERK. On page 102, after line 13, it is proposed to strike out paragraph 715, as follows:

PAR. 715. Black or silver foxes, $200 per head.

Mr. TOWNSEND. Mr. President, perhaps the Senator from North Dakota has stated why the committee propose to strike out the paragraph. If he has, I did not hear his statement, and do not know what the reason was which induced the committee, if the Senator speaks for the committee, to reverse itself. It appears that the House imposed a duty on black and silver foxes of $350, while the Senate committee made an amendment placing the duty at $200. As I understand, the motion now is to disagree to the Senate committee amendment. Am I correct about that?

Mr. McCUMBER. The motion is to strike out the entire paragraph, which would place black and silver foxes upon the free list, if imported for breeding purposes, and impose a 15 per cent ad valorem duty under the basket clause on other black and silver foxes.

Mr. TOWNSEND. Mr. President, the black and silver fox industry is, of course, very little understood generally throughout the country; the people know very little about it. It does not stand on a parity with industries engaged in the production of other animals which are admitted into the United States for breeding purposes. The testimony before the committee would indicate that those who are in favor of free trade or are opposed to a high protective duty disagreed among themselves, and the other facts that were brought out disputed the testimony of those gentlemen.

This morning I have received, as I presume other Senators have received, scores of letters, worded in exactly the same manner, which shows clearly they were inspired from a single source, the letters not differing from each other in a single word. They protest against the action of the Senate committee. I take it the writers of the letters are in favor of some sort of a protective duty, but just what they do not make clear.

High-grade black or silver foxes when imported into the United States on an average cost $2,000 a pair. The evidence shows that the Canadian Government imposes a duty of 25 per cent on such foxes when imported from the United States to Canada for breeding purposes; in other words, on a $2,000 fox Canada imposes a duty of $500. It is proposed by the Senate committee to strike out the paragraph imposing a duty on these animals, although the House bill provided a duty of $350. I was content that the rate should be made $200, which is less than the Canadian duty.

It can not be said that the poor man is interested in these articles or affected by the duty on them. Anybody who buys a black or silver fox skin—and such skins sell for very high prices—is able to buy it. It is no hardship, I repeat, upon the poor man to impose the duty suggested, because the poor man does not buy fur skins that cost from $750 to more than $1,000 apiece. Here is a luxury, clearly a luxury, nothing else than a luxury, and it is proposed that a duty shall be placed upon these articles not even as high as the duty which Canada, our competitor, places upon these articles coming from the United States.

There is a disposition on the part of people who are speculating in these matters to import inferior animals into the United States for breeding purposes. They bring them in on the theory that they are for breeding purposes, and they use them to interfere very materially with a legitimate industry of the United States. So, Mr. President, while this may seem like an item that does not require protection, and although when we are dealing with foxes the ordinary individual is inclined to scoff at the matter and say that they need no protection, we have in the State of Michigan more than 70 breeders of foxes, who have gone to great expense and who are conducting a legitimate industry. I do not know how many of these fox farms there are in other States. There are some in Wisconsin, some in New York, California, Minnesota, and in several other States; but Michigan, especially, has a very large number of these concerns which are engaged in the breeding of very high-grade animals.

I want to impress, if I can, upon the Senators who do me the honor to listen to what I am saying that this duty is not an imposition upon the ordinary individual. It does not make his furs or the furs for his wife and daughter cost more, because he does not buy these furs. This particular breed of foxes—the black and silver-gray fox—are rare animals and are bred only at great expense and with great care, and those who are engaged in their breeding in Michigan, those who started the industry there and in the other States, are deeply interested in maintaining the quality of the animals which are brought in. They have asked for this protection, and the House has given them $350. The matter was brought before me, and I went before the committee. It seemed to me that $200 would probably afford adequate protection, although by getting that nobody in the United States who is buying ordinary furs is injured by the duty, and if these animals are shipped into the United States free of duty the Government loses a revenue from a tariff which it can well afford to place upon a luxury.

A few Senators have come in since I began speaking about this matter, and I want to repeat: Our competitor is Canada. Foxes for breeding purposes are shipped back and forth across the line. Canada is protecting herself by putting a duty of 25 per cent ad valorem upon the value of the foxes, which, I say, in the case of those high-grade foxes, the ones that are imported, is about $2,000 per pair, so that a 25 per cent duty is $500. The House placed the duty at $350. The Senate committee reduced it to $200, and so reported it to the Senate; and now, without any explanation that I have heard, the chairman of the committee—speaking, I assume, for the committee—moves to disagree to the Senate amendment, and then he proposes to strike out the paragraph.

Mr. BORAH. Mr. President, how much revenue will this bring in?

Mr. TOWNSEND. More than the Senator thinks. I have not the figures here, because I had not expected the matter to come up at this time, so I am not prepared in regard to it.

Mr. KELLOGG. Mr. President, if the Senator will allow me, I have here a statement which says that in 1920, 805 of these foxes were shipped in; in 1919, 335. I can not vouch for this. This was furnished, I think, by the Fox Breeders' Association. It gives the number of fox farms in the United States as 216 and the number of foxes on those farms as approximately 4,350, of a total value of $4,281,830.

Mr. TOWNSEND. I shall endeavor to find out more about that before we get through, but I have nothing further on the subject at present.

Mr. McCUMBER. Mr. President, inasmuch as the committee has changed its view with reference to the simple question really as to whether or not animals of this character for breeding purposes should come in free, I desire to give very briefly the reasons that actuated the committee.

Mr. President, anyone who is acquainted with our agricultural conditions of 40 or 50 years ago, and who will stop to consider the kind of scrub cattle and horses that the country generally had at that time, and then compare them with the fine blooded stock that we have at the present time all over the United States, can realize the benefits to be obtained from allowing the importation of fine blooded cattle or hogs or sheep or horses, and we are asked now to change that policy. We are asked to change it just at a time when a fair number of people

in the United States have begun the development of fox farms. They got their blooded stock in the first instance free. Having developed the business and having gotten into this country under the law as it then stood without the payment of high duties, they now desire to take advantage of those who also wish to go into a business in which they can sell a single fox hide, as the Senator says, for from five to twelve hundred dollars, and require them to pay a mighty good price for so doing. In other words, they want the monopoly; they want the exclusive trade in the blooded stock.

I do not think we should change our policy. While the committee changed its mind, I am perfectly free to say to the Senator from Michigan that I have been in favor at all times of admitting free of duty these foxes for breeding purposes. Canada allows them to come into her own country free of duty, notwithstanding the fact that Canada is the home of the black and the silver fox, and they have had their fox farms for 20 years. The only excuse that can be given by those who desire a heavy duty upon the importation of these foxes is that the American purchaser does not know enough to distinguish between a good breeding stock and one which is poor.

Mr. President, the same objection that these people are making now might have been made against the Holstein bill; the same objection might have been made against the imported stallion and the sheep. I do not know why an American who is importing from Canada should not be able to distinguish between good stock and poor stock in foxes as well as he would in cattle or sheep; and if he is not able to distinguish he had better not go into the business, or else get some one with him who can pass judgment upon the quality of the stock better than he can.

I do not agree with the Senator that fur is a luxury——

Mr. TOWNSEND. I did not say that; I said this kind of fur.

Mr. McCUMBER. We people who live up near the North Pole, in the Dakotas and in northern Minnesota, regard it as an absolute necessity in the wintertime; and we should like to see the fox farms grow in the United States, and the number of pelts increase, until we can buy a silver or a black fox pelt practically as cheaply as we could buy the pelt of the old red fox a few years ago. We need the fur, and in my opinion we ought not to pass any legislation the effect of which will be to prevent other people going into the business of raising foxes for their fur; and the only way in which we can assure a steady increase is to allow the importation for breeding purposes to anyone who desires to go into the business. It will benefit our stock in the end; and I want to say in addition to that, in answer to the Senator from Michigan, that the Agricultural Department, who have jurisdiction over the matter of these importations, should see to it—and they have the power to see to it—that nothing but the highest class of well-bred stock shall come into the United States.

I think, Mr. President, that the fox industry ought to be placed exactly where the industry of cattle and horses and mules and everything of that character is placed.

Mr. ROBINSON. Mr. President, I am in accord with the position taken on this subject by the chairman of the committee, and I congratulate the committee on what appears to me to be a very intelligent and proper action, as indicated by the policy now suggested by the chairman of the committee.

This item relates to a tax upon the importation of live animals. The evidence is that the importations are had solely for breeding purposes. Every person now engaged in the production of the foxes described in this paragraph procured his original stock by importation. That statement, I think, will not be controverted by the Senator from Michigan or by anyone else.

The United States has never been known as a silver-fox country. It is true that ever since the country was discovered there have been a few silver foxes grown in the country, but the business as it now exists in the United States, even in the State of Michigan, is the result of the importation into the country for breeding purposes of the silver foxes grown in Canada, principally, I believe, on Prince Edward Island.

Comparatively few individuals have procured the stock and are now engaged in the business of breeding. A large number of other individuals, perhaps some corporations, are engaged in the same industry. It has been found exceedingly profitable during the last 10 years, one man with a very small capital having made a profit of approximately $250,000 in the single year 1920, if my memory serves me correctly.

There is a mutual arrangement now in force by which both Canada and the United States permit importations from the other country, respectively, of registered animals for breeding purposes, and among those registered animals are included foxes of the class designated in this paragraph.

Any disturbance of that arrangement in all probability would create resentment upon the part of Canada. It is a wholesome arrangement. It has proven beneficial to the United States, as stated by the Senator from North Dakota. There never was any justification for a tax upon the importation of silver or black foxes into the United States. There can be no justification for the high rate proposed in the House bill, and there is little justification for the rate proposed in the Senate committee amendment, which the Senator from North Dakota now contemplates withdrawing with a view to striking out the entire paragraph.

The importation of high-class animals for breeding purposes is a policy strongly intrenched in the procedure of this country in the past. The wisdom of that policy has been demonstrated by results already obtained. No circumstances within my knowledge exist which would justify the imposition of a high rate of duty upon the importation of these animals merely for the benefit of those who have already obtained the necessary stock for breeding purposes and who would, therefore, by the imposition of this duty or any other high duty, shut out competition upon the part of other American producers.

There has been furnished me by Mr. Frank L. Augustine, who is engaged in the business of producing silver foxes for the market in the United States, a brief disclosing the history of this industry in the United States, fully explaining the purposes of those who seek the imposition of this high duty contemplated by the House provision and by the Senate committee amendment, for the Senate committee amendment provides a tax of $200 a head upon all black or silver foxes imported into the United States.

The adoption of the course suggested by the Senator from North Dakota, in my judgment, is not inconsistent with a fair policy of protection. We have heretofore arranged with Canada for the importation of stock into that country free of duty for breeding purposes and we permit Canada to send stock into this country upon the same conditions and for the same purpose.

I ask unanimous consent to have inserted in the RECORD as a part of my remarks the brief which has been furnished me upon this subject. I can see no justification whatever for the imposition of either the House rates or the rates proposed in the original committee amendment. I am in hearty accord with the purpose set forth by the Senator from North Dakota.

There being no objection, the brief was ordered to be printed in the RECORD, as follows:

For the reasons outlined in the inclosed brief we believe that the words "except black or silver foxes" should be struck out of paragraph 1507 on page 209 of Calendar No. 591, House bill 7456.

There is a reciprocal arrangement between the United States of America and the Dominion of Canada whereby animals registered in national records of the United States are admitted into Canada duty free and animals registered in Canadian national records are admitted into the United States duty free. Canadian national records for black or silver foxes were officially recognized by the United States Department of Agriculture on October 4, 1921, for free entry into the United States.

If the words "except black or silver foxes" are left in paragraph 1507, it will mean that the agreement between the United States and Canada in regard to registered animals will be broken. You can not break an agreement in one part without breaking the agreement altogether. If we choose to break this agreement, how can we expect the Canadian Government to allow our registered horses and cattle to go into Canada duty free. We export to Canada far more registered animals than Canada exports to this country. This is particularly true in reference to registered horses and registered cattle.

With reference to the matter of the proposed duty of $200 per head on silver black foxes imported into the United States, I would like to draw your attention to the following facts regarding this situation. I am endeavoring to make a start in this industry, and I write from the point of view of a new beginner. I sincerely hope that you will read this brief over carefully and give your best consideration to the points which I endeavor to bring out.

The American Fox and Fur Farmer Magazine has its office in the same building and on the same floor of this building as the Central New York Fur Co., and I understand that the Central New York Fur Co. is interested in the magazine—that is, that the directors of the Central New York Fur Co. are among those behind this magazine. Anybody could tell by looking at the magazine that it could hardly be made to pay from the amount of advertising that they have. Mr. Cookingham, who went down to Washington in the first place in connection with this duty matter, is a director, or was a director, in the Central New York Fur Co. The Central New York Fur Co. brought their foxes into the United States in the fall of 1920, and their first breeding season was in the year 1921. As soon as they got their foxes into the United States they immediately started a hue and cry for a high duty. They claim that they have the best foxes in the United States. Where did they get these foxes? They got them right direct from Prince Edward Island. Is it fair that as soon as they got their good foxes into the United States that they should shut out everybody else in the United States from importing foxes into the United States?

Then take the case of Arthur Schleicher. Arthur Schleicher imported his foxes direct from Prince Edward Island, and claims to have as good a ranch of foxes as can be found anywhere. Is it fair that as soon as he has his foxes in the United States his neighbor in Wisconsin or some other State should be shut out from importing equally as high grade stock? Both the above people have good, large ranches. There is no doubt about that, but, even so, their ranches can not supply the whole world with fur.

Then take the case of Frank F. Tuplin. He was one of the pioneers of the business on Prince Edward Island. He made a lot of money there, and then took some foxes out to Michigan and started in the business, where, I understand, he has made a large amount of money. Almost every year, however, Mr. Tuplin goes to Prince Edward Island and brings foxes back with him to the United States. Why does he do this? If he has the best foxes in the world, as he seems to think in Michigan, why is it necessary for him to go to Prince Edward Island for new blood from time to time? These are pretty pertinent questions. Is it fair, now, because he thinks he has enough foxes to go on breeding independently from them, that his neighbor should be prevented from going to the original source of supply for foundation stock to start operations with? There is no question but that Frank Tuplin knows a lot about foxes; perhaps he does not tell all he knows. I believe he has made the statement that the quality of fur in Michigan on the average is not up to the quality of the fur on Prince Edward Island, but that he could raise more pups in Michigan than he could raise there. This is a strong argument for the wisdom of importing new blood from year to year.

The American Fox and Fur Farmer says that inferior foxes and culls should be kept out of the United States. This is quite true. How many cases do they actually know of where inferior foxes and culls have been shipped into the United States from Canada? There is no question that probably in some cases poor foxes have come in, but let me tell you that the average man who is buying foxes and paying his good money for them is pretty sure to see that he gets good foxes. Further than that, the Canadian Government will not register in their national records a cull fox. I believe that there should be a duty on foxes not registered going into the United States, but there should be no duty on foxes registered in Canadian national live-stock records.

The Canadian Government is just as strict in inspecting their foxes for registration as they are in inspecting their Holstein cattle. A great many cattle and horses are shipped into Canada duty free from the United States because they are registered in American national records. Some of these have gone bad and have been poor animals, it is true, but on the whole the average has been high, and it is the same way with silver black foxes coming into the United States from Canada. There are a number of people in the United States who have become interested in the fox industry within the last two or three years and who think they know it all. How can this be possible any more than it is possible for a man to learn and thoroughly understand the Holstein cattle business in so short a time? They may think that they know it all, but do they?

There is an agreement between the Government of the United States and the Canadian Government whereby animals registered in Canadian national live-stock records can go into the United States duty free, and vice versa; animals registered in American records recognized by the Washington Government and recognized by the Canadian Government can go into Canada duty free. If the United States Government chooses to break this agreement in respect to one branch of Canadian national live-stock records, would it not have a tendency to upset the whole working arrangement which is now going along so smoothly? This is only my own opinion, and I have not heard any others express their views on the subject. If it would upset the agreement, American horses and cattle could not go into Canada duty free as at present. This thought has just occurred to me, and it is only expressed as my viewpoint.

Here is another example: The Fromm Bros., of Hamburg, Wis., have been in the fox business in the United States for a long number of years. Why did they go down to Prince Edward Island in the fall of 1920 and bring back 20 or more good female foxes to mate up with their own stock at Hamburg, Wis.? They wanted good blood for breeding purposes, and they went to Prince Edward Island for it. Is it fair that we or some others should now be shut out and not allowed to secure new blood?

Another point is this: A large number of American citizens own foxes in Canada. These foxes are being ranched for them by Canadian ranchers, and it is their intention to bring these foxes into the United States this fall to ranches which they are establishing in different parts of the country. They have bought these foxes from Canadian ranchers and have paid for them, and why should they have to pay a big duty when they bring these foxes back into their own country? Is it fair? The Government talks about the conservation of fur-bearing animals. Is it a progressive step to stop the importation of high-class new blood just at this period of this young and growing industry?

The whole thing looks as if this movement for a high duty is being pushed by a number of American ranchers who, after they have shut out Canadian competition, can ask extravagant prices for their breeding stock, and thus the American citizen who wants to go into the industry would have to pay far more than the foxes are really worth to get a start. One large rancher stated that they would be able to get higher prices for their breeding stock if this duty went on. Another said that Canadians were selling their foxes too cheap. Why does he say this? The Canadians have as much sense about intrinsic values as we have. These large ranchers, however, want to get high prices for their breeding stock, and many of them are publishing literature stating that the average price received for silver-black fox pelts is $400 and $500 per pelt. They publish these things in order to get the public to buy their foxes. Everybody knows that no collection of silver-black fox skins would average these prices unless it was a hand-picked collection, but these people state that the average all over the country is this amount. This is a false statement, and people buying foxes and basing their expectations for profits on such estimates are certainly going to be disappointed and lose money.

Why are the American ranchers scared of Canadian competition? It is not on account of Canadians shipping poor foxes into the United States, as this statement is false. It is not on account of the large number of foxes in the United States, but it is simply because they want to make exorbitant prices for themselves. Talk about Canadians shipping poor foxes into the United States. I can name you instance after instance where foxes have been shipped by reputable Canadian breeders to ranchers in the United States, who have been more than pleased with the animals they secured. Take the case of Arthur Schleicher, of Lake City, Minn. He ordered all his foxes by mail from Canada, and he certainly got splendid animals. Read his advertisements, and it will show you what he thinks of his foxes. The foxes were shipped out to him from Canada, and he never saw them until they arrived at destination.

The Central New York Fur Co. bought their foxes in practically the same way, with the exception that they sent a man down by the name of Doctor Young to work on a ranch there during the winter and to study the business, and the foxes were ranched on Prince Edward Island for the first year and then they were brought to their own ranch in New York State. Take all the bunch of foxes in the States of Michigan and New York, Wisconsin, and Minnesota, and with the exception of a few foxes that came from Alaska they all came from Canada and were all bought at reasonable prices, with perhaps some few exceptions.

The United States was never known as a silver-fox country—that is, there were very, very few wild silver foxes ever caught here. Does it not seem reasonable to suppose, then, that we should have some source open from which we can draw new blood for breeding purposes to keep up the stamina and quality of our stock? If we shut out Canada, where are we going to get the new blood?

Mr. JONES of New Mexico. I should like to inquire whether or not it is proposed also to put these foxes on the free list.

Mr. SMOOT. If they are stricken from this paragraph, if foxes come in which are not for breeding purposes, they fall under paragraph 716, with a duty of 15 per cent, just the same as all other live animals.

Mr. ROBINSON. But foxes imported for breeding purposes will come in free?

Mr. SMOOT. Yes; just the same as other animals. But I understood the Senator from New Mexico to ask if foxes would come in free if this change were made. Foxes which come in, but not for breeding purposes, fall under paragraph 716, at 15 per cent ad valorem. If they are for breeding purposes, then they come in free.

Mr. JONES of New Mexico. My attention is called to paragraph 1507, which provides that—

> Any animal imported by a citizen of the United States specially for breeding purposes, except black or silver foxes, shall be admitted free.

Mr. SMOOT. Just as soon as we agree to this amendment I shall ask that we turn to paragraph 1507, the one to which the Senator refers, and shall ask that that first amendment there be disagreed to, and that the second amendment be agreed to. That will leave foxes brought in for breeding purposes on the free list.

Mr. ROBINSON. The course suggested by the Senator from North Dakota, and which I understand it is the policy of the Senator from Utah to carry out, is, as I comprehend it, to place foxes imported into the United States for breeding purposes upon the free list, and other foxes within a paragraph which contemplates a duty of 15 per cent.

Mr. SMOOT. That is correct.

Mr. ROBINSON. I have no objection whatever to that arrangement. I think it is a fair arrangement.

Mr. JONES of New Mexico. I wanted to be assured that these pure-bred foxes for breeding purposes would not bear any tax under any other clause of the bill.

Mr. SMOOT. If the Senate agrees to the recommendations of the committee, all breeding animals, including the black and silver foxes, will come in free of duty. If they are not for breeding purposes, outside of mules and horses, all live animals come in under paragraph 716, at a duty of 15 per cent ad valorem.

Mr. JONES of New Mexico. I have had occasion to get some first-hand information about fox farms. Last summer I was up in northern New York attending to another matter, but took advantage of the situation to visit one of these farms, and the owner of the farm happened to be present. Of course, I visited the farm just as any stranger would, for the purpose of seeing what I could and finding out what I could. I realized at that time that there was an attempt being made to get a very high duty put upon these foxes imported for breeding purposes. However, I gave no intimation of that kind to the proprietor of this farm. He was very liberal with his information, and proceeded to tell me all about his business. The substance of what he said was that he had invested $40,000 in that farm; that during the previous year his profits from the farm amounted to $60,000; that they expected to have a duty put upon foxes of $350 each, and that his profits would then be much larger.

He told me about the advantages of raising foxes in New York in comparison with the fox-raising industry on Prince Edward Island in Canada, and he said that while in Canada they did manage their business in such a way that their expenses were not so great as they were in New York, yet in New York they conducted their farms on a much more scientific basis, and that the increased cost was more than relatively returned to them in the profits of the industry.

So I can not conceive, from any reasonable point of view, that the industry needs this duty. It is true, as the Senator from Michigan has said, that at the present time at least these skins are a luxury, but I have never before heard it intimated that it was a province of government, even with respect to

luxuries, to impose a tax for the express purpose of enabling one citizen to reap a profit at the expense of other citizens. So far as building up this industry is concerned, it is being built up now.

Mr. ROBINSON. Mr. President, it can only be built up by the importation of stock for breeding purposes from Canada, and any rate of duty which tends to prevent that will tend to restrict the industry as a whole, rather than to promote and encourage it.

Mr. JONES of New Mexico. The Senator is unquestionably correct. If you put a tax upon these breeding animals, you necessarily raise the capital cost of the industry every time one of the animals is imported.

Mr. ROBINSON. If the Senator will permit me, I want to take issue with him upon his statement that furs are to be considered purely as luxuries. I do not take that view of the matter. There is a tendency to treat them as such, but they are a necessary, a common article of apparel, indispensable to the comfort of citizens who live in cold climates, and by some mysterious evolution of human society they have become necessary for use in summer seasons in hot climates. How that has happened I do not choose to take the time of the Senate to attempt to explain.

Mr. JONES of New Mexico. I do not dispute what the Senator from Arkansas has said. What I intended to express was that this particular fur is considered a luxury at this time, and so it is.

Mr. ROBINSON. That is true.

Mr. TOWNSEND. I think the Senator misconstrued my remarks. I take it that the higher grade of sealskins and these silver and black foxes are not necessities of life; they are luxuries. We were talking about this particular kind of an animal, not the ordinary fur-bearing animal.

Mr. JONES of New Mexico. My thought was that we should lower the capital investment in these farms as much as we could, because by the encouragement of production, in that way it is just possible that in the near future these furs may be so cheapened in price that those of us who are able to purchase at a reasonable price may afford some such furs as these. At any rate, whether they are luxuries or not, I can not see any logic or reason in wanting this tax, when it is not for the purpose of preserving the business, when it would tend to discourage the business, to limit the business, and when there is no claim made that the fox farms are not prosperous now. It seems to me that no principle can be invoked for this kind of a tariff duty. It would tend to create a monopoly in the hands of those who are fortunate enough to have the animals in this country now, and, according to their own statements, the purpose is simply to enable them to make more profit.

Mr. POMERENE. As I understood the Senator from New Mexico, he stated a moment ago that the New York fox farm, by reason of its scientific methods, was put to greater expense in the raising of these foxes than were the Canadians with their unscientific methods. If that be so, perhaps it might be better for the New York scientists to adopt the unscientific methods which prevail in Canada.

Mr. JONES of New Mexico. The Senator probably did not hear the remark which I made preceding that. He correctly quoted what I said in the first place, but the same New York farmer said that the additional expense was more than repaid to him in the profits of the business or, in other words, that they made greater profits by reason of this scientific knowledge and the additional cost which it necessitates.

Mr. CALDER. Mr. President, I favor the levying of this duty as proposed by the Committee on Finance, but about which they seem to have changed their minds. I know it is difficult to justify picking out one animal for the purpose of levying a tax upon that animal and not upon the rest. The domestic breeders of these foxes have contended that in recent years a poor quality of animal is coming in and that it is tending to destroy the value of their production here, and that only in this way can that be prevented. May I just read a paragraph from the summary of tariff information? It is as follows:

> Ordinary pelts range in price from $50 to $200 or $300, while the better pelts bring as much as $1,000 to $1,200. A common price for a pair of good breeding animals is $2,500, although poorer animals are sold as low as $500 per pair.

The $200 tax duty proposed is about 15 per cent upon the value of the higher grade animals, which is $2,500 a pair. The breeders seem to feel that this would tend to improve and keep up the breed, with which I am thoroughly in accord. It seems to me that their position is well taken and their position is well founded, and I hope the Senate will disagree with the recommendation of the committee.

Mr. KELLOGG. Mr. President, I heard the remarks of the chairman of the committee on the question of silver foxes to the effect that silver fox furs in Minnesota and North Dakota are a necessity. I hardly deem it necessary to state what everybody knows, that this, of course, is a pure luxury, and, carrying out the theory of our friends on the other side of the Chamber, they ought to be in favor of a tariff on this product for revenue purposes.

First, Canada imposes a duty against this country on the importation of all foxes.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER (Mr. CAPPER in the chair). Does the Senator from Minnesota yield to the Senator from Utah?

Mr. KELLOGG. I yield.

Mr. SMOOT. Somehow or other there is a mistaken idea as to Canada imposing a duty upon breeding foxes going into Canada. I have a copy of a telegram from Mr. R. R. Farrow, commissioner of customs at Ottawa, which reads as follows:

> Silver foxes have been allowed free entry into Canada for the last 15 years.

Mr. TOWNSEND. Mr. President, may I interrupt the Senator by suggesting that there was presented before the committee a letter signed by R. J. Lunny, chief appraiser at the port of Montreal, in which he said:

> Referring to your letter of the 22d instant, addressed to the collector of customs, respecting a letter written to you December 14, 1920, which has been lost, particularly referring to the duty on silver foxes imported into Canada.
>
> In reply I beg to advise you that silver foxes brought into Canada temporarily, for a period not exceeding three months, for the purpose of exhibition or of competition for prizes offered by any agricultural or other association are admitted free of duty. Otherwise the duty is 25 per cent ad valorem, plus a sales tax at present in force of 2½ per cent on the duty-paid value when imported by wholesalers or jobbers and 4 per cent in cases of importation by retailers or consumers.
>
> Yours truly,
>
> R. J. LUNNY, *Chief Appraiser.*

If the Senator from Minnesota will permit me, I have endeavored to find out what the facts are in reference to the matter. I wanted to find out about it and I presented my argument on the theory that Canada imposes a 25 per cent duty on the same kind of foxes which the Senate committee now proposes shall be admitted free of duty into the United States from Canada. The Senator from Arkansas [Mr. ROBINSON] said—or perhaps it was the Senator from New Mexico [Mr. JONES]—that the only way to improve the stock was to get these foxes into the United States. The farms in the United States can supply the American breeders of foxes, and they can pay the duty.

I am obliged to the Senator from Minnesota. He was talking about a matter in which I am greatly interested.

Mr. SMOOT. Mr. President, I want to say to the Senator from Michigan and also to the Senator from Minnesota that after the question came up as to whether there is a duty on black and silver foxes in Canada, the chairman of the committee wrote a letter and received an answer to it, and in that answer it was stated that there is no duty imposed upon foxes going into Canada for breeding purposes.

Mr. ROBINSON. Supplementing the statement which the Senator from Utah just made, my information is that all animals imported into Canada from the United States and all animals exported into the United States from Canada are, under existing arrangements, admitted free of duty in the respective countries when transported for breeding purposes. That is the rule which has been universally followed with respect to all animals. There is no duty of 25 per cent or any other rate, according to my information, imposed upon foxes imported into Canada from the United States for breeding purposes.

In addition to that and in addition to the statement I made a moment ago, with the permission of the Senator from Minnesota, a number of persons have gone into Canada and are now engaged in the business of producing foxes there for breeding purposes with the view of importing them into the United States. There are only two considerable businesses in this country which have already secured their stock and which are now attempting to shut out the importation of other foxes for breeding purposes. They went to Canada and got their breeding stock, had it admitted free of duty under existing arrangements, and, having done that, their effort now is to prevent others from doing the same thing, so as to put higher and higher the price to the American people for this very necessary, if sometimes considered luxurious, article.

Mr. KELLOGG. Mr. President, I have not examined the law, but the National Silver Fox Breeders' Association and the American Fox Breeders' Association state positively that the Canadian duty of 25 per cent applies to the importations into Canada of all silver and black foxes. That is the extent of my information on the subject.

Mr. President, there is a difference between admitting free of duty ordinary breeding animals, such as horses, cattle, and

hogs, and admitting silver foxes free. The animals which I mention, such as horses, cattle, hogs, and sheep, are a necessity in business; they are the great stock-producing animals of this country, and, of course, it has been the policy, as it should have been the policy of this country, to admit them free of duty for breeding purposes; but it is an entirely different thing when it comes to the business of breeding silver and black foxes, which is an expensive business, to contend that the general industry of the country is going to be benefited by admitting them free of duty.

I realize that the breeding of silver and black foxes is a new industry in this country; it has only grown up within a few years; but there are to-day in the various States 216 fox farms, on which it is estimated that there are being raised five or six thousand silver foxes for breeding purposes and for fur.

A great deal of money has been invested in the industry, and it is estimated that the value of the foxes on those farms is $4,281,830. The Bureau of Animal Industry recommends, and I understood so recommended to the committee, a duty on the importation of silver and black foxes for breeding purposes or for any purpose. It does seem to me, Mr. Pres.dent, that the proposed duty will produce a reasonable revenue, and that $200 is not more than a fair duty for the protection of a growing American industry. I hope the last committee amendment will not be adopted.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from North Dakota [Mr. McCUMBER] in behalf of the Finance Committee to strike out paragraph 715.

Mr. ROBINSON. I call for the yeas and nays.

The yeas and nays were ordered.

Mr. ROBINSON. A parliamentary inquiry, Mr. President. What is the pending motion?

The PRESIDING OFFICER. The pending motion is the motion made by the Senator from North Dakota to strike out paragraph 715.

Mr. ROBINSON. That was my understanding.

Mr. WALSH of Massachusetts. And should the motion be agreed to, I understand that on silver and black foxes, except those for breeding purposes, a duty of 15 per cent ad valorem will be imposed.

The reading clerk proceeded to call the roll.

Mr. NEW (when his name was called). I transfer my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. WATSON of Indiana (when his name was called). I transfer my pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the Senator from Pennsylvania [Mr. CROW] and vote "yea."

The roll call was concluded.

Mr. EDGE. I transfer my general pair with the Senator from Oklahoma [Mr. OWEN] to the Senator from Oregon [Mr. STANFIELD] and vote "yea."

Mr. TRAMMELL. I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Missouri [Mr. REED] and vote "yea."

Mr. CAMERON (after having voted in the negative). I am paired with the Senator from Georgia [Mr. WATSON]. In his absence I transfer that pair to the junior Senator from Vermont [Mr. PAGE] and allow my vote to stand.

Mr. HARRISON (after having voted in the affirmative). I transfer my pair with the Senator from West Virginia [Mr. ELKINS] to the Senator from Nebraska [Mr. HITCHCOCK] and allow my vote to stand.

Mr. CARAWAY (after having voted in the affirmative). I transfer my pair with the Senator from Illinois [Mr. McKINLEY] to the Senator from Nevada [Mr. PITTMAN] and allow my vote to stand.

Mr. CURTIS. I am requested to announce that the Senator from Illinois [Mr. McKINLEY] and the Senator from Wyoming [Mr. KENDRICK] are absent on official business.

I also desire to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER].

The result was announced—yeas 47, nays 19, as follows:

YEAS—47.

Ashurst	du Pont	Keyes	Myers
Borah	Edge	King	Oddie
Bursum	France	La Follette	Overman
Capper	Frelinghuysen	Lodge	Pepper
Caraway	Harris	McCumber	Pomerene
Culberson	Harrison	McLean	Ransdell
Curtis	Heflin	McNary	Rawson
Dial	Jones, N. Mex.	Moses	Robinson
Sheppard	Smoot	Sutherland	Walsh, Mass.
Shields	Spencer	Swanson	Walsh, Mont.
Simmons	Stanley	Trammell	Watson, Ind.
Smith	Sterling	Underwood	

NAYS—19.

Calder	Johnson	Nelson	Poindexter
Cameron	Jones, Wash.	New	Townsend
Fernald	Kellogg	Newberry	Wadsworth
Gooding	Lenroot	Nicholson	Willis
Hale	McCormick	Phipps	

NOT VOTING—30.

Ball	Ernst	McKellar	Shortridge
Brandegee	Fletcher	McKinley	Stanfield
Broussard	Gerry	Norbeck	Warren
Colt	Glass	Norris	Watson, Ga.
Crow	Harreld	Owen	Weller
Cummins	Hitchcock	Page	Williams
Dillingham	Kendrick	Pittman	
Elkins	Ladd	Reed	

So the amendment was agreed to.

Mr. LA FOLLETTE obtained the floor.

Mr. SMOOT. Mr. President, will the Senator from Wisconsin yield to me for a moment?

Mr. LA FOLLETTE. I yield to the Senator from Utah.

Mr. SMOOT. The action just taken by the Senate will necessitate changes in paragraph 1507, and I think those changes ought to be made at this time, so as to dispose of the question of the duty upon foxes. I ask, therefore, to take up paragraph 1507.

The PRESIDING OFFICER. The amendments to paragraph 1507 will be stated.

The READING CLERK. On page 209, paragraph 1507, line 8, after the word "United," it is proposed to strike out "States," and insert "States."

The amendment was agreed to.

The next amendment in paragraph 1507 was, on page 209, line 8, after the word "purposes," to insert "except black or silver foxes," so as to read:

PAR 1507. Any animal imported by a citizen of the United States specially for breeding purposes, except black or silver foxes, shall be admitted free.

Mr. SMOOT. I ask that that amendment may be disagreed to, in order to conform to the action of the Senate in reference to paragraph 715.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The next amendment in paragraph 1507 was, on page 209, line 10, after the word "such," to strike out "purposes, except black or silver foxes" and to insert "purposes."

Mr. SMOOT. I ask that that amendment may be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

CROP INSURANCE.

Mr. McNARY introduced a joint resolution (S. J. Res. 219) creating a joint commission to investigate the subject of crop insurance, which was read twice by its title.

Mr. McNARY. Mr. President, I have introduced a joint resolution providing for the appointment of a joint congressional committee, consisting of three Members of each House, to investigate the subject of crop insurance with a view to determining the practicability and expediency of creating a Government crop-insurance bureau or other agency.

This important subject has never been given the attention it merits, and I propose that Congress make a thorough and accurate survey, touching upon all the elements involved in such a considerable undertaking.

There is no industry subject to as many vicissitudes and hazards as farming. A year's toil and crop investment may be destroyed in a night. This threatening possibility is one of the reasons that drives farmers to the already overcongested cities, resulting in a condition both uneconomic and fraught with social evils. The farmers' economic status is directly dependent upon nature, and any legislation that tends to stabilize his crop production and minimize his losses is worthy of the most studious investigation by the Congress.

Excessive heat or rain may ruin his planted fields. His gardens or orchards may suffer from the frosts, the lack of heat, or drought. His growing grain or fruit may be injured by plant diseases or suffer damage by windstorms or hail.

The plan I propose by the resolution contemplates a study of all forms of crop insurance and the inclusion in a general legislative bill of all forms of losses against which insurance may be practicable.

For many years the farmers have carried their fire risk. Indeed there are over 2,000 mutual fire insurance companies in the country to-day actively, prosperously, and soundly en-

gaged in fire insurance. The total amount of insurance which they now have in force exceeds $8,000,000,000.

Insurance contracts against loss of grain by hail are issued in some of the Northern States and have worked to the benefit of the grain growers. A certain amount of fire insurance has also been written on standing grain in some States in the West. This form of insurance is most common where the wheat is left standing until thoroughly ripe and dry and then cut and threshed in a single process.

I realize it is not practicable to enact legislation that will justify the issuance of an insurance policy covering all the hazards to which crops are subject, but, in my judgment, a number of serious hazards may be included in a policy. If legislation of this character can be worked out, money made in the fat years would assist in carrying the farmer over during the lean years.

A single-crop farmer exposes himself to the possibility of losing the result of an entire year's work from a single catastrophe. Happily, however, the farmer of the present, in most instances and in most localities, practices diversified farming, and this practice is calculated to simplify the scheme of general crop insurance.

The principle involved in any plan of agricultural insurance must be such as will safeguard the farmer against unavoidable losses and at the same time permit him to obtain the insurance at a cost which he can afford to pay. It is these principles the resolution in question will seek to discover and, when discovered, write into legislation.

Mr. President, this Congress has done much to better farm conditions and has shown a sympathy for rural problems quite beyond that displayed by the Congress for many years. The neglect of the legislative branch of the Government to fashion laws designed to improve farm conditions has added to the unrest manifest throughout the agricultural communities in the country. While many questions appertaining to farm life can not be solved by legislation, yet every lawmaking effort should be exhausted in behalf of those who occupy and till the soil.

It is my opinion that, if the farmer's income is stabilized through the years and assurance given him of wholesome legislation providing that a sudden loss may be recouped by the payment of a policy of insurance, one of the great causes will be removed that accelerates the human current to the cities.

Mr. President, I intend to ask the Senate for early and favorable consideration of this legislation. I move that the joint resolution be referred to the Committee on Agriculture and Forestry.

The motion was agreed to.

VIEWS OF SENATOR POMERENE ON AMERICAN VALUATION PLAN.

Mr. POMERENE. Mr. President, I have had a great many letters from constituents urging me to support the American valuation plan which was contained in the tariff bill as it came to the Senate from the House. Personally I am very much opposed to it. Several days ago I wrote a letter to one of our largest manufacturers, giving my reasons for opposing it. I could take the time of the Senate to make a speech on the subject. I do not care to do that at this time, but in order that I may be able to answer other people who have written me on the subject, I ask unanimous consent that the letter to which I have referred may be incorporated in the RECORD in 8-point type. I should add that this is the complete letter, except for two or three paragraphs which were of a rather personal nature, and those I have omitted.

There being no objection, the letter was ordered to be printed in the RECORD in 8-point type, as follows:

"The question before us is the American valuation plan. It has nothing whatever to do with the theory of either a protective tariff or a revenue tariff. I have been in the Senate long enough to get away from theories. On the tariff question a man may be a theorist whether he believes in high protection or in a revenue tariff. It is practical common sense which ought to prevail, and whatever may have been our theories before the world cataclysm, changed economic and financial conditions must be borne in mind in all legislation. If American valuation is either right or wrong under a protective theory, it is right or wrong under any other system of tariff.

"I quoted to you on the train the argument used by the foreign trade branch of the Cleveland Chamber of Commerce. They used the item of lemons and pointed out the great difference in the price of lemons in the Cleveland markets within a very short period of time and based their argument against the American valuation plan on the very great difference in the amount of the tariff duties based upon a high price and a low price for lemons in the Cleveland markets. It is true they were unfortunate in their illustration, because the duty on lemons is specific and not ad valorem, but because they were mistaken in this fact it does not lessen the weight of the argument as applied to ad valorem duties where the American valuation plan could apply; and it is but a short step to conclude that if the American valuation plan was once adopted those who favor it would insist that every duty be made ad valorem rather than specific, or that the American valuation plan should be made to apply on imports whether subject to ad valorem or specific duties.

"I note your suggestion that it is easier for our customs officials to determine American values than foreign values. I can not think that you are quite serious in making this suggestion. We have consular officers and Treasury agents in every part of the world who are in constant communication with the Government departments at Washington. All this information is available to the customs officials. Importers who buy abroad are not wont to pay less to the producers abroad than the prevailing prices abroad. True, there may be special occasions to the contrary. The customs officials here have the same right to call witnesses and books and papers and inquire into foreign values of the importers that they would have under the American valuation plan, and if anything is needed to extend this authority, it is within the power of Congress to do it.

"Again, the variation in market prices at the point of production and sale is not so great as the variation in prices in the various markets of the United States throughout this great country from coast to coast and Lakes to Gulf. It is perfectly clear to those who have studied the question here in Washington that it is easier for the Treasury officials to enforce the tariff laws based on foreign valuations than it would be on American valuations.

"Your contention is seemingly that a high tariff does not aid in the control of prices. That prices can be and are controlled by dealers in articles on the free list is admitted. Fair-minded men will also admit that prices can be and are controlled on articles which are on the dutiable list, and I think fair-minded men will go further and say that the more nearly we exclude all foreign articles of a given kind the better will be the opportunity for those who are producing articles of this same kind to control the market and fix the price. The fact is that one of the purposes of a tariff is to increase prices. No one now denies this and no one denies the right of a producer to fix his prices, unless it be as a result of a combination which prevents reasonable competition and thereby places the buying public at the producer's mercy.

"To sustain your contention that the American valuation plan would not aid the American producer in advancing prices you say, 'If an article is valued at $4 in Germany and a similar article has a valuation in the United States of $8, then to equalize the difference under the American valuation a 50 per cent tariff should be set. That would mean a tariff on the article in question of $4. Add that $4 to the $4 German valuation and the result is $8, thus equalizing the American valuation of a similar article.'

"You further say, 'If then the American manufacturers try to raise the price, let us see what would happen. Supposing they boost the price to $10, then the tariff would be 50 per cent of $10, or $5. Add that $5 tariff to the $4 German valuation, and the German selling price to the United States would be $9. The result plainly shows that the American manufacturers could not boost the price; otherwise the Germans could take all the business.'

"Given your hypothetical illustration with your hypothetical prices and circumstances, you perhaps have proven your case to your entire satisfaction. You make the mistake, however, of assuming all the while that the change in valuation can only apply to the American market. Your example overlooks the changing of prices in the other countries. The debates in the Senate show that very substantial advances in the price of products as well as of labor are being made in Germany, and particularly was this true during the months of January and February.

"Now, let us take your illustration with the price of the article $8 and with a 50 per cent ad valorem tariff duty of $4. Then assume that the price in Germany advances from $4 to $6. If this article was to enter the United States, the importer would have to pay the German price $6, plus the ad valorem duty of $4, or $10; so it would be utterly impossible for the German article to enter the United States, with the effect that there would be no competition at all between domestic and foreign articles, and the producer in the United States could advance his price from $8 to just below $10. The further result would follow that the tariff duty which supposedly was intended as a source of revenue to the Government of the

United States would yield no revenue whatsoever. Effects will differ with varying prices.

"I understand, of course, some men holding economic views like your own are absolutely opposed to any imports which in any way tend to compete with their products. If that is sound policy then it would be simpler and wiser to place an embargo at once upon all imports; but no school of thought with which I am familiar is willing that this shall be done during a period of peace.

"Again, I note your suggestion, 'Let us take an article at a valuation in Germany of $4, France $5, England $6, and the United States $8. Under American valuation the tariff should be 50 per cent, which would compel the German, Frenchman, and Englishman to pay $4 tariff on that article. On the other hand, if foreign valuation were used it would mean that a tariff of 100 per cent must be placed on the article, whereby the German would pay $4, the Frenchman $5, and the Englishman $6 tariff.'

"Again, it is your purpose to keep out all competition. You would make the price of the German article with the 50 per cent tariff duty $8, the French $9, and the English $10. In other words, your plan would limit all American buying to Germany.

"In all tariff bills heretofore, whether of Republican or Democratic origin, foreign cost has always been taken into consideration. This cost varies at different times and in every country, and it is no more difficult to arrive at a rate that is reasonably just, based on foreign valuation, keeping in mind these differences in cost at the place of production, than it is to determine the American valuation in the various markets of the United States, due in part to varying marketing conditions in the several sections of the country, as well as to the cost of transportation.

"I can not understand how a gentleman with your usual eminently fair judgment can take this position. McKinley was a high protectionist, but in his last speech at Buffalo he said, 'America can not forever expect to sell and never to buy.' Certainly you want us to capture the foreign markets, but you do not seem to be willing that our people shall have the benefit of any trade relations with the old countries. From the logic in your letter you must even go further and suggest that the tariff should be made high enough so as not to permit any competition from abroad even with the most inefficient plant in the country. Again, let me repeat, if this is sound policy, then let us act openly and above board and either place a direct embargo upon all imports or do it indirectly by making the rate so high that nothing can come in. Let Congress do this and not put it in the power of producers to manipulate domestic prices so that the tariff rates will become in effect an embargo.

"Europe owes this country and its nationals $18,000,000,000. She can not pay it in gold because she does not have it. She can not pay it in her depreciated currency because we will not take it, and there is only one method whereby to get it, and that is by some reasonable trade relations.

"Again, we have a surplus of agricultural products running from one billion and a half to two billions each year, and a surplus of manufactured products running from at least two billions to two billions and one-half or more per year. How are we going to sell these things if we are not going to buy? If every other producer would take your position this country would be ruined in a twelvemonth.

"Now, let me state concretely some of my objections to the American valuation plan:

"First. The fact that the American valuation plan was early adopted and after a short trial discarded and the foreign valuation later adopted and continued all these years ought to indicate that the best judgment of your own party has been against the American valuation plan and for the foreign valuation plan.

"Second. Before the holidays the Congress of the United States set aside $100,000 for the purpose of investigating the American valuation plan. This investigation was conducted by the so-called Reynolds Commission, which was appointed by a Republican administration. This commission investigated the subject very, very carefully. They made their report to the Senate Finance Committee, and the Republican members of the committee by a vote of seven to three rejected the American valuation plan as wholly impracticable. And one of the special reasons why it is impracticable is because of 'the limited number of exactly comparable domestic and foreign products,' and again 'because of the difficulty and probable litigation involved in defining comparability to the satisfaction of importers, domestic manufacturers, and customs officials,' and again 'because of the disturbance to business while these difficulties were being adjusted.' The language just quoted is from Senator SMOOT, one of the very high protectionists in the Senate.

"Third. To a very large extent the producer fixes the price of his article. If the American valuation plan was adopted and the rate of duty was 50 per cent ad valorem based upon this American valuation, the producer could not change the rate of duty, but he could by the increase or decrease of his own price either increase or decrease the amount of the revenue which the Government would get out of this duty if articles were imported; and if the price of the foreign article abroad were to increase from month to month, it would be possible for the producer by raising his price to increase the amount of duty which the importer would have to pay to such an extent that the importer could not bring his goods in and pay the duty and compete with the American price. In other words, the producer could advance or decrease his own prices. It is not likely that he would decrease them. If he increased them, or if the prices abroad were increased, the foreign article could be shut out entirely because of the duty. In other words, it would be within the power of the producer to cut off the revenue of the Government. I have made this clear, I think, by what I said above as to the effect of the increase in prices abroad.

"Or, perhaps, to express my thought a little more clearly, American valuation must include labor cost, overhead cost, transportation charges, and profits. It therefore follows that any increase in labor costs, overhead costs, or transportation charges will increase the amount of tariff which the importer must pay; but this is not all. In other words, the greater the profit of the producer under the American valuation plan the greater will be the amount of the tariff the importer must pay, and the lower the profits of the American producer, the lower will be the amount of the tariff which the importer must pay.

"I have the greatest confidence in your personal integrity, but I would not trust you or any other man with the power in this way to fix the duty on goods competing with your own product. The fixing of the amount of duties is a function of Congress. It ought not to be within the province of a private American citizen to fix the amount of duty which a competing foreign article must pay. Congress should fix taxes. The amount of our revenue should not be subject to the control of the taxpayers, either directly or indirectly.

"Fourth. I think I can make my objections to the American valuation plan a little clearer if I avail myself of some of the figures which were prepared by the tariff experts of the Treasury Department, and which have been approved by at least a majority of the Republicans on the Finance Committee, and they will answer largely your suggestions that the American producer under the American valuation plan can not advance prices so as to cut out foreign competition. In presenting these figures let me remind you that the profits as well as the costs of importers and also producers vary constantly. There can be no fixed rule. To illustrate:

"Overhead expenses and profits may vary from 5 to 6 per cent and even as high as 100 per cent. Transportation rates may vary from an insignificant part of the cost of articles of small weight but of high intrinsic value to almost half or more of the total cost of articles of heavy weight, and profits may vary from nothing to 100 per cent or more. But these varying figures as to cost, transportation, and profits very seriously affect the amount of tariff to be paid under the American valuation plan, and a study of the figures I am about to give will demonstrate conclusively that the higher the profit to the domestic producer under the American valuation plan the higher the amount of duty will be which the importer will pay. Let me now give the figures of the expert.

"He assumes for illustration the foreign value of the article to be imported as 100 per cent, the landing charges 10 per cent, the average overhead expense and profit 25 per cent. The result is as follows:

	Per cent.
Foreign value	100
Freight, etc	10
Duty at 60 per cent of foreign valuation	60
Landed cost	170
Plus 25 per cent overhead and profit	42½
	212½
American valuation equivalent (60 per cent)	28

Sixty per cent of foreign value (100 per cent) equals 28 per cent of American value (212½ per cent).

"The experts then make an actual application of this rate under varying conditions. Based upon foreign valuation under

differing conditions, this rate of 28 per cent will vary from 46 per cent to 84 per cent on foreign values. He then gives the following examples:

Example No. 1.

(Thirty-three and one-half per cent overhead and profit.)

	Per cent.
Foreign value	100
Freight rate	10
Duty, at 28 per cent on American valuation (234 per cent)	65½
Landed cost	175½
Plus 33⅓ per cent overhead and profit	58
American valuation	234

Example No. 2.

(Fifty per cent overhead and profit.)

	Per cent.
Foreign value	100
Freight rate	10
Duty, at 28 per cent on American valuation (285 per cent)	80
Landed cost	190
Plus 50 per cent overhead and profit	95
American valuation	285

Example No. 3.

(Thirty-three and one-third per cent overhead and profit; freight 40 per cent.)

	Per cent.
Foreign value	100
Freight, etc	40
Duty, at 28 per cent on American valuation (297 per cent)	83
Landed cost	223
Plus 33⅓ per cent overhead and profit	74
American valuation	297

Example No. 4.

(Five per cent commission.)

	Per cent.
Foreign value	100
Freight, etc	10
Duty, at 28 per cent on American valuation (164 per cent)	46
Landed cost	156
5 per cent commission	8
American valuation	164

Summary of above.

	Freight.	Profit.	American value.	Foreign value equivalent rate.
	Per cent.	*Per cent.*	*Per cent.*	*Per cent.*
Formula	10	25	212½	60
Example No. 1	10	33⅓	234	65½
Example No. 2	10	50	285	80
Example No. 3	40	33⅓	297	83
Example No. 4	10	5	164	46

"It will be conceded, of course, that American valuation includes cost of production, transportation, overhead expenses, and profits. So it follows that the 28 per cent ad valorem on the American valuation used in the first table is the equivalent of 60 per cent on the foreign valuation thereof, but when applied to illustrations given in examples 1, 2, 3, and 4, in practice, the American valuations would vary from 164 per cent to 297 per cent of the foreign valuations. It seems to me that these figures demonstrate conclusively the wisdom of the majority of the Finance Committee in not adopting the American valuation plan.

"Fifth. I note your alarm, as stated in your letter, over the foreign goods being imported from Italy and being sold in this country at 90 per cent off the list in competition with your product. Of course, I know what list price is, and what 90 per cent off list price may mean, but in order to understand what it does in fact mean I would have to know what the list price was and what the domestic price was. These you do not give. If you had given them, I could then tell more about competitive conditions.

"It is no doubt true that in the course of readjustment producers have lost money. In fact, nearly everybody has lost money, but nearly everybody made money during the war and for a year or two thereafter.

"Possibly it is well that I have delayed the answer to your letter because it tells me of imports from Italy at 90 per cent off list and because of that fact you can not sell in competition with them. I was reassured the other day when I picked up the Canton papers which brought the happy news that your plant was running almost at full capacity and that within the last few weeks you gave your employees an increase of 10 per cent in their wages. I am glad to hear this and I congratulate you and your men.

"The tariff has not changed since you wrote your letter. Imports have been coming in during the last six months just as they did before, or at least there has been no change in the tariff. The continued employment to almost full capacity of your plant, and the increased wages you are paying, convince me that you were suffering unnecessarily and without cause from stage fright in January when you wrote your letter. Ninety per cent off of Italian list price apparently has not disturbed you very much in fact.

"To me the American valuation plan is the most vicious proposal that has been presented to the Senate during the nearly 12 years I have been a member of that body."

TARIFF RATES ON WOOL, ETC.

Mr. HARRIS. Mr. President, I ask permission to place in the RECORD three letters protesting against certain rates in the pending bill.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ROME, GA., *June 28, 1922.*

Senator W. J. HARRIS,
Washington, D. C.

DEAR SIR: We are mailing you to-day copies of the Rome Tribune-Herald and Rome News of June 28 issue. We desire to call your particular attention to the two editorials appearing in these two papers regarding the proposed tariff bill, in which it places 33 cents per pound on the scoured contents of all wool. This, we think, will work a terrible hardship on the common people. It will advance every garment that contains wool to a point where the masses will be compelled, in a great many instances, to do without the proper clothes.

Retailers have had a bitter experience the last two years through unfair attacks of the press because of high prices. Retail clothiers have not made any money the past two years, and the consumer is demanding lower prices. If this bill passes the Senate and becomes a law it will advance the price of every suit and overcoat from $3 to $5. This will naturally create in the minds of the buying public sentiment against the retail clothier.

We trust that you will give this matter your due consideration and, if possible, have this phrase of the proposed tariff bill changed or defeated.

With kind personal regards, we are,

Yours very truly,

W. M. GAMMON & SONS.

—

ROME, GA., *June 29, 1922.*

Hon. W. J. HARRIS,
United States Senate, Washington, D. C.

DEAR SIR: At the regular meeting of the board of directors of the Rome Chamber of Commerce, held June 27, 1922, resolution was adopted opposing the present tariff bill and indorsing the position taken by the retail dry goods and retail clothing merchants, having special reference to the tariff on wool, and I have been directed to call this to your attention. I feel sure, however, that you are alive to the situation and that you will do what you can.

Yours truly,

ROME CHAMBER OF COMMERCE,
H. H. SHACKLETON, *President.*

—

Hon. W. J. HARRIS,
United States Senate, Washington, D. C.

DEAR SIR: Will you please read into the CONGRESSIONAL RECORD the following resolution and have a copy of the RECORD containing it sent me:

"*Resolved*, That we protest against the food, tableware, and women's wear schedules of the Fordney-McCumber bill. These schedules will increase the costs of living in every American home. They are fines levied by American men upon American women and upon American children. They should not be allowed to become law."

Yours truly,

Mrs. ROBT. L. BERNER,
Chairman Legislative Council of Georgia for all Women's Organizations.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. LA FOLLETTE. Mr. President, during the period of my participation in public affairs six great tariff bills have been considered by the Congress—the McKinley tariff, the Wilson tariff, the Dingley tariff, the Payne-Aldrich tariff, the Underwood tariff, and the present bill.

The passage of the Dingley bill in 1897, during President McKinley's first term, marks a turning point in the history of tariff legislation in this country. The schedules of that bill were framed in disregard of the principle which up to that time had been the declared policy of the Republican Party. That principle had been embodied in almost every Republican platform since 1860. That principle was first expressed in the Republican platform of 1860 in the following language:

That while providing revenue for the support of the General Government by duties on imports sound policy requires such an adjustment of these imposts as to encourage the development of the industrial interests of the whole country.

In 1864 and 1868 the issues of war and reconstruction dominated all other issues, and I find no declaration respecting the tariff in the platforms of the Republican Party of those years. In 1872, however, and continuously thereafter, the Republican

Party asserted its belief in the principle of protection. I shall not quote all those platforms. The platform of 1892 is typical in its declaration—

> That on all products coming into competition with the products of American labor there should be levied duties equal to the difference between wages abroad and at home.

Mr. POMERENE. Mr. President, may I ask the Senator a question? Was the Senator quoting from the utterances of the present Finance Committee?

Mr. LA FOLLETTE. No, indeed; I was not. I was stating the often declared and accepted doctrine of the Republican Party and was quoting from the platform of 1892 as a typical declaration of the party on protection.

The opponents of the protective policy had always advanced the argument that protection by shutting out foreign products would lead to monopoly and the consequent undue enhancement of prices at home. To this Republicans have replied that duties should never be high enough to shelter private monopoly, and that competition in this country could be relied on to prevent monopoly prices. It was in recognition of the danger of combinations and trusts that Senator Sherman, championed and supported by statesmen of that time, secured the enactment of the antitrust law of 1890.

The Republican platform of 1896, upon which President McKinley was elected, declared for the principle of protection while opposing such rates as could result in domestic monopoly. That platform declared:

> We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity. The true American policy taxes foreign products and encourages home industry * * * in its reasonable application it is just, fair, and impartial; equally opposed to foreign control and domestic monopoly, to sectional discrimination and individual favoritism.

The Republican Party, however, disregarding the McKinley platform upon which it had won the election in 1896, proceeded to the enactment of the Dingley tariff law.

The avowed purpose of the Dingley law was to exclude foreign-made goods to the largest extent feasible and give to domestic capital full opportunity to supply the American market. The Dingley rates were designed, as far as possible, to shut out foreign competition, and in that purpose they were largely successful. Now, note the result. Within three years following the enactment of the Dingley law 149 trusts were organized in the United States, with a total stock and bond capitalization of $3,784,000,000. Four years later trust control had extended to 8,864 plants, with a total capitalization of $20,379,000,000. By January 1, 1908, the increased consolidation embraced 10,220 plants, with outstanding stocks and bonds aggregating $31,672,000,000 of paper capitalization. The Dingley law had excluded foreign competition. The trusts strangled home competition. The American consumer was completely at the mercy of the overprotected manufacturers of the country. Prices were rapidly advanced. The cost of living increased during that period more than 40 per cent.

The condition was upon us which the wiser statesmen had foreseen in 1890 must result from monopoly breeding tariffs. The reaction of the people was prompt and exactly what John Sherman had foreseen it would be when in the advocacy of the antitrust law he said:

> If we will not endure a king as a political power, we should not endure a king over the production, transportation, and sale of any of the necessaries of life. If we would not submit to an emperor, we should not submit to an autocrat of trade, with power to prevent competition and to fix the price of any commodity. If the combination is confined to a State, the State should apply the remedy; if it is interstate and controls any production in many States, Congress must apply the remedy. If the combination is aided by our tariff laws, they should be promptly changed, and, if necessary, equal competition with all the world should be invited in the monopolized article. If the combination affects interstate transportation or is aided in any way by a transportation company, it falls clearly within the power of Congress and the remedy should be aimed at the corporations embraced in it and should be swift and sure.

For a time the people hoped for some relief through the antitrust law; but the action of the executive department, through the Department of Justice, in the enforcement of this act was feeble and indecisive, and the trusts and combinations, fortified behind the tariff wall, soon learned that the antitrust law was no menace to them. And the trusts which that act had been intended to crush went scot free, while labor organizations, at which the law was never directed, became its victims.

President McKinley's untimely death and Roosevelt's accession to the Presidency, heralded widely as he was as the champion of the common people, for a short time confused the issue and restrained the people from open revolt against the Dingley tariff. But the demand from all parts of the country for revision of the Dingley tariff downward, even during the Roosevelt administration, was overwhelming.

I would invite Republicans at this time to turn to the newspaper files of that day and observe how generally throughout the country Republican State conventions were clamoring for the revision of the Dingley tariff downward. The Republican platforms of the different State conventions during this period amply attest this fact.

It is a part of the unwritten history of the time, which many of you will remember, that President Roosevelt during his second term prepared a message which recognized the demand made for a downward revision of the tariff, and that the message in this form was sent out to the press to be released when it was presented to Congress. But between that time and the presentation of the message something happened. That portion of the message was recalled and in its place was inserted a paragraph promising a special message on the subject later. The special message was never presented to Congress, and revision was delayed through standpat influences until near the close of his term, on the eve of the presidential election of 1908, it was suggested that the question should be taken up by the next administration.

Throughout the campaign of 1908 the promise of the Republican candidate nominated on that platform was that Congress would be immediately assembled and the tariff revised downward.

In 1908 it was vitally necessary for Republican success that Mr. Taft should promise immediate revision of the tariff downward. It had been so long deferred that the political managers of that party did not dare to enter upon the campaign of 1908 without certain distinct and clear-cut promises to call an extra session and revise the tariff immediately opon the inauguration of a Republican President. The standpatters had resisted the universal demand for downward revision of the high Dingley rates for years. But as the campaign of 1908 approached they saw that the public would stand no further delay on revision, and it was deemed essential to the success of the Republican Party that there should be incorporated in that platform two unusual, exceptional, and extraordinary pledges. What were they? First, that the Republican Party would call an extra session of Congress immediately after the presidential election for revision of the tariff. You will find that written in the platform of 1908. Second, they had to specifically define the principle upon which that revision should take place, namely, that it should measure the difference in the cost of production at home and abroad.

The Republican political managers did not dare to enter the campaign of 1908 without writing into the political platform of that year those two extraordinary, unusual pledges. Because of increased living costs the feeling was so tense that leaders of the Republican Party said, in effect, "We have postponed this thing so long that we now have to say something definite. We have to lead the voters of this country to believe that tariff revision will come immediately upon the election of a Republican President and a Republican Congress—not waiting for the assembling of the regular session of Congress on the first Monday in December."

And they wrote into the Republican platform of 1908 the principle that the rates fixed by a protective tariff should represent the difference in the cost of production at home and abroad.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me to interrupt him for a moment, to sustain the position he has taken, I wish to call back to his memory the fact that in the House of Representatives, just prior to the election of Mr. Taft as President, the Republican Party being in control, the chairman of the Ways and Means Committee, Mr. Payne, brought in a resolution providing that the Ways and Means Committee should hold sessions for the consideration and formation of a new tariff bill immediately after the election, so that the promised revision downward should be ready for the extra session. The record of the proceedings of the House of Representatives will show that fact, indicating that the Republican Party were trying to make it certain to the people of the United States that they were going to be relieved of some of the burdens of taxation.

Mr. LA FOLLETTE. Mr. President, my own recollection confirms that of the distinguished Senator from Alabama. I remember now. And that simply emphasizes the fact, Mr. President, that the political managers of the Republican Party well understood that it was vital to the success of the Republican Party in that campaign that the voters should understand that this relief was to come, and come at once.

If anybody is interested enough in this subject to go over to the Congressional Library and consult the bound volumes of the papers of that day, he will find that county conventions, State conventions, and, indeed, every gathering of Republican organizations from 1903 to 1908 passed resolutions, almost without exception, and particularly west of the Allegheny Mountains, demanding a downward revision of the Dingley rates.

The cost of living was climbing higher and higher every hour, and that, too, was taking place without any just and sufficient reason.

I undertake to say that the cost of living during the period after the enactment of the Dingley tariff should have gone down and not up. We have revolutionized the cost of production during the last 25 years. We cut production costs in two again and again. Every student of the subject knows that to be a fact.

Throughout the campaign of 1908 the promise of the Republican Party and its candidates generally was that Congress would be immediately assembled and the tariff revised downward.

This was particularly true of the speeches of Mr. Taft, the Republican candidate for President. It is a matter of record that not once but many times throughout the campaign he made this promise. So insistent was this demand for tariff revision that Mr. Taft opened his campaign in the Middle West, where the demand for a revision of the tariff downward was most insistent. So strong was the demand of the people for a downward revision of the tariff during this period from 1904 to 1908 that they forced their views upon a reluctant Congress, made a new division in the Republican Party, and the name "standpatters" was coined for the first time in our political history to designate a small but powerful minority in the party who were successful in defying the public sentiment of the party and the country, even as some Republican Senators are attempting to defy it to-day. And they stood pat in their effort to thwart the desires of the people for tariff revision.

Not so, however, Mr. Taft and most of the other candidates who knew that only by promising a downward revision of the tariff was it possible to win the election of 1908. In my State on September 24, 1908, at a meeting at which I introduced Mr. Taft, he declared:

> The tariff is greater than the differential between the cost of production at home and abroad and it should therefore be reduced.

That was virtually the opening of President Taft's campaign for the Presidency of 1908. He came to Wisconsin because Wisconsin was the leading progressive State and had been insisting among other things upon a reduction of the outrageously high tariff duties. After a personal interview, I introduced him to a large audience in the gymnasium at the university with the assurance to that audience, which I believed to be well warranted by the interview I had had with him, that if he were President this and all other measures affecting the public interest would be dealt with upon what was well understood in that section of the country to be progressive Republican principles. I traveled with him for two days in his private car throughout Wisconsin while he made speeches in that State. And in every speech he pledged that if he were elected President the high rates of the Dingley Act would be reduced.

He referred in one of those speeches to CANNON, then the autocrat of the House, as "the old man of the sea on the back of the Republican Party." And he pledged himself then, and on a score of other occasions during the campaign, if elected, to immediately call a special session of Congress and recommend revision of the tariff downward.

It was upon this promise and because of it that the Republicans were successful in the campaign of 1908 and that Mr. Taft was elected President.

Mr. President, I could fill pages of the CONGRESSIONAL RECORD with his declarations made during the campaign from the time he left Wisconsin, where I introduced him to his first audience, until he turned from his campaign in the Middle West and West and went to the New England section of the country. And every one of those quotations from his speeches upon the tariff would be an assurance to the public that the revision to be made by the Republican Party on the assembling of Congress was to be, and should be, a revision downward from the fixed rates of the Dingley tariff law. I assembled those quotations and put them in the CONGRESSIONAL RECORD when President Taft was urging the passage of his reciprocity bill, and if my statement should be challenged I shall be able to quickly prove it.

Now, Mr. President, upon these promises of tariff revision downward William Howard Taft was elected President and the Republican Party was given another lease of power.

Mr. SIMMONS. Mr. President——

Mr. LA FOLLETTE. I yield to the Senator from North Carolina.

Mr. SIMMONS. The Senator is now reciting some historical facts with reference to this matter which I really feel that the Republican Members of the Senate ought to hear. I am afraid they have forgotten them. If it is acceptable to the Senator, I will suggest the absence of a quorum in order that we may have more of them present.

Mr. LA FOLLETTE. Mr. President, a call for a quorum at this time would necessarily return to the Chamber a larger number of my Republican colleagues, but I doubt very much whether they could be induced to remain here and listen to this historical review which I regard as very important.

I want to make, in the course of what I have to say, a direct appeal to Republicans to take such action regarding this bill as may rescue the Republican Party from defeat upon this issue. I do not know, however, that I can make an effective appeal. They may be so absolutely and completely committed to interests that overshadow the interests of the public and the interests of the Republican Party—which ought at all times to be identical—that I fear I shall fail in my undertaking.

So I will say to the Senator from North Carolina that I apprehend that a call for a quorum would be simply the waste of half or three-quarters of an hour of the valuable time of the Senate.

Mr. SIMMONS. I thought, in view of the action of the Republican Members of the Senate with reference to the tariff bill, it was possible they had forgotten the fact and that it might be very well to have them present and hear the facts stated by the Senator from Wisconsin. But it may be the Senator from Wisconsin is right and I am wrong, that they have not forgotten them and do not care to hear them related again.

Mr. LA FOLLETTE. Mr. President, I resume my remarks, and reassert that in the promised downward revision of the tariff Republicans were successful in the campaign of 1908. President Taft did immediately call a special session of the Congress. But instead of submitting the strong message we had expected, urging a thoroughgoing revision of the tariff, a revision of the tariff downward, President Taft submitted to this body and to the House of Representatives a six-line message which simply emphasized the importance of disposing of the tariff as early as possible, and said nothing of the promised revision downward—not a word.

Sir, I remember sitting in my seat, as a Member of the Republican side of the Senate, when that message from President Taft was read. I sat in expectation as that message was read by the Secretary from the desk. I waited, however, for something that was akin to what he said in the campaign, akin to what the Republican platform promised. When the Secretary of the Senate stopped his reading I, with scores of Republicans on this floor, could not believe it was the end of the message. I wish you could have seen the Senate at that moment of time. Senators looked into each others' faces with amazement as the Secretary of the Senate concluded his reading and laid the message aside.

The result of that message and what President Taft did in connection with the organization of the House was that Congress passed and President Taft approved what I regard as the infamous Payne-Aldrich tariff law.

I know something of what transpired during those crucial days. I know that the progressive Republicans of the House of Representatives held the balance of power, and enough of them decided not to go into the Republican caucus to defeat the selection of CANNON for Speaker. Why? Because they understood perfectly well that if CANNON were selected Speaker of the House of Representatives he would appoint a standpat Ways and Means Committee, and that tariff revision, instead of being downward, as had been promised throughout the campaign, would be a revision upward.

Then President Taft, notwithstanding the campaign he had made and the interpretation that he had put upon the Republican platform, sent his Cabinet officers to the floor of the House of Representatives and through promises of patronage and political pressure, "persuaded" a sufficient number of the progressive Republican Congressmen who were opposed to Cannonism and standpatism to enter the Republican caucus and nominate and elect CANNON as Speaker of the House of Representatives. Speaker CANNON promptly appointed Payne as chairman of the Ways and Means Committee and framed up a committee on Ways and Means that proceeded to revise the Dingley tariff rates upward and not downward. This bill revising the tariff was called the Payne bill as it passed the House of Representatives in the spring of 1909. It violated the pledges that had been made to the people of the country who elected the Republican Party to power.

I shall not now take the time of the Senate to relate the story of the struggle made by the progressives, both in the House and in the Senate, to defeat that measure and to secure the enactment of tariff legislation which would keep faith with the people. The story illustrates better than any other that I know the manner in which the great business interests of the country control legislation in spite of party pledges and in spite of the manifest opinion and wishes and welfare of the people, but I will not turn aside to tell it here. Suffice it to say that our protests were unheeded. The standpat Members of Congress had the votes and they had control of the President and were in position to put through the House of Representatives that legislation, and they did put it through.

The day the bill passed the House of Representatives revising the tariff upward, or on the day following, I called upon President Taft. I reminded him of his Wisconsin speeches; that he had said revision of the tariff schedules would be downward, and that the revision ought to be downward; that the Dingley rates more than represented the difference in the cost of production here and abroad, which the Republican Party had written in its platform as the true measure of protection.

I implored the President to send a message to Congress and urge Republicans to redeem their platform pledges and the promises which he as a candidate had made in the campaign. He said to me—and I quote substantially his words, which I published in 1912 and which have never been denied by him—"I know that is true, and if the Senate does not reduce those duties I will veto the bill." I said to him, "Mr. President, you will be in no position to veto the bill if you remain silent while the Senate is considering the bill and see these increases confirmed and remain mute. You will be so committed that you can not veto the bill. Business is suspended throughout the country, as it is during every tariff revision. You are, as it were, the supervising architect of the great legislative measure that is being constructed day by day and can not afford to sit on the job and see the plans and specifications violated day by day and never open your lips in protest." I again urged him to remind the Republicans of the Senate of the declarations upon which their party had won the election of 1908, and I asked that he appeal to that body to make good the pledges that the House had violated.

I remember distinctly that he said:

> Well, I do not altogether like to send to the Congress a message on pending legislation. I think my predecessor rather overran the limit in that respect, but I will tell you what I will do: If the Senate does not reduce the duties, I will veto surely the bill.

And he smote the table with his fists. He then added

> You Progressives attack that bill in the Senate; secure all the reductions you can, and if it is not a better bill when it comes to the Executive I will veto it.

I said good-by to him, came to this floor, and as one of a little group of Progressive Republicans we entered upon that long struggle to make the Payne-Aldrich bill conform to the promises of the Republican platform. We fought for six or eight weeks.

Mr. President, at the end of some six or eight weeks of the most arduous resistance upon our part against its excessive and extortionate rates the Payne-Aldrich bill was passed. Besides the increases made in the House over the Dingley rates, there were more than 680 increases in the bill as reported from the Finance Committee, and I can not at this moment tell you how many more were offered on the floor and put through. The bill as enacted was an abomination.

When the bill passed I again went to the White House and said, "Mr. President, the bill has passed the Senate. It is infinitely worse than when it passed the House. I have not been home for more than a year. I am going home while it is in conference. I have just come to pay my respects to you. I have not been able to come to you for six weeks because of the hours of meeting of the Senate."

"Well," he said—he did not have his fist doubled up at that time; he did not hit the top of his desk with his clenched fist; the starch seemed to be pretty well out of him, and he said, "What am I going to do?"

I said to him, "Mr. President, I do not know what you are going to do, but I do know what you told me you would do. You told me you would veto that bill unless it was improved; unless it was a revision downward."

"Well," he said, "suppose I can not veto it; what will I do?"

I said, "I do not know."

"Well," he replied, "tell me some of the bad things that are in it."

"Oh," I said, "Mr. President, that will take too long."

He picked up a pencil and a pad of paper and said, "Tell me some of the worst things in it."

And I began to enumerate some of its most vicious provisions as he wrote. When he had filled the first page of the pad he threw down the pencil and said, "Senator LA FOLLETTE, won't you go and write me a letter analyzing this bill, pointing out the worst things in it?"

I said to him, "Mr. President, I have my reservations to go home. I was going to take the train to-day."

He said, "Well, I request it."

I said, "That settles it, Mr. President, and I will go and cancel my reservations."

I did so, and sent him the next day an analysis—not perfect by any means, but the best analysis I could make in that brief time at my disposal.

I then took the train for Wisconsin, and when I reached my home State I received and have now in my files a letter from Mr. Taft thanking me for putting into his possession that analysis of the bill.

Then, to quote the language of the lamented Dolliver, "Surrounded as he was by gentlemen who knew what they wanted," he did what you might expect him to do—he surrendered and signed the bill.

And now let us see what happened.

In the congressional elections which shortly followed in 1910, however, the people of the country spoke in tones which commanded the attention of even the most hardened Republican bosses. Following the election of Mr. Taft to the Presidency in 1908, the membership of the House stood 212 Republicans and 174 Democrats, a clear Republican majority of 38 in the House. The Senate stood 59 Republicans to 33 Democrats, a Republican majority of 26 in the Senate. The Republican Party had undisputed control in both Houses. Mr. Aldrich was the boss of the Senate, and Mr. CANNON was, through Taft's influence, restored to his position as dictator of the House. But by the election of 1910 the Republican majority of 38 in the House was completely wiped out and control passed to the Democrats with a clear majority of 70 votes. Think of it! A House which had stood 212 Republicans to 174 Democrats became a House composed of 160 Republicans and 230 Democrats. The Republican majority of 26 in the Senate could not be entirely wiped out since only a third of the Senators are elected at one time. Yet the Republican majority in the Senate was reduced from 26 to 7. The Progressive Republicans held the balance of power, and the Aldrich-Cannon machine thereby lost control of legislation.

But even this rebuke by the voters was not enough. The Republican progressives in the Senate joined with the Democrats, and a tariff bill was passed with a reduction of rates from the Payne-Aldrich schedules, intended in some measure to keep faith with the people. But the influences brought to bear upon President Taft were so strong that he vetoed the measure.

On March 26, 1912—election was then approaching—President Taft transmitted to the Congress a report of the tariff board which dealt with cotton manufactures in what was known at that time as "Schedule I."

Mr. President, I would not have Senators assume that the tariff board dealt only with the cotton schedule. They dealt with a number of the schedules in a most thoroughgoing way.

A good corps of experts worked with that board, and never in the history of tariff legislation have we had such work, such thoroughgoing work, as was done by the Taft tariff board during its existence. They went thoroughly into the subject of the difference in the cost of production, and they made separate reports of the highest value to the President. You can get more information as to the difference in the costs of production by studying the work of the tariff board appointed by President Taft than you can find anywhere else in the history of tariff legislation of the United States.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. WALSH of Massachusetts in the chair). Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LA FOLLETTE. I yield.

Mr. POMERENE. The Senator has just stated that that tariff commission went into the difference in the wage cost between domestic production and foreign production.

Mr. LA FOLLETTE. I did.

Mr. POMERENE. The Senator is a member of the present Finance Committee. Permit me to ask him to what extent the present Finance Committee went into the difference in the cost of production in this country and in other countries.

Mr. LA FOLLETTE. Mr. President, I answer that as best I am able. In my opinion, it is impossible at this time to under-

take a study of the difference in the cost of production. Members of that commission have said to me what I think they have said to all members of the Finance Committee, that with unsettled conditions of affairs abroad, with the hourly changing of costs of production and wages, they could not make any study that would be reliable and have value if they undertook to do it.

So we have before us at this time, I think, as much as the present tariff commission could well do. There are a large number of surveys in the different industries, showing what they are doing in other countries in the way of production, such information as they could gather over the years they have been at work. That has all been summarized in a volume which is on the desks of most of the Senators.

But I undertake to say that the fact that it is impossible to make this scientific study is the best reason in the world why this Finance Committee should never have undertaken to make a complete revision of the tariff at this time.

I again go back to gather up the thread of my argument. President Taft, in transmitting to Congress the report of the tariff board on cotton manufactures, to which I have previously referred, said:

On the basis of the report I now recommend that the Congress proceed to a consideration of this schedule with a view of its revision and a reduction of its rates.

I base this recommendation on the declaration of the platform on which I was elected, that a reasonable protective tariff should be adjusted to the difference in cost of production at home and abroad.

It would have been better for Mr. Taft and for the Republican Party and for the people of the country if he had earlier remembered the pledges which enabled the Republican Party to win the election in 1908. I quote further from this message of the President, because I am presently going to submit some brief observations on the schedule dealing with cotton manufactures in the pending bill. He further said:

The duty on these yarns—referring to the ordinary warp or filling yarns forming the bulk of the domestic production—is two or three times in excess of the difference in the cost of production.

Again, in the same message he said, speaking of cotton yarns—he took that up first because that is the thing you start with in manufacturing cloth:

The difference in the cost of weaving yarn into cloth as between this country and its chief competitor varies according to the character of the fabric. In the case of many cloths of plain weave the American cost of weaving seems to be lower than the foreign cost, due to the great number of looms tended per weaver in this country. This reduces the labor cost per yard despite the higher earnings of the American weaver. This conclusion is further substantiated by the fact that cloths of this description are sold by the domestic manufacturer in this country at prices as low as those charged by the foreign manufacturer in his own country. In proportion, however, as the fabrics become more complicated—and therefore permit of fewer looms per weaver—the American cost of production increases. In the case of most fancy fabrics of complicated weaves, the cost of weaving is higher in this country, but on such fabrics the present duties are in excess of any difference in cost and in many cases are in excess of the total conversion cost in this country.

The cost of finishing—that is, bleaching, printing, dyeing, and mercerizing—is about the same in this country and in the leading competing country. The extra duties imposed under the present law by reason of these processes are in excess of the difference in the extra cost due to finishing and are often in excess of the total domestic cost of finishing.

I shall ask you to remember the language coming from a stand-pat high-tariff Republican President, based upon the findings of a Republican tariff board, when in a few moments I shall have something to say about the cotton schedule in the pending bill. Remember also that the tariff rates condemned by a Republican President and a Republican tariff board were those of the Payne-Aldrich law and were substantially lower than those of the pending bill as reported.

But this message of President Taft came too late. The people had been fooled too often and too grievously. Staggering under the burdens imposed by the Payne-Aldrich tariff, distrustful of the promises made by Republican leaders to reform that tariff, because those promises had been so often broken, the people in the election of 1912 in desperation turned to the Democratic Party with its promise of vastly lower tariffs, and Woodrow Wilson was triumphantly elected and both the Senate and the House became Democratic. Do we want to repeat that? The Democrats then passed what is known as the Underwood tariff bill, which afforded some relief from the exactions of the Payne-Aldrich tariff. By the elections of 1914 and 1916 the Democrats were continued in power, and it was not until the almost unanimous revolt on the part of the people from President Wilson's administration in 1920 that the Republicans were again able to assume control of the Government. If it had not been for the resentment of the people against the Wilson administration growing out of the war and what followed, there is no doubt that the Republican Party would never have returned to power unless it reformed its tariff policy and gave satisfactory guaranties that its reformation was permanent.

Mr. SIMMONS. Mr. President——

Mr. LA FOLLETTE. I yield to the Senator from North Carolina.

Mr. SIMMONS. I understand the Senator from Wisconsin to lay down the statement of the real situation, namely, that whatever may have been the cause of the overthrow of the Democratic Party in 1920, beyond all question the cause of the overthrow of the Republican Party in 1912 was the passage of the Payne-Aldrich law.

Mr. LA FOLLETTE. I say that the elections of 1910, and I think of 1912 as well, were unmistakably, and particularly in so far as the elections relating to the Congress were concerned, the result of the tariff legislation known as the Payne-Aldrich law. If anyone should regard what I say here as worthy of any reply, it may be said in extenuation on the Republican side that we had a split in the Republican Party in the presidential election and that there were two candidates, who divided the Republican Party. That is true as to the Presidency in 1912. But, Mr. President, that did not affect the election of 1910 with regard to Members of the House of Representatives and the Senate of the United States. I am satisfied that anybody who studies history and the trend of events as influenced by legislation and the conduct of political parties would be bound to agree that the congressional elections of 1910 were fought out, so far as the House and the Senate were concerned, upon the tariff legislation of 1909, known as the Payne-Aldrich law.

I think that carried over into the congressional elections of 1912.

So that I think I am entirely warranted and entirely sustained by the events of the time in asserting that the congressional elections of 1910 and 1912, which retired Republican majorities that were phenomenal in both the House and the Senate and transferred that power to the Democratic Party, were the result of that legislation.

Mr. SIMMONS. In other words, the first time the people had an opportunity to express themselves with reference to the House and the Senate after the passage of the Payne-Aldrich law the result was overwhelmingly against the Republican Party?

Mr. LA FOLLETTE. Yes. That, Mr. President, I think is history. It is in the light of those facts that I would appeal to my Republican colleagues here at this time not to repeat the political tragedy of that time by the enactment of a bill that is not only as bad as the Payne-Aldrich law but is in many of its schedules and many of its rates very much in excess of the tariff act of 1909.

In the stress of things generally, and in the light of the discussion that is going on here, and of the attitude of the press of the country, I do not know how much reduction will be made in the pending tariff schedules and tariff rates by my associates upon the committee, but I wish it might be very much more than there has been any indication of up to the present time.

Mr. SIMMONS. If the Senator will allow me to follow up the line of thought I had, the first time the people got an opportunity to express themselves with reference to the Congress which enacted that law they expressed themselves against the Republican Party, which controlled the Congress that passed the Payne-Aldrich law. That was in 1910. The first time the people got an opportunity to express themselves with reference to the President who signed that bill instead of vetoing it, as the Senator said the President told him he would do, they expressed themselves adversely.

Mr. LA FOLLETTE. Very adversely; more adversely then, I think, than at any other time in the history of our country.

Mr. SIMMONS. The Senator stated that that expression was somewhat complicated as to its purpose and intent by the fact that there was a division in the Republican Party preceding the election and during the campaign of 1912. I want to ask the Senator if that division in the party did not to a very large extent grow out of the Payne-Aldrich law?

Mr. LA FOLLETTE. It certainly did, Mr. President. I know something about the things that led on to it. It is perfectly clear, and it is not open to dispute, that more than anything else—infinitely more than any other single issue—the passage of the Payne-Aldrich law was the occasion for the revolt of the progressive element in the Republican Party.

Mr. SIMMONS. The revolt against President Taft?

Mr. LA FOLLETTE. Yes; the revolt against President Taft.

Mr. SIMMONS. The President who signed the bill?

Mr. LA FOLLETTE. That is absolutely true. There were some other elements that came in. There was the assault made upon conservation in the country through the Cunningham claims up in Alaska, and there were some things of that sort, but there was nothing comparable to this great piece of legis-

lation that involved every home and every consumer of all sorts of products in the country.

Mr. SIMMONS. Then does not the Senator agree with the general statement that the Republican Party, with its big majority and its long record of control in the country, was overthrown and turned out of power because of the passage of the Payne-Aldrich law?

Mr. LA FOLLETTE. I should say that beyond any question that was the primary cause. That is really the argument I am trying to make to my colleagues here.

It would seem, sir, that the men responsible for this Republican administration, in the light of this history, would, with the return of the Republican Party to power, frame a tariff bill with at least some show of a decent regard for meeting the undoubted will and desire of the vast majority of the people. But it seems that the same interests which foisted the Dingley tariff and the even worse Payne-Aldrich tariff upon a long-suffering public are strong enough to write into the statutes of this country the far worse tariff provisions contained in the pending bill. I do not understand, sir, how men charged with the duty of upholding and preserving the principles of the Republican Party, even if they felt no responsibility to the people who elected them, can deliberately force through legislation which they must know means the defeat, if not the utter ruin, of that party. If the elections of 1910 and 1912 and 1914 and 1916 mean nothing to them, then let them look to the Republican primaries held in Indiana, in Iowa, in North Dakota, and other States within the last few months. Powerful, indeed, must be the influences which can bludgeon through this legislation when the political leaders responsible for it know that it means the defeat of their party and the end of the political lives of most of the leaders responsible for this bill.

Mr. President, I had expected to begin what I had to say about the schedules of this bill by analyzing the cotton schedules. For that purpose I had prepared an exhaustive comparison between the cotton schedules in this bill and those of the Underwood-Simmons bill, which has been the law since 1913, and I had compared them also, in so far as they were comparable, with the schedules of the Payne-Aldrich bill. The result was most startling. I have the table before me and the samples of cotton cloths, 58 in number, before me upon which I had made this comparison. That comparison showed an increase in the tariff rates in the majority of those samples in the present bill over the rates in the Payne-Aldrich bill of from 11 to 90 per cent, and over the rates in the Underwood bill, or present law, very substantial increase in every instance, and in the majority of instances the increase in the rates ranged from 100 to 200 per cent.

Mr. POMERENE. Mr. President, am I right in assuming that when the Senator speaks of the "present bill" he means the bill as reported to the Senate?

Mr. LA FOLLETTE. I mean the pending bill as reported to the Senate.

It was therefore upon the basis of the schedule as printed in the bill now before the Senate that I prepared my tables and made my comparison. My Republican colleagues on the Finance Committee, however, have apparently seen a great light in the last few days, and they have been so industriously rewriting the cotton schedule of this bill as to make it practically a new bill in that respect.

One of the many jokers that were slipped into the cotton schedule of this bill has, I am advised, been slipped out or will be slipped out by the majority of the Finance Committee, and this action will effectively destroy the value for strictly accurate purposes of comparison any tables based upon the bill as reported to the Senate. I refer to the provision added by the Senate committee to paragraph 904. That provision reads as follows:

> The average number of the yarn in cotton cloth shall be based on the weight and length as above determined and shall be the number of 800 yard lengths that weigh 1 pound.

So long as there has been a cotton industry the accepted method throughout the world in measuring the weight of yarn or thread has been on the basis of "hanks" or "skeins" of the standard measurement of 840 yards. For this purpose the 840 yards have been quite as fixed a standard as 36-inch yards or 16-ounce pounds. The accepted way for measuring yarns is merely to ascertain the number of 840-yard hanks or lengths required to make 1 pound, and that number becomes the yarn number. Thus for a given yarn if 840 yards weighed exactly 1 pound, that would be a No. 1 yarn. If 10 lengths or "skeins" or "hanks" of 840 yards weighed 1 pound, that would be No. 10 yarn, and so on. When we buy a spool of No. 60 cotton it means simply that the thread was of such size that 60 times 840 yards, or 50,400 yards, were required to make a pound. That is what the number means on a spool of thread.

The majority of the Finance Committee in the provision which I have quoted provided that yarn numbers for tariff purposes only shall no longer be considered to be based upon 840-yard lengths but shall be the number of 800-yard lengths that weigh 1 pound.

Mr. SMOOT. When woven into cloth.

Mr. LA FOLLETTE. One pound when woven into cloth. It has been arranged in that way on the ground that some of the length would be taken up in weaving the thread going up and under and over and under. That never seemed to have been thought of before by Mr. Lippitt or by any other ingenious hunter for high duties, but they are after everything in sight on this occasion, and so they devised that scheme.

When, therefore, as provided in section 903, the tariff rate is fixed according to the number of the yarn, it is plain that this change in the yarn lengths arbitrarily made by the Senate committee operated to increase the tariff rate. The bill might just as well have provided that for duty purposes, yards should be considered to be 34 inches, or that pounds should be considered to be 14 ounces.

Mr. POMERENE. The public can understand that.

Mr. LA FOLLETTE. Yes; they can comprehend that all right, but this involved computation in regard to counts and skeins and hanks would go through all right.

While the increased tariff rate thus obtained is not very much, the withdrawal of this provision from the bill makes inaccurate all calculations based on 800-yard lengths instead of the 840-yard length. This provision also well illustrates the whole plan of these schedules which are so devised as to make it practically impossible for anyone but an expert to determine their application or the amount of tariff they impose in a particular case. When the majority members of the committee get through changing these schedules, the Senate, if it hopes to know anything about the effect of them, must treat the cotton schedules of this bill exactly as it would if they came before the Senate for the first time in an original bill.

Because of the committee changes which I know will be made in these cotton schedules, which amounts to practically rewriting them, I shall withhold for the present, at least, the tables which I have prepared and refrain from discussing the rates of the bill as to particular cloths until we have before us the schedules in the form in which they are finally offered to the Senate.

But there are some facts, Mr. President, which can not be changed by the modifications which the Finance Committee will make in the cotton schedules. My understanding is that in a general way it is the purpose of the majority of the Finance Committee to reduce the rates which this bill now carries on the cotton schedules to substantially the rates of the Payne-Aldrich bill. While, of course, it can be shown that as applied to certain fabrics the rates now carried in the bill are not in excess of the Payne-Aldrich rates, and some of them are even a little lower, yet as a whole the rates are very substantially higher than the Payne-Aldrich rates, the increase amounting from 10 to 20 per cent, according to the opinions of Finance Committee experts who have been engaged for months in work on this bill. I have no doubt that it is this consideration, coupled with the reminder of the election results of 1910 and 1912, furnished by the recent primaries in a number of the States, and the debate which has been proceeding on this floor, which I think has been most wholesome in its influence, which has caused the majority of the Finance Committee to agree to whittle down the rates they originally proposed.

Mr. SIMMONS. Mr. President, did I understand the Senator to say that the amendments hereafter which may be reported by the Finance Committee will probably reduce the rate in the cotton schedule about to the level of the Payne-Aldrich rates?

Mr. LA FOLLETTE. They may be a little under the Payne-Aldrich rates.

Mr. SIMMONS. I understood the Senator some time ago, when he was discussing——

Mr. LA FOLLETTE. The Payne-Aldrich rates.

Mr. SIMMONS. No; discussing the Tariff Commission——

Mr. LA FOLLETTE. The report of the Tariff Commission on the Payne-Aldrich rates.

Mr. SIMMONS. When the Senator was discussing the report of the Taft Tariff Commission, I understood him to read from some statement of the President at that time, Mr. Taft, to the effect that the rates in the Payne-Aldrich law were two or three times greater than the difference between the cost of production here and abroad.

Mr. LA FOLLETTE. Yes; I did state that with reference to many of the cloths. I shall go into that a little more definitely later.

Mr. SIMMONS. So that if the rates are now reduced down to the level, or, perhaps, a little bit below the level of the Payne-Aldrich rates, according to that statement of President Taft, based upon the findings of the Tariff Commission, they would still be very excessive.

Mr. LA FOLLETTE. There can be no question about that, Mr. President, but, of course, the Senate will have to deal with the rates in this bill as they are finally proposed by the committee. I think it is very unfortunate the Senate can not have the benefit of time to examine the rates. It seems to me that it would be reasonable to report the rates to the Senate some days in advance of the time when the Senate is required to take them up for consideration.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. JONES of New Mexico in the chair). Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LA FOLLETTE. I will yield in just a moment, Mr. President. The cotton schedule and the woolen schedule perhaps more than any others are very complicated and require study and time for calculation and for working out the exact effect of changes in rates, as no one better understands than the Senator from North Carolina, the ranking member of the minority of the Finance Committee.

Mr. SIMMONS. And for that reason, if the Senator will pardon me, having been advised by the distinguished Senator from Utah [Mr. SMOOT], who will have charge, as I understand, of the cotton schedule upon the floor, that he, as spokesman of the committee, proposes to offer additional amendments that will materially reduce the rates, I suggested to him that as soon as he had prepared those amendments he ought to give this side of the Chamber the benefit of examining them and not wait until the schedule is taken up for discussion.

Mr. LA FOLLETTE. Mr. President, if there is delay in the discussion of this tariff bill, and particularly of the cotton schedule, it will be entirely justified by the submission of a new schedule of rates in the cotton schedule right on the eve of taking it up for consideration in the Senate. As a member of that committee, and as a Member of the Senate who has been interested in tariff legislation and has had something to do with the tariff bills and the history of tariff legislation during the present generation, I urge my colleagues upon the committee to prepare and report to the Senate a revised cotton schedule as they propose to take it up and ask the Senate to consider it at least a week in advance of the time when they are going to present it for debate and argument in the Senate. That is only reasonable and fair to everybody connected with the legislation.

Mr. SIMMONS. Mr. President, I want to say to the Senator that we on this side have been very much embarrassed by the course that the majority have pursued with reference to these amendments that they have been bringing in here from day to day. We have known nothing about them until the paragraph was taken up for consideration, and then we have been suddenly told that the committee had proposed a new amendment in place of the one under consideration.

Mr. LA FOLLETTE. Mr. President, every Senator who has had experience in legislation of this sort must understand that any fair consideration of it must be preceded by an opportunity for investigation and study and computation and the employment of expert assistants.

Mr. President, this tariff legislation is of tremendously vital importance to every home, every individual, every man, and every woman in this land. It means so much in the daily life of everyone that no advantage ought to be taken by one side or the other. It ought to be an open, square-deal proposition, with a chance for full, fair, free debate on it to get at the truth.

I do not believe there is such a tremendous difference between the Republican side and the Democratic side on the matter of tariff as effort is made day after day to lead the public to believe.

I remember that I attempted to answer the distinction, and, Mr. President, I do not hesitate to say that the Underwood bill in a vast majority of its provisions is a protective measure, fairly protective to the industries of this country.

Mr. POMERENE. Mr. President, if the Senator will yield to me now——

Mr. LA FOLLETTE. I beg the Senator's pardon for not yielding to him before.

Mr. POMERENE. That is all right. The Senator stated a moment ago, as I understood it to be the fact, that the Finance Committee had very greatly reduced the rates on the cotton schedule; and the Senator——

Mr. LA FOLLETTE. I meant to say, and I should like to correct that, that it is under consideration by the Republican members of the committee; but just what the finished work of that committee will be when they are ready to submit it I am unable to say.

Mr. POMERENE. In reply to the statement made by the Senator from Wisconsin, the Senator from Utah [Mr. SMOOT] said that these rates would be reduced to the level of the Payne-Aldrich bill, and some of them below that.

Mr. SMOOT. I never made any such statement as that on the floor of the Senate.

Mr. POMERENE. Why, I certainly heard——

Mr. LA FOLLETTE. The Senator says that they will be less than that now.

Mr. SMOOT. I never interrupted the Senator at all.

Mr. POMERENE. Why, I heard it at this distance.

Mr. SMOOT. I simply say to the Senator that I made no such statement on the floor of the Senate, and I thought that was what he had reference to.

Mr. POMERENE. No; I was sitting here and heard what was said by the Senator from Utah to the Senator from Wisconsin. I do not care to have the Senator tell me that he did not say it when I heard it.

Mr. SMOOT. Mr. President, what I said was that I did not make any such statement here in the Senate.

Mr. POMERENE. Very well.

Mr. SMOOT. As far as that is concerned, if the Senator wanted me to interrupt him—which I did not think he did—I am perfectly willing now to say that if the rates are reported to the Senate that have been discussed, and I am quite sure will be reported to the Senate on the cotton schedule, they will materially reduce the rates as at present reported to this body.

Mr. POMERENE. Mr. President, I am interested in this schedule, and I simply wondered whether either Senator could advise me as to how much higher, on the average, the rates in the present bill were than the rates of the Payne-Aldrich bill.

Mr. SMOOT. I will say to the Senator, if the Senator from Wisconsin will pardon me, that a good many of the rates in this bill are lower than those of the Payne-Aldrich bill and some of them as reported to the Senate are higher than the rates of the Payne-Aldrich bill. The great bulk of them are lower. The amendments that will be offered, however, as the Senator has already intimated, will materially reduce those higher rates.

Mr. LA FOLLETTE. Mr. President, the figures furnished to me by the best expert on cottons that I know of in this country, who is connected with the Tariff Commission, establish the fact that the average rates in this bill as reported are substantially higher than the average rates of the Payne-Aldrich bill, in some instances nearly 50 per cent higher than the rates of 1909, and that the average rates of the Payne-Aldrich bill are substantially twice as high as the average rates of the Underwood-Simmons bill. That is about right, I think. I am speaking of the average.

Mr. SMOOT. It is a difficult question to take up in another Senator's time, but I want to say to the Senator that when the cotton schedule is reached I shall compare the rates and show the Senate just exactly what they are and what the proposed amendments mean. The Senator from Wisconsin referred to one this afternoon that had been taken out, about the length of a hank of cotton weighing a pound that makes a No. 1 thread. That is a small item compared to what the other changes will be. That simply means a 5 per cent reduction in the length of the thread. A quarter of a cent on that would be a very small item.

Mr. POMERENE. Mr. President, of course it will assist other Senators in their investigation of this subject if we have this information, and the sooner we can get it the better. This demonstrates how, just at this particular time, it would have been very unwise to adopt the cloture rule. We then, perhaps, could not have had this explanation at all.

Mr. LA FOLLETTE. Oh, yes, Mr. President; I think Senators on both sides will attest the wisdom of the action of the Senate day by day as we go on with this bill in rejecting this cloture proposition. I do not know where it emanated from or why it was ever proposed here.

Mr. SMITH. Mr. President——

Mr. LA FOLLETTE. It may be that there are Senators on this side who want to stop this debate, who do not want the disclosures made that ought to be made to the American people, who have to bear the tax burdens that follow the passage of a tariff bill.

I yield to the Senator from South Carolina.

Mr. SMITH. I do not want to stop that line of discussion, if the Senator wants to follow it up. The question that I

wanted to ask him does not pertain to that; but that is interesting, and I should like to have him develop it.

Mr. LA FOLLETTE. I yield to the Senator now.

Mr. SMITH. The Senator touched on a point in a speech that I made on the floor of the Senate here some time ago, and I wanted to ask him if he has followed it out to any practical working degree so that the Senate may understand it, and that is the comparison of the product of American labor with the product of a foreigner.

Mr. LA FOLLETTE. Oh, yes; yes.

Mr. SMITH. I am doing all that I can to get some reliable data on comparable production. Even as between Great Britain and America, on this very subject of cotton manufacturing—and I understand that it applies to other manufactured articles as well—the mechanical appliances, the extreme skill, the organization, the elimination of expense and waste in America, have made the American laborer the producer of a volume vastly in excess of any competitor in the world, so that when we come to compare the cost of production the element of wage is almost, I started to say, negligible, and in some departments I am going to undertake to show on the floor of the Senate that it is practically negligible.

Mr. LA FOLLETTE. Mr. President, I wish we might proceed with the consideration of this tariff bill, not as Republicans or Democrats, seeking a political advantage for our parties; not as stockholders in cotton mills or mines of one kind or another; not as flockmasters or owners of stock in woolen or in any other line of business. I wish we might proceed with the discussion and consideration of tariff legislation as representatives of the public interest, divested of every other consideration, and if we could proceed in that way I think we would make a searching examination into the costs of production and into the relation of wages to those costs. Then we would not have Senators on this floor making comparisons of the shelling of almonds by old women and little children at night—shelling them with a couple of rocks, beating upon the shells and extracting the kernels with their fingers—with the business of shelling them by machinery in this country.

Oh, sir, if we were here serving the public interest, we would have scientific and accurate data compiled in nobody's interest except ng the interest of the public. We would submit to no infernal juggling by the Steel Corporation or the American Woolen Co. or anybody else. We would be here hunting for the truth, for God's everlasting truth, with respect to everything, and then we would be serving the public.

I have not been able to attend upon the sessions of the Republican members of the Finance Committee for a number of days now, but, according to my information, the rates will be reduced to about the Payne-Aldrich rates.

The Payne-Aldrich rates wiped out the Republican majority in the House and in the Senate only a few years ago and drove from power the Republican administration. That is not going to be repeated here with my consent, I will say to my Republican colleagues.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Kentucky?

Mr. LA FOLLETTE. I yield.

Mr. STANLEY. I suggest to the Senator, speaking about certain iniquitous rates which proved ruinous to the Republican Party, that that was before a certain bloc tyranny in the Republican Party discovered that the higher you make the rates the more prosperous you make the people who pay them, and that the more protection you have in this country the greater is its prosperity. The Senator is talking about a time when protectionism was a belief. Now it is a fetich, a superstition. Nobody needs to explain why. You just get up and holloo, "We are for protection; it is a good thing." It is like the Irishman's stove—you buy one stove and you save half your fuel; if you buy two, you save it all. If you make the rates high, it will make us all rich and prosperous, and there is no use bothering about whether it is 100 per cent or 200 per cent or 1,000 per cent on the cost of production.

Mr. LA FOLLETTE. I proceed now to invite your attention to a more critical analysis of the Payne-Aldrich rates of that time.

If you get pretty well fixed in your minds what these rates of the Payne-Aldrich bill were, you will have some measure to apply to the rates that may be presented to you at this time, and it will help you, I think, very materially in getting before the American people just what is happening.

I tell you the cotton industry is something to which Senators must pay attention. There is no other product that comes from the hand of man, unless it is bread, that is much more important to the American people than cotton. Be they rich or be they poor, they must buy cotton cloth. From the cradle to the grave, no one is so rich that he is not a user of cotton cloth; and as to the poor and those in moderate circumstances, it is one of their chief household necessities. You can scarcely think of an article of household use—anything that enters into the life of the family—where cotton is not an important factor. It involves hundreds of millions, aye, it runs into billions of dollars. If by chance you make the American people pay twice as much as they ought to pay, you are unjustly loading more than $2,000 000,000 upon their backs. I do not care how complicated it is, yarn numbers, average counts, taking it in all of its details, it is your business to know what every line of the bill affecting cotton means, and if you vote for it you will have to be able to go out and defend yourselves before your constituents. They are going to know all about it. It is curious how the folks at home find out. The press may not carry much of it, but in some mysterious way it sifts down through to them. You may go out in the remote corners in the rural districts, and there is no place in the country on which the sun shines that will not understand the meaning of the cotton schedule, and how much additional it will cost them above what it is costing them now.

So, however forbidding and however difficult these paragraphs may look to you, you have got to take them up and dig it out yourselves, or have somebody assist you to dig it out, so you will be in a position to understand and defend your acts.

It will be the same with the woolen schedule when we get to that.

It will be the same with steel and iron.

We spent a little time on the steel and iron schedule here, and at the proper time I shall propose a revision of those schedules, one after another. Cloture might stop it, but I think there is enough loyalty and devotion to the interests of the public still left in the United States Senate to put cloture on the cloturists who would stop debate in order to put through this kind of a tariff bill.

There are millions who are interested and who are entitled to be represented and to have their day on the tariff. They are going to have it, and if they do not get it in the Senate they will get it somewhere else—they will get it out in Oregon or Wisconsin or Kentucky or Ohio or North Dakota or South Dakota or wherever the issue is carried, and it will be carried over this country before four years go by.

Mr. POMERENE. Mr. President, under this bill Ohio is being penalized for the benefit of some outlying districts.

Mr. LA FOLLETTE. That is befalling every section of this country. This interest or that interest which is strong in some locality ties up with an interest strong in some other locality.

But to return to my remarks on the cotton schedule.

It is well known, of course, that the Taft tariff board made an exhaustive study of the whole subject and that the board selected 100 representative samples of American cotton cloths and presented in a most exhaustive way their findings as to the cost of production, prices, and duties which would be imposed upon such goods if imported from abroad. In this way they covered the whole field of cotton-cloth production in this country, and they presented and there is printed in their report, which I have before me, elaborate tables to show the result of their researches.

I can not give you the samples of cloth. I had them once in my possession when I was making a study of this subject. I had the original samples which the board used in making its study. I have not been able to secure them again, but I have here a diagram of all of them and they are numbered and the tables go with them and show the cost of converting each of those samples from the raw material into the finished product, all figured out in the report which I hold in my hand.

Mr. WALSH of Montana. Mr. President, I would like to ask the Senator if the conclusions of the tariff board on that particular schedule were ever seriously controverted by anyone?

Mr. LA FOLLETTE. Never, as I shall show in just a moment.

I am not going to take the time of the Senate to go into this report in any detail. I assume that Senators are familiar with it, or if not they should become familiar with it before they vote upon the cotton schedules in this bill. I am going to ask the indulgence of the Senate to read only a few paragraphs from that report. The first paragraph that I read is found on page 446 of the report, and the language I quote relates to Table No. 137, which dealt with the labor and conversion cost per square yard of cotton goods—gray and finished—compared with present duty, showing lowest and highest cost obtained in the United States.

I take it that Senators understand what I mean by the terms "gray" and "finished." As the cotton is converted from the raw material into a fabric, in its first form it is known as gray cloth—that is, before it is bleached, dyed, printed, stained, mercerized, or subjected to any other advanced or finishing process. These hundred samples deal with the gray cloth and the finished cloth.

In general the table shows on these samples that with few exceptions the duty—

Referring to the duties of the Payne-Aldrich tariff then in force—and I will show the Senate the relevancy of that to this existing situation before I finish—

In general the table shows on these samples that with few exceptions the duty is greater than the total domestic labor cost, and in the majority of cases is greater than the total conversion cost—not including material.

Of course, not including material, for cotton is free. I continue to quote from the report of the tariff board, a majority of whom were Republicans:

In a number of cases the duties are two or three times the total domestic conversion cost.

Mr. POMERENE. Does that mean the conversion cost from the raw material?

Mr. LA FOLLETTE. From the raw material to the finished product. I continue to quote from the report of the board:

About the same thing holds true of the relation between the cost of finishing and the increase in duty on the finished fabric over the same fabric when unbleached.

When reference is made to the conversion cost of cloth it means completely finished; it takes in the mercerization and everything else, including the bleaching, the printing, the dyeing, and all that. When reference is made to the conversion cost of the gray cloth that takes in the conversion cost of that cloth from the raw cotton to the woven gray unbleached cloth, untouched after it is woven. Senators can see how the term "conversion cost" will have a different meaning, depending upon what kind of cloth it is applied to.

Think of that for just a moment. You talk about a tariff that shall equalize the labor cost at home and abroad or the cost of production at home and abroad. Here, sir, is the proof—unimpeachable and unanswerable—that the duties of the Payne-Aldrich tariff law, which are about to be duplicated in this legislation, or were a day or two ago, and are greatly increased in the bill now before you, exceed not only any difference in the cost of labor in this country and abroad but that they exceed the entire domestic labor cost. Not only that, but they exceed the entire conversion cost of cotton goods in the great majority of cases. By conversion cost is, of course, meant the entire cost of converting the raw material into the finished product ready for the market. Do you wonder, sir, that there was a popular revolt against the political party or, rather, the leadership of the political party that had foisted that infamy upon the people under the guise of protecting labor and our infant industries?

Again, speaking of Table 141, which dealt with the cost of production and duties on tapestries and pile fabrics, at page 460 of the report, it is said:

The labor cost of the tapestries given in the table varies from 11 to 47 per cent of the total cost, and the conversion cost from 14 to 65 per cent of the total cost. * * * The duty—

That is the Payne-Aldrich duty—

is 50 per cent ad valorem, and will be seen to be greatly in excess of the labor cost and in most cases in excess of the total conversion cost.

The total labor cost is only from 11 to 47 per cent. We Republicans put in our platform that we wanted tariff duties levied to cover the difference between the labor cost here and abroad, but it is shown that, while the labor cost on the pile fabrics runs from 11 to 47 per cent, the duty is 50 per cent. So it is more than the total labor cost in this country. That enables the pile fabric manufacturer to cut the price and have a little understanding with his competitors. I will come to that a little later on.

The board further states:

However, as stated, this does not include the labor cost and conversion cost of yarns which are purchased from outside.

Of course, if the yarn is purchased from the outside, that has to be taken into account.

This latter cost, however, is negligible and does not substantially affect the result.

Again, referring to Table 142, which dealt with the cost of production of pile fabrics, the report says:

Table 142 gives the same items of cost for pile fabrics. The cost for the pile fabrics includes the entire cost, the yarns being made by the mills manufacturing the pile fabrics—

There the yarns are not bought—

which is one of the reasons which accounts for the larger margin between the mill selling price and the total cost, including selling expense. The duty on bleached or colored pile fabrics is 12 cents per square yard and 25 per cent ad valorem, and on corduroys weighing 7 ounces or over per square yard the duty is 18 cents per square yard and 25 per cent ad valorem. The specific part of the duty alone exceeds the total labor cost. The relation of the total duty to the labor and conversion cost can be ascertained approximately on the basis of the ad valorem equivalent of the duties levied on imported pile fabrics, as reported by the Bureau of Statistics. These duties vary from 47.5 to 64.68 per cent. The latter rate is for corduroys weighing more than 7 ounces per square yard. The labor cost varies from 20.5 to 36.6 per cent of the total cost and the conversion cost varies from 39.8 to 70.8 per cent of the total cost. Expressed as percentages of the selling value these figures would be considerably less. It will be seen from the figures just quoted that the duty is greatly in excess of the labor cost and also exceeds the total conversion cost of pile fabrics.

So I might go on reading page after page from this report, showing the sham and the mockery of the pretense that the Payne-Aldrich tariff rates or any rates that approximate to them are in anywise calculated to simply equalize the cost of production at home and abroad.

Mr. President, when the Underwood tariff bill was before the Senate in 1913 I made some calculations based upon identically the same 100 samples used by the Tariff Board in its computations, and I found, sir, that on these 100 samples, which were representative of the whole cotton industry, the Payne-Aldrich duties then existing, equaled upon all except 25 of those samples the entire conversion cost. In 4 of these 100 samples the duty was 55 per cent of the total conversion cost. In 4 more it was 70 per cent. In 5 more it was 75 per cent. In 6 more it was 80 per cent. In 6 more it was 90 per cent. In 20—that is, in one-fifth of these samples which really represented the cotton industry—the duties of the Payne-Aldrich bill were 100 per cent of the entire conversion cost.

Is it any wonder that the Republican Party were retired for a number of years after putting through that kind of a tariff bill, despite their pledge to revise tariff duties according to the difference in the cost of production at home and abroad?

But even this is not all. Fourteen of these samples showed a duty under the Payne-Aldrich law of 125 per cent of the total cost of conversion; 10 of them carried a duty of 150 per cent; 9 of them bore a duty which was 175 per cent of the total cost of conversion. Three of these samples showed a duty under the Payne-Aldrich law 200 per cent higher than the total conversion cost. Four of these typical samples showed a duty under the Payne-Aldrich law 250 per cent of the total cost of conversion. Whose job do you suppose that was, Mr. President? Two of them carried duties of 300 per cent, one a duty of 400 per cent, and two a duty of 600 per cent under the Payne-Aldrich law of the entire conversion cost.

Mr. President, it was not until 1912 that the Tariff Board, having gathered its figures with the greatest care and compiled them with the assistance of experts, was able to know and publish to the world something of the iniquities of the Payne-Aldrich law.

The Payne-Aldrich law is damned, and damned by the report of a Republican board, and under present conditions the report of that board is more effective and better authority than it was when it was made in 1912.

It was in 1913 that I had compiled the figures which I have just given and which I gave on the floor of the Senate on September 9, 1913, and so far as I am aware no effort has ever been made to challenge their correctness. The attacks upon the Payne-Aldrich bill at that time were swept aside and did not appeal to the interest of Senators very much, and I doubt if a dozen Senators then on the floor gave heed to these figures which I now present, but we hear so much about the Payne-Aldrich bill in considering the pending tariff measure that I thought it worth while to get before the Senate some estimate of the Payne-Aldrich bill, not made by myself—no—but made by a real good Tariff Board appointed by President Taft. It so commended itself to him that he made it the subject of a special message to Congress, and asked just on the eve of the election of 1916 for Congress to get busy and do something. He tried to square himself with a Democratic Congress, but in the following election he carried just two States. That was not due, of course, altogether to the Payne-Aldrich law, but the change in the House and in the Senate can not be accounted for on any other basis. When Senators again seek to pass a bill such as that they can look for a result somewhat akin to that. I am not making that as an argument, because that is not a scientific basis for tariff legislation, but I sometimes think it is about the only appeal that can be made in some situations.

Mr. POMERENE. The same God is still overhead.

Mr. LA FOLLETTE. Yes; the same God is still overhead.

But, sir, long before the Tariff Board compiled and published its report the people of this country had learned the facts by bitter experience. They did not need any experts to figure out the results. They figured the matter out for themselves in the

increased cost of everything that they bought, and the result was that just as soon as they could reach the ballot box in the congressional elections of 1910 and the presidential elections of 1912 they swept from power in every branch of the Government the party responsible for this legislation.

Mr. President, I find that I can not conclude to-night what I have to say on this subject, because of the digressions to which I have been tempted in one way and another in the course of my remarks. I yield the floor at this point and will resume the floor again to-morrow. I see that it is now half past 5, and I suppose it is approaching the time when the Senate may care to adjourn, or it can take such course as it likes with regard to that. I yield the floor at this time and will resume again to-morrow.

MESCALERO APACHE INDIAN RESERVE.

Mr. BURSUM. Mr. President, I ask unanimous consent to take up a bill which is purely local in its character and affects only New Mexico. It is Order of Business 791, Senate bill 3519.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). The Secretary will state the title of the bill for the information of the Senate.

The ASSISTANT SECRETARY. A bill (S. 3519) defining the rights of the Mescalero Apache Indians in the Mescalero Indian Reservation, providing for an allotment of certain lands therein in severalty to the Mescalero Apache Indians, and creating and defining the All-Year National Park.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. KING. Mr. President, may I inquire of the Senator whether the bill has the approval of his colleague [Mr. JONES of New Mexico]?

Mr. BURSUM. It has.

Mr. KING. And the unanimous report of the committee?

Mr. BURSUM. The unanimous report. It is unanimously agreed upon by the Indians, recommended by the Interior Department, and very much desired by the people of that section.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. ROBINSON. Mr. President, I do not desire to object, but I want to ask the Senator from New Mexico a question. What is the purpose of the bill?

Mr. BURSUM. The purpose of the bill is to create a park in the Mescalero Indian Reservation, amounting to 2,000 acres. It also authorizes the Secretary of the Interior to purchase a small amount of land along a stream for the benefit of the Indians. The matter has been thoroughly threshed out with the Indians; they have unanimously agreed to it and desire it, and the people in that country desire it, and it does not affect any other part of the country.

Mr. ROBINSON. I believe the Senator has stated that the bill has the approval of the Interior Department.

Mr. BURSUM. It has; yes.

Mr. ROBINSON. Did the Indians, in their tribal capacity, take action respecting it?

Mr. BURSUM. Yes; they did. They had a meeting out there, and unanimously approved of the bill as drafted.

Mr. ROBINSON. I have no objection to the consideration of the bill.

Mr. OVERMAN. Mr. President, is this land to be purchased from Indian funds?

Mr. BURSUM. The Senator means this small amount of land? I suppose so; yes. The bill does not carry any appropriation.

Mr. SMOOT. How is the land that is to be purchased to be paid for?

Mr. BURSUM. It is a very small amount of land. The amount is not specified in the bill, but it probably will not exceed two or three hundred acres, all of it.

Mr. SMOOT. But does the Government pay for it, or is it to be paid for out of the Indian funds?

Mr. BURSUM. It would come out of the Indian funds, of course. It is not provided for in the bill, though. There is no appropriation whatever in this bill.

Mr. SMOOT. Then the Government would have to pay for it, if it is not provided for.

Mr. BURSUM. Whenever the appropriation is made, it would probably be taken out of the Indian money derived from timber sales.

Mr. SMOOT. Not unless it is specifically stated in the bill.

Mr. BURSUM. It is not specifically stated.

Mr. SMOOT. Then it would not.

Mr. BURSUM. At any rate, it will not exceed two or three hundred acres, and probably will be less.

Mr. SMOOT. What is the value of it?

Mr. BURSUM. Oh, I should say perhaps $3,000. It is a small amount. It is just a little creek that the Indians want, and which they ought to have.

Mr. SMOOT. If the Indians have any funds, of course it ought to be paid for out of the Indians' funds.

Mr. BURSUM. We passed a bill here some time ago that gives these Indians some assets in the shape of timber which may be sold at different times, and they will have funds.

Mr. SMOOT. I ask to have the bill read, so that we can see just how it reads.

The PRESIDING OFFICER. The bill will be read.

The ASSISTANT SECRETARY. The committee proposes to strike out all after the enacting clause and to insert seven pages of printed matter, which read as follows——

Mr. BURSUM. The substitute was prepared by the Park Service, taking into account the views of the Indians and the Secretary of the Interior. A substitute bill was framed, to which all sides agreed, including the Indian Rights Association.

Mr. WALSH of Montana. Mr. President, I was unable to hear the Senator when he undertook to tell us what the bill was about.

Mr. BURSUM. The real purpose of the bill is to establish a park containing an area of 2,000 acres in the Mescalero Reservation.

Mr. WALSH of Montana. What kind of a park?

Mr. BURSUM. A national park. It is very much desired by the people of the Southwest, of Texas and of southern New Mexico and of Arizona. There is no place where those people can go in the summertime and have a little recreation, and this place lends itself splendidly to that purpose. It has been agreed upon not only by those who desire the park but by the Indians themselves, and it is also recommended by the Interior Department.

Mr. WALSH of Montana. How large is this Indian reservation?

Mr. BURSUM. I suppose it is, perhaps, 60,000 acres or more.

Mr. WALSH of Montana. How many acres does the Senator say are included in this territory which is to be constituted a park?

Mr. BURSUM. Two thousand acres. It is very small.

Mr. OVERMAN. What is there about the land which makes it necessary for a park? Is it mountainous?

Mr. BURSUM. It is mountainous; yes.

Mr. OVERMAN. Is there any beautiful scenery there?

Mr. BURSUM. There is. It is a beautiful section, with fine, cool climate in the summer time, where you can have restful weather.

Mr. OVERMAN. We are buying a great many parks. I hate to object, but I think there ought to be some explanation of how this land is going to be purchased by the Government.

Mr. SPENCER. Mr. President, we do not pay anything for this park. The plan of the Secretary of the Interior is that when he is taking over this land he shall have the option of segregating some 2,000 acres which are not described, but which will be described within those limits, from the most mountainous and picturesque land, desirable land for a public park. When he takes this land from this Indian reservation, without any payment for it, the bill authorizes him to purchase such additional small amount of land as will round out the Indian reservation. The exact amount I do not remember. The Senator from New Mexico thinks it is but two or three hundred acres, and undoubtedly that land will have to be paid for; but it is insignificant in amount.

Mr. BURSUM. It is a small amount in acreage, but it is land which is subject to irrigation and has certain water rights, which are private now, but which the Indians desire; and that will be given to the Indians.

Mr. SPENCER. We do not buy the park.

Mr. WALSH of Montana. Mr. President, I do not comprehend this very well. This, as I understand, is within an Indian reservation?

Mr. BURSUM. It is.

Mr. WALSH of Montana. It accordingly is not subject to appropriation by anybody and no one can use it except the Indians, and so long as it is not allotted it is open to common use. What is the purpose of making a national park of it?

Mr. SPENCER. Only a very small part is designed for a national park.

Mr. WALSH of Montana. Two thousand acres.

Mr. SPENCER. Out of, the Senator from New Mexico says, something like 60,000 acres.

Mr. WALSH of Montana. It seems to me a remarkable thing to create a national park inside of an Indian reservation.

Mr. BURSUM. It is a remarkable place. It is the only place available for a park in that part of the country. It happens that this reservation embraces a very high, mountainous country, covered with pines. The land is seven or eight thousand feet high.

Mr. WALSH of Montana. Will it continue to be a portion of the reservation after it is constituted a national park?

Mr. BURSUM. The 2,000 acres, of course, will be subject to the control of the park director. The rest of it will belong to the reservation. The bill also provides that if at any time the park should be abandoned it will automatically revert to the Indians.

Mr. OVERMAN. Does the Senator guarantee that he will not ask $10,000 next year to take care of it?

Mr. SMOOT. Mr. President, I want to read a part of section 9, and ask the Senator if he knows anything about what the cost will be. The last paragraph of section 9 reads as follows:

The Secretary of the Interior is further authorized and directed to provide, at the earliest possible moment, proper houses for the Indian residents and particularly for the Mescalero Apache Indians.

Does the Senator know how much that is going to cost?

Mr. BURSUM. I will say to the Senator that it ought not to cost anything, because we passed here previously a bill authorizing the Secretary of the Interior to sell certain timber, and the proceeds of that timber will go for the benefit of the Indians.

Mr. SMOOT. But the Secretary of the Interior is directed here, at the earliest possible moment, to erect proper houses for the Indian residents.

Mr. BURSUM. That is very true, but I take it that that is supplementary to the prior bill which was passed authorizing the Secretary of the Interior to dispose of timber for the benefit of the Indians. That housing, however, has nothing to do with this park. That is part of the policy of the Indian Service.

Mr. SMOOT. These houses are to be built on this land.

Mr. BURSUM. Not on this land.

Mr. SMOOT. It says here—

The Secretary of the Interior is further authorized and directed to provide, at the earliest possible moment, proper houses for the Indian residents, and particularly for the Mescalero Apache Indians——

Mr. BURSUM. That is on the reserve.

Mr. SMOOT (reading):

The costs of such acquisition of property and of the construction of such houses and necessary buildings for individual Indians to be paid out of any funds now or hereafter available for such purposes.

So the houses that are mentioned here are to be built upon the land that is to be acquired.

Mr. BURSUM. The land to be acquired. That is a very small portion of the land. I will say that it is not to exceed two or three hundred acres, and I think less. That is a narrow strip of land, situated adjacent to the mountain stream, which is subject to irrigation, and it is not a question of the quantity of the land but it is a question of the character of the land. This land is owned by private parties. It has been owned for many, many years by private parties, and the Indians are very desirous of obtaining that land for their benefit. That is a very small affair, though.

Mr. SMOOT. Mr. President, there is not a national park created in the United States without an appropriation being made to take care of it every succeeding year after its creation. As I understand, this is to be a park within an Indian reservation.

Mr. BURSUM. Yes.

Mr. SMOOT. Does the Senator think that is a wise thing to do?

Mr. BURSUM. It is wise, because it is in a splendid location and the part segregated as a park would no longer be under the control of the Indian reservation.

Mr. SMOOT. As soon as it becomes a national park the Government of the United States will have to appropriate every year to maintain it.

Mr. BURSUM. It will belong to the Government. It will be subject to the jurisdiction of the Park Service. It will not belong to the Indians when it is a park.

Mr. SMOOT. Not if the provisions of this bill are carried out, because it says here that the amount that is paid for the land acquired under this bill——

Mr. BURSUM. Oh, that land is apart from the park. It is not a portion of the park. That is some private land that the Secretary is undertaking to purchase for the Indians. That has nothing to do with the park. It is not a part of the park.

Mr. SMOOT. In what part of the Indian reservation will the park be located?

Mr. BURSUM. That will be selected by the Secretary of the Interior and the park commissioner and must not exceed 2,000 acres. But these lands which are to be purchased are not for the park; they are for the Indians. They are farm lands, lands subject to irrigation, which belong to private parties, and have belonged for many, many years to private parties, although they are within the reservation. They were there prior to the time the reservation was created by Executive order.

Mr. SMOOT. That often happens.

Mr. BURSUM. It is desired to purchase those lands for the benefit of the Indians and for their use, and not for the park. They have nothing to do with the park.

Mr. SMOOT. Does the Senator believe that if this bill becomes a law there will be no appropriation asked for the maintenance of the park?

Mr. BURSUM. No appropriation any more than Congress would have to make for any other park.

Mr. OVERMAN. Will no appropriation be asked to build roads and beautify the park?

Mr. SMOOT. We created parks in Colorado with an absolute understanding that at no time would an appropriation ever be asked exceeding $10,000, and that understanding lasted one year, or perhaps two.

Mr. BURSUM. Even though Congress did have to appropriate a little money, does not the Senator think it is a fine policy to look after the health of the children of the country by a park located as this is?

Mr. OVERMAN. What is picturesque about it?

Mr. BURSUM. It is a country of beautiful pine trees and beautiful scenery generally.

Mr. OVERMAN. What kind of scenery? Pine trees and rivers?

Mr. BURSUM. The finest scenery in the world. There is no place more picturesque, more beautiful, more pleasant. It is a place where the people from the South can go with their children to escape the sultry weather of summer time.

Mr. OVERMAN. Are there any roads through it?

Mr. BURSUM. Of course there are roads, and fine roads, too.

Mr. OVERMAN. The Senator will not be here asking for an appropriation for roads?

Mr. BURSUM. I am not asking for a cent now. All I want the Senate to do is to pass this bill, and it will save me writing at least a hundred letters in the next 20 or 30 days.

Mr. OVERMAN. The Senator knows that we have to build roads through pretty nearly every one of these parks. How about this one?

Mr. BURSUM. We have a good road through this park.

Mr. OVERMAN. The Senator will not ask for any money to build roads?

Mr. BURSUM. No; not for a road. We have a good road there, which was built under the law we passed last year.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Indian Affairs with an amendment to strike out all after the enacting clause and insert:

That all the lands embraced within the present boundary lines of the Mescalero Apache Indian Reservation, in the State of New Mexico, are hereby reserved and withdrawn from settlement, occupancy, or disposal under the laws of the United States and dedicated and set apart for the use and benefit of the Indians thereupon and their descendants, subject only to the exceptions hereinafter set forth.

The name of such reserve shall be the Mescalero Apache Indian Reserve.

Within the boundaries of the Mescalero Indian Reserve there shall be set aside for use as a national park for the recreation of the public such parcels of land conspicuous for beauty of scenery or adapted for summer camps as the Secretary of the Interior may cause to be surveyed, designated, and set apart for park purposes: *Provided*, That no lands shall at any time be designated or set apart for park purposes which are occupied, used, or cultivated by any Indians: *Provided further*, That the aggregate area of the parcels of land so surveyed, designated, or set apart for park purposes shall not exceed 2,000 acres.

The official designation of this and the other lands herein mentioned for park purposes shall be "The All-Year National Park," and said national park shall embrace, in addition to the areas in said reserve hereby set apart for park purposes, such additional territory surrounding the Elephant Butte Reservoir, the White Sands, and the Mal Pais lava beds, herein set forth, to wit:

The Elephant Butte Lake and all of the lands appurtenant thereto heretofore acquired or set apart as the site of the Elephant Butte Reservoir and the lands appurtenant thereto.

Such portion of the Mal Pais lava beds and of the unappropriated public domain adjacent thereto, not exceeding 640 acres of the land adjacent thereto, as the President may, by proclamation, include in such park. Such portion of the White Sands or Gypsum Hills in Otero County, N. Mex., and of the unappropriated public domain adjacent thereto, not exceeding 640 acres of the lands adjacent thereto, as the President may, by proclamation, include in such park.

SEC. 2. That immediately upon the passage of this act the Secretary of the Interior shall cause to be surveyed the arable lands along the watercourses and elsewhere within the following-named canyons, to

wit: Tularosa, Elk, Silver Springs, White Trail, Cherokee, North Carrizo, South Carrizo, Rinconado, and Nogal, and such other informal selections as have heretofore been made and are now being occupied or cultivated by Indians for agricultural purposes, all of which said lands shall be allotted in severalty to the Mescalero Apache and other Indians now upon said reserve; and such lands as are now being used by the United States Government for school, agency, and other purposes shall be likewise surveyed and are permanently reserved, and such tracts as have heretofore been set aside for the benefit of any church shall be permanently reserved for such purpose. Such severalty allotments may descend to the legal heirs of the allottee, but neither the allottee nor such heirs shall have the power to dispose of such allotment by deed or otherwise until these restrictions may be removed by the Congress of the United States, except that in the discretion of the Secretary of the Interior such allotment may in the interest of the allottee be leased to any other Indian among those, or the descendants of those, now residing upon such reserve.

SEC. 3. That nothing in this act contained shall be held to abrogate the provisions of the mining laws of the United States, including the mineral lease law approved the 25th day of February, 1920, but the same shall remain in effect in the territory herein set apart: *Provided*, That the surface land area of any lease or permit shall be no more than is sufficient for strictly mining purposes: *And provided further*, That the proceeds of any lease of nonmetalliferous minerals shall be placed in the Treasury of the United States, one-third of such proceeds to be available from time to time for the use of the Indians residing upon such reserve, one-third to the credit of the reclamation fund, and the remaining one-third shall be paid over to the State of New Mexico for the road fund of such State. Any coal deposits which may be found upon the present Mescalero Indian Reservation may be leased or worked for the benefit of the Indians upon such reserve and their descendants, and the output thereof disposed of under such rules and regulations as the Secretary may prescribe. The Secretary of the Interior may sell and permit the removal of only the excess matured or down timber as he may deem necessary or advisable, the proceeds of such sale to be deposited in the Treasury to the credit of the Mescalero Indians. The Secretary shall cause to be provided for the use of said Indians one or more sawmills, easily transportable, which shall be used under the direction of the agent or superintendent by the Indians for cutting and preparing lumber for houses, corrals, fences, road building, and other necessary purposes for the benefit of said Indians upon such reserve.

SEC. 4. That the unallotted and unreserved lands upon said reserve shall be and remain the property of the Indians now residing upon said reservation for their common use and benefit, for grazing, and other purposes, through tribal herds or lease of such areas, and for their common use and benefit in securing supplies of lumber therefrom, as stated in section 3, until otherwise directed by the Congress of the United States.

SEC. 5. That the Indians resident upon said reserve and their descendants shall, under the rules and regulations to be prescribed by the Secretary, have free grazing for their own stock within said reserve, and the surplus grazing lands, if any therein, may be leased under such rules and regulations, and the proceeds of such lease or leases shall be deposited in the Treasury to the credit of said Indians.

Nothing in this act contained shall be interpreted to restrict or curtail the right of the Indians lawfully resident upon said reserve to hunt game therein or to fish therein under rules and regulations to be adopted by the Secretary of the Interior, which rules and regulations shall prohibit the hunting of game upon such reserve by any other than an Indian resident thereupon. All rights to the use of waters for irrigation and domestic purposes, whether obtained by user, prior appropriation, adjudication, or otherwise, now vested in or belonging to the Indians resident within the boundaries of said park are hereby confirmed.

SEC. 6. That under the directions of the Secretary the Bureau of Indian Affairs shall have complete jurisdiction over Indian matters and all properties and proceeds of the reserve for the benefit of the Indians lawfully resident therein, except as specifically excepted herein, and such jurisdiction shall extend to the Indians at all times, whether upon portions of the reserve set aside for park purposes or otherwise.

SEC. 7. That within the boundaries of said Mescalero Apache Indian Reserve the National Park Service shall have jurisdiction over roads and trails now constructed or to be hereafter constructed, as well as over the parcels of land referred to in section 1: *Provided*, That transit over same shall be perpetually free to the Indians, and that no such trails or roads now constructed shall be closed and no new roads or trails opened except by agreement between officials of the park and of the Indian Service, and said park service shall have jurisdiction over tourists and visitors within the limits of said reserve and the limits of said park, and shall formulate rules for the administration and control of such areas within said reserve as are specifically designated and set aside for park purposes and over roads and trails.

SEC. 8. That in the employment of labor within the boundaries of said reserve, including the portion set apart for park purposes, preference shall be given to Indians lawfully resident within said reserve, and a like preference shall be given for all guide work and for the use of Indian horses, whether such guide work and horseback riding shall be by rules and regulations provided to be carried on under concession or otherwise.

SEC. 9. That in event the use of any parcels of land hereinbefore provided to be set aside for park purposes, or the jurisdiction over any roads or trails now or hereafter to be constructed shall be surrendered, the Commissioner of the General Land Office shall be immediately notified thereof, and the title to such lands and the right to use thereof and jurisdiction over such roads shall immediately revert to the Indians resident upon the reserve, and such title or right to the use thereof shall not reinvest in the park service or any other service, or be divested from the Indian residents, except by act of the Congress of the United States.

That the Secretary of the Interior, in consideration of the transfer of the use of said parcels of land and roads to the park service, is hereby authorized to negotiate for, and secure the title to, privately owned lands situated upon said reserve within the Tularosa Canyon, together with any water rights or water-power rights appurtenant to said lands, through proper deeds of conveyance, which properties shall immediately become the property of the Indian residents; and those portions or lots thereof susceptible of allotment in severalty shall be so allotted to Indian residents; the remaining portions of such property to become the common property of the tribe, and the use, if any, of such water power to be for the common benefit of the Indian residents.

The Secretary of the Interior is further authorized and directed to provide, at the earliest possible moment, proper houses for the Indian residents, and particularly for the Mescalero Apache Indians; the costs of such acquisition of property and of the construction of such houses and necessary buildings for individual Indians to be paid out of any funds now or hereafter available for such purposes.

SEC. 10. That nothing in this act contained shall be interpreted to limit or interfere with the use of the Elephant Butte Dam and Reservoir and the lands appurtenant thereto for irrigation purposes, nor to limit additions to said dam and enlargement of said reservoir for irrigation purposes, nor to diminish, limit, or interfere with the use and development of electrical power incident to the discharge of water from said reservoir by or for the benefit of the Rio Grande irrigation project and the settlers and landowners entitled to the benefit thereof, but the use of said dam, reservoir, and lands appurtenant thereto for park purposes shall always be subservient to its use for irrigation purposes and the incidental development and use of hydroelectric power thereupon, under such rules and regulations as the United States Reclamation Service, under the authority of the Secretary, shall from time to time adopt and prescribe: *Provided further*, That the privilege of fishing in the Elephant Butte Reservoir shall be open and free to the persons complying with the game laws of the State of New Mexico.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

The title was amended so as to read: "A bill defining the rights of the Mescalero Apache Indians in the Mescalero Indian Reservation, providing for an allotment of certain lands therein in severalty to the Mescalero Apache Indians, and creating and defining the All-Year National Park, and for other purposes."

NOMINATIONS REPORTED.

The PRESIDING OFFICER (Mr. WADSWORTH). The present occupant of the chair asks unanimous consent, as in open executive session, to report from the Committee on Military Affairs certain nominations, to go to the calendar. Is there objection? The Chair hears none.

Mr. UNDERWOOD. I assume from this that we will not have an executive session this evening.

Mr. McCUMBER. No; we will not.

Mr. UNDERWOOD. Very well.

RECESS.

Mr. McCUMBER. I move that the Senate take a recess until to-morrow morning at 11 o'clock.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m.) the Senate took a recess until to-morrow, Saturday, July 8, 1922, at 11 o'clock a. m.

SENATE.

SATURDAY, *July 8, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

DISTRIBUTION OF SPEECHES BY FEDERAL RESERVE BANKS.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the governor of the Federal Reserve Board, transmitting, pursuant to Senate Resolution 308, letters from the governors of the Federal reserve banks of Philadelphia, Richmond, and St. Louis relative to the circulation of copies of the speech of Senator GLASS. Without objection, the communication, with the accompanying letters, will be printed and lie on the table.

Mr. HEFLIN subsequently said:

Mr. President, in response to a resolution passed by the Senate a few days ago calling upon the Federal reserve banks to give certain information about the circulation of the speech of Senator GLASS, we have reports from the Federal reserve banks of Richmond, St. Louis, and Philadelphia transmitted to the Senate by the governor of the Federal Reserve Board. I ask unanimous consent that the order made this morning to print the reports be rescinded and that they lie upon the table of the Vice President until the other reports are received, so that we can dispose of all of them together.

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Without objection, the request will be granted. The reports will lie on the table for the present.

PETITIONS.

Mr. SHORTRIDGE presented petitions of sundry granges of the Patrons of Husbandry in the State of California, with a membership of 900, favoring the election by farmer stockholders of six directors to officer each of the 12 Federal land banks,

the Federal Government appointing three directors to represent the Government and the country's interest, which were referred to the Committee on Banking and Currency.

REPORTS OF COMMITTEES.

Mr. BURSUM, from the Committee on Pensions, to which were referred the following bills, reported them each with amendments and submitted reports thereon:

A bill (H. R. 11427) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war (Rept. No. 809); and

A bill (H. R. 11533) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war (Rept. No. 810).

Mr. NEW, from the Committee on Claims, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

A bill (S. 1491) for the relief of George T. Larkin (Rept. No. 811); and

A bill (S. 1515) for the relief of Henry C. Wilke (Rept. No. 812).

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SWANSON:

A bill (S. 3797) granting a pension to Anna R. Little; to the Committee on Pensions.

A bill (S. 3798) for the relief of F. J. Andrews; to the Committee on Claims.

A bill (S. 3799) for the relief of Louis A. Hogue; and

A bill (S. 3800) for the relief of C. Pateras & Sons and C. Lemos, owners of the Greek steamship *Constantinos Pateras;* to the Committee on the Judiciary.

By Mr. MOSES:

A bill (S. 3801) granting a pension to Eliza A. Stratton (with accompanying papers); to the Committee on Pensions.

STANDARDS FOR HAMPERS AND BASKETS.

Mr. CAPPER submitted an amendment intended to be proposed by him to the bill (H. R. 7102) to fix standards for hampers, round stave baskets, and splint baskets for fruits and vegetables, and for other purposes, which was referred to the Committee on Manufactures and ordered to be printed.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenues, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. POINDEXTER. Mr. President, I submit certain proposed amendments to the pending tariff bill and ask that they be printed and lie on the table for future presentation.

The VICE PRESIDENT. The amendments will be printed and lie on the table.

Mr. McCUMBER. Mr. President, I ask the Senate to return to paragraph 728, the rice paragraph. I desire to state in respect to this paragraph, as I stated some time ago, my belief that while the committee itself has not yet definitely reported the disagreement, in my own conviction we ought to disagree to the committee amendment.

Mr. RANSDELL. Mr. President, I am delighted to hear that statement from the chairman of the committee. Ordinarily I would not say anything in the light of that statement, but I have prepared some remarks which I would like to put in the RECORD, and I promise not to take a great deal of the time of the Senate. I think, however, it would add a little to the literature of the subject. The question is one of great importance.

Mr. McCUMBER. I made the statement just now because when the Senator from Louisiana was absent some time ago I indicated the same view in a statement before the Senate. I thought that the Senator who is now to speak on the subject should speak of it with the idea that at least he has the support of some members of the Committee on Finance in his view of the case.

Mr. RANSDELL. I thank the Senator very much for the statement.

Mr. DIAL. Mr. President, if the Senator from Louisiana will yield to me, and it is agreeable to the Senator, I will suggest the absence of a quorum.

Mr. RANSDELL. If the Senator will withhold his request for a quorum and let me proceed I shall appreciate it.

Mr. DIAL. Very well.

Mr. McCUMBER. Will the Senator from Louisiana yield to me to make a unanimous-consent request?

Mr. RANSDELL. With pleasure.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its business on this calendar day it recess until Monday at 11 o'clock a. m.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. McCUMBER. I thank the Senator.

Mr. RANSDELL. Mr. President, the action of the Finance Committee in recommending a horizontal reduction of 50 per cent in the existing tariff on rice practically amounts to the proscription instead of protection of that great industry. This hostile attitude toward a defenseless industry, which more than any other in the long agricultural schedule should call for the aid of a protective tariff, is all the more amazing because of the liberal treatment which the committee has recommended for all the other cereals.

Not only must our rice farmers compete with the lowest and most unequal form of foreign competition met by any American producer, but I think I can successfully demonstrate to the Senate the necessity of this particular crop if we are to succeed in our efforts to build up our merchant marine and foster our expanding foreign trade. I also intend to show that since the present tariff law went into effect the rice industry has been adversely affected by congressional enactments which, though not intentionally aimed at it, as in the present case, have nevertheless seriously affected it, and I believe that when these facts are demonstrated the Senate in a spirit of justice will agree to a restoration of the rates carried in the bill as it passed the House.

Let me preface these remarks, Mr. President, by briefly reciting the important position which this crop occupies in world-wide economy and its place in our own history. Not only is its use the most ancient but it remains to this day the most important of all the cereals used for human food. It occupies an honored place in records that are found at the very dawn of history, the Chinese tracing its introduction back beyond the year 2822 before the Christian era. All of the early classic writers of the western world who dealt with economic subjects testify to its importance, and it continues to occupy a highly important place in the agricultural life of the nations grouped about the Mediterranean Sea.

I shall not consume the time of the Senate to discuss the detailed history of the crop in those foreign countries; to show how during the lapse of ages its culture has lapsed at times, when for a period popular taste swung toward those grains which have always been identified with the North, like wheat and corn. The notable fact about it is that mankind has always returned with increased ardor to the cultivation of the crop that was invested with divine attributes when the race was in its infancy, and it suffices to say that not only in Asia but in Italy, in Spain, and elsewhere greater efforts are being made to-day to stimulate the production of rice than at any time in recorded history.

In our own country the rice industry has been one of the most spectacular factors in our marvelous agricultural development. This especially applies to the past 25 years, or from the time of the Spanish-American War, since when there has been a complete change not only in the fields of production but in the methods of cultivating the crop.

Rice is credited with having been introduced into this country in 1694, when a British vessel bound from Madagascar to Liverpool put into Charleston, S. C., for repairs. It is related that the captain gave to the governor, Landgrave Thomas Smith, some of the rough rice from his cook's stores, suggesting it as a possible additional article of food. It was planted in the governor's garden, now known as Longitude Lane, in the city of Charleston, and the product carefully preserved and distributed among the colonists.

By careful seed selection and intelligent study of cultural methods rice raised in the Carolinas and other South Atlantic States attained a world-wide fame for the excellent quality of the grain. There was a generous rivalry among the planters to promote this improvement and many of the most distinguished men of the colonial period were engaged in the production of this crop. The one man who stands out conspicuously, however, in his efforts for the improvement and development of the American rice industry is Thomas Jefferson. As a profound student of history and of contemporaneous world conditions, rice always held a strong fascination for Mr. Jefferson. He gave repeated proof of this in the course of his voluminous correspondence. In the historic letter from the author of the Declaration of Independence to

General Washington, dated Paris, December 4, 1788, beginning: "I have seen with infinite pleasure our new Constitution accepted by 11 States," he concludes as follows:

The consumption of rice is growing fast in this country, and that of Carolina gaining ground on every other kind. I am of the opinion the whole of the Carolina rice can be consumed here. Its transportation employs 2,500 sailors, almost all of them English at present, the rice being deposited at Cowes and brought from thence here.

I do not wish to make any extended citations from the works of either Mr. Jefferson or his distinguished political rival, Mr. Hamilton, who divided with him the honor of serving in President Washington's first Cabinet and with founding a rival school of political thought. However, I expect to show by brief citations how deeply concerned the founder of the Democratic Party was in establishing this great agricultural industry in America, and how rice as one of the grain crops was recommended for special consideration in the preparation of our tariff laws by Alexander Hamilton. That being so, the situation should receive favorable consideration from every follower of that distinguished statesman.

Let me show you the extent to which Mr. Jefferson went to advance the quality of our early American rice. He searched the three continents of Europe, Asia, and Africa for improved seed, and the drawbacks to the cultivation of the crop which he mentions are of interest to us at this time, because under modern conditions they have entirely disappeared.

Regarding his efforts with African rice he wrote William Drayton from France, "I have forwarded to you two couffres of rough rice which I had brought from Egypt." But his principal hopes lay with seed secured from another quarter of the dark continent. Of this variety he wrote:

In 1790 I got a cask of heavy upland rice from the river Denbigh, in Africa, about latitude 9° 30′ north, which I sent to Charleston in hopes it might supersede the culture of the wet rice, which renders South Carolina and Georgia so pestilential through the summer.

He reverted to this shipment in later years when he wrote:

The upland rice which I procured fresh from Africa and sent them (the South) has been preserved and spread in the upper parts of Georgia and, I believe, in Kentucky.

In the hope of improving the American strain with Asiatic seed, he wrote:

I first became informed of the existence of a rice which would grow in uplands without any more water than the common rains by reading a book of M. de Poivre, who had been governor of the Isle of France, who mentions it as growing there and all along the coast of Africa successfully, and as having been introduced from Cochin China. I was at that time (1784–1789) in France, and there happening to be there a prince of Cochin China, on his travels, and then returning home, I obtained his promise to send me some.

The steps that he took to secure the Italian varieties involved personal danger that lends a romantic hue to the recital. In his "Travels in Italy" he has recorded that "Poggio, a muleteer who passes every week between Vercelli and Genoa, will smuggle a sack of rough rice for me to Genoa, it being death to export it in that form."

Evidently the doughty Italian smuggler found the risk too great, for the author of the Declaration of Independence has recorded that he ultimately found it necessary to make a personal visit to the Italian rice country to make an investigation at first hand of their secret methods of milling the grain and to bring back a meager supply of seed concealed upon his person.

In his letter to Edward Rutledge from Paris, under date of July 14, 1787, he said:

I was glad to find that the adaptation of your rice to this market was considered worth attention, as I had supposed it. I set out from hence impressed with the idea the rice dealers here had given me, that the difference between your rice and that of Piedmont proceeded from a difference in the machine for cleaning it. At Marseille I hoped to know what the Piedmont machine was, but I could find nobody who knew anything of it. I determined, therefore, to sift the matter to the bottom by crossing the Alps into the rice country. I found their machine exactly such a one as you had described to me in Congress in the year 1783. There was but one conclusion then to be drawn, to wit, that the rice was of a different species, and I determined to take enough to put you in seed; they informed me, however, that its exportation in the husk was prohibited, so I could only bring off as much as my coat and surtout pockets would hold. I took measures with a muleteer to run a couple of sacks across the Apennines to Genoa, but have not great dependence on its success. The little, therefore, which I brought myself must be relied on for fear we should get no more; and because, also, it is genuine from Vercelli, where the best is made of all the Sardinian Lombardy, the whole of which is considered as producing a better rice than the Milanese.

Surely, Mr. President, no American who venerates the memory of Thomas Jefferson can read these extracts from his writings without a desire to preserve the industry which he labored so hard to establish.

The early history of the crop in the United States is confined to the Carolinas and South Atlantic States, where 96 per cent of it was grown. Very little of it was consumed by the American people outside of the localities in which it was produced and almost the entire output was marketed in Europe and the West Indies. While the statistics for the period antedating the Civil War are somewhat meager, yet they are sufficiently complete to give an accurate idea of the size of the crop.

From the best available data the production of rice in the United States grew from about 200,000 bushels at the end of 1720 to 3,335,000 bushels at the end of the last century, when the modern industry may be said to have become thoroughly established. The present yield averages about 50,000,000 bushels a year.

During the period from 1862 to 1864, inclusive, no record was kept but the output was small. Civil War ravaged the section where the great bulk of the crop had grown. The elaborate embankments and irrigation systems which had been constructed in the river bottoms of Georgia and the Carolinas at such an enormous expenditure of treasure and years of labor were destroyed. They were never fully restored, and their destruction marked the transfer of the crop from the South Atlantic to the Gulf States, where it was revived upon the sugar plantations that flourished near the mouth of the Mississippi River.

The production of sugar in Louisiana was also undergoing a radical change at that time, which marked the advent of large central factories. Prior to this development practically every plantation, large or small, maintained its own expensive manufacturing plant. More than a thousand existed in the southern part of the State, and their collective output was not as large as the modern establishments which are not one-tenth so numerous. It was a very expensive system, and, as the planters were looking for a crop that did not require so much operating capital, they eagerly turned their plantations from the cultivation of sugar to rice.

While rice had been introduced into Louisiana in 1817 it had only been grown in extremely limited quantities along the banks of the river below the city of New Orleans, and little of it was used outside of New Orleans prior to the Civil War.

With the destruction of the Carolina industry, however, and the discovery that rice could be profitably grown upon the sugar plantations at only a fraction of the cost, and with comparatively little preparation of the soil, its cultivation steadily extended in the river section of Louisiana. During the quarter of a century that followed this movement more than 80,000 acres were gradually adapted to it on either bank of the Mississippi as far north as Baton Rouge.

It was during this period that the cultivation of "upland rice," which had been the cherished dream of Thomas Jefferson nearly a century before, received its greatest impetus.

It was grown in innumerable small patches, and mills cleaning it were located here in Washington, D. C., in New York, Baltimore, and at numerous points farther south. Owing to the lack of uniformity in the grade of the output, however, this flare-up of the domestic industry was fighting a losing battle against foreign rice of more uniform grade, when the adaptability of the prairie lands of the Gulf coast for the production of this crop became recognized in the late nineties, and the history of the modern American rice industry dates from that period.

The Department of Agriculture, in collaboration with the Louisiana State University and Agricultural and Mechanical College at Baton Rouge, has recently issued a bulletin pointing out that the coastal plain area of southwest Louisiana came into special prominence as a rice-producing section about 1896, and the same bulletin gives us a comprehensive idea of the cost of producing the crop under modern methods and conditions.

It is safe to say, Mr. President, that since the period just referred to, beginning in the early nineties, no branch of American agriculture has shown such progress, either in the volume of the output or the technique of cultivating and harvesting the crop.

In view of these modern conditions prevailing in the rice belt of the South and on the Pacific coast, this crop now being produced, harvested, and marketed in much the same manner as wheat, and in justification of our appeal for a restoration of the House rates on rice, I submit an itemized statement of costs to the honorable Senator from North Dakota, in charge of this bill. Hailing, as he does, from the heart of our wheat-producing section, I feel sure he will recognize the justice of our plea.

When I tell him that this statement was not prepared in connection with the revision of the tariff; that it was not intended for use by Congress, but was undertaken as part of the regular routine work of one of the experimental stations in the rice belt, he will be convinced that if this branch of American in-

dustry is to be preserved from the deadening competitive conditions of the Far East, then our plea must be granted.

I will print, with the consent of the Senate, the statement as a part of the appendix to my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See Appendix A.)

Mr. RANSDELL. As against those costs, compiled under official and disinterested auspices, the American grower is called upon to compete with rice produced by the cheapest labor and under the lowest living condition of any article that enters into international commerce.

Since the enactment of the last general tariff act a great deal of information has been obtained about conditions in the Far East surrounding the production of the rice crop. Among the authoritative contributions on the subject are the works of Dr. F. H. King, late professor of agricultural physics at the University of Wisconsin, and late Chief of the Division of Soil Management of the United States Department of Agriculture.

Doctor King was a friend of the oriental people and made several visits to the Far East in pursuit of his studies. His statements in Farmers of Forty Centuries are valuable, because he was unprejudiced and sought to avoid exaggeration. I want to emphasize this statement, because approximately 90 per cent of the world's rice is produced under the conditions described in Doctor King's book.

Mr. President, at this point I wish to ask permission to print in the RECORD, without reading, as a part of the appendix to my remarks some brief excerpts from Doctor King's extremely interesting and instructive book entitled "Farmers of Forty Centuries." He visited Japan and China, made a most intense and careful study of conditions of agriculture in those two countries and has embodied his observations in a book, which I think every person in the United States interested in agriculture could read with very great profit. He especially discusses the rice situation; tells how rice is cultivated in those countries; about the wages paid to Japanese and Chinese for cultivating rice; and shows such an entirely different state of affairs from that which obtains in this country, especially how much cheaper they can raise rice than we possibly can, and how entirely different conditions are there, that a few extracts would be very instructive, and I ask to attach them to my remarks without reading, and that they be printed in 8-point type.

The VICE PRESIDENT. Without objection, it is so ordered.

(See Appendix B.)

Mr. RANSDELL. Mr. President, notwithstanding the enormous strides we have made in increasing the output in recent years, our total production is infinitesimal when measured by that of Asia, and it is against the surplus rice grown under such conditions as described by Doctor King and sent to this country to find a market that the American rice farmer asks to be protected.

Again let me emphasize at this point, Mr. President, that we produce in the United States only about 1 per cent of the rice crop of the world, while fully 99 per cent of the rice crop is produced in oriental lands. Along with that statement it should be borne in mind that the world produces and consumes considerably more rice than wheat. Wheat is the staff of life with us, but it is not the staff of life of a great many people in the world; rice with them is the principal article of food.

Doctor King found that many factors conspire to give the orientals an advantage in producing rice; that in portions of China, Japan, and Korea, to say nothing of the French and British possessions, not only does a dense population insure cheap labor but their geographic positions permit of a longer growing season, with the result that they have two or more crops annually, grown at but a fraction of our own cost in producing one. He found that in southern China, in Formosa, and in parts of Japan two crops of rice are grown; in the Cekiang Province there may be a crop of rape or wheat or barley or of Windsor beans or clover, which is followed in midsummer by another of cotton or of rice. In the Shantung Province wheat or barley in the winter and spring may be followed in summer by large or small millet, sweet potatoes, soy beans, or peanuts. It is unnecessary to expatiate upon the folly of expecting American farmers to meet such competition as this. As I have already pointed out, natural conditions contribute to this result no less than the cheap labor, for the rainfall in these countries is not only larger than that in our Atlantic and Gulf States but it falls more exclusively during the summer season, when its efficiency in crop production may be highest. South China has a rainfall of some 80 inches with little of it during the winter, while in our Southern States the rainfall is nearer 60 inches, with less than one-half of it between June and September.

Doctor King says that it is difficult to convey, by word or map, an adequate conception of the magnitude of the systems of canalization which contribute primarily to rice culture. A conservative estimate would place the miles of canals in China at fully 200,000, and there are probably more miles of canal in China, Korea, and Japan than there are miles of railroad in the United States. China alone has as many acres in rice each year as the United States has in wheat, and her annual product is more than double and probably threefold our annual wheat crop, and yet the whole of the rice area produces at least one and sometimes two other crops each year.

These brief excerpts from the monumental work which Doctor King gave to the world under the title "Farmers of Forty Centuries" will give an idea, not only of the natural advantages these people possess by reason of climatic conditions but likewise of the wonderful artificial improvements they have wrought through the centuries in the form of canals and dikes to enable them to produce this crop. When we come to consider the factor of labor costs our disadvantage is even more pronounced. In some of the advanced Chinese Provinces farm labor is paid at the rate of $21.50 gold per annum, with board. This is less than the monthly wage paid in the American rice country. But there are vast numbers of oriental farm laborers who receive less than $10 per year, with board and lodging and a few cheap articles of clothing. It is utterly impossible to attempt to build up an American industry that has to compete with such conditions unless we make some attempt to equalize these differences at the customhouse.

If I have been able to give the Senate a fair idea of how the American rice industry was developed from an unpromising start until within the last decade it assumed a place among our more important crops, and if I have succeeded in making clear the impossible competition we are called upon to meet from the Orient, I will proceed to show the wonderful possibilities that this cereal holds if the American Congress, in its wisdom, will permit us to continue the work of development which has been so ably begun.

As I have already pointed out, the prairies of southwest Louisiana became recognized as ideal rice lands some 30 years ago, and the history of the modern industry dates from that time.

In a recent discussion of the industry the United States Department of Agriculture points out that the principal rice region of the United States lies on the Gulf coastal plain, where there are broad, level prairies extending approximately from Rayne, La., to Crosby, Tex. These tracts of level land are broken here and there by sluggish streams. From them the irrigation water is obtained by the use of powerful pumps. As these streams are much lower than the prairies they also serve as the natural outlets for drainage. Deep wells also are used in this section to supply irrigation water for approximately 150,000 acres.

The rice area in Louisiana is located on the prairies in the southwestern part of the State, with the exception of a narrow strip of alluvial land, totaling 89,000 acres, along the Mississippi River. Since the early part of the nineteenth century rice has been produced in Louisiana, but the crop remained unimportant until it was demonstrated in Acadia Parish that it could be grown on the prairies.

The effect of the successful outcome of this agricultural venture increased the rice area in the State from 42,000 acres in 1879 to 84,377 acres in 1889. During the next 10 years there was such an increase in the number of irrigation plants, and at the same time so great an enlargement of the canal systems, that the acreage in rice in Louisiana reached 201,685 acres. By 1918 the prairie rice area in that State had increased to 491,893 acres. In Texas, where rice is grown only under prairie conditions, the area devoted to the crop increased from 178 acres in 1889 to 245,000 acres in 1918, 136,520 acres of which were located in southeastern Texas.

In acreage and production of rice the Louisiana prairies rank first, and those of Texas second. Of the 1,112,770 acres of rice grown in the United States in 1918 the Louisiana and Texas prairies contained 736,893 acres.

There is a similar, though smaller, prairie district in eastern Arkansas, approximately 50 miles wide and 150 miles long, which in 1918 produced 7,310 000 bushels on 170,000 acres. The rice industry is of recent development there, for it was in 1905 that Arkansas, with 460 acres of rice, was first included among the rice-producing States.

The department has also issued a treatise describing the industry as developed in California, in which it states that the first commercial crop of rice in California was grown in 1912 on adobe soil in the Sacramento Valley near Biggs. The profits

from this crop of 1,400 acres were large. The wide publicity that was given to the possibilities of rice culture on black adobe soil resulted in the sowing of more than 6,000 acres in 1913. The greater part of this acreage was in Butte County, though there were several small sowings in the San Joaquin Valley. The average yield of 3,200 pounds of grain per acre which was produced by the 1913 crop gave so great an impetus to the industry that in 1914 the area sown to rice was increased to 15,000 acres. Since that time rice production has increased rapidly. In 1919 rice was grown on 142,000 acres, and the resulting crop was valued at more than $21,000,000.

The last State to enter the field as a rice producing center is Missouri, where an output per acre has been reached that stands next to California. I will insert at the conclusion of my remarks a table taken from the last yearbook of the department, showing that this is an important branch of our agriculture, and that 1,337,000 acres were seeded to it in the crop year 1920.

With the growing demand in the markets of the world for this cereal and with new lands constantly being found within our borders that are susceptible to its cultivation, the possibilities for its expansion are enormous. As an indication of these possibilities, in the State of Louisiana alone, where the greatest area ever sowed to rice amounted to 700,000 acres, it has been stated by competent engineers after careful surveys that there is in excess of two and a half million acres of open prairie lands in the southwestern part of the State naturally adapted to the cultivation of rice. Underlying this entire area is an impermeable bed of clay which prevents the escapement of water when placed on its surface, and explains the remarkable success that has attended the cultivation of the crop in that section. As this same formation extends across the Sabine River into Texas, it may be conservatively estimated that there is a like area in that State, of no use heretofore except for grazing cattle, which holds forth the promise of enormous riches when brought under the cultivation of rice. The extracts I have read from the publications of the Department of Agriculture showing the extent of soil adapted to this crop in Arkansas and California, and the experiments which are going on in Missouri and elsewhere, warrant the statement that there are now more than 7,000,000 known acres of land available for the expansion of the American rice industry, and it is probable that this area will be doubled or trebled as accurate soil surveys are made.

Although we produced a crop of 54,000,000 bushels in 1920 under the stimulus of appeals from the Federal Government to increase all food crops, that enormous output represents less than 1 per cent of the rice crop of the world. Practically the entire output is grown in Asia, where it is most difficult to secure statistics; but from countries like India, where the statistics are accurate, we are enabled to secure some idea of the enormous output of this cereal, which feeds more than half of the human race.

In the reports of the Department of Commerce issued March 20, 1922, appears the following statement of the magnitude of India's crop:

> The final general memorandum on the rice crop of 1921–22, issued by the Department of Statistics of the Government of India the latter part of February, 1922, reports the total area planted to rice as 81,234,000 acres, or 3 per cent more than last year, and the total production as 32,994,000 tons, or 19 per cent over the previous year, according to a cablegram from Consul General Alexander W. Weddell, at Calcutta. This confirms the forecast made by the Far Eastern Division of the Bureau of Foreign and Domestic Commerce, published in Commerce Reports of December 12, 1921, to the effect that it was probable that the final forecast would report 81,000,000 acres and a yield of 33,000,000 tons.

It has been conservatively estimated by British trade experts that the Indian output is but 40 per cent of that of China. When to this we add the crops of Japan, the French and Dutch possessions, and the other countries of the Orient we can have some idea of the deluge that is threatening the American rice farmer, and understand why he cries out for legislation that will help him to meet it.

Mr. President, I wish to add, as a part of the appendix to my remarks, a table furnished to me by the Department of Agriculture a few days ago entitled "World crops of wheat and rice," which shows the approximate world yield of these two crops.

(See Appendix A.)

This table shows that the yield of wheat is 4,423,000,000 bushels, as compared with a yield of rice amounting to 4,452,000,000 bushels.

This gives an excess of 29,000,000 bushels of rice over wheat, which, taken in conjunction with the fact that the food value of rice is much higher than that of wheat, clearly demonstrates the premier place which this great cereal occupies among the crops devoted to human food.

Let me now consider the objection which has been raised to the proposed duty on rice because of the alleged large exports, which would seem to make unnecessary the imposition of these duties.

While for several years following the close of the late World War there were enormous exportations of rice from this country, this was due to the fact that in answer to an official appeal to produce more foodstuffs to help win the war the American rice farmers harvested twice as much rice as was consumed at home. But it must be remembered, Mr. President, that the Allies had taken an enormous horde of rice consumers from Asia either to fight or to work behind the lines, and the rice farmers of the United States were called upon to feed them.

Right here let me say that the situation with respect to rice was very much the same as that which arose in connection with the scarcity of sugar. It will be remembered that when the famine in that article was at its height the Food Administration comforted us with almost sardonic humor that there were tons of sugar piled up in Java and elsewhere in the Far East, but that tonnage could not be spared to go and get it. By the same token, we were asked to grow the rice that otherwise would have taken the cargo ships on long voyages to the rice fields of the Orient when they were needed in the theater of hostilities.

When hostilities suddenly terminated and the Asiatics were sent home to consume the surplus stores that had been piling up in the Orient, the American industry was caught not only with enormous stocks on hand but with the largest crop that had ever been grown and for which there appeared to be no market.

We all remember the distressing situation which ensued. Speculators who had overreached themselves and contracted for enormous supplies in Asia, counting on a prolongation of the war, had to accept delivery as soon as ships could bring it across. This foreign rice added to our own unmarketable output, which had been grown under the spur of an appeal to patriotism, absolutely broke the American rice market. A wild scramble was made to unload in all the far corners of the earth. One of the most notable results was the effect produced in Cuba. It was because of overspeculation in rice that the first clouds of financial disaster gathered on the horizon of that island, and a crisis was developed among the importers and banks of Habana interested in these importations, even before the crash came in sugar.

But these, Mr. President, were abnormal conditions the result of equally abnormal times, and do not represent the regular ebb and flow of our rice imports and exports. At the hearings before the Ways and Means Committee, which resulted in the rates being recommended which we are now seeking to have restored, it was shown that in normal times the home consumption in this country has been between five and six million bags and the importations something like a million bags.

This trade movement in rice can easily be explained. The manufactured product of other important cereals, such as wheat, corn, and oats, take the form of flour and meal, and the output of the mills is of rather uniform grade. In the case of rice, however, the grain is marketed in either whole or broken kernels, and very little of it is made into flour or meal. The American consuming public is perhaps the most discriminating on earth, and it will not use broken or defective rice. That is why a large percentage of our output, which otherwise would have to be marketed at considerable loss at home, enters into our export trade. It finds a ready market among the Latin people living on the islands and in the countries immediately to the south of us. The financial condition of the masses of those people prevents their balking at appearances, and they buy the broken rice solely for the food value which it contains.

This brings me, Mr. President, to the consideration of a subject that should appeal to the sense of fairness of every Senator; and I will say right here that it should especially appeal to every Member on the other side of the Chamber.

In the beginning of my remarks I quoted extensively from the works of Mr. Jefferson, the patron saint of the Democratic Party, to show his deep interest in the rice industry. I also stated that I intended to show by the writing of his great political antagonist, Alexander Hamilton, that rice should receive encouragement at the hands of his Republican followers of the present day.

As I have understood it, Mr. President, the report which Mr. Hamilton, as Secretary of the Treasury, made upon manufactures in 1790, has always been reverently regarded by Republicans as the keystone in the arch of protection. In discussing

grain in that report, Mr. Hamilton said that "manufacture of the several species of this article have a title to peculiar favor."

He then proceeded to say:

Ardent spirits and malt liquors are, next to flour, the two principal manufactures of grain. The first has made a very extensive, the last a considerable progress in the United States. In respect to both an exclusive possession of the home market ought to be secured to the domestic manufacturers as fast as circumstances will admit. Nothing is more practicable and nothing more desirable.

Without wishing to precipitate a discussion of the prohibition question, Mr. President, I desire to call attention to the fact that since the Underwood-Simmons Act became law drastic legislation has passed Congress which makes it impossible to follow this advice so far as rice is concerned. The Volstead law has almost completely destroyed the brewing industry, which formerly consumed large quantities of inferior grades, which were known among the trade as brewers' rice. There being no longer any occasion to admit this grade in large quantities because of the lack of a domestic supply for the brewers, a proper regard of the domestic industry would suggest that the rate as recommended by the House, of one-half cent a pound, be restored.

In the appendix which I shall publish as a part of these remarks I will give the statistics to show the important place that rice occupies not only in our domestic economy but in the commerce of the world. [See Appendix A.]

Let me say, moreover, that our Department of Agriculture has for years been urging the importance of developing this great crop. It has called attention to the fact that rice is more extensively grown and more widely used than any other foodstuff, a fact which it says will surprise many Americans, who do not realize that millions of people eat rice as regularly as Americans and Europeans eat bread. It might be added, Mr. President, that rice is to-day the most economical article for the table on the market; of high food value; healthful and nutritious. No food, not even wheat flour, lends itself to more varied ways of preparation. No single article of food possesses all the qualities of a perfect ration, but rice possesses them in greater degree than any meat, cereal, or vegetable in common use. You can go further on rice than any other single article of food. The nutritive value of food depends not simply on the proportions of nutrients it contains but also on the amount of those nutrients which can be made available to the body by digestion for building material and fuel. The superiority of rice in this respect is shown by the following comparisons:

Energy-yielding percentages of digestible nutrients in rice, 84.8; in beef, 31; in mutton, 34.8; in fresh pork, 37.4; in bacon, 71; in ham, 48.7; in salt pork, 86.6; in fowl, 25.5; in fish, 11.2; in canned salmon, 32.8; in eggs, 22.2; in milk, 12.5; in oats breakfast food, 87.1; in wheat breakfast food, 86.6; in white strain upon our wheat lands by turning to the cultivation of rice.

With all authorities agreed that the wheat-producing areas of the world are failing under the increasing strain that is placed upon them, and with that fact notoriously true as concerns our own fields; with an ever-growing population that must be fed; and with the best intellects of the world genuinely concerned about the prospect that the future holds for mankind in view of this condition; it is the part of wisdom that we should utilize every means that will insure us against the possibility of future famine, and as much as possible relieve the strain upon our wheat lands by turning to the cultivation of rice.

Mr. President, I ask leave to publish as an appendix to my remarks, in 8-point type, the several tables.

One gives the itemized cost of the production of 1 acre of rice in Louisiana.

The next one is a table giving rice, its acreage, production, and farm value, by States, in 1920.

Then there is a table giving the average production of rice from 1720 to 1900.

Next is a table showing the acreage, production, and value of rice in the United States from 1904 to 1920, from the Yearbook of the United States Department of Agriculture.

Then there is an extremely interesting table entitled "World's crops of wheat and rice." The source of the same is the International Institute of Agriculture.

Then there is a table showing the total exports and imports of rice by fiscal years from 1895 to 1921, inclusive.

Finally, there is a table showing how the pending legislation compares with previous tariff duties on rice in modern times. I ask leave to publish these tables as an appendix to my remarks.

The last two tables were compiled by my colleague [Mr. BROUSSARD] from Monthly Summary of Foreign Commerce and from the past tariff acts of the country, and all but the third and fifth used by him in his speech in the Senate on May 3 last.

The PRESIDING OFFICER (Mr. LADD in the chair). Is there objection? The Chair hears none, and it is so ordered.

(See Appendix A.)

Mr. RANSDELL. Mr. President, in conclusion, I sincerely hope that the amendment offered by my colleague, the junior Senator from Louisiana [Mr. BROUSSARD], proposing to strike out the Senate committee amendment and return to the provision of the House, will be adopted. I understood from the distinguished chairman of the Finance Committee that he has no objection to such action by the Senate. I sincerely hope that we may have a unanimous agreement upon that point.

APPENDIX A.

Itemized estimated cost of production of 1 acre of rice in Louisiana.

	1917–18	1910
Plowing	$1.46	$1.26
Disking	2.68	2.13
Harrowing	.89	.28
Pulverizing	.54	.30
Drilling	.68	.20
Fertilizer	2.00	1.40
Seeds	2.50	1.66
Weeds and red rice	1.00	.75
Levees and maintenance	.50	.40
Cutting roads	.20	.18
Harvesting	2.81	2.25
Threshing	3.00	3.00
Hauling	1.00	1.00
Warehouse and insurance	1.00	1.00
Water rent	6.00	6.00
Shop and tools	.20	.20
One-half automobile expense	.50	.40
Telephone	.07	.07
Insurance	1.20	1.20
Fencing	.10	.08
Taxes	.62	.50
Interest on investments	3.00	3.00
Total	31.95	27.26

TABLE 93.—*Rice: Acreage, production, and farm value, by States, 1920.*

State.	Acreage.	Average yield per acre.	Production.	Average farm price per bushel Dec. 1.	Farm value Dec. 1.
	Acres.	*Bush.*	*Bush.*	*Cents.*	*Dollars.*
North Carolina	400	25.0	10,000	167	17,000
South Carolina	4,100	25.0	102,000	290	296,000
Georgia	1,100	26.4	29,000	225	65,000
Florida	3,000	24.0	72,000	175	126,000
Missouri	500	50.0	25,000	131	33,000
Alabama	500	31.0	16,000	290	46,000
Mississippi	3,000	31.0	93,000	200	186,000
Louisiana	700,000	36.0	25,200,000	110	27,720,000
Texas	281,000	34.0	9,554,000	125	11,942,000
Arkansas	181,400	49.0	8,889,000	131	11,645,000
California	162,000	60.0	9,720,000	121	11,761,000
United States	1,337,000	40.2	53,710,000	118.9	63,837,000

Average production of rice from 1720 to 1900.

	Bushels.
1720–1729	219,425
1730–1739	497,304
1740–1749	604,966
1750–1759	523,966
1760–1769	742,997
1770–1774 (4 years)[1]	576,393
1782–1784 (2 years)[1]	91,203

[1] From 1775 to 1782 (during the Revolutionary War) and from 1784 to 1789 no record can be found.

	Bushels.
1790–1799	1,412,323
1800–1809	1,117,668
1810–1819	1,295,062
1820–1829	1,592,304
1830–1839	1,978,417
1840–1849	2,215,714
1850–1859	2,273,833

[1] Rough rice, pounds. [2] Cleaned rice.

The approximate average yield of the world crop of wheat is 2,650,000,000 hundredweight (or 4,423,300,000 bushels).

The approximate average yield of the world crop of rice is (rough) 4,400,000,000 hundredweight (cleaned = 2,716,000,000 hundredweight, or 4,452,000,000 bushels).

Total exports and imports of rice by fiscal years from 1895 to 1921, inclusive.

The totals of imports and exports for each year have been added by fiscal years, and show the following results:

	Pounds.
1921:	
Exportation	440,855,298
Importation	96,804,612
Surplus exportation over importation	344,050,686
1920:	
Exportation	483,385,259
Importation	179,921,961
Surplus exportation over importation	303,463,298
1919:	
Importation	363,726,263
Exportation	193,128,000
Surplus importation over exportation	170,598,263
1918:	
Importation	456,058,608
Exportation	196,363,268
Surplus importation over exportation	259,695,340
1917:	
Importation	216,048,858
Exportation	181,372,310
Surplus importation over exportation	34,676,548
1916:	
Importation	264,324,005
Exportation	121,967,465
Surplus importation over exportation	142,356,540
1915:	
Importation	277,191,472
Exportation	77,480,065
Surplus importation over exportation	199,711,407
1914:	
Importation	290,194,917
Exportation	22,414,326
Surplus importation over exportation	267,780,591
1913:	
Importation	222,103,547
Exportation	38,195,490
Surplus importation over exportation	183,908,057
1912:	
Importation	190,063,331
Exportation	39,446,571
Surplus importation over exportation	150,616,760
1911:	
Importation	208,774,795
Exportation	30,063,361
Surplus importation over exportation	178,711,434
1910:	
Importation	225,400,545
Exportation	26,799,188
Surplus importation over exportation	198,601,357
1909:	
Importation	222,900,422
Exportation	20,511,429
Surplus importation over exportation	202,388,993
1908:	
Importation	212,783,392
Exportation	28,444,415
Surplus importation over exportation	184,338,977
1907:	
Importation	209,603,180
Exportation	30,174,371
Surplus importation over exportation	179,428,809

	Pounds.
1906:	
Importation	166,549,957
Exportation	38,142,103
Surplus importation over exportation	128,407,854
1905:	
Exportation	113,282,760
Importation	106,483,515
Surplus exportation over importation	6,799,245
1904:	
Importation	154,221,772
Exportation	29,121,763
Surplus importation over exportation	125,100,009
1903:	
Importation	169,656,284
Exportation	19,751,448
Surplus importation over exportation	149,904,836
1902:	
Importation	157,658,894
Exportation	29,591,274
Surplus importation over exportation	128,067,620
1901:	
Importation	117,119,710
Exportation	25,527,846
Surplus importation over exportation	91,671,864
1900:	
Importation	116,679,891
Exportation	41,066,517
Surplus importation over exportation	75,613,374
1899:	
Importation	204,177,293
Exportation	15,334,589
Surplus importation over exportation	188,842,704
1898:	
Importation	190,285,315
Exportation	6,200,987
Surplus importation over exportation	184,084,328
1897:	
Importation	197,816,134
Exportation	3,905,734
Surplus importation over exportation	193,910,400
1896:	
Importation	146,724,607
Exportation	15,031,554
Surplus importation over exportation	131,693,053
1895:	
Importation	219,564,320
Exportation	1,573,336
Surplus importation over exportation	217,990,984

How the pending legislation compares with previous tariff duties on rice in modern times:

Bills.	Paddy, or rough rice.	Brown rice (hulls removed).	Milled, or cleaned rice.	Broken rice, flour, etc.
H. R. 7456 (pending bill).	1 cent....	1½ cents..	2 cents...	½ of 1 cent.
Emergency.....	¾ of 1 cent	1¾ cents..	2¾ cents..	¼ of 1 cent.
Senate amendment....	⅝ of 1 cent	⅝ of 1 cent	1 cent...	Do.
Underwood bill.....	...do.....	...do.....	...do.....	Do.
Payne-Aldrich bill....	¾ of 1 cent	1¼ cents..	2 cents...	Do.
McKinley bill.....	¾ of 1 cent	1½ cents .	2 cents ..	¼ of 1 cent.
Wilson-Gorman bill....	...do.....	1/16 of 1 cent	1½ cents..	Do.
Tariff act, Oct. 1, 1890.	...do.....	1¼ cents..	2 cents...	1¼ cents.
Tariff act, Mar. 3, 1883 .	1¼ cents..	1½ cents..	2½ cents..	20 per cent ad valorem.

APPENDIX B.

FARMERS OF 40 CENTURIES, OR PERMANENT AGRICULTURE IN CHINA, KOREA, AND JAPAN.

(By F. H. King, D. Sc., formerly professor of agricultural physics in the University of Wisconsin and Chief of Division of Soil Management, United States Department of Agriculture. 1911.)

Page 2: We were instructed, surprised, and amazed at the conditions and practices which confronted us whichever way we turned; instructed in the ways and extent to which these nations for centuries have been and are conserving and utilizing their natural resources, surprised at the magnitude of the returns they are getting from their fields, and amazed at the amount of efficient human labor cheerfully given for a daily wage of 5 cents and their food, or for 15 cents, United States currency, without food.

The three main islands of Japan in 1907 had a population of 46,977,003, maintained on 20,000 square miles of cultivated field. This is at the rate of more than three people to each acre and of 2,349 to each square mile; and yet the total agricultural imports into Japan in 1907 exceeded the agricultural exports by less than $1 per capita.

Page 3: In the Shantung Province we talked with a farmer having 12 in his family and who kept one donkey, one cow, both exclusively laboring animals, and two pigs on 2.5 acres of cultivated land, where he grew wheat, millet, sweet potatoes, and beans. Here is a density of population equal to 3,072 people, 256 donkeys, 256 cattle, and 512 swine per square mile. In another instance, where the holding was 1⅞ acres, the farmer had 10 in his family and was maintaining one donkey and one pig, giving to this farm land a maintenance capacity of 3,840 people, 384 donkeys, and 384 pigs to the square mile, or 240 people, 24 donkeys, and 24 pigs to one of our 40-acre farms which our farmers regard too small for a single family.

Pages 5, 6, and 7: Many factors and conditions conspire to give to the farms and farmers of the Far East their high maintenance efficiency, and some of these may be succinctly stated. The portions of China, Korea, and Japan where dense populations have developed and are being maintained occupy exceptionally favorable geographic positions, so far as these influence agricultural production. Canton, in the south of China, has the latitude of Habana, Cuba, while Mukden, in Manchuria, and northern Honshu, in Japan, are only as far north as New York City, Chicago, and northern California. The United States lies mainly between 50° and 30° of latitude, while these three countries lie between 40° and 20°, some 700 miles farther south. This difference of position, giving them longer seasons, has made it possible for them to devise systems of agriculture whereby they grow two, three, and even four crops on the same piece of ground each year. In southern China, in Formosa, and in parts of Japan two crops of rice are grown; in the Cekiang Province there may be a crop of rape, of wheat or barley, or of windsor beans or clover, which is followed in midsummer by another of cotton or of rice. In the Shantung Province wheat or barley in the winter and spring may be followed in summer by large or small millet, sweet potatoes, soy beans, or peanuts. At Tientsin, 39° north, in the latitude of Cincinnati, Indianapolis, and Springfield, Ill., we talked with a farmer who followed his crop of wheat on his small holding with one of onions and the onions with cabbage, realizing from the three crops at the rate of $163 gold per acre; and with another who planted Irish potatoes at the earliest opportunity in the spring, marketing them when small, and following these with radishes, the radishes with cabbage, realizing from the three crops at the rate of $203 per acre.

Nearly 500,000,000 people are being maintained chiefly upon the products of an area smaller than the improved farm lands of the United States. Complete a square on the lines drawn from Chicago southward to the Gulf and westward across Kansas, and there will be inclosed an area greater than the

cultivated fields of China, Korea, and Japan, and from which five times our present population are fed.

The rainfall in these countries is not only larger than that even in our Atlantic and Gulf States, but it falls more exclusively during the summer season, when its efficiency in crop production may be highest. South China has a rainfall of some 80 inches, with little of it during the winter, while in our Southern States the rainfall is nearer 60 inches, with less than one-half of it between June and September. Along a line drawn from Lake Superior through central Texas the yearly precipitation is about 30 inches, but only 16 inches of this falls during the months May to September, while in the Shantung Province, China, with an annual rainfall of little more than 24 inches, 17 of these fall during the months designated, and most of this in July and August. When it is stated that under the best tillage and with no loss of water through percolation, most of our agricultural crops require 300 to 600 tons of water for each ton of dry substance brought to maturity, it can be readily understood that the right amount of available moisture, coming at the proper time, must be one of the prime factors of a high maintenance capacity for any soil, and hence that in the Far East, with their intensive methods, it is possible to make their soils yield large returns.

Page 7: Notwithstanding the large and favorable rainfall of these countries, each of the nations has selected the one crop which permits it to utilize not only practically the entire amount of rain which falls upon their fields but in addition enormous volumes of the run-off from adjacent uncultivable mountain country. Wherever paddy fields are practicable there rice is grown. In the three main islands of Japan 56 per cent of the cultivated fields—11,000 square miles—is laid out for rice growing and is maintained under water from transplanting to near harvest time, after which the land is allowed to dry, to be devoted to dry-land crops during the balance of the year, where the season permits.

Page 8: It is difficult to convey by word or map an adequate conception of the magnitude of the systems of canalization which contribute primarily to rice culture. A conservative estimate would place the miles of canals in China at fully 200,000, and there are probably more miles of canal in China, Korea, and Japan than there are miles of railroad in the United States. China alone has as many acres of rice each year as the United States has in wheat, and her annual product is more than double and probably threefold our annual wheat crop, and yet the whole of the rice area produces at least one and sometimes two other crops each year.

Page 11: Notwithstanding the enormous acreage of rice planted each year in these countries it is all set in hills and every spear is transplanted. Doing this they save in many ways, except in the matter of human labor, which is the one thing they have in excess. By thoroughly preparing the seed bed, fertilizing highly, and giving the most careful attention they are able to grow on 1 acre, during 30 to 50 days, enough plants to occupy 10 acres, and in the meantime on the other 9 acres crops are maturing, being harvested, and the fields being fitted to receive the rice when it is ready for transplanting, and in effect this interval of time is added to their growing season.

ILLUSTRATION OF JAPANESE AND CHINESE LABOR.

Pages 17, 18, and 19: Everything here was strange, and the scenes shifted with the speed of the wildest dream. Now it was driving piles for the foundation of a bridge. A tripod of poles was erected above the pile and from it hung a pulley. Over the pulley passed a rope from the driving weight, and from its end at the pulley 10 cords extended to the ground. In a circle at the foot of the tripod stood 10 agile Japanese women. They were the hoisting engine. They chanted in perfect rhythm, hauled and stepped, dropped the weight and hoisted again, making up for heavier hammer and higher drop by more blows per minute. When we reached Shanghai we saw the pile driver being worked from above. Fourteen Chinese men stood upon a raised staging, each with a separate cord passing direct from the hand to the weight below. A concerted, half-musical chant, modulated to relieve monotony, kept all hands together. What did the operation of this machine cost? Thirteen cents gold per man per day, which covered fuel and lubricant, both automatically served. Two additional men managed the piles, 2 directed the hammer, 18 manned the outfit. Two dollars and thirty-four cents per day covered fuel, superintendence, and repairs. There was almost no capital invested in machinery. Men were plenty and to spare. Rice was the fuel, cooked without salt, boiled stiff, reinforced with a bit of pork or fish, appetized with salted cabbage or turnip and perhaps 2 or 3 of 40 and more other vegetable relishes. And are these men strong and happy? They certainly were strong. They are steadily increasing their millions, and as one stood and watched them at their work their faces were often wreathed in smiles and wore what seemed a look of satisfaction and contentment.

CHAPTER III.

EXTREME VALUE OF CHINESE MONEY.

Pages 76 and 77: Perhaps nothing better measures the intensity of the maintenance struggle here and better indicates the minute economies practiced than the value of their smallest currency unit, the cash, used in their daily retail transactions. On our Pacific coast, where less thought is given to little economies than perhaps anywhere else in the world, the nickel is the smallest coin in general use, 20 to the dollar. For the rest of the United States, and in most English-speaking countries, 100 cents, or half pennies, measure an equal value. In Russia 170 kopecks, in Mexico 200 centavos, in France 250 two-centime pieces, and in Austria-Hungary 250 two-heller coins equal the United States dollar; while in Germany 400 pfennigs and in India 400 pie are required for an equal value. Again 500 penni in Finland and of stotinki in Bulgaria, of centesimi in Italy, and of half cents in Holland equal our dollar; but in China the small daily financial transactions are measured against a much smaller unit, their cash, 1,500 to 2,000 of which are required to equal the United States dollar, their purchasing power fluctuating daily with the price of silver.

RICE IN CHINA.

Two crops of rice are commonly grown each year in southern China, and during the winter and early spring grain, cabbage, rape, peas, beans, leeks, and ginger may occupy the fields as a third or even fourth crop, making the year's product from the land very large; but the amount of thought, labor, and fertilizers given to securing these is even greater and beyond anything Americans will endure. How great these efforts are will be appreciated from what is seen in figure 50, representing two fields thrown into high ridges, planted to ginger and covered with straw. All of this work is done by hand, and when the time for rice planting comes every ridge will again be thrown down and the surface smoothed to a water level. Even when the ridges and beds are not thrown down for the crops of rice the furrows and the beds will change places so that all the soil is worked over deeply and mainly through hand labor. The statement so often made that these people only barely scratch the surface of their fields with the crudest of tools is very far from the truth, for their soils are worked deeply and often, notwithstanding the fact that their plowing, as such, may be shallow.

WAGES IN CHINA.

Page 93: Through Dr. John Blumann, of the missionary hospital at Tungkun, east from Canton, we learned that the good rice lands there a few years ago sold at $75 to $130 per acre, but that prices are rising rapidly. The holdings of the better class of farmers there are 10 to 15 mow—1⅔ to 2½ acres—upon which are maintained families numbering 6 to 12. The day's wage of a carpenter or mason is 11 to 13 cents of our currency, and board is not included, but a day's ration for a laboring man is counted worth 15 cents Mexican, or less than 7 cents gold.

WAGES IN SHANTUNG.

At Tsingtau, in the Shantung Province, a missionery was paying a Chinese cook $10 per month, a man for general work $9 per month, and the cook's wife, for doing the mending and other family service, $2 per month, all living at home and feeding themselves. This service, rendered for $9.03 gold per month, covers the marketing, all care of the garden and lawn, as well as all the work in the house.

Page 119: We had a soil tube made in the shops of a large English shipbuilding and repair firm, employing many hundred Chinese as mechanics, using the most modern and complex machinery, and the foreman stated that as soon as the men could understand well enough to take orders they were even better shop hands than the average in Scotland and England. An educated Chinese booking clerk at the Soochow railway station, in Kiangsu Province, was receiving a salary of $10.75 gold per month.

PEOPLE OF CHINA AND JAPAN ARE VEGETARIANS.

Pages 134 and 135: The small number of animal products which are included in the market list given should not be taken as indicating the proportion of animal to vegetable foods in the dietaries of these people. It is nevertheless true that they are vegetarians to a far higher degree than are most western nations, and the high maintenance efficiency of the agriculture of China, Korea, and Japan is in great measure rendered possible by the adoption of a diet so largely vegetarian. Hopkins, in his Soil Fertility and Permanent Agriculture, page 234, makes this

pointed statement of fact: "One thousand bushels of grain has at least five times as much food value and will support five times as many people as will the meat or milk that can be made from it."

AREA IN RICE IN JAPAN AND CHINA.

Page 272: In the three main islands of Japan more than 50 per cent of the cultivated land produces a crop of water rice each year and 7.96 per cent of the entire land area of the Empire, omitting far-north Karafuto. In Formosa and in southern China large areas produce two crops each year. At the large mean yield used in the computation the estimated acreage of rice in China proper amounts to 5.93 per cent of her total area, and this is 7,433 square miles greater than the acreage of wheat in the United States in 1907. Our yield of wheat, however, was but 19.000,000 tons. while China's output of rice was certainly double and probably three times this amount from nearly the same acreage of land; and notwithstanding this large production per acre, more than 50 per cent, possibly as high as 75 per cent, of the same land matures at least one other crop the same year, and much of this may be wheat or barley, both chiefly consumed as human food.

Pages 276 and 277: Great as is the acreage of land in rice in these countries, but little, relatively, is of the dry-land type, and the fields upon which most of the rice grows have all been graded to a water level and surrounded by low, narrow raised rims, such as may be seen in Figure 149 and in Figure 150, where three men are at work on their foot-power pump flooding fields preparatory to transplanting the rice. If the country was not level then the slopes have been graded into horizontal terraces varying in size according to the steepness of the areas in which they were cut. We saw these often no larger than the floor of a small room, and Professor Ross informed me that he walked past those in the interior of China no larger than a dining table, and that he saw one bearing its crop of rice, surrounded by its rim and holding water, yet barely larger than a good napkin. The average area of the paddy field in Japan is officially reported at 1.14 se, or an area of but 31 by 40 feet. Excluding Kokkaido, Formosa, and Karafuto, 53 per cent of the irrigated rice lands in Japan are in allotments smaller than one-eighth of an acre, and 74 per cent of other cultivated lands are held in areas less than one-fourth of an acre, and each of these may be further subdivided.

TRANSPLANTING RICE.

Page 284: Extensive as is the acreage of irrigated rice in China, Korea, and Japan, nearly every spear is transplanted; the largest and best crop possible, rather than the least labor and trouble, as is so often the case with us, determining their methods and practices.

Page 302: When the harvest time has come, nothwithstanding the large acreage of grain, yielding hundreds of millions of bushels, the small, widely scattered holdings and the surface of the fields render all of our machine methods quite impossible. Even our grain cradle, which preceded the reaper, would not do, and the great task is still met with the old-time sickle, as seen in Figure 176, cutting the rice, hill by hill, as it was transplanted.

Mr. KING. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Assistant Secretary called the roll, and the following Senators answered to their names:

Ashurst	Harreld	McNary	Simmons
Broussard	Harris	Moses	Smith
Bursum	Harrison	Nelson	Smoot
Cameron	Heflin	New	Sterling
Capper	Johnson	Newberry	Sutherland
Caraway	Jones, N. Mex.	Nicholson	Townsend
Culberson	Kellogg	Norbeck	Trammell
Curtis	Kendrick	Overman	Underwood
Dial	Keyes	Pepper	Wadsworth
Dillingham	King	Phipps	Walsh, Mass.
Edge	Ladd	Poindexter	Walsh, Mont.
Ernst	La Follette	Pomerene	Warren
Fernald	Lenroot	Ransdell	Willis
France	Lodge	Rawson	
Gerry	McCumber	Robinson	
Gooding	McLean	Sheppard	

Mr. HARRIS. My colleague [Mr. WATSON of Georgia] is absent on account of illness.

Mr. GERRY. I wish to announce that the Senator from Nevada [Mr. PITTMAN] is necessarily absent on account of illness in his family.

The PRESIDING OFFICER. Sixty-one Senators having answered to their names, a quorum is present.

Mr. LA FOLLETTE obtained the floor.

Mr. POMERENE. Mr. President, may I ask the Senator from Wisconsin to yield to me for a moment to make a correction?

Mr. LA FOLLETTE. I yield with pleasure.

Mr. POMERENE. I would like the attention of the senior Senator from Utah [Mr. SMOOT].

In the CONGRESSIONAL RECORD of July 6 an effort was made to charge Democratic Senators with undue delay in the discussion of the tariff bill, and attention was called to the discussion of extraneous matters by various Senators. On page 10012 the Senator from Utah charged that I took four pages of the CONGRESSIONAL RECORD to discuss the subject of the election of Senators. That is a very important subject, but instead of taking four pages I took less than one column and a half of the CONGRESSIONAL RECORD, which will be found on page 6871, and on page 6872 there are some eight or nine lines. So the Senator from Utah was away from the fact just about three or four hundred per cent.

I am not objecting to this, but I do think when a statement of that kind is made it should be accurate. I have been in the habit of going to the Senator from Utah for statistical information, and I am very glad to do it. I am quite sure that this was not his own estimate, but perhaps an estimate by some clerk. Either he will have to get another clerk or I shall have to get another statistical adviser.

Mr. SMOOT. Mr. President, I want to say to the Senator from Ohio that I regret a mistake occurred. I frankly say to the Senator that I did not intend to put that data in the RECORD until after I had checked it up myself, but the question came up suddenly and I had that statement in my desk. If there are mistakes in it, I would like other Senators to call attention to them. There was, of course, no intention of making any error.

Mr. WALSH of Massachusetts. Mr. President, I would like to call attention to the fact that a similar mistake was made in my own case. I addressed the Chair on one occasion in reference to secret meetings of the Finance Committee. That provoked a discussion in which the Senator from Indiana [Mr. WATSON], the Senator from North Dakota [Mr. MCCUMBER], and the Senator from Utah [Mr. SMOOT] participated and which covered some pages of the RECORD. The amount of space which I took was less than a column, and yet I am charged with two and one-half pages.

Mr. SMOOT. That came about through interruptions. I did not take out for interruptions on either side of the Chamber, and I did not pretend to do so. I am in no position to state that all the figures are correct, because I have not checked them. I have been very careful in all statements I have made on the floor of the Senate, but I generally do the work myself and I do not leave it to any clerk. So when I make a statement I generally feel positive that what I am saying is correct. I apologize to the Senator from Ohio if the clerk made a mistake in the number of pages taken by him in extraneous debate.

Mr. SIMMONS. Mr. President, will the Senator from Wisconsin allow me just a moment?

Mr. LA FOLLETTE. I am very anxious to proceed. Of course, I want to be obliging to the Senator, but I shall conclude in a short time, if I may be permitted to proceed.

Mr. SIMMONS. Very well.

Mr. LA FOLLETTE resumed the speech begun by him yesterday. After having spoken for some time,

Mr. HEFLIN. Mr. President, I think we ought to have more Senators here to listen to the Senator from Wisconsin, and, if he will permit me, I should like to make the point of no quorum. I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KING in the chair). The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Harris	McNary	Smith
Borah	Harrison	Moses	Smoot
Broussard	Heflin	Nelson	Spencer
Bursum	Johnson	New	Sterling
Cameron	Jones, N. Mex.	Newberry	Sutherland
Capper	Kellogg	Overman	Townsend
Caraway	Kendrick	Phipps	Underwood
Curtis	Keyes	Poindexter	Walsh, Mass.
Dial	King	Pomerene	Walsh, Mont.
Dillingham	La Follette	Ransdell	Warren
Elkins	Lenroot	Robinson	Watson, Ind.
Ernst	Lodge	Sheppard	Willis
Fernald	McCumber	Shortridge	
Gerry	McKinley	Simmons	

The PRESIDING OFFICER. Fifty-four Senators have answered to their names. A quorum is present. The Senator from Wisconsin will proceed.

Mr. LA FOLLETTE. Mr. President, I resume my discussion at the point where I concluded when we recessed last evening.

Do the gentlemen responsible for this bill imagine that the people have forgotten? Do you think that the people will calmly accept the burdens in 1922 which they so decisively refused to carry in 1910 and 1912? There is just one way, Mr.

President, in which to save the Republican Party from defeat in the congressional election of 1922 and from disaster in the presidential election of 1924, and that is to return this bill to the committee and rewrite all the schedules of it so that they conform to the old Republican principle of protection by merely equalizing the cost of production at home and abroad, and if they are unable so to do, then to abandon general tariff legislation at this time.

It may be said, Mr. President, that although the tariff rates on the cotton schedules of the Fordney-McCumber bill, which we are about to consider, are as high or higher than those of the Payne-Aldrich bill, that nevertheless conditions have changed and that therefore the rates of the present bill are justified, although it is admitted that the rates of the Payne-Aldrich bill were indefensible. It is true that conditions have changed, but every change in condition is of a character which particularly makes for lower and not for higher rates on cotton cloth.

Past and present competition certainly do not justify high rates on cotton cloth. Are they justified by potential competition? The answer is no. American cotton-cloth manufacturers fear no competition from Japan. Our imports of cotton cloth from Japan are small and consist almost entirely of Japanese crêpe and the stenciled dyed tablecloths and mats, known as Japanese blue prints. These goods are sold because they are oriental novelties; but on cloths which are used in quantity, such as sheetings, print cloths, fine lawns, and so forth, the Japanese have been unable to secure a foothold in this country. Their sheetings are inferior in manufacture, and, because made from the rougher cotton of India, the American consumer will not use them. In goods requiring the use of American or Egyptian cotton, such as print cloths and lawns, the Japanese costs of production are higher than are the American costs of production. For corroboration of these statements I refer Senators to the Japanese Cotton Industry Trade, a report published by the United States Tariff Commission after sending an expert to Japan to ascertain the facts. That publication is accessible to every Senator, and it puts the quietus on the claim of Japanese competition.

American cotton-cloth manufacturers do not fear competition from Germany. The German cotton industry is confined almost exclusively to coarse and medium goods and uses few automatic looms. They have never been able to sell us sheeting or print cloth or fine lawns, and in the past have been confined mainly to coarse colored goods, mainly specialties where they had some advantage in dyes. This advantage they no longer have; and they will doubtless be a still smaller factor on the American market in the future.

With the bogies of Japan and Germany eliminated from the discussion, what countries remain? The United Kingdom, France, and Switzerland. Swiss exports are mainly of swivel-woven goods, particularly the class of fabrics which are known as dotted Swisses, and fine organdies made of high-count yarns. There are no swivel looms in American cotton mills, as this class of work is too slow and tedious to appeal to our manufacturers, so imports of dotted Swisses are noncompetitive. The Swiss organdies owe their sale to a peculiar gum finish, which enables ladies' collars made therefrom to withstand repeated launderings, and to their unexcelled bleaching. French goods are partly of fine lawns and partly of novelties. Neither the French nor the Swiss attempt to compete with the general run of staple fabrics which are made in the United States.

The United Kingdom of Great Britain is the one important competitor of the American cotton-cloth manufacturer in domestic and in foreign trade. Here again, though, there is no competition in the staple fabrics that make up the bulk of our trade, and imports from England are confined to fabrics which are sold because of fine counts or because of special finish. One of the most prominent of the latter cloths is the 8-harness sateen lining known as Venetians, which is dyed and mercerized and schreinered to imitate silk. The production of these goods in the United States, inaugurated during the war, is steadily expanding, and does not need a high duty to continue the gradual confining of the British fabrics to the very highest grades.

It may be noted that imported cotton cloths rarely undersell the domestic; in fact, the great bulk are imported because of novelty or of superiority in make or finish, and sell on the American market at a higher price than the nearest comparable domestic fabric. This fact has been proved by investigations conducted by the United States Tariff Commission and also, through the Treasury Department, by the Senate Finance Committee. Further corroboration is afforded by the International Comparisons of Prices of Cotton Cloth, compiled and published monthly by the Bureau of Business Research of Harvard University. These comparisons, which are based on staple gray goods, show that the level of American prices is but slightly different from the British; in fact, even substantially below the British and in some periods even below the Japanese prices.

Mr. SIMMONS. Mr. President, would it interrupt the Senator for me to ask him if, in the course of his exhaustive investigation, he has been able to ascertain the amount of imports of the class of cotton goods which are made in this country?

Mr. LA FOLLETTE. Such imports are negligible, I will say in answer to the Senator. That particular class of cotton goods is not made in this country, because it can not be made profitably here and our manufacturers find it greater to their profit to make other classes of goods.

Mr. SIMMONS. Do they not find it greatly to their advantage in the way of getting tariff duties to allow certain classes of goods to be exclusively manufactured elsewhere?

Mr. LA FOLLETTE. Assuredly they do.

It will be remembered that the Tariff Board in 1911 found that on many cloths, particularly staple goods which could be made on automatic looms, the American prices were the lowest. This accounts in large measure for the increasing success of our export trade in cotton cloth. Only on goods involving an unusual proportion of labor cost, as well as very fine goods and specialties, where the rate of output is necessarily slow, were we at a disadvantage. Our manufacturers are unwilling to enter that field, but that furnishes no excuse for the extravagant duties on the whole cotton schedule.

This condition obtains to-day with the modifications that our industry has expanded in size and range until we are beginning to offer substantial competition abroad in medium fine goods, as well as in the coarse and medium goods which comprised our export trade prior to the World War.

Wages in the cotton industry in England and the United States are closer together than they were before the war. This is shown by a contrast of Lancashire and Fall River weaving rates, which I propose to put in the RECORD, and I now ask leave to print in the RECORD a table showing the facts.

The PRESIDING OFFICER. Without objection, the table will be included in the RECORD.

The matter referred to is as follows:

COTTON WEAVING RATES IN LANCASHIRE.

Weavers and other operatives in the Lancashire cotton mills work under the terms of collective wage agreements that are made up for fixed periods. For each section of the industry there is a "standard list" that is basic, and changes in rates of payment are stated in percentages of this fixed list. For cotton weavers the rate of payment was the standard list, net, from April 19, 1906, to March 1, 1912, when there was an advance of 5 per cent on list. Subsequent changes have been as follows:

	Total of standard list rates.	Per cent of 1914 rate.
	Per cent.	*Per cent.*
January, 1916, 5 per cent advance, on list	110	104.76
January, 1917, 5 per cent advance, on list	115	109.52
July, 1917, 10 per cent advance, on list	125	119.05
December, 1917, 15 per cent advance, on list	140	133.33
June, 1918, 25 per cent advance, on list	165	157.14
December, 1918, 50 per cent advance, on list	215	204.76
June, 1919, 30 per cent advance, on list	245	233.33
May, 1920, 70 per cent advance, on list	315	300.00
June, 1921, 60 per cent reduction, on list	255	242.86
December, 1921, 10 per cent reduction, on list	245	233.33

Since the rate in 1914 was 105 per cent of the standard list, the per cent that the rate in any other year is of the 1914 rate has been obtained by dividing such rate by 1.05.

It is seen that from May, 1920, to June, 1921, the rate was precisely three times that paid in 1914. In June, 1921, employers and employees agreed on a reduction of 70 per cent on list, of which 60 per cent was to go into effect immediately and 10 per cent on pay day in the week ending December 31, 1921. The weaving rates in January, 1922, are therefore two and one-third times those obtained in 1914.

It is to be noted that the English hours of work were 55½ per week in 1914 and that these were reduced on July 10, 1919, to 48 hours per week. The actual weekly wages received by the weaver, assuming output per weaver per hour to have remained the same, are therefore 48 divided by fifty-five and one-half times 233.33, which is equal to 206.95 per cent of the weekly wages received in 1914.

COTTON-WEAVING RATES IN FALL RIVER.

The American cotton industry is scattered over a wide area and there is no uniform list of piecework rates such as prevail in Lancashire. Fall River, the largest center, has such a list by which weavers are paid on print cloths. The basic rate is that paid for weaving a 47½-yard cut of 28-inch, 64 by 64, 7 yards per pound print cloth. This rate has varied as follows:

Calendar years:	Cents per cut.
1877	19
1878	18
1880	21
1884	18.50
1885	16.50
1886	18.15
1888	19
1892	19.63

Calendar years—Continued.	Cents per cut.
1892	21
1893	18
1894	16
1895	18
1898	16
1899	18
1899	19.80
1902	21.78
1903	19.80
1904	17.32
1905	18.61
1906	19.80
1906	21.78
1907	23.96
1908	19.66
1912	21.63
1916	22.71
1916	24.98
1916	27.48
1917	30.23
1917	34.01
1918	39.11
1919	44.98
1919	50.50
1920	58.19
1920	45.10

The percentage advances and reductions since 1914 have therefore been as follows:

	Per cent of 1914 rates.
January, 1916, 5 per cent increase of existing rates	105.00
May, 1916, 10 per cent increase of existing rates	115.49
December, 1916, 10 per cent increase of existing rates	127.04
June, 1917, 10 per cent increase of existing rates	139.76
December, 1917, 12½ per cent increase of existing rates	157.24
June, 1918, 15 per cent increase of existing rates	180.81
June, 1919, 15 per cent increase of existing rates	207.95
December, 1919, 12½ per cent increase of existing rates	233.93
June, 1920, 15 per cent increase of existing rates	269.02
December, 1920, 22½ per cent decrease of existing rates	208.51

The Fall River weaving rates therefore attained a height in June, 1920, that was 2.69 times that of 1914, and to-day, January, 1922, are 2.0851 times that of 1914.

It is to be noted that the hours of work in Massachusetts cotton mills were reduced on June 2, 1919, from 54 down to 48 hours per week. The actual weekly wages received by the weaver, assuming the output per weaver per hour to have remained the same, are therefore 48 divided by 54, or eight-ninths times 208.51, which is equal to 185.34 per cent of the weekly wages received in 1914.

Mr. LA FOLLETTE. It is seen from these tables that the piecework rate for weaving cotton cloth in force January 1, 1922, was 2.333 times that in force July 1, 1914, in the case of Lancashire, as compared with only 2.0851 in the case of Fall River.

Fall River has been taken as indicative of the American cotton industry because it has a standard scale of weaving rates, but if the entire American industry, South as well as North, were considered as a unit, it would be found that American weaving rates are less than double those of July 1, 1914, whereas English weaving rates are two and two-thirds times those of July 1, 1914. This is due to the fact that since the peak in June, 1920, wages have been reduced to a much greater extent in country mills than in city mills, and that hours of work in States other than Massachusetts have not been lowered to the same extent. In fact, while English mills are restricted to 48 hours a week, as also are most of the mills of the Continent, American mills outside of Massachusetts work longer hours than 48—many operating 55 or more hours per week.

Including day and piece workers, wages are in general lower in English than in American mills, although closer together than before the war. In regard to weaving, however, the English rates are, on a large proportion of fabrics, actually more per yard than the American. The American weaver on sheetings and print cloths gets less per yard but more per week, due mainly to the much larger use of automatic looms in this country. Over half of our cotton looms are automatic, whereas less than 10 per cent of the English are automatic. English weavers ordinarily operate four plain looms on cloths that an American weaver would operate eight plain looms on; this being partly due, of course, to the differences in system whereby the American weaver is enabled to confine himself to weaving only, and work incidental thereto, such as sweeping, cleaning looms, and so forth, being performed by cheaper labor. On automatic looms American weavers average about 20, whereas, as stated on page 22 of the Textile World of April 22, 1922, some American weavers operate as many as 40 looms each on fine lawns.

The point that I want to emphasize at this stage of my argument is that the findings of a Republican tariff board on the Aldrich rates in 1912 are directly in point in considering the competitive conditions with Great Britain at this time, and are made especially pertinent for the reason that the English rates of wages paid in cotton mills are more nearly on a level with the rates paid in this country now than they were in 1914, before the war in Europe. So that the findings of the tariff board as to the relative cost of cotton manufactures at that period become applicable here and must be accepted as standard high-grade proof, for there is a less difference in the comparative rates of wages between Great Britain and the United States to-day than there was when the tariff board made its report, to which I directed the attention of the Senate yesterday in a somewhat elaborate way.

Mr. POMERENE. Mr. President, it seems to be the opinion of the Senator from Wisconsin that the majority of the Finance Committee must get back to normalcy in their tariff views.

Mr. LA FOLLETTE. Yes; I do think that that is very important, Mr. President. We can not make a tariff bill based on the fluctuating and changing conditions of all industries at this time and expect it to be a fair and just measure. If we make it to-day it will not be applicable to the conditions to-morrow. If it is determined that we are to pass a general tariff bill at this time it is my contention—and I want to stress that as much as I can—that that bill should be made to conform as nearly as possible to normal conditions as they existed before the war, taking into account some probable changes. There may be changes which would require a reduction in rates, as shown by the comparative tables that I have just asked to have inserted into the RECORD; it may be that in some cases an advance in rates would be required. It should be made largely with regard to the restoration of normal conditions, and not with regard to the present unstable and daily changing conditions.

Mr. WALSH of Massachusetts. Mr. President——

Mr. LA FOLLETTE. I yield.

Mr. WALSH of Massachusetts. Do the tables which the Senator has introduced show that the wages paid to the cotton weavers of Massachusetts are less than those paid the weavers of England?

Mr. LA FOLLETTE. No; that is not my contention, Mr. President. They show that they are more nearly equal to-day than they were in 1912, 1913, and 1914, at the time that the tariff board made its report on the Aldrich rates, and stated that in the great majority of the instances the rates there fixed were not only enough to measure the difference in the cost of production but were sometimes two, three, four, and five hundred per cent more than the difference in the total cost of converting the goods from the raw material into the finished product. What I am contending for now is that the wages paid in the cotton industry of England and the wages paid in the cotton industry of America are more nearly on a parity to-day than they were at the time the Taft tariff board made its report, to which I called the attention of the Senate somewhat elaborately yesterday.

Mr. EDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Jersey?

Mr. LA FOLLETTE. I yield.

Mr. EDGE. Does the Senator believe that the type of scientific tariff bill to which he refers could be best prepared by a Senate committee, or by what might be termed a nonpartisan tariff board?

Mr. LA FOLLETTE. Mr. President, the present Tariff Commission has answered that question very definitely. Of course, as an abstract question, I should say that Congress ought to be guided by the report that would be made by a scientific commission after investigation; but the present Tariff Commission have been unable to furnish Congress any data on the difference in the cost of production between this and competing countries at this time. Why? Because the costs of production are changing hourly, daily, weekly, monthly. Since it is laid down as a cardinal principle in Republican platforms from the beginning down to now that in measuring the amount of protective duty that we shall impose there shall be a direct relation between the cost of production, the wages paid, the efficiency of labor, and all that is involved in it, in this country and in the competing country, if you can not get that data now then now is not the right time to make a general and sweeping revision of the tariff.

Mr. EDGE. Mr. President, with the most patriotic desire in the world on the part of the Senator and the members of the committee charged with the responsibility, does the Senator think that under ordinary circumstances, with all their varied responsibilities, they could ever be suitably equipped with the technical knowledge necessary to prepare a tariff bill such as the Senator describes?

Mr. LA FOLLETTE. Mr. President, that question has been answered innumerable times in the last 10 or 15 years. Every man who stands for anything that approaches scientific tariff making has contended that there should be a body independent of Congress that works all the while on all of the elements that enter into the comparative cost of production as between

this and competing countries. The standpatters in the present Senate—of whom the Senator from New Jersey is one of the most pronounced examples—have resisted the establishment of a tariff commission in this country for many years.

Mr. EDGE. I thank the Senator for the compliment.

Mr. LA FOLLETTE. Aldrich and Hale, when the Payne-Aldrich bill was pending, fought against the establishment of an effective tariff commission, and the RECORD is full of statements upon their part showing such opposition; but enlightened men for 25 years and more have contended that the only way to determine these nice questions of the cost of production is not in the committees of Congress but by an independent and scientific tariff commission.

Mr. EDGE. If the Senator will permit me once more, and then I will not interrupt him further——

Mr. LA FOLLETTE. I will permit a question. I do not want to be diverted at any length in my argument. If the Senator desires to submit a question, I will yield for that purpose.

Mr. EDGE. Following up the question that I have already propounded, I assume, then, that the Senator, inasmuch as he criticizes the work of the present committee which has presented this bill, really favors greater powers for some tribunal outside of a congressional committee. If he does, I must say that I agree with that contention, but I do not see how we can greatly improve the present system.

Mr. LA FOLLETTE. Let me say, in response to that, that the present Tariff Commission has that power now, but the conditions are not favorable to an exercise of that power, because all of the elements that they are to consider in arriving at a conclusion with respect to the cost of production are changing with every hour. Therefore they can not do their work. We can not create a tariff commission that could make a report to Congress to-day on the cost of production upon a single item covered by the tariff bill that would be reliable 10 days from to-day.

Mr. EDGE. Does not that make it all the more necessary to pass an elastic bill, a bill with discriminatory powers delegated to some authority?

Mr. LA FOLLETTE. No; that is the reason why it is all the more necessary for Senators to wake up to the fact that this is no time to enact a general tariff revision. It was seized upon as a favorable time because of the difference in exchange and because of the disordered state of business everywhere for the tariff robbers to rush in and demand big protection. Business was depressed here, business was depressed there, and that was made the excuse for coming before the committees of Congress and seeking to force through at this time a revision of the tariff that will be a millstone about the neck of the party and the Congress that passes it.

Mr. President, at the point where I was interrupted I was about to say that our system, by superior managerial ability and a larger use of automatic looms and other improved machinery, is operated more efficiently than the British. Those are all items to be taken into account by any committee seeking to adjust rates upon anything like an honest competitive basis or on the difference in the cost of production at home and abroad.

Mr. SIMMONS. Mr. President, may I mention to the Senator a statement I have seen somewhere, which I think is true, so far as investigations show? The statement I refer to is that in England, where the unions have probably greater control than they have in this country, the unions have been steadfastly opposed to the installation of automatic labor-saving machinery, and that their influence has operated in curtailing the installation of those labor-saving machines.

Mr. LA FOLLETTE. I think that is the answer. Labor is much more potential in Great Britain, much better organized, than it is here, and is able to carry the ideas to which the Senator refers into the operations of the cotton mills of Great Britain; but in this country production and everything that contributes to volume of output is the big thing the manager insists upon, because in the volume of output is found the great measure of profit and the command of the business.

Mr. SIMMONS. Is it not also true that the attitude of labor unions toward the number of men who should be employed to operate the machines has contributed largely to the situation which seems to exist there as compared with that here, namely, that more men are required there to operate the machines than are required in this country?

Mr. LA FOLLETTE. Mr. President, I think it is partly due to that. I would not want to say that it can be wholly ascribed to the greater power of the unions. I think there is no people on the face of the earth who move so rapidly in the direction of improvement and higher efficiency as the American people, and I believe that if it were possible for us to have an impartial investigation of the whole field of industrial production, comparatively, between the United States and the other countries, and to have an honest, scientific report made to the Congress of the United States, it would be the greatest blow ever dealt to the form of tariff making which we encounter every time there is a change in political supremacy in this country of ours.

Mr. UNDERWOOD. Mr. President, I am very much interested in the Senator's statistics. I think he has thrown great light on this controversy. But if the Senator stated the source from which he got his statistics I did not hear it, and I want to know, because possibly I may want to use the statistics hereafter. Will the Senator advise me as to the source from which he got these statistics?

Mr. LA FOLLETTE. Mr. President, the cotton experts employed by the Government assist Senators in studies of tariff legislation from time to time. Throughout my whole career in the Senate I have had to labor at a good deal of a disadvantage on tariff matters.

I want to say, with regard to the facts I am giving to the Senate now, while I am giving them as from myself, they are furnished to me——

Mr. UNDERWOOD. I do not ask the Senator for any name he may not want to give——

Mr. LA FOLLETTE. They were not furnished by any importer; I will say that much.

Mr. UNDERWOOD. I do not mean that. What I mean is, whether the facts come from an expert——

Mr. LA FOLLETTE. They come from one whom I consider the best expert on textiles in the United States.

Mr. UNDERWOOD. I do not want in any way to embarrass the Senator, but I am very much interested. I am a low-tariff man myself. I think these rates are entirely too high, and I am in accord with the Senator's argument. But even an expert goes to statistics to get the rates, and I thought possibly the Senator might furnish me with the source from which the statistician got his underlying, basic facts.

Mr. LA FOLLETTE. The statistician who furnished these tables to me secured his information from original sources on the ground abroad and here, and I will vouch, as a Member of this body with all that that implies, that he was a scientific and an impartial investigator.

Mr. UNDERWOOD. I thought they might possibly come from some Government reports, but it was a personal investigation and not a Government investigation.

Mr. LA FOLLETTE. No; it was not a personal investigation; it was an investigation conducted by our Government through its most experienced textile expert acting in his official capacity. I will say that much.

Mr. UNDERWOOD. I merely asked the Senator for information. I wanted to pursue it myself.

Mr. LA FOLLETTE. Mr. President, I thought I had made it clear that in regard to weaving the English rates are, on a large proportion of fabrics, actually lower per yard than the American. The American weaver on sheeting and plain cloth gets less per yard but more per week, due mainly to the much larger use of automatic looms in this country. English weavers ordinarily operate 4 plain looms on cloth that an American weaver would operate 8 plain looms upon, this being partly due, of course, to the difference in the system. On automatic looms American weavers average about 20, whereas, as stated in the Textile World, some American weavers operate as many as 40 looms each on fine lawn.

Mr. SIMMONS. That answers the question which I asked the Senator a little while ago with reference to the number of men operating certain classes of machinery in Great Britain and in this country. Referring to the opposition of the union and how that was controlled in Great Britain, I did not mean to criticize American labor unions, but rather to have the Senator infer in my opinion that American unions were much more liberal in these matters than the unions of Great Britain. They do not have the same control and they do not attempt to exert the same control over the operations of the factories in which they labor.

Mr. LA FOLLETTE. When I come to comment, as I shall shortly, on the matter of wages of cotton operatives in this country and the profits of mill owners, I think the Senator will find another answer. They have not the power, even if they had the disposition, in this country.

Mr. SIMMONS. I think there is a great deal in that. But what I rose to ask the Senator was this: The Senator has

spoken about the cost of piecework. Is the Senator able to segregate the piecework from the daywork of any particular article produced in Great Britain and also produced on the piecework basis in this country? I think that would give us the best index of the difference in the labor costs of the two countries that we could possibly get. The labor cost of piecework in Great Britain compared with the labor cost of piecework in this country, where the articles are the same, would give us a very good basis for an estimate of the difference in the labor cost of production in that country and in this country.

Mr. LA FOLLETTE. I am sure the Senator must have overlooked in part or not have heard in part my statement. The tables relate to similar production in the two countries. The piecework rates in the Fall River district of this country are comparable to the piecework rates in the Lancashire district as presented by the two tables which I have here.

Mr. SIMMONS. Wages paid generally do not measure the difference in cost of production, but the labor cost of piecework, I think, does very accurately measure the difference in cost of production.

Mr. LA FOLLETTE. Not only have excessive rates been written into paragraph 903 but the average rates of duty on countable cotton cloths dutiable thereunder have been substantially raised by the application to a large proportion of such cloths, probably to between one-third and one-half of the total of such cloths, of cumulative additional rates levied in paragraph 905a.

The levying of additional duties on Jacquard cloths is perhaps least open to criticism, inasmuch as many of these cloths carry a high labor cost percentage, but it may be noted that the Jacquard is also used on goods of medium price and quality and that, because it puts less strain on the yarn in weaving, it is frequently used in preference to dobbies, which describes another form of attachment.

The levying of additional duties on swivels can not be justified except as a revenue measure, inasmuch as American mills, after experiments in the past under high tariffs, discarded swivel looms as being less remunerative, because of their slow rate of production, than looms making plain, dobby, and Jacquard fabrics.

That does not justify putting these high duties on the Swiss goods which are made on these swivel looms when we have nothing to compete with it and when our consumers want that particular class of goods and can not get it any other way. The scheme of putting high duties upon that class of Swiss imports is to make the consumers of the country buy something they do not want at a higher price.

The extra duty on fabrics woven with eight or more harness cover not only eight harness sateen Venetian linings but also dobby goods. In the House bill it was intended to penalize in particular the import of Venetians, which constitutes the largest item of cotton cloth imported, but it is to be noted that the domestic manufacturers of Venetians have been gradually restricting English importations only to the highest qualities under the Underwood rates, and the higher rates of paragraph 903 will strongly accentuate this curtailment of imports without the necessity of this special additional rate of duty. In dobby goods the American industry is strong and increasing and has no need for exorbitant and extra rates of duty. The least justifiable class included under the cumulative rates of paragraph 905a is that of cloths made with drop boxes; this covers mainly ginghams and checks. The extra duty on drop-box fabrics, together with the extra rate in paragraph 903 on vat-dyed goods, was intended to stop importation of Scotch ginghams. It may be noted that the chairman of the committee on cotton manufacturers, Mr. Lowe, who secured these special additions to the high duties already agreed upon, is a manufacturer of ginghams.

American gingham manufacturers have been unusually prosperous for a number of years, having probably suffered less from the recent depression than any other section of the industry. Probably 98 per cent of the ginghams used in the United States are made here, and are mainly of 25s to 35s yarn counts; the relatively small amount imported is confined almost entirely to fine ginghams, made of yarn counts from 40s to 60s, and these imported ginghams are in almost every instance sold on the American market at higher prices than the nearest comparable ginghams of domestic manufacture. The "drop-box" provision serves not only to raise the price of such fine imported ginghams but makes prohibitive the duties on cheap shepherd checks, plaids, tweeds, and similar goods made with two colors in the filling.

The rates of duty in paragraph 903 are excessive enough without the addition of extra duties under paragraph 905a.

It thus plainly appears that the difference in labor cost in producing cotton goods between this country and England is much less than it was at the close of the period covered by the rates of the Payne-Aldrich law. It follows inevitably, therefore, that the tariff rates sufficient to equalize the cost of production in the two countries would be very substantially lower now than they would have been for that purpose in 1914 or in 1909, when the Payne-Aldrich law was enacted, or in 1912, when President Taft submitted to Congress the report of the Taft Tariff Board. If the rates of the Payne-Aldrich law were indefensible at the time they were in force, as stated in his message by President Taft, and as more elaborately stated by the Taft Tariff Board in its report, similar rates or anything approaching those rates are indefensible at the present time.

Not only is there this closer approximation of the wage rate between the two countries at the present time, but other factors have come into the problem in the last few years favoring the American as compared with the English cotton manufacturer. The Tariff Board in 1911 came to the conclusion and reported that staple plain cloths were made in the United States as cheaply or more cheaply than in England. Since that time not only have wages advanced proportionately more in England than in the United States in this industry but British taxes have been raised proportionately more than in this country. The price of mill supplies has been raised proportionately higher. During and just after the war a large proportion of English mills were sold at exorbitant prices, so that a large number of English cotton mills are working to-day under charges for depreciation and interest that are based on fully three times as great a valuation of mill-plant machinery as obtained before the war, with cotton costing about the same in Manchester as in Boston, while the English now have to pay considerably more for their material than do the American mills, due to increased ocean freight, storage, and other immediate charges. Although exact comparative data on this subject is not available so far as I am aware, it must be evident that the English costs of production have advanced much more than the American costs of production since 1914.

Every change in the industry which the passing years have brought since the Payne-Aldrich law was repudiated and repealed have been in favor of the American manufacturer as compared with the British cotton manufacturer. Every argument which applied against the Payne-Aldrich tariff rates when the people of this country so overwhelmingly repudiated that law is to-day much stronger against any similar rates or any rates that approach the Payne-Aldrich rates.

Why is it, Mr. President, that the people are having thrust upon them general tariff legislation at this time, and especially legislation which proposes to revise the rates upward to the extent proposed in the cotton schedules of this bill? On the average the rates as reported in this bill are higher than the rates of the Payne-Aldrich law, very much higher, of course, than the rates of the Underwood law. Some of the rates in the pending bill as reported by the Finance Committee of the Senate are very much higher than the Payne-Aldrich rates, some of them are lower than the Payne-Aldrich rates, but the average of all the rates of the bill as reported to the Senate is higher than the average of the Payne-Aldrich rate and very much higher than the average of the Underwood-Simmons rates, under which cotton manufacturing in the United States has advanced in its control of the world market.

Has the Congress come into the possession of any information worthy to be considered for rate-making purposes which was not possessed by the Tariff Board when it made the report from which I have quoted? Has the Tariff Commission, which succeeded the Tariff Board, gathered any facts or given to the Congress any information respecting the cost of production in this country and abroad which changes the figures of the Tariff Board to which I have referred? Every Senator who has followed this discussion knows that the Tariff Commission has made no study respecting the cost of production in this country and abroad, and particularly in England. The reason why the commission has not done so, as its members state to me, is because the unsettled conditions growing out of the war render it practically impossible to make reliable figures on production cost for purposes of comparison between this and other countries at this particular time. But, sir, that is the very reason why fundamental and general tariff legislation should not be undertaken at this time. The last authoritative word upon the comparison of costs of production in this country and in England in the cotton industry is found in the report of the Tariff Board, to which I have referred. And every change in the relative positions of the industry of the two countries which are really competitive—Great Britain and this country, and they are only

partly competitive—since that time has been in favor of America and against the English. If there is to be general tariff legislation in advance of a careful investigation of the subject by the Tariff Commission, all the logic and reason of the situation would require a revision downward, and a marked revision downward, instead of the proposal to double and in some instances treble the present rates as provided in this bill.

For the purpose of showing the growth of the cotton manufacturing business in this country under high tariffs and low tariffs and revenue tariffs, I have had a table prepared showing the imports and exports of cotton cloth, both in quantity and value, since the year 1891. This includes the period covered by the McKinley tariff, the Wilson tariff, the Dingley tariff, the Payne-Aldrich tariff, and the present law. I ask leave to have this table printed without taking the time of the Senate to read it.

The PRESIDING OFFICER (Mr. KING in the chair). Without objection, it is so ordered.

The table referred to is as follows:

Foreign trade of United States in cotton cloth.

Fiscal year.	Quantity.		Value.		Average value.	
	Imports.	Domestic exports.	Imports.	Domestic exports.	Imports per square yard.	Exports per linear yard.
	Square yds.	*Linear yds.*	*Dollars.*	*Dollars.*	*Cents.*	*Cents.*
1891	32,194,940	174,546,272	4,226,663	11,863,046	13.13	6.80
1892	34,230,070	183,754,321	4,508,915	11,158,023	13.17	6.07
1893	45,669,241	143,792,114	5,705,068	9,108,484	12.49	6.33
1894	27,581,490	185,887,736	3,465,333	11,494,786	12.56	6.18
1895	46,722,296	184,258,061	5,516,687	10,479,217	11.81	5.69
1896	42,068,865	225,139,368	4,998,739	12,953,357	11.88	5.76
1897	40,178,832	313,533,044	4,846,318	17,281,620	12.06	5.51
1898	43,440,363	270,507,818	5,304,851	13,290,823	12.21	4.91
1899	54,294,327	412,004,055	6,911,306	18,969,897	12.73	4.60
1900	60,625,422	352,194,989	7,994,064	18,068,934	13.19	5.13
Average 1891-1900	42,700,665	244,561,778	5,347,794	13,467,819	12.52	5.51
1901	43,615,055	251,503,351	6,422,959	14,136,037	14.73	5.62
1902	48,260,978	504,773,813	7,238,355	25,861,196	15.00	5.12
1903	58,621,129	495,379,197	9,146,023	25,352,584	15.60	5.12
1904	50,254,073	247,380,737	8,043,146	14,696,199	16.00	5.94
1905	50,339,051	694,500,715	8,217,735	41,320,542	16.32	5.95
1906	74,868,012	711,493,054	11,322,411	43,181,860	15.12	6.07
1907	83,640,236	326,340,329	13,059,050	21,239,247	15.61	6.51
1908	79,212,048	205,994,812	12,320,893	14,268,083	15.55	6.93
1909	68,914,101	367,631,542	10,499,288	21,693,080	15.24	5.90
1910	65,350,501	309,911,304	9,681,846	19,971,491	14.81	6.44
Average 1901-1910	62,307,518	411,490,885	9,595,171	24,172,032	15.40	5.87
1911	55,516,744	346,590,169	8,832,673	24,387,099	15.91	7.04
1912	46,041,533	476,778,499	7,638,631	31,388,998	16.59	6.58
1913	43,648,762	444,729,241	7,717,873	30,668,234	17.68	6.90
1914	58,621,496	414,860,013	11,523,829	28,844,627	19.66	6.95
1915	45,705,579	396,944,195	7,208,472	28,682,515	15.17	7.23
1916	53,800,547	550,571,720	9,002,572	46,381,390	16.73	8.42
1917	73,752,185	690,193,896	15,093,203	72,608,110	20.46	10.52
1918	44,522,663	684,927,075	12,693,999	103,416,102	28.51	15.10
1919	26,322,449	570,348,660	9,853,735	131,405,495	37.43	23.04
1920	119,482,121	867,292,647	40,314,983	211,937,783	33.74	24.44
Average 1911-1920	56,741,408	544,323,612	12,987,997	70,972,035	22.89	13.04
Calendar year 1921	112,340,259	[1] 551,521,981	33,723,908	71,578,227	[2] 30.02	[2] 12.98

[1] Square yards. [2] Cents per square yard.

[At this point Mr. LA FOLLETTE yielded to Mr. HEFLIN, who suggested the absence of a quorum, and the roll was called.]

Mr. LA FOLLETTE. The table which I have just presented to the Senate shows in the first place that imports of cotton cloth have at all times since 1891 been a mere fraction of our exports. Even in the greatest importing year, which was 1920, we imported only 119,482,121 square yards of cotton cloth, valued at a little over $40,000,000, while we exported 867,292,647 square yards, valued at practically $212,000,000. Throughout all this period neither our imports nor our exports appeared to have been substantially affected by tariff legislation. The reports show that at the present time our imports of cotton cloth at this time are less than 1 per cent of our production and are constantly decreasing, even under the Underwood-Simmons law, while our exports are over 11 per cent of our production and the percentage is constantly increasing. This is strikingly shown by a table which I have prepared and ask leave to insert in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table is as follows:

Relation of production, imports, and exports of countable cotton cloth in census years (all data for calendar years).

IN QUANTITY.

Calendar year.	Domestic production.[1]	Imports.	Relation of imports to production.	Domestic exports.	Probable relation of exports to production.[2]
	Square yards.	*Square yards.*	*Per cent.*	*Linear yards.*	*Per cent.*
1889	3,002,761,037	[3] 31,138,204	1.04	120,302,818	3.61
1899	4,422,269,461	[3] 61,846,781	1.40	418,504,132	9.46
1904	4,952,188,834	[3] 44,755,238	.90	434,989,686	8.78
1909	6,122,143,115	[3] 73,803,398	1.21	380,521,971	6.22
1914	6,883,796,000	[4] 58,550,790	.92	326,477,879	5.11
1919	5,787,409,000	[4] 47,846,024	.83	683,045,326	11.80

IN VALUE.

Calendar year.	Domestic production.[1]	Imports.	Relation of imports to production.	Domestic exports.	Probable relation of exports to production.[2]
			Per cent.		*Per cent.*
1889	$191,804,036	[3] $3,959,344	2.06	$8,635,988	4.50
1899	230,989,886	[3] 8,074,436	3.49	19,704,713	8.53
1904	302,685,143	[3] 7,258,159	2.40	25,568,009	8.45
1909	426,100,200	[3] 10,726,461	2.52	23,050,260	5.41
1914	440,574,000	[4] 10,570,016	2.40	23,635,599	5.36
1919	1,307,062,000	[4] 17,047,514	1.30	151,997,817	11.63

[1] The tabulation does not include special cloths such as pile fabrics, tapestries, toweling, terry weaves, and cloths containing silk, nor does it include towels, bedspreads, sheets, blankets, or other articles made from cotton cloth.

[2] This percentage is obtained after reducing linear yards to square yards by subtracting 10 per cent—that is, assuming that exports average nine-tenths of a yard in width.

[3] General imports, since imports for consumption are not obtainable by calendar years before 1911.

[4] Imports for consumption.

Mr. JONES of New Mexico. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LA FOLLETTE. I yield.

Mr. JONES of New Mexico. May I inquire of the Senator if he has any information as to whether or not the imported goods are comparable to the domestic product?

Mr. LA FOLLETTE. Very largely not; the imports are made up almost entirely, according to my information, of a quality and character of goods which we do not produce in this country and which our manufacturers do not want to produce, because they can produce other cotton cloths more profitably in larger volume.

Mr. JONES of New Mexico. I desired to call attention to that because just the bare figures of imports and production might lead some persons to believe that we are importing the same classes of goods which we are exporting or producing and using in this country.

Mr. LA FOLLETTE. No; that is not true, Mr. President.

There is nothing therefore in the history of the cotton industry, as shown by the records of its imports and exports and production for the last 30 years, that calls for any such tariff rates as those proposed in the present bill, or as those provided in the Payne-Aldrich law. Certainly, Mr. President, there is nothing in the condition of the cotton-manufacturing business in this country at the present time which requires an upward revision of the tariff rates, but there is everything demanding a downward revision. Why, sir, the profits they have been making under the low-tariff provisions of the present law stagger the imagination.

I should be glad, indeed, if some of the representatives of the New England manufacturing States were present at this time. I remember—and that indicates the difference in the psychology of the situation—that 10 years ago, or something more than that, when we were framing the Payne-Aldrich tariff bill, Republican Members representing the cotton industries of New England remained upon the floor to defend in some measure the rates which were proposed in that bill. I remember distinctly something of a running debate which I had with a number of representatives of cotton-manufacturing States in New England when that bill was under consideration.

Is it because we have come to a time when nobody dares to stand up here to defend the profits that are being made by the cotton manufacturers of this country and that have been made ever since the Dingley Act was written on the statute books?

I do not know; but I know that we have the situation which is now shown to those Senators present.

I remember that when the Payne-Aldrich bill was under consideration in 1909 I devoted a part of a speech which I made on the bill to the cotton schedule, and I there showed from the reports of the companies and other official sources that many of them—this was in 1909—had been making yearly profits of 15 or 16 per cent upon their investment. Mr. President, the statement of that fact upon this floor in 1909, when the Payne-Aldrich bill was pending, produced a sensation.

Your predecessor, Mr. President [Mr. MOSES in the chair], Senator Gallinger, of New Hampshire, rose in his place in the Senate and argued that the manufacturers were not making so large a per cent of profit as 15 and 16 per cent, which I had stated from tables based upon the reports which they had made themselves. Your distinguished predecessor rose on this floor to contend that those excessive rates of 15 and 16 per cent could not have been made out of the cotton-manufacturing business, but that such profits as they were receiving, as shown by their reports which I presented, must represent outside speculation of some sort. I wonder what he would say it he were here and could see the balance sheets of those same companies during the last few years under the present low tariff law.

Take one of the companies, to the defense of which Senator Gallinger came on the occasion to which I refer—the Amoskeag Manufacturing Co., which Senator Gallinger declared was the leading cotton-manufacturing concern of New England. I made my speech in 1909. I happen to have before me a compilation taken from the records of that company of its net income available for surplus and dividends from the year 1910 to 1918, inclusive. Here they are:

1910	$760,967
1911	721,825
1912	1,104,352

The Underwood-Simmons bill went into effect on the 3d day of October, 1913. In 1913 the Amoskeag Co. carried to surplus and dividends $1,106,427, as shown by their reports.

1914	$1,022,887
1915	1,079,415

Let me say to the Senator from Alabama [Mr. UNDERWOOD] that the figures which I am now giving show that the profits made by this company were quite as great before the effects of the war began to manifest themselves under the tariff bill which he largely framed.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me, the bill that I had a part in making cut the tariff rates all along the line, and especially in the cotton schedule, very materially.

Mr. LA FOLLETTE. That is true.

Mr. UNDERWOOD. It cut most of them in two, or more.

Mr. LA FOLLETTE. Just about.

Mr. UNDERWOOD. But I never contended that it was anything more than a conservative bill. I said then, and have always said, that I thought the first step should be conservative, so as not to frighten the country. I realize as fully as the Senator from Wisconsin that the cuts that I made in many schedules were not enough, but I do not know of any rates that I made that the gentlemen now in charge of the Government do not want to increase.

Mr. LA FOLLETTE. Mr. President, I made the reference which brought the Senator from Alabama to his feet for this reason: The advocates of excessive protection, not only for the cotton manufacturers but for every other manufacturing industry of this country, will say that we have no test of what the low rates of the Underwood-Simmons bill would do to the industries of this country; that it was not very long after the Underwood-Simmons bill went into operation that the war came on, which wholly changed the situation, and that therefore it was no test of that legislation.

I think everybody must say that a good deal of confusion was introduced into the statistics of the country as a result of that war; but I call particular attention to these figures just at this time because in 1912, when the Payne-Aldrich bill was in operation, this particular company was able to carry to surplus and expend in dividends $1,104,352, and in 1913, before the European war, a part of that time under the operation of the Underwood-Simmons bill, they carried to surplus and dividends $1,106,427—almost exactly what they did the year before—and that the next year, 1914, one-half of that calendar year being under the operation of the Underwood-Simmons bill, they carried substantially the same amount to profit and surplus as they did the two preceding years, to wit, $1,022,887.

Mr. UNDERWOOD. Mr. President, if I am not interrupting the Senator too much, I want to say this: I do not know the output of the particular company to which the Senator refers, but I think it is pretty general.

Mr. LA FOLLETTE. It is the leading cotton manufacturing concern in the country.

Mr. UNDERWOOD. I know, but I do not know the grades of cotton that it makes, although I know that it makes some of the higher grades of cotton that are made in the country; but in this country there are but few mills that spin yarn more than No. 200, whereas the English mills, some of them, spin up to No. 400; but the imports coming into this country are the high-grade cotton goods that are spun out of the finer thread.

In the case of many of the low-grade goods, if you put them on the free list there would be no competition, because we make them cheaper; and the main purpose, as I understand it, of the man who wants protection on cotton goods is to have protection on the higher-grade goods, where there are some imports coming in. He wants that protection, however, not for protection against the class of goods he makes, the heavier class of cotton goods, but he wants to keep out the high-grade goods, just as he wants a tariff on linen to keep out linen, because he thinks if linen comes in it occupies part of the market; and if the high-grade cotton goods comes in, that really high-grade cotton goods competes with linen, not with low-grade cotton goods, and he wants to exclude it, so as to make a larger market for himself in another direction. So I have no doubt that so far as the present tariff law was concerned on the bulk of the goods that were made in this country this particular bill did not charge the competitive conditions at all.

Mr. LA FOLLETTE. The reports of this company of their surplus and dividends sustain the Senator in the statement which he has just made.

In 1914, as I have just stated, they carried to surplus and dividends $1,022,887.

In 1915, after the European war had gotten well under way, and there was considerable interruption of cotton imports into this country, they still had just about the same amount of surplus and dividends—$1,079,415.

In 1916 the amount was $1,179,181.

In 1917, $1,333,610.

In 1918, the last year of the war, they made their big killing. In that year $5,052,681 went to surplus and profits.

It is undoubtedly true that the figures for 1918 reflect the war profits of the company, and figures for subsequent years undoubtedly do the same. But this does not alter the fact that the profits were made and distributed to stockholders or retained as surplus. If it be said that the war profits of the company are not a fair measure of its prosperity under normal conditions, then I answer that we should wait for normal conditions before enacting tariff legislation for the benefit of this and other similar companies. The profits of all these companies showed that they did not need this tariff before the war, and the available evidence to-day is to the effect that they will need it still less when normal conditions are restored.

In order to get before the Senate and the country some idea of the profits of these companies it is designed by this bill to protect, instead of reading into the RECORD a mass of figures from the reports of these companies, as I have done on previous occasions, I am going to read briefly what is said with respect to the business and profits of these concerns by an authority whose statements will be accepted everywhere as correct. I refer to the firm of Sanford & Kelley, members of the Boston Stock Exchange, with offices in New Bedford, Boston, and elsewhere. I have inquired into the reliability of this concern, and am advised that it is of the highest character and every statement put out by it may be relied on.

This concern has recently published a great mass of statistics relating to the cotton-manufacturing corporations for a period of years down to and including the year 1921, and I am going to quote briefly some of the facts and figures given by this firm, which is, of course, on the friendliest terms with all of the manufacturing corporations mentioned.

Mr. MOSES. Mr. President——

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from Wisconsin yield to the Senator from New Hampshire?

Mr. LA FOLLETTE. I do.

Mr. MOSES. Being released from the thraldom of the Chair, I would like to ask the Senator, as a member of the Committee on Finance, if he has heard any representatives of the Amoskeag Co. raising their voices before the committee in this Congress asking for an increase of duty?

Mr. LA FOLLETTE. I have not, I am bound to say, as far as I can now recall.

Mr. MOSES. I would like to point out to the Senator, further, if he will permit me, that the profits which he has enumerated as being made by this company in the exceptional year of 1918—and I assume he will not hold it against the company that that was an exceptional year, because they did

not bring on the war—ran something less than 3 per cent of the annual turnover of the company. I assume the Senator would not consider that as an improper profit?

Mr. LA FOLLETTE. Mr. President, I will go into that a little later on with my friend from New Hampshire, if he will remain about the Senate. If I remember correctly, this is one of the companies which in the last two years has enormously increased its capital stock out of profits which it has made in the business, increasing its capital stock from something like $5,000,000, before the adoption of the Payne-Aldrich rate, to something like $40,000,000 at the present time.

Mr. MOSES. I think the Senator is in error in the last figures.

Mr. LA FOLLETTE. I may be.

Mr. MOSES. The capital stock has been doubled, as I remember.

Mr. LA FOLLETTE. I think it has gone way beyond that.

Mr. MOSES. Unluckily, I do not hold any of it; I wish I did. But I would like to say to the Senator that substantially every dollar of the profits made in the year of excessive profits which the Senator has quoted, the year 1918, is invested in Liberty bonds.

Mr. LA FOLLETTE. Mr. President, that does not very much concern the people who had to pay for the cotton goods which this company put out and charged two or three or four prices for. I do not conceive that that is any answer.

Mr. MOSES. Mr. President, I hold no brief for the Amoskeag Co.——

Mr. LA FOLLETTE. I am aware of that.

Mr. MOSES. But I want to say that at the conclusion of the war the Amoskeag Co., in an effort to bring business back to normal, decided to break the consumers' strike, and to cut the price of its standard goods on the market from 37½ cents a yard, which was the peak price in 1918, to 12½ cents a yard; and it ran its mills without making a dollar in order to keep 16,000 people employed in the city of Manchester.

Mr. LA FOLLETTE. Mr. President, that is a detail about which I am not informed, and I take the statement of my friend from New Hampshire, of course, as being in accordance with the facts. I will take up the Amoskeag Co. a little later for some further observations.

Mr. MOSES. I shall give myself the pleasure of hearing the Senator.

Mr. LA FOLLETTE. I hope my friend from New Hampshire will do me the honor to follow me when I come back to the Amoskeag Co. a little later.

Mr. MOSES. If the Senator will give me some adequate idea as to when that will be, I will go to luncheon, and return refreshed for the combat.

Mr. LA FOLLETTE. I think the Senator will be back in time, if he does not stop too long in the restaurant.

I come now to give the Senate a little idea of the profits which some of these cotton manufacturing concerns have been making, not during the war period, let me say to my friend from New Hampshire. I am going away back of that. I am going back in this report, from which I quote, 25 or 30 or 40 years, in reviewing the profits of these New England concerns under the rates of duty which have been maintained on the cotton schedule.

Let us take the Beacon Manufacturing Co. Here is what Sanford & Kelley have to say of the Beacon Manufacturing Co., one of the largest cotton manufacturing companies in the country, with mills at New Bedford, Mass.:

> This company has over $225 a share in surplus of net quick assets behind each preferred share of $100 par value—

They have been doing pretty well, have they not?—

> and net tangible assets at the book value are over $375 a share.

Mark you, I am quoting from a reputable firm, which is intrusted with the sale of their securities, a member of the Boston Stock Exchange.

> These figures are obtained after inventories are marked down to present market levels or to the lowest price of raw materials, finished goods, and supplies have reached in many years. After these write-offs in inventories have been made the company earned for the calendar year 1920 over 100 per cent on the amount of outstanding preferred stock. In the six previous years it also earned an amount equal to 100 per cent of its outstanding preferred stock. * * * The Beacon Manufacturing Co. makes cotton blankets. The superior quality and low retail price of the blankets have caused it to be necessary for the Beacon Co. to constantly year after year tremendously increase the size of their plant. This has been done almost entirely from profits of operation, as their capital to-day is $1,200,000, which compares with $800,000 in 1914. In that year their total sales were $1,800,000, by 1920 the plant had been so increased that they sold $7,627,000 of product. This gain in sales is not entirely due to increased output, because the selling price of their blankets was doubled in the last few years.

Now, note the following:

> The Beacon did not raise its price but one-third as much as its competitors (it only doubled the selling price of its blankets), although at no time could they entirely supply the demand for their goods. The reason prices were not raised further was that the company believed that their then profit was sufficient (100 per cent would seem to be a pretty fair profit), and it was good business in the long run not to increase the cost of their product to the consumer to such an extent as other manufacturers did, as by not doing so they were likely to have better satisfied customers, and their profits already had so increased that the larger proportion of any further increases they might have charged would have gone to the Federal Government in the shape of excess-profits taxes.

The only reason this concern did not take more than 100 per cent profit out of the people was because so much of such excess profits would have gone to the Federal Government in taxes.

Mr. CARAWAY. Mr. President, I presume they were one of the poor beneficiaries of the repeal of the excess-profits taxes.

Mr. LA FOLLETTE. Unmistakably, this concern is one of that long list of companies whose influence was brought to bear upon the Finance Committee from the very beginning of this Congress to repeal the excess-profits taxes by a propaganda the like of which I think I have never witnessed since I have been in public life.

Mr. POMERENE. The Senator does not mean to say they made these large profits by reason of the depreciated currency abroad?

Mr. LA FOLLETTE. They made these large profits because they had a chance to charge the American consumer enough to take 100 per cent out of him. They could have taken more. They did not take any more, because after they reached that point, if they had gone very much beyond it, the larger proportion of it would have gone to the Government in excess-profits taxes, and their loyalty to the Government did not extend to the point of raising their prices for the benefit of the Government Treasury.

Mr. POMERENE. Did these people ask for the increased rates found in the pending bill?

Mr. LA FOLLETTE. I do not remember that a representative of the Beacon Co. appeared before the Committee on Finance. The most active agent before the Committee on Finance was a former member of this body, one Senator Lippitt. He has been in evidence whenever there has been a cotton schedule to be framed, and in his trail I think we have generally found some things which were pretty embarrassing to his colleagues on the Republican side.

Mr. HARRIS. Mr. President, during the war the Government advertised for bids for gauze for dressing the wounds of the soldiers, and these manufacturing enterprises about whom the Senator is talking made bids to the Government. I was on the committee, and I happen to know about it for that reason. The Government investigated the profits they were making on this gauze and found that the profit was 95 per cent during the war.

Mr. LA FOLLETTE. That would be pretty modest for most of the companies I am going to call to the attention of the Senate in a few minutes.

Mr. CARAWAY. Mr. President, I wonder if the Senator could tell us why they should forego that extra 5 per cent profit which they were making. Was it due to their patriotism?

Mr. LA FOLLETTE. Yes; 5 per cent patriotism.

Mr. HARRIS. That was the lowest.

Mr. LA FOLLETTE. It was about the average of that class of citizens in this country at that time.

Continuing with the Beacon Co., this authority which handles their stocks on the Boston Stock Exchange said:

> In the 1920 year the Beacon Manufacturing Co. charged off from their inventories an amount equal to their average outstanding capital for that year. Even then they showed a profit after deduction equal to the amount of their entire outstanding preferred capital. * * * After charging off a million dollars from their liquid assets they then showed a surplus of net quick assets amounting to $1,800,000, or 50 per cent larger than the combined preferred and common capital.

This concern seems to have done very well even in the "bad year" of 1921, for the same authority further states, and I am quoting now from a representative member of the Boston Stock Exchange who handles the stocks of this company on that exchange:

> The demand for the product may be further illustrated by the fact that with their 1921 selling, open only a few weeks, they have sold 40 per cent of their capacity for the calendar year of 1921.

Here is what Sanford & Kelley have to say of some other New Bedford mills in their financial review of the year 1921:

THE DARTMOUTH MILL.

> At the annual meeting of the Dartmouth Mill, held in November, the corporation reported net earnings of $567,254. Their balance sheet showed also a reduction in inventory account of nearly $45,000. They paid in dividends during the year on the common stock 32 per cent. In 1920 they paid 34 per cent, in 1919 14 per cent, in 1918 12 per

cent, in 1917 42 per cent, in 1916 20½ per cent. In 1916 their surplus of net quick assets was $1,145,181, and now it stands at $2,649,986, or a gain in the period mentioned of nearly $1,550,000.

Mr. CARAWAY. That was in addition to the dividends they paid?

Mr. LA FOLLETTE. That is true.

Mr. CARAWAY. This amount was passed to surplus in addition to 30 or 40 per cent dividends?

Mr. LA FOLLETTE. That is true. Now, I take another company typical of the profits made, the Holmes Mill.

Mr. POMERENE. Where is it located?

Mr. LA FOLLETTE. It is located in Massachusetts.

THE HOLMES MILL.

This stock is now selling, according to Sanford & Kelley, at $300. I quote from their report:

The mill was started in about 1910, and the common stock sold at par. Therefore, in 12 years the investor has seen the market value of his stock trebled and has been receiving dividends since 1916 of 20 per cent or more; in 1920 he received 38 per cent.

THE NEILD MILL.

This mill has been paying quarterly dividends of $5 a share, or at the rate of 20 per cent in cash dividends. Of this concern Sanford & Kelley report:

If the Neild can earn 20 per cent on its capital in one of the worst years ever known in the cotton industry, what will it earn in normal times? It should be remembered in considering the dividends being paid by the Neild that they have not had many years to accumulate surplus earnings to pay off their debts as have many of the older companies. "It is therefore worthy of remark," say Sanford & Kelley, "that in the last five years they have paid successively 18, 19, 20, 32, and again 20 per cent." In spite of these disbursements in five years, amounting to considerably more than their capital stock, they can yet show a surplus of more than 100 per cent in their surplus of net quick assets. This, too, in spite of the tremendous taxes which the corporation has had to pay because of its large earnings, because of excess-profits taxes.

THE PIERCE MILLS.

I quote again:

The Pierce Mills paid its stockholders 34 per cent in cash dividends during the year, as compared to 50 per cent last year and 41 per cent the three previous years. The Pierce is one of those rich corporations that can well afford to pay substantial dividends in times of depression, as so much in the way of surplus quick assets has been laid aside over a long period of years and kept as a reserve for just such occasions.

Mr. WALSH of Montana. Mr. President, I understood the Senator to say some time ago that these companies were reducing wages.

Mr. LA FOLLETTE. I am coming to that pretty soon. There has been quite a struggle on between the manufacturers of cotton goods and their employees. I am going to take that up and present to the Senate some facts which I think are very pertinent to the discussion of the subject. I am just now dealing with the profits of these concerns.

If Senators will follow me in the quotations I am making here from a reputable concern in Boston, a member of the Boston Stock Exchange, representing the actual condition of these stocks and of these companies in all the aspects of their financial situation, they will observe that they are not dealing merely with recent years and the war profits that have been made under exceptional conditions, but that every once in a while we get a comment that reaches back into the pre-war period many years, sometimes 10, 12, 15, or 20 years and in some instances, as I remember, 40 years. These are not exceptional cases.

Mr. WALSH of Montana. If the Senator will suffer another interruption, I would like to inquire what was the occasion for the publication of this information by the concern to which the Senator has referred.

Mr. LA FOLLETTE. It was for the purpose of disposing of the stocks and bonds of these companies in the usual course of business. People who can make investments in stocks of this sort that pay 50 per cent or 100 per cent are interested, of course, in the opportunities which are offered by the bond companies and the stock companies that deal in and represent the various manufacturing companies in the disposition of their stock.

I come now to the Whitman Mills.

THE WHITMAN MILLS.

This is one of the largest and oldest mills in the country, and was reorganized in 1895. Again referring to the stock of this company, this same report says:

A man who owned 20 shares at that time—1895—and took new stock as it was offered to him afterwards now has 40 shares, which cost him $3,800 and are worth about double that amount in the market to-day. From the distributions of all kinds he has received in dividends since 1895 on what cost him $3,800 the sum of $8,034.50.

Sanford & Kelley also issued in 1921 a special report on the Whitman Mills, in which there is a most interesting side light upon the manner in which the cotton industry is conducted. I quote from that report:

The principal earnings of this corporation are from two distinct branches of the textile industry, which fact acts as a stabilizer. Through ownership in cotton mills they receive profits from manufacturing. From the sale and distribution of a tremendous volume of merchandise they receive profits in the form of commissions.

The company directs or actively assists in the management of nine textile mills and is the exclusive selling agent for all of them. * * *

Gross sales exceeded $120,000,000 in 1920, as compared with more than $100,000,000 in 1919 and an annual average of more than $23,000,000 for the 10 years prior to 1913.

We hear a good deal of complaint about the excessive retail price of cotton goods, and it is popular now to refer to the small retailer as a profiteer. The real explanation appears in the language I have just quoted. Mill owners simply form themselves into a selling agency to distribute the product for several mills, and to the manufacturing profit they add the immense profits they make as such selling agency.

That the immense profits in the cotton industry are not confined to any particular locality appears from Sanford & Kelley's reports. I quote from the same authority respecting Fall River mills:

THE LINCOLN MILL.

The Lincoln Mill made an exceptionally fine showing for 1920, indicated earnings being nearly $1,250,000 on a capital of $1,625,000. Disbursements to stockholders amounted to $30 a share. * * *

Dividends of 33 per cent in cash were paid and the inventory was kept down to low levels in the past year. For a great many years a large part of the earnings of this corporation have been put back into the plant, and the past calendar year was no exception.

THE TECUMSEH MILLS.

I quote:

With earnings amounting to about 100 per cent for 1920, it may surely be felt that the Tecumseh Mills did exceedingly well. The stockholders have every reason to be gratified, as they have received in cash and Liberty bonds 73 per cent, and when all this has been paid out the mill then showed a surplus of net quick assets amounting to over 100 per cent.

THE FLINT MILLS.

The Flint Mills—

And I am quoting from the representative of the stocks of these companies, their selling agent on the Boston Stock Exchange—

The Flint Mills made a remarkable showing for the past year, indicated earnings being in excess of its total capital stock. This more than justifies the board of directors for its liberal payments of cash dividends, which amounted to $48 a share.

It may be said that the profit of these mills was abnormally large during the war period. That is true; but most of the figures that I am giving involve two years subsequent to the war, including what is supposed to be a period of depression in the industry. Numbers of them also include years prior to the war.

The representatives of these organized industries who appeared demanding more tariff protested that there was terrible depression in the industry. I have stated the dividends, the profits, made in the period during which they represented they were suffering from depression which they advanced as a reason for the excessive increases in duties over those imposed by the Underwood-Simmons law.

Here is what Sanford & Kelley have to say of the Granite Mill, not only during the war period but for a period of 40 years:

THE GRANITE MILL.

Like the Flint Mill, it (the Granite Mill) shows a surplus of net quick assets greater than its capital and no debts except unaccrued taxes. The average dividend record of the Granite Mill over a 40-year period is exceptionally good, during which time there has never been a year past but what the stockholders received something in cash in the way of dividends, no matter how great the depression in the industry may have been.

THE KING PHILIP MILLS.

The King Philip Mills added another to its list of years of prosperity, which was reflected in the payment of dividends to the stockholders amounting to 73 per cent, taking the Liberty-bond disbursement as worth 100 cents on the dollar.

The list of mills which I have taken at random from these reports are typical, not exceptional. Some made more and some less.

The dividend record tells only a part of the story of the profits of these mills. In some instances, as in the case of Amoskeag, dividend paid on preferred stock may be carried in the statement of the company as "cost of manufacture." As in the case of this company also, stock dividends are declared sometimes equaling or exceeding the original amount of stock issued. Amoskeag, for instance, in 1919 declared a stock dividend of 100 per cent. Consequently the holders of that stock thereafter received dividends thereon the same as upon the original stock, which, of course, reduced the dividend rate. Then also, as in the case of this company, which is reported to have a surplus of $40,000,000, the surplus is built up entirely out of the earnings or profits of the company, which is but

another way of saying that it is built up out of money collected from the public largely as the result of profiteering.

Mr. President, I digress for a moment to cite another authority upon this subject. Former Professor Lauck, of the West Virginia University, made an investigation.

Mr. MOSES. Mr. President, before I left the Chamber, with the permission of the Senator from Wisconsin, he told me he was about to refer to the Amoskeag Mills. May I ask the Senator if what he has now stated is what he had in mind?

Mr. LA FOLLETTE. Yes, sir; I think it is.

Mr. MOSES. And that finishes the indictment of the Amoskeag Mills?

Mr. LA FOLLETTE. For the present.

Mr. MOSES. I do not want to interrupt the continuity of the Senator's argument at all, but it seems to me that he has overlooked some elements of the situation which would have been more familiar to him if he had lived in New England and had seen the operations of the mill. While it is quite true, I wish to say to the Senator, that the Amoskeag has accumulated a very large surplus, it has done so, as I understand, because it has not been in the habit of distributing its earnings in dividends, but it has kept its earnings for the purpose of developing the plant and taking advantage of the market. For example, the Stark Mills, in Manchester, neighboring the Amoskeag, have been compelled to go out of business because of some element, possibly of imprudence, in the management of their affairs or because of certain elements of competition in the Southern States, where the particular class of goods which they make has been produced in larger volume. The Amoskeag has bought the Stark Mills in order to continue the Stark Mills as a manufacturing enterprise in Manchester, something that the Amoskeag could not have done but for the prudence of its management in the past and the accumulation of the surplus to which the Senator from Wisconsin has referred.

It is my recollection from my reading of the last printed report of the Amoskeag—and I have nothing but newspaper sources from which to quote, and I am quoting wholly from memory—that the income of the Amoskeag from its investments, including the item Liberty bonds, to which I referred in a colloquy which the Senator permitted me to have with him a few moments ago, was fully equal to the income from its manufacturing operations.

I hope that the Senator from Wisconsin has not in mind any notion of penalizing New England thrift and prudence. The Senator will remember that my State is far distant from the source of supply of its raw material. We have in my State for native raw material nothing but a few deposits of building stone, a rapidly diminishing supply of timber, and water powers. Around those water powers have grown up these mills, and around those mills have grown up large, enterprising, flourishing communities, bringing cotton from Alabama and coal from Pennsylvania. This development has been made possible by thrift and enterprise. I hope the Senator from Wisconsin has not in mind the penalizing of New England for those sterling qualities.

Mr. LA FOLLETTE. Mr. President, I am scarcely in a position either in the Finance Committee or in the Senate to penalize anybody. I hold views which are not in accord with the majority. Those who boss the legislation of the Senate with regard to the tariff have been for many years in the majority here and in the majority in the Finance Committee. I stand quite by myself in that committee. So my friend from New Hampshire has no reason to apprehend any drastic action emanating from me against the Amoskeag or any other New England manufacturing concern for which he speaks.

I have considerable data here upon the Amoskeag cotton manufacturing plant. I had extracted therefrom for the purpose of the argument this afternoon just such material as I have presented. I remember, however, Mr. President, without referring to my more extended notes upon the subject, that the Amoskeag had many years ago a capital stock of about $5,000,000, and it has been able to add to its capital from profits in the business under the tariffs which have existed eight times the capital stock which it had some 20 years ago, or, perhaps, less than that—15 years ago.

Mr. MOSES. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield further to the Senator from New Hampshire?

Mr. LA FOLLETTE. I yield.

Mr. MOSES. The Senator would not assert that that increase in capital stock had all come out of profits during the time which he mentions, would he?

Mr. LA FOLLETTE. That is the same argument which the Senator's predecessor, Doctor Gallinger, sought to make here some years ago.

Mr. MOSES. In that respect, then, Mr. President, I presume I am a worthy successor of the late Senator Gallinger.

Mr. LA FOLLETTE. I think the Senator is; I think he is able to go his late colleague one better in his presentation of the case of the Amoskeag or any other New England interest. When these facts are presented with respect to that company, if the Senator from New Hampshire has any explanation for it, let him make it. I say that they have put by in capital stock out of profits since 1895 eight times the capital stock that they had at that time.

Mr. MOSES. I think the Senator is in error about that with reference to the period of time, but with reference to the practice of the company of putting by a part of its profits into surplus, I wish to say that that is a trait that I should be glad to see extended.

Mr. LA FOLLETTE. Yes; and out of profits they have been able to pay round dividends every year to their stockholders.

Mr. MOSES. I hope they have, and I hope they will continue to do so.

Mr. LA FOLLETTE. I will put into the RECORD the story of that institution. I will satisfy my friend from New Hampshire upon that subject.

Mr. MOSES. It certainly will be an interesting story of the development of a great industrial concern.

Mr. LA FOLLETTE. It certainly will be a story of the excessive profits that greedy manufacturers can make under excessive tariff rates.

Mr. MOSES. Oh, Mr. President, when a concern having a turnover of $35,000 000 a year amasses in profits and dividends substantially $1,000,000 a year, less than 3 per cent on its turnover, it is not possible to say that that is profiteering, or that it is excessive. The Senator knows perfectly well that in the general run of business transactions in the country a gross profit of 10 per cent on the turnover is not abnormal and is not deemed excessive.

Mr. LA FOLLETTE. Mr. President, a profit such as I have been presenting here to the Senate this afternoon of 50 per cent, 80 per cent, and 100 per cent per year on the manufacturing business that these protected interests have been conducting can not be excused on any play of terms about "turnover."

Mr. MOSES. Why, certainly, Mr. President, if a company keeping its capitalization at a small figure, for any reason——

Mr. LA FOLLETTE. Like the Amoskeag Co., for instance.

Mr. MOSES. Like the Amoskeag Co., for instance.

Mr. LA FOLLETTE. With its $40,000,000 of capital increase in a very brief period of time.

Mr. MOSES. I have not the figures of the Amoskeag Co. in my mind. I do not think it is as great as that, however.

Mr. LA FOLLETTE. I am very certain it is.

Mr. MOSES. But in the case of a company keeping its capitalization at a small figure, but having a tremendous turnover, certainly, as I view it, it is somewhat unreasonable to take the percentage applied to a small capital, but based upon a very large turnover, and present that as evidence of a charge of profiteering. The particular question which the Senator from Wisconsin is discussing, however, is not one which affects the Amoskeag Co., because, as I pointed out to him earlier in the day, the Amoskeag Co. has not been here asking for higher tariffs.

Mr. LA FOLLETTE. I do not know that that signifies anything, Mr. President. They may be represented by those who are here asking for higher tariffs.

Mr. MOSES. I think I may say of my own knowledge that they are not——

Mr. LA FOLLETTE. Well, that may be true, and if the Senator says so I know it is true.

Mr. MOSES. Because, I think, if the Amoskeag Co. had wished to have its case presented here, I would have heard something about it. The other manufacturers of my State have not been at all modest in notifying me of their desires.

Mr. CARAWAY. Mr. President, I might suggest to the Senator from Wisconsin that the Finance Committee has not been at all modest when it granted their desires, has it?

Mr. LA FOLLETTE. It has not been necessary, I will say, for anything more than intimations as to advances in rates to be made to have them recorded in this bill as presented here.

Mr. CARAWAY. Modesty, then, has not characterized their dealings——

Mr. LA FOLLETTE. Not very much; no.

Mr. CARAWAY. Not only with the constituents of the Senator from New Hampshire, but with the constituents of other Senators.

Mr. LA FOLLETTE. When any representative of a manufacturing interest appeared before the committee, about the first

question that was asked was "What do you want?" And when it was stated by the representatives of the concern what they wanted, that is about what they got.

Mr. MOSES. Mr. President, if I may ask the Senator from Wisconsin another question, he having already told me that as a member of the Finance Committee he has not heard the voice of any representative of the Amoskeag Co.——

Mr. LA FOLLETTE. I do not remember, Mr. President, whether the Amoskeag Co.'s representatives appeared before the committee or not. There was a period of about one month when I was absent from the hearings in the committee on account of a death in my family. They may have appeared at that time. I do not know whether they did or not.

Mr. MOSES. I think they did not; and, with reference to the suggestion made by the Senator from Arkansas, I wish the Senator from Wisconsin also to give me absolution. I have not appeared before the Finance Committee asking for higher duties on cotton.

Mr. LA FOLLETTE. No; that is very true, and I am very glad to attest that fact, Mr. President. I think the appearance of anybody representing any of these New England cotton manufacturers and asking for increased rates would be a piece of brazen impudence, and I know the Senator from New Hampshire well enough to know that he could not be enlisted in an enterprise of that sort.

Mr. CARAWAY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Arkansas?

Mr. LA FOLLETTE. I do.

Mr. CARAWAY. Granting that, I was going to suggest that it was not necessary for anybody except the representatives of the concern to come, was it? I judge from what the Senator has said that if they intimated, even by letter, that they wanted a raise they got it.

Mr. LA FOLLETTE. Mr. President, I think the record of the committee will show that an increase was, as a rule, accorded to those who appeared asking for an increase. I think that is the record of the Committee on Ways and Means in the House of Representatives. I think if anybody will take the testimony presented to the Ways and Means Committee of the House and the testimony presented to the Finance Committee of the Senate, it will be found that substantially the rates asked for by the interests who appeared were accorded to them. Of course many rates were added after the record evidence of the hearings terminated, for a very large body of representatives of these interests appeared when there was no record made of the hearings that were had by the Republican members of the committee, and concerning what transpired at that time I have to depend upon my recollection, as do other members of the committee.

Mr. WALSH of Montana. Mr. President——

Mr. LA FOLLETTE. I yield to the Senator from Montana.

Mr. WALSH of Montana. I have been endeavoring to follow the argument of the Senator from Wisconsin upon this very interesting question. I do not understand that he was questioning at all the propriety as a business proposition of passing a portion of the earnings of the company to surplus instead of distributing it as dividends. As I understood him, he was calling our attention to the fact that in addition to the amount distributed as dividends a large amount had been annually passed to surplus as indicating that great profits had been made out of the business, and that the companies were easily able to compete and do well, remarkably well, even under existing rates. I did not understand that the Senator from Wisconsin was questioning at all the wisdom or propriety of the Amoskeag Co. passing some of its earnings to surplus.

Mr. LA FOLLETTE. Mr. President, I was simply calling attention to the profits derived from the manufacturing business under the various tariffs that have been in existence for a period of years and showing how much had been paid out in dividends and the amounts that had been carried to surplus. I have made no comment upon either the amounts paid out in dividends or the amounts carried to surplus. I simply wanted to get before the Senate the facts with respect to these various companies, their earnings, the amounts that they had carried to surplus, and the amounts that they had paid out in dividends under the existing tariffs covering the period of years designated in the reports that I have presented.

Mr. MOSES. Mr. President——

Mr. LA FOLLETTE. I yield.

Mr. MOSES. In the interest of strict accuracy, to which the Senator is as much wedded as I, if I recall the language which he employed in citing figures in reference to this particular company, he cited the amounts annually derived from their operations applicable to dividends and surplus.

Mr. LA FOLLETTE. I think that is true; yes.

Mr. MOSES. So that the less than 3 per cent upon their turnover, which is about what happened——

Mr. LA FOLLETTE. Well, I do not know. I am not certain about that. I have not any data upon that subject. Has the Senator looked that up?

Mr. MOSES. I beg the Senator to take my word for it.

Mr. LA FOLLETTE. I will take the Senator's word for anything that he has investigated.

Mr. MOSES. My recollection from my investigation is that the annual turnover of this company is about $35,000,000, and $1,000,000 applicable to dividends and surplus would be something less than 3 per cent on the turnover, and as I understood the Senator in the table which he read earlier in the day that was the total amount available for dividends and surplus, so that the Senator from Montana [Mr. WALSH] should not think that there is an additional amount that in some way was carried to surplus, because, as I remember the table which the Senator read, that included the total earnings of the company.

Mr. LA FOLLETTE. Mr. President, I do not carry all those figures in my mind, and I will not take the time of the Senate to recur to the table.

Mr. MOSES. Mr. President, I merely happened to be in the chair, and my mind was entirely free to follow what the Senator was saying, and I think I recall it with literal accuracy.

Mr. LA FOLLETTE. That may be true.

Mr. SMITH. Mr. President, will the Senator allow me to get clearly in my mind the distinction that the Senator from New Hampshire is making in his calculation as to the turnover? The capitalization of this company, I believe the Senator from Wisconsin has said, is $5,000,000. That is the amount owned by the company or invested by the company, upon which they are to pay dividends. In the course of a year's business they will turn over that amount to an aggregate of $35,000,000, and on that turnover they will earn about 3 per cent; but that 3 per cent represents the amount made upon the yearly turnover. What does it represent upon the capital invested, upon which dividends will be paid?

Mr. MOSES. Mr. President, upon the figures which the Senator from South Carolina has quoted that would be something like 20 per cent on the capitalization, of which, however, less than half is distributed in dividends. The rest of it goes into betterments or into available surplus.

Mr. SMITH. Yes; but we want to get clearly in our minds this idea: There is invested in this business by the individuals engaged in it $5,000,000. They have a monthly or bimonthly turnover which in the course of a year aggregates $35,000,000. Upon that turnover they earn annually 3 per cent. That means that they have been able, by the use of the $5,000,000, to earn something like 20 or 25 per cent. Now, the question arises, What per cent have they made upon the capital invested? That is the point that the Senator from Wisconsin was attempting to develop. It is not so much a question as to the turnover as it is a question of what is the annual return upon the $5,000,000 invested.

Mr. MOSES. Mr. President, may I interrupt the Senator right there?

Mr. SMITH. Yes.

Mr. MOSES. No, Mr. President; the amount of money invested in the plant may be and probably is much more than the amount of the par value of the capital stock, because out of earnings in past years money has gone back into the plant for its enlargement and its improvement for which no stock was issued, and which has no place in its capital account.

Mr. SMITH. I know; but the Senator must not lose sight of the fact that all that accrued capital and facilities is a part of the profits. They did not see fit to pay it out as dividends. They put some of it into surplus and some of it into betterments or facilities for enlarging the plant.

To illustrate, it is alleged that in my State a certain cotton mill earned enough to build plant No. 2. They just issued duplicate stock, and I believe out of the earnings of plants No. 1 and No. 2 they built plant No. 3. Nobody invested any more money.

Mr. LA FOLLETTE. They took it out of the public.

Mr. SMITH. The plant made the money. They did not invest any capital out of other business, but plant No. 2 was the dividend paid on the stock of plant No. 1, and plants No. 2 and No. 3 in the last analysis were the dividends on the stock of plant No. 1; and that is the thing we want to get at in this debate, if possible—the question of what were the earnings.

Mr. MOSES. Do I understand that the Senator is complaining about that industrial development in his State?

Mr. SMITH. No; I am not complaining about these fellows making all they can. I am complaining about our legalizing that

kind of thing and shutting other people out from the possibility of protecting themselves against it.

Mr. MOSES. Of course, if the Senator from South Carolina wishes to pass a statute here which will prevent the Amoskeag Co., in Manchester, N. H., from paying the Southern States $16,000,000 for cotton, as they did last year, he can answer to the cotton raisers on that point.

Mr. SMITH. I am glad the Senator has called attention to that. These are not matters which pertain to any particular individual or any particular corporation. We are charged here with the duty of making such laws as will give every man an equal chance under the law, and the Senator knows that when the spinners in New England bought $16,000,000 worth of cotton from the South, if they did, they got their cotton below the cost of production. The man who sold them the cotton was not declaring any dividends or laying by any surplus. He was fixing to get a mortgage on his place, to try to meet expenses.

Mr. MOSES. I assume that the New England cotton spinners paid for cotton in the South what the cotton raisers in the South asked for it. They could not get it anywhere else.

Mr. SMITH. The cotton raiser in the South takes what the New England man offers. That is notoriously the fact. He has to take that or take nothing. He has no way of protecting himself. He is in bad; and, besides that, the monstrous condition still prevails in this country that the New England mills and the southern mills wait every morning for the Liverpool market to open to sell American cotton upon the basis of a European competitor.

Mr. LA FOLLETTE. Mr. President——

Mr. MOSES. I beg the Senator's pardon; he has the floor.

Mr. LA FOLLETTE. Mr. President, I want to conclude what I have to say, and I will leave the discussion of this subject to my friend from South Carolina and my friend from New Hampshire. I may have occasion at another time to go more fully into the financial history of the Amoskeag Co. I find I am not able to put my hand upon some notes I had regarding that company, which I thought I had brought to the Senate floor.

I wish to add to the testimony as to the profits made by these various cotton manufacturing companies this statement from Professor Lauck, formerly of the West Virginia University, who made an investigation into the profits of various manufacturing companies and published a pamphlet upon that subject, which was issued in 1920, from which I read:

PROFITS AS SHOWN IN THE PUBLISHED REPORTS OF TEXTILE COMPANIES.

Such profits should be reflected in the net incomes shown in the published reports of the large textile companies. Here, again, the material at hand is not so full as one could wish. But such returns as appear in Moody's and Poor's Manuals enable us to substantiate the above conclusions for eight large representative cotton and wool manufacturing companies. Roughly speaking, the net income of these companies for the war years 1916–1918 was five times as large as the corresponding total for the pre-war years 1912–1914.

* * * * * * *

In general, the outstanding fact is that in recent years the manufacturer's and retailer's margins of profits have been absorbing a much larger portion of the consumer's money than in earlier years, that to-day the amount absorbed by these two elements amounts to approximately one-half the price paid by the consumer for the goods, and that this is reflected in profits which, for the manufacturer at least, are many times those received in pre-war years. This establishes a very close relationship between profiteering and high prices.

I have not given these figures nor discussed the profits or the business methods of cotton manufacturers for the purpose of convicting them of profiteering but for the purpose of showing that before the war, during the war, and after the war the business has been an extremely profitable one, and the greatest of this prosperity has been enjoyed under tariff rates less than one-half of those which this bill seeks to impose. The only possible purpose of the cotton schedule of this bill is to give these great manufacturers an absolute monopoly of the American market—its purpose is to give these cotton manufacturers a monopoly just as complete as though an embargo were imposed upon importation of cotton cloths. The limit of the price which the American consumer will have to pay for this great necessary of life will be measured only by the necessities of the purchasing public and by the greed of the cotton manufacturers, who have come to look upon dividends of 20, 25, or 50 per cent quite as the ordinary thing in their business.

It is rather remarkable that the advocates of prohibitive tariffs never point to the real beneficiary of such legislation. They never mention what the tariff does for the manufacturer, but they solemnly declare that the tariffs are necessary for the poor laboring man and woman. There never was a falser claim made by mortal man than that the tariff wall which the cotton schedules of this bill propose to erect for the benefit of the cotton manufacturer will in any way benefit the laborer in the cotton mills. The cotton manufacturer pays his labor just as little as possible without any regard to tariff legislation or his profits. The wages paid in the cotton mills of this country and the manner in which women and children have been worked in those mills is a national disgrace. I have before me a pamphlet entitled "Wages and hours in American industry," prepared by the National Industrial Conference Board and published in 1921. This concern is composed of manufacturers, and the cotton manufacturers of the country occupy a prominent place in it. In this pamphlet they have a chapter on cotton manufacturing, and in that chapter they give what they call "classified pay-roll data." Among other things, this data shows for a typical month in 1914 and for six months of 1920 and six months of 1921 the average weekly earnings in the cotton factories, North and South, of women. and male skilled and male unskilled labor, and the average for all. By multiplying the amount of weekly earnings, as given in the pamphlet of this manufacturers' association, by 52, it is obvious that one gets the total amount the laborer could earn if he worked every week in the year. Constructed on this basis you get the following table:

Cotton-mill workers' yearly earnings (for 52 weeks' employment).

	1914	1920	1921
NORTH.			
All wage earners	$469.04	$1,218.93	$924.20
Male skilled	536.64	1,687.64	1,085.44
Male unskilled	457.60	1,162.82	915.98
SOUTH.			
All wage earners	369.20	937.61	791.60
Male skilled	419.64	1,236.87	951.60
Male unskilled	296.40	924.40	625.56

This employers' document also shows that in 1914, before the war, cotton-mill wages in the South were as low, if not lower, than any other wages in the United States; that in 1914 cotton-mill wages in the North were among the very lowest wages in northern industry; and that in 1921, at the peak of cotton-mill wages, both North and South, they were at the very bottom of the wage scale of the industries of the country. It also shows that in 1921, after the war, cotton-mill wages, North and South, were on the average further below wages in other industries than they were in 1914. Is it any wonder that there are strikes throughout New England? This table I have presented shows that at no time were the wages paid even to the most skilled cotton-mill workers anywhere near the health and decency level of any of the budgets made up either by the Labor Bureau or any of the other organizations that have made studies into that question. It is my recollection, also, that since the figures were published from which I have compiled this table, cotton-mill workers have accepted a very large cut in wages to escape starvation, and they are now generally on strike because of a proposal to still further cut their wages and increase the hours of labor.

But, sir, imagine a laborer, skilled or unskilled, in any industry supporting himself and maintaining a family on the yearly wage which it would be possible for him to earn in this industry, even though he worked every week in the year without loss of time. This table demonstrates beyond all question that the profits of the manufacturer have little to do with the wages of the worker, no matter what the manufacturer's profits may be.

They prate about low wages abroad and appeal for higher rates of protection to offset the difference between the wages paid in foreign countries and the wages paid here. The laborers of this country get no wages from their employers excepting as they are able to exact them through collective bargaining, and even then they are in an overwhelming and steadily encroaching condition of oppression.

Manufacturers appear before the committees of Congress with their mouths dripping with unctuous phrases about the protection of labor, and then drive their employees into a condition of life such as that shown by the investigations of the conditions in Lawrence, Mass., where families are compelled to live in one room on the wages which they are able to earn, and then are forced to strike to prevent those wages being reduced to a point which makes their condition of life more bitter and more exacting and more oppressive than it is.

The tariffs fixed by Congress ostensibly for the protection of labor never reach the laborer where the employer can prevent it. The employer will take every cent of the advantage that the tariff imposes and labor gets nothing from it excepting as labor, through organization, is able here and there to make an approach toward exacting what will furnish a fair return for its services.

Mr. President, it ought to be enough to say that labor to-day in the United States is paid less in the purchasing power of

its wage than at the beginning of this century. No man who has taken the trouble to go into the figures showing the increase in the cost of the necessaries of life will dispute that statement for a moment. I have submitted to the Senate ample proof on that subject. It is overwhelming. The shrinkage in the purchasing power of the dollar is such that the actual wage of labor in the United States to-day is below what it was at the beginning of the present century, measured by the purchasing power of the dollar. The purchasing power of the dollar to-day is 38 cents as compared with what it was in 1901.

The table which I have presented demonstrates beyond all question that the profits of the manufacturer have little to do with the wages of the worker, no matter what the manufacturer's profits may be. In the cotton business, at least, its history shows that the wages paid to labor will not be voluntarily increased. I think that is true of every other industry. If 10, 20, 50, and 100 per cent annual profits do not induce the manufacturer to raise the wages of his labor above starvation level, what is the use of talking about aiding labor through a protective tariff? Never was a greater fallacy than that you could make labor prosperous by adding to the wealth of the employer. Not one cent of the millions or billions that go into the employers' pockets as the result of a protective tariff in excess of the fair margin of profit ever benefits labor. That is an axiom that applies to the cotton schedule and the woolen schedule and the steel schedule and every other similar schedule in this bill. Of course, it is true that if a manufacturing business can not be conducted and some moderate profit realized it will in time be abandoned, and labor thereby will lose employment. But if it can be conducted at a moderate profit, no matter how great the wealth you may shower upon the manufacturer by embargoes, tariffs, or other favors, you will not benefit labor one cent. They will pay labor just what they are obliged to pay labor, and not one farthing more, and all the surplus of profits that come from a tariff and from other favors bestowed will be put into the coffers of the corporations and into the pockets of those who own the business.

That is why, Mr. President, the robber rates of tariff in the cotton schedule, the steel schedule, the wool schedule, and other schedules in this bill will not benefit labor in the least, but will simply enrich the great manufacturers by the hundreds of millions and billions of dollars which they will thereby be able to extort from the consuming public, and will lay upon the consumer that enormous burden in addition to that which he carries now.

Mr. President, I want to say just this word in closing: I hope to be able to devote some time to the cotton schedule after its rates shall have been fully settled upon and presented by the committee to the Senate for its consideration. I want to say that I shall be fortified with proof here to show that upon every step of conversion cost, from the gray cloth to the finished product, the processes are so improved in this country that the cost in Great Britain exceeds the cost here. That is my belief, based upon cablegrams which I have received within the last 24 hours touching this subject.

I hope to be able, Mr. President, to submit some observations further on this schedule at another time, and I hope to be able also to take up certain other schedules in the tariff bill and submit them to some discussion and analysis. I believe this is all I care to present at this time.

Mr. BROUSSARD. Mr. President, before action is taken on the rice schedule I have here a few facts which I should like to insert in the RECORD. We are asking that the House rate on rice be restored. I wish to place in the RECORD a few facts to show what the House rate is on an ad valorem basis and to show that it is not unreasonable.

The imports during the calendar year 1921 of paddy, or rough rice, were 56,615 pounds, valued at $3,501, or 6 cents per pound. That is equivalent under the House rate of 1 cent per pound to an ad valorem rate of 17 per cent.

Of the uncleaned or brown rice there were imported 19,839,596 pounds, valued at $1,052,668, or 5 cents per pound, which equals an ad valorem rate of 25 per cent.

Of milled rice there were imported 17,078,059 pounds, valued at $804,285, or 5 cents per pound, which would make the equivalent of an ad valorem rate of 40 per cent.

Of rice flour, meal, and broken rice there were imported 787,215 pounds, valued at $53,549, or 7 cents per pound, which is equivalent to an ad valorem rate of 7 per cent.

These are importations for 1921 and show, in my opinion, that the House rates are not excessive.

In order to show that the tariff rate is effective and does protect rice, which is an agricultural product—because it has been said that we can not reach agricultural products through the imposition of a tariff rate—I desire to put into the RECORD certain figures which show the result of the operation of the rates under the emergency tariff law, printed recently under resolution of the Senate.

It will be recalled that we passed the emergency tariff law on May 27, 1921. We find that the price of New Orleans rice in this country for June, 1921, was 2.75 cents per pound. We find that in July the price went to 3.63 cents per pound; August to 3.88 cents per pound; September, 3.63 cents per pound; October, 5.19 cents per pound; November, 4.51 cents per pound; December, 4.69 cents per pound. This was an increase of 70 per cent in the price of rice from June, 1921.

In order to show that the emergency tariff rate had something to do with this, I have here figures from the London market with reference to Siam rice, which is a comparable rice to the New Orleans rice. It will be found that in June the price in London was 4.54 cents per pound, whereas we were receiving in this country 2.75 cents per pound. Then the price on the London market was as follows: For July, 4.14 cents per pound; August is not given; September, 5.02 cents per pound; October, 4.74 cents per pound; November, 4.98 cents per pound; December, 5.14 cents per pound.

Mr. President, it will be seen by a computation and striking an average that the increase of Siam rice on the London market during the same period was only 13 per cent, and yet, notwithstanding the increase in the tariff rate under the emergency tariff law, the American consuming public were paying less for rice than was paid by the British consumers for a comparable quality of rice. I think that that demonstrates—and it is one of the lessons which this report clearly teaches; and if the figures in other instances are analyzed I believe the same result will be apparent—that we were never made to pay more than the British consumers paid for rice. Though the duty did increase the prices to the producer by 70 per cent, the consumer still paid less during every month than the English people paid on the London market, on which during the same period the price increased only by 13 per cent.

Mr. President, I wish to say on behalf of the committee that the statistics concerning rice in the Summary of Tariff Information were not sufficiently complete to afford the committee adequate information, and we find that they dealt with only two years, which were the only years that they could have selected where the conditions were such. For instance, we find on page 695 of the Summary of Tariff Information—and I am now quoting from that document:

> Compared with the enormous crops and exports of the Orient, the domestic production is insignificant. However, with the exception of certain kinds imported to meet special requirements, the American output supplies substantially the entire domestic demand and permits an export of over 400,000,000 pounds.

There could not have been a more inaccurate statement made with reference to rice, generally speaking, but it was practically true. Immediately after this was published I got together all of the monthly summaries which were issued by the Bureau of Foreign Commerce, and checking them up I found that the excess of exportations over importations for 1921 amounted to 344,050,686 pounds; for 1920 the exportations exceeded the importations by 303,463,298 pounds; but before that, going back as far as the time when the industry became generally recognized as an important agricultural industry in this country, going back to 1895, we find—I will select just a few years by way of illustration—that the excess of importations over exportations was in 1919, the year before that for which figures are cited by the Tariff Commission, amounted to 170,000,000 pounds plus; that in 1918 the excess amounted to 259,000,000 pounds plus; in 1915 to 199,000,000 pounds plus—practically to 200,000,000 pounds, because the total figures are 199,711,000 pounds—and going down to 1909, the surplus of exportations over importations amounted to 202,388,000 pounds plus.

These facts were not given to the Finance Committee, and for that reason the Finance Committee recommended a reduction in the rates proposed in the House bill. Immediately I presented these figures to individual members of the Finance Committee I was very much encouraged at the attitude taken, and I have been told by practically all of them individually that they recognized that the facts had not been presented to them at the time they took the action recommending a reduction of the rates.

I wish to say a word with reference to the amendment which I proposed to offer here. Before proceeding to do that, however, Mr. President, I should like to have permission to have the table which I prepared several months ago for my speech delivered on May 3, 1922, and inserted then in the CONGRESSIONAL RECORD from the Monthly Summary of Foreign Commerce reinserted in the RECORD, so as to show the relative importations and exportations of rice from 1895 to 1921.

The PRESIDING OFFICER. Without objection, leave will be granted. The Chair hears none, and it is so ordered.

The table referred to is as follows:

The totals of imports and exports for each year have been added by fiscal years and show the following result:

	Pounds.
1921:	
Exportation	440, 855, 298
Importation	96, 804, 612
Surplus exportation over importation	344, 050, 686
1920:	
Exportation	483, 385, 259
Importation	179, 921, 961
Surplus exportation over importation	303, 463, 298
1919:	
Importation	363, 726, 263
Exportation	193, 128, 000
Surplus importation over exportation	170, 598, 263
1918:	
Importation	456, 058, 608
Exportation	196, 363, 268
Surplus importation over exportation	259, 695, 340
1917:	
Importation	216, 048, 858
Exportation	181, 372, 310
Surplus importation over exportation	34, 676, 548
1916:	
Importation	264, 324, 005
Exportation	121, 967, 465
Surplus importation over exportation	142, 356, 540
1915:	
Importation	277, 191, 472
Exportation	77, 480, 065
Surplus importation over exportation	199, 711, 407
1914:	
Importation	290, 194, 917
Exportation	22, 414, 326
Surplus importation over exportation	267, 780, 591
1913:	
Importation	222, 103, 547
Exportation	38, 195, 490
Surplus importation over exportation	183, 908, 057
1912:	
Importation	190, 063, 331
Exportation	39, 446, 571
Surplus importation over exportation	150, 616, 760
1911:	
Importation	208, 774, 795
Exportation	30, 063, 361
Surplus importation over exportation	178, 711, 434
1910:	
Importation	225, 400, 545
Exportation	26, 799, 188
Surplus importation over exportation	198, 601, 357
1909:	
Importation	222, 900, 422
Exportation	20, 511, 429
Surplus importation over exportation	202, 388, 993
1908:	
Importation	212, 783, 392
Exportation	28, 444, 415
Surplus importation over exportation	184, 338, 977
1907:	
Importation	209, 603, 180
Exportation	30, 174, 371
Surplus importation over exportation	179, 428, 809
1906:	
Importation	166, 549, 957
Exportation	38, 142, 103
Surplus importation over exportation	128, 407, 854
1905:	
Exportation	113, 282, 760
Importation	106, 483, 515
Surplus exportation over importation	6, 799, 245
1904:	
Importation	154, 221, 772
Exportation	29, 121, 763
Surplus importation over exportation	125, 100, 009
1903:	
Importation	169, 656, 284
Exportation	19, 751, 448
Surplus importation over exportation	149, 904, 836
1902:	
Importation	157, 658, 894
Exportation	29, 591, 274
Surplus importation over exportation	128, 067, 620
1901:	
Importation	117, 119, 710
Exportation	25, 527, 846
Surplus importation over exportation	91, 671, 864
1900:	
Importation	116, 679, 891
Exportation	41, 066, 517
Surplus importation over exportation	75, 613, 374
1899:	
Importation	204, 177, 293
Exportation	15, 334, 589
Surplus importation over exportation	188, 842, 704
1898:	
Importation	190, 285, 315
Exportation	6, 200, 987
Surplus importation over exportation	184, 084, 328
1897:	
Importation	197, 816, 134
Exportation	3, 905, 734
Surplus importation over exportation	193, 910, 400
1896:	
Importation	146, 724, 607
Exportation	15, 031, 554
Surplus importation over exportation	131, 693, 053
1895:	
Importation	219, 564, 320
Exportation	1, 573, 336
Surplus importation over exportation	217, 990, 984

Mr. BROUSSARD. Mr. President, I had offered an amendment to this paragraph, but I find from the disposition of the Committee on Finance it is not necessary to press the amendment. I shall be satisfied to request the Committee on Finance to ask the Senate to disagree to the proposed committee amendment, which action will restore the House rate, which is practically the same rate as that carried in the emergency tariff law, and is also the rate which all of the rice growers of the country have asked the Finance Committee of the Senate and the Ways and Means Committee of the House of Representatives to give them. I hope the Committee on Finance will accept that suggestion and will ask that the committee amendment be disagreed to, thereby restoring the House rate.

Mr. JOHNSON. Mr. President, I wish to join in the suggestion made by the Senator from Louisiana. I shall make no extended remarks on the subject, because I think the justice of the suggestion made by the Senator is conceded upon all hands. I desire, however, to have printed in the RECORD a letter received by me from the Rice Growers' Association of California, together with the resolution adopted by them and the names attached thereto. One paragraph from the letter, however, I shall read:

The rice industry of California represents the product of 250,000 acres of land, upon which rice is the only crop that can be raised at a profit. It is, therefore, vital that this industry should be protected against the invasion of South Asiatic rice, which can be sold in the United States under the 1-cent tariff at one-half the price at which Louisiana, Texas, Arkansas, and California rice must be sold in order to return to the grower the cost of production.

The fact is, Mr. President, which probably is little known, that California in the last few years has become the second rice-producing State in the Union, and, unless Louisiana looks to her laurels, it will soon be the first rice-producing State in the Union. I ask that the resolution and letter to which I have referred be printed in the RECORD as a part of my remarks.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The matter referred to is as follows:

RICE GROWERS' ASSOCIATION OF CALIFORNIA,
CENTRAL OFFICES, CAPITAL NATIONAL BANK BUILDING,
Sacramento, Calif., June 29, 1922.

Senator HIRAM W. JOHNSON,
Senate Building, Washington, D. C.

DEAR SENATOR JOHNSON: Inclosed herewith you will find unanimous petition of the rice growers of California for a 2-cent tariff on cleaned rice, which involves an increase from the 1-cent tariff recommended by the Senate Finance Committee.

The rice industry of California represents the product of 250,000 acres of land, upon which rice is the only crop that can be raised at a profit. It is therefore vital that this industry should be protected against the invasion of south Asiatic rice, which can be sold in the United States under the 1-cent tariff at one-half the price at which Louisiana, Texas, Arkansas, and California rice must be sold in order to return to the grower the cost of production.

The great majority of all rice growers in the State are members of the Rice Growers' Association of California, and I therefore earnestly ask on their behalf your favorable consideration and support of the 2-cent rice tariff.

With kindest personal regards, I am,

Very faithfully yours,

F. M. PORTER, *Secretary.*

To the Senators and Representatives in Congress from the State of California:

Whereas the Underwood tariff provided a tariff of 1 cent per pound on milled rice, with variations for collateral products, which was properly and commendably increased to 2 cents in the emergency tariff; and

Whereas the Fordney tariff bill as revised by the Senate Finance Committee abandons the urgently necessary protection afforded by the emergency tariff and places the schedule back at the Underwood tariff rates, and also provides an exemption of any tariff on rices used in the manufacture of soups and canned goods, which is dangerous and unfair to the American producers of rice; and

Whereas the stability and development of the rice-growing industry in the United States, and particularly in the State of California, is vitally dependent upon the protection that would be afforded by a 2-cent tariff and the elimination of the unfair preference given manufacturers of soup and canned goods; and

Whereas the livelihood and prosperity of thousands of families of American farmers, merchants, and workingmen in the State of California are directly dependent upon the return of a reasonable price upon the 350,000,000 pounds of paddy annually grown in the State, which can not be obtained without protection against practically open competition with rices grown in Asia under living conditions intolerable and impossible to Americans: Now, therefore,

The undersigned, citizens and residents of the State of California living in the rice-growing area of your State, earnestly urge that you lend you good efforts to securing a 2-cent tariff on rice and the elimination of the unfair preference to the manufacturers of soup and canned goods, and by so doing indicate your loyalty to the principle of a fair return to Americans for products of American soil and a decent living to the farmers, merchants, and workingmen who are giving their time and best efforts to the building up of a great and sturdy industry in your State of California.

Mr. POMERENE. Mr. President, I received this morning an editorial from this week's issue of the Iron Age entitled "An unsatisfactory tariff." The Iron Age represents what has been commonly understood to be one of the protected industries of the country. I think Senators and the country will be interested in getting the viewpoint of this periodical, and I ask that the editorial to which I have referred may be incorporated in the RECORD without reading.

The PRESIDING OFFICER. Without objection, leave will be granted. The Chair hears no objection, and it is so ordered.

The editorial is as follows:

AN UNSATISFACTORY TARIFF.

The tariff bill as it stands to-day, much amended by the Senate in Committee of the Whole, may fairly be spoken of as more unsatisfactory than any of its predecessors. It was to be expected that the majority party would frame the schedules on a protective basis and therefore that these would more closely approach the rates of the Payne-Aldrich Act than of the existing Underwood tariff. But no consistent policy has been followed in making the new schedules. Moreover, in many instances the existing duties have been so greatly increased that advocates of a moderate tariff, of whom there are many more in the ranks of lifelong protectionists than at any time since revenue bills began to be made, have either made open protest or washed their hands of what they fear will be one of the most unpopular of all tariff acts.

It is granted that the public mind in its present state is highly receptive to any and all statements to the effect that special interests are having their way in the making of duties. More easily than ever any increase in existing duties can be put before the people as so much more added to the consumer's burdens for the benefit of domestic producers. War taxes are felt in every quarter; profiteering by retailers in many lines is still notoriously common. The purchasing power of many classes in the community has been cut down by the wage reductions of the past year. These conditions give uncommon weight to criticisms of the pending bill, particularly to criticisms to the effect that in many cases domestic producers have had their way completely in the framing of schedules in which they are interested.

As has been pointed out in these columns from time to time, the efforts of steel manufacturers have been more in the direction of urging that their raw materials be left free of duty or nearly so than in securing high duties on their finished products. Their ability to export was an important consideration in this connection. Excessive transportation charges and the high labor costs of to-day, even after the reductions of 1921, have made the export position of our steel companies much more difficult than it was in 1913 when the Underwood bill was passed. There was hope that the Senate would reduce the House bill duties on manganese ore, ferromanganese, fluorspar, magnesite, and some of the ores entering into the manufacture of special steels. But through the action of the agricultural bloc and various combinations of Senators representing sectional interests, the raw materials duties in the metal schedule have been retained substantially as the House passed them. The manganese ore duty is left at 1 cent per pound of contained manganese, or $11.20 per ton for a 50 per cent ore. The duty on 80 per cent ferromanganese was put at $33.60, instead of $39.42. The fluorspar duty was raised from $5 per ton in the House bill to $5.60. The House duties on crude and dead burned magnesite were finally put at one-half cent and three-fourths cent per pound, just as in the House bill. The House duties on ferrotungsten and ferromolybdenum and their ores were reduced somewhat, but in other duties affecting tool steel prices the changes are immaterial.

Both House and Senate bills continue the Underwood bill's concession to the farmer in free barbed wire, but protection consistency is asserted in respect to cotton ties, the Senate retaining the House bill duty of one-fourth cent per pound, whereas cotton ties are now on the free list.

Changes may yet be made in the metal schedule, as the bill comes up for final consideration in the Senate and later in conference committee, but no important departure need be expected from the policy already approved of imposing on the raw materials of steel manufacture duties that each year will add many millions of dollars to the cost of producing American steel.

That tariff making under present world conditions and the unparalleled problems, industrial and fiscal, existing at home is a business of high hazard is being demonstrated almost daily in the popular reactions to the provisions of the pending bill. To add to the uncertainties of domestic industries the form which the pending bill will finally take seems likely to make it short lived. Radical changes by the next Congress are the well-nigh certain result of its enactment on substantially the present lines.

Mr. GOODING. Mr. President, I have a letter, together with a numerously signed petition, from the peanut growers of Virginia. I ask that the letter and the accompanying resolution or petition be read, but, as there are about 5,000 names to the petition, I shall not ask that the signatures be printed in the RECORD.

There being no objection, the letter and petition were ordered to lie on the table and to be printed in the RECORD, as follows:

AMERICAN PEANUT CORPORATION,
Norfolk, Va., July 3, 1922.

Senator FRANK R. GOODING,
United States Senate, Washington, D. C.

DEAR SENATOR: I herewith inclose you a list of names that are asking for a protective tariff on peanuts, and being so many of these names I have decided best to have them typewritten, and I attach copy of resolution passed by the Peanut Growers' Exchange.

You will see there are about 5,000 of these names.

Very truly yours,

P. D. BAIN.

CERTIFIED COPY OF RESOLUTIONS PASSED BY BOARD OF DIRECTORS OF PEANUT GROWERS' EXCHANGE (INC.).

SUFFOLK, VA., *March 1, 1922.*

Whereas the peanut growers of America can not successfully compete, in our own markets, with foreign growers of peanuts without a tariff thereon sufficient to cover the difference between the cost of labor abroad and in this country; and

Whereas the present emergency tariff on peanuts has been of decided benefit to the peanut farmers: Therefore, be it

Resolved, That the directors of the Peanut Growers' Exchange (Inc.), representing more than 5,000 farmers in Virginia and North Carolina, appeal to the Representatives and Senators of Virginia and North Carolina to secure such a competitive tariff on peanuts as is now provided for in the pending tariff bill, which is not more than sufficient to cover the difference between the cost of production here and abroad, and that a special appeal be made to the officials of peanut organizations in other peanut-growing States to appeal to their Representatives and Senators in Congress to assist us in securing this much-needed legislation.

We hereby certify that the above is a correct copy of the resolutions passed by the board of directors of the Peanut Growers' Exchange (Inc.) at their meeting March 1, 1922.

PEANUT GROWERS' EXCHANGE (INC.),
T. H. BIRDSONG, *Manager.*
J. FRANK FOOSHE, *Secretary.*

Mr. WALSH of Massachusetts. Mr. President, the Finance Committee reported amendments to the pending bill making substantial reductions in the rates fixed upon rice in the House bill. The rates named in the House bill are the highest ever named in any tariff bill with which I am familiar—certainly higher than those of the Payne-Aldrich law or the Underwood law or even the emergency law. I am informed that the committee now is in favor of the rejection of their amendments lowering the rates on rice, which means the restoration of the House rates in this bill. Why the committee came to that conclusion since this bill has been before the Senate I do not know, but it is significant that after much study—for I assume they studied all these schedules—they recommended a reduction in the rates named by the House. It may be that the change of heart is due to pressure exerted upon the committee by the able Senators from Louisiana. But why not? As this bill has been drafted by bargain-counter methods Louisiana should have its demand gratified just as California was a few days ago. If the efforts to reject the committee amendments prevail, then the House rates will be restored and the rates imposed upon this very important food product will in consequence be the highest ever levied. Of course, that action will prevail, for the committee has surrendered its former position.

The record of exports and of imports, the volume of the production, the expansion and growth of the industry does not warrant, in my opinion, these high duties upon rice. The average production in the years 1909 to 1913 amounted to 681,000,000 pounds, while the production in the year 1916 rose to the enormous figure of 1,135,000,000 pounds. What need is there for increased duties upon rice if this industry was able under the rates named in the Underwood law to increase its production by nearly 100 per cent?

Mr. BROUSSARD. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield.

Mr. BROUSSARD. I would suggest to the Senator that the war made the Underwood rate as to this item inoperative and ineffective, and when it became operative after the war it was necessary to put it in the emergency tariff bill in order to save the industry.

Mr. WALSH of Massachusetts. I am glad to get the Senator's information as to the effect of the Underwood law upon this product; but the facts snow that the industry prospered, or at least increased greatly. There is no doubt but that between 1909 and 1916 the production of rice doubled, and it does not seem to me that an industry which increased its production so rapidly during these years could be said to be suffering by reason of the want of protective tariff duties.

Let us compare the figures of production, imports, and exports.

Mr. KING. Mr. President, will the Senator yield before he proceeds with that?

Mr. WALSH of Massachusetts. I shall be glad to yield.

Mr. KING. The Senator from Louisiana has just adverted to the fact that owing to the war there was some development and that after the war, as he stated, the industry suffered very disastrously.

Mr. WALSH of Massachusetts. Every industry has.

Mr. KING. I was going to say that farm products and practically every industry in the United States suffered, and rice suffered no more—indeed, suffered less—than some of the other industries of the United States. The depreciation in the price of rice, as I recall, was no greater relatively than the depreciation in the price of corn, where there was no possible competition.

Mr. WALSH of Massachusetts. If we attempted to frame a tariff bill based upon information as to what the industries of this country suffered after the war by reason of the depression in business, we would fix rates here that would be so high and so prohibitive that the whole economic structure of our country would collapse. Every industry suffered, and suffered tremendously, even including those heretofore among the most prosperous in this country, during that period of time, as the Senator well knows.

Mr. KING. And it might be added, too, that there was no interruption of importations by reason of the war, because our imports of rice have always come from the Orient, not from Europe; and there was no such chaotic or industrial perturbation in the Orient as to interrupt the importation of rice from the Orient to the United States. Rice could come just as freely during the war as before.

Mr. WALSH of Massachusetts. I have just had handed to me some figures that will enlighten the Senator.

The importations in 1920, after the war and before the emergency tariff law, were 50,000,000 pounds, while the importations from 1909 to 1913 averaged 71,000,000 pounds, nearly 50 per cent more.

Now, let us see what the imports and exports show.

Out of a production of 930,000,000 pounds of rice in 1921 we exported 600,000,000 pounds. Two-thirds of the crop produced went out of the country. Suppose that it all went out. Would you need a tariff duty to protect it? An industry that is exporting two-thirds of its crop can not justify the levying of any protective duty. It is preposterous to make any such claim. It stands to reason that the world price must be the controlling factor in the sale of a product that is exported in such large quantities. Nearly two-thirds of our products were exported. Do we want a system established of selling American products at home higher than abroad?

Mr. NICHOLSON. Mr. President, will the Senator yield for a question?

Mr. WALSH of Massachusetts. Certainly.

Mr. NICHOLSON. When the large export took place to which the Senator refers was a profit made by the producers of the rice? Can the Senator show or demonstrate by the figures which he is now in possession of that the growers of rice made large profits?

Mr. WALSH of Massachusetts. I have no figures as to that. I assume the situation is the same as with other industries, sometimes large profits were made and sometimes smaller profits.

Mr. NICHOLSON. Has the Senator ever been around where rice has been planted?

Mr. WALSH of Massachusetts. Yes, sir.

Mr. NICHOLSON. Has the Senator ever visited the fields where it is planted?

Mr. WALSH of Massachusetts. Yes, sir; I have.

Mr. NICHOLSON. And the Senator knows that the people who work in the rice fields work in mud up to their knees?

Mr. WALSH of Massachusetts. Yes, sir.

Mr. NICHOLSON. And if the Senator or I had to work in those fields we would look for a tariff of 10 cents a pound instead of 2 cents a pound, if we had to endure the labor, the hardships, that they have to endure.

Mr. WALSH of Massachusetts. There is just as much reason for giving them a tariff of $1 a pound as 2 cents a pound.

Mr. NICHOLSON. No; I would not say so but they are entitled to protection from the mere fact that——

Mr. WALSH of Massachusetts. You can not protect this industry except in one way, the way that is contemplated here, by the rice producers selling their crop to growers' organizations who control prices, and who get the benefit of the protective duties in making the American price higher than the foreign price.

Mr. NICHOLSON. From the Senator's statement, then, there is very little hope for the producer.

Mr. WALSH of Massachusetts. In my opinion this tariff does not amount to the paper it is written on, except that if the information I have is correct, that the price is controlled by the growers' associations, they can manipulate the price so as to get a larger price at home than abroad.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Louisiana?

Mr. WALSH of Massachusetts. I shall be glad to yield to the Senator.

Mr. BROUSSARD. I wish to say to the Senator that his information is not correct. There is a rice growers' association, but it is a cooperative association, just the same as we authorized under the amendment of the agricultural law some months ago. It is not one which buys rice and then sells it again, but the association is merely one which maintains an office and furnishes the producer with the price, and then combines the product of two or three small farmers in order to market their crop. It is a cooperative plan, however, and the men who are conducting it are working under a salary for the growers of the rice themselves, and no profit is made by the American Rice Growers' Association, because they are taxed for the expense of conducting it.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WALSH of Massachusetts. Just a moment. May I finish my answer to the Senator from Louisiana? I have sympathy for the men and women who work on rice plantations, and I have sympathy for the men and women who toil in the cotton mills of New England; but the result of tariff legislation has been to impoverish them and to enrich the few. For the 10 per cent benefit that the working classes receive from tariff protection, 90 per cent of the benefit of the protection goes to the few who constitute the capitalistic class. That is the trouble with high protective tariff duties. It results in enriching the few, and it is responsible for the unrest in this country to-day, namely, that our economic system is resulting in concentrating the wealth of the country in the hands of the few, largely through excessive protective tariff duties.

Mr. NICHOLSON. Mr. President, will the Senator yield for just a minute?

Mr. WALSH of Massachusetts. Yes; I yield.

Mr. NICHOLSON. I will agree that the large corporations have benefited from the protective tariff; likewise, the laborers. There is no country in the world where the laborer is upon as high a pedestal as he is in this country of ours, and that is largely due to protection.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield now to the Senator from Idaho?

Mr. WALSH of Massachusetts. Yes; I yield.

Mr. GOODING. Admitting that we grow all the rice we can consume in this country, I will ask the Senator if he does not think that forcing a great lot of rice into this country from foreign countries on what the Senator calls an already glutted market has the effect of reducing the price to practically nothing at all?

Mr. WALSH of Massachusetts. I will discuss directly the extent to which this market has been flooded by imports.

Mr. GOODING. I ask the Senator if that must not have an effect in the way of beating down the price?

Mr. WALSH of Massachusetts. Why, certainly.

Mr. GOODING. And will not a tariff keep it out?

Mr. WALSH of Massachusetts. Certainly, if it is possible to flood the market with any commodity, and that will affect the price. That is why prices fluctuate in many lines of business, tariff or no tariff.

Mr. GOODING. If the tariff is so low that it is not protective, it flows in here, of course, and it can have but one result.

Mr. WALSH of Massachusetts. The facts show that under the Underwood law, where the rate was very much lower, no such flood of importations came into the country as to force down the prices.

It is true that in some industries the working people have been benefited by the protective tariff system; there is no doubt about that; no one thinks the tariff barons were so foolish as to put all their earnings in their own pockets; but labor's benefits are insignificant compared to the benefits that have come to the manufacturers and others who have benefited by the high protective tariff system, and the concentration of the great wealth of this country in the hands of a few is attributable, in my opinion, to two things: The favors bestowed upon certain classes and privileged interests through tariff protection and the damnable stock-watering processes and proceedings that have taken place in the industrial life of this country in the last 50 years. The statistics clearly show that those industries that have been the most highly protected have amassed the greatest wealth, and have amassed enormous fortunes and paid great dividends because they were able to collect through a government subsidy from the consumers of America.

I repeat what I said a few days ago: In my opinion the agricultural interests of this country would be serving the farmers better if they were here driving down these excessive high rates on the things that the farmer must buy, rather than seeking to get tissue-paper rates for the farmer that will mean nothing and will not protect the farmer.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WALSH of Massachusetts. Certainly.

Mr. GOODING. If it is true that labor has received some benefits from protection, then, because there is in this country a condition which I agree with the Senator is deplorable, so far as that is concerned, in the way of combinations and trusts, the Senator would deny the laboring men of this country proper protection.

Mr. WALSH of Massachusetts. I have never taken any such position. I have never taken a position against protection, in so far as protection is invoked to equalize the difference between the cost of labor here and the cost of labor in Europe; but your system of protection has been carried away beyond that theory. Your system of protection has resulted in increasing dividends and profits and amassing the wealth of this country in the hands of a few, and is bound to increase more and more the wealth of those few privileged tariff barons. Your system has been used to blind the public by giving small benefits to the laboring class to blind them against the tremendous wealth accumulated by the few.

Mr. GOODING. Then the laws of the country and the people are to blame, or those who represent the people are to blame, and not the principle of protection.

Mr. WALSH of Massachusetts. Mr. President, I suppose there are several groups on this floor who entertain widely different views upon what principle of protection ought to be applied to the making of a tariff law. One thing we have learned during the discussion of this bill, and that is that nobody has tried to find out what the facts were in a given industry to determine whether or not any principle of protection fitted those facts and justified the levying of a protective tariff duty.

Mr. GOODING. I think the Senator is entirely mistaken.

Mr. WALSH of Massachusetts. Here is an illustration of the lack of any definite principle in the formulation of this rate on rice. The rice industry is doing a tremendous export business and yet is given a high protective duty. Yesterday, industries which produce only 3 per cent and 5 per cent of our consumption were given a protective tariff duty. It makes absolutely no difference in giving protection whether the demands of the American consumers are satisfied by the industry's production or whether we must go out into the world markets to buy the things our people need to consume because an industry can not compete with foreign industries; there is absolutely no distinction made as to whether the industry is a small, growing one or whether the industry is a trust or expanding so that it controls the world market.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from Louisiana?

Mr. WALSH of Massachusetts. I yield.

Mr. BROUSSARD. I think the Senator was out of the Chamber a moment ago when I took up the question of the importations and the exportations of rice. The only two years in which we imported more rice than we exported were 1920 and 1921. Previous to that, as far as there is any record in the Department of Commerce or the Department of Agriculture, we have imported an average of over 200,000,000 pounds every year in excess of our exportations.

If the Senator will permit me, I can explain in two minutes why we export rice. We would export rice if we did not produce one-tenth of the rice the people consume, because the

American consumer will not buy what we call broken rice. They want first-class, white, whole grains. We buy and import rice from rice-producing countries, and in milling it we break it. There is bound to be some breakage; and then we have to export the broken rice, because the American consumer will not buy it.

For many years we sold nearly 500,000,000 pounds of rice to the brewers and we still had a surplus of broken rice and inferior rice that we have to ship out of this country. Since prohibition the market for that 500,000,000 pounds of rice has been destroyed, so that added to what we previously exported is this quantity which was known as brewer's rice, and that is shipped to other countries, which ship whole rice to us. The American consumer will not buy it. I wish to say further to the Senator that every year previous to that our importations far exceeded the exportations.

During the war those of us in the State of Louisiana who had a little influence were put to work persuading the people to increase their production.

The Senator from Utah has referred to the fact that the Orient was still shipping its rice here. It could, in a measure; but our ships were out of that market, and the Asiatic bottoms were carrying other things besides rice, and they could not have brought to us the whole quantity which they produced at that time.

We know that the whole world was stimulated in the production of agricultural products, and when the war ended there came an accumulation of rice upon us, which the emergency tariff law stopped to a large extent. To say that we are exporters of rice is not true in the common acceptation of that term, because we export rice which the American consumer will not buy.

Mr. WALSH of Massachusetts. Mr. President, I have no personal feeling in this matter. If I could select my course, I would much prefer to remain silent and let the statements of both the Senators from Louisiana, whom I esteem very highly, remain undisputed. But it is my duty to look at the thing impartially and to apply to the facts presented to me such principles of tariff protection as I think my party and country ought to stand for. I have tried to be fair in presenting the facts, without any purpose of distorting them. In fact, I would naturally try to construe them in favor of the position of the Senator from Louisiana, if possible.

Mr. HARRELD. A while ago the Senator made the statement that the statistics show that those industries which have been most heavily protected have made the greatest profits. I would like to ask him if it is true also that those which have been least protected have made the least profits? That follows as a natural consequence, does it not?

Mr. WALSH of Massachusetts. No; it does not necessarily follow at all.

Mr. HARRELD. What is the matter with the farmers' profits? The reason they have not made profits is because they have not had protection, is it not?

Mr. WALSH of Massachusetts. The Senator claims we have a right to invoke the power of the Government to help make profits for people. I do not believe that. I do not believe this Government has a right to invoke its power to help make profits for anybody. It has a right to help an industry that is essential for the happiness and prosperity of our people. It has a right, perhaps, to invoke this unusual power to help develop an essential industry that will take care of the reasonable demands of our people at a reasonable price; but it has no right to pass tariff laws for agricultural industries or for manufacturing industries simply to make prosperity and profits for groups of individuals.

Mr. HARRELD. I did not say that at all. The Senator coined the expression that those who have been most highly protected made the highest profits.

Mr. WALSH of Massachusetts. I repeat it, that the protected industries in this country have become enriched through their exactions upon the consumers of America, made possible by reason of indefensible and pernicious high-tariff duties.

Mr. HARRELD. Then, would it not be wise to let the farmer profit a little by putting a protective tariff on his products?

Mr. WALSH of Massachusetts. I repeat, it seems to me that the agricultural bloc would be rendering a better service to the agriculturists of this country if it were seeking to lower some of the high rates upon the things the farmer buys, rather than put high rates upon agricultural products which can not be reflected in increased prices, such as the rates upon rice, wheat, and other products named in this bill.

The figures before me show that the imports of rice in 1921 amounted to only 37,000,000 pounds. The imports of rice were about 3 per cent of our total production. The exportations were about twenty times the importations.

Mr. President, compare these figures of production, imports, and exports. Do these disclose any urgent need for tariff increases? Out of a production of 983,000,000 pounds of rice in 1921 we exported 600,000,000 pounds. Nearly two-thirds of our enormous production exported! How can a duty be expected to benefit the growers in Louisiana and California under conditions like these? Total imports in 1921 amounted to only 37,000,000 pounds. These imports consist largely of Japanese brown rice for Japanese residents of Hawaii and of special types not grown in the United States.

In this country rice is cultivated by machine methods in large tracts in similar fashion to wheat, while in the Orient laborious methods prevail. There the seed is first planted in nurseries and laboriously transplanted by hand. Because of this difference in method, it is probable that in spite of the low wages in the Orient costs are higher there than in the United States, where rice is grown under the modern, improved, machine methods of large-scale production.

Domestic rice growers are so strongly organized that the members of the associations grow the great bulk of domestic rice. The associations annually fix minimum prices and have great influence in determining what the prices shall be.

The tremendous preponderance of exports shown by the figures I have quoted indicates that the proposed duty will be a nominal one, except for the possibility that the tariff barriers, by shutting off competition in the domestic market, may enable the organizations to sell at one price in the United States and at a lower price abroad.

How can this industry demand a protective tariff duty? Against what? Protective tariff duties are invoked to keep something out that is lowering the price of the American product; and we are shipping out twenty times as much of this product as is coming into this country and twice as much as we consume.

I am not going to prolong the discussion. There is no use in doing that. The policy of the other side is settled. Anybody and everybody who will vote for this bill can get protective tariff duties, whatever he wants, with no attempt made to justify them, no attempt made to distinguish between the nature and character of the industry and the needs of the industry.

I repeat, it does not seem to me, upon the evidence, that these increased tariff duties can be defended. But I want to say that rice is not different from many other agricultural products in the bill. Similar facts have been shown as to other agricultural products, but duties have been levied just the same—yes, the highest duties in our history. It is useless to protest here, but the American people will not hesitate to protest when they realize the burdens we are inflicting upon them.

Mr. GOODING. Mr. President, it is especially fitting that a Democratic Senator from New England should oppose protection to the rice growers of the South. For 130 years, or as long as the existence of this Government, the manufacturers of New England have been given protection. During most of those years they have had free cotton, free hemp, free silk, as they call it, and when the Democratic Party was in power free wool, and now, when the people of Louisiana and the other Southern States come and ask for a little protection, how fitting it is that those people who have been protected all those years should oppose it. I do not believe the junior Senator from Massachusetts represents the people of New England in that stand. I can not believe that they are not willing to give to other people what they have enjoyed for so many years, regardless of whether the Republican Party or the Democratic Party has been in power.

The manufacturing industries of New England to-day, under the Underwood-Simmons bill, have a protection of from 30 to 60 per cent on most things, where they are given any protection at all, unless it is the boot and shoe industry. Yet the junior Senator from Massachusetts has stood upon this floor and fought every proposition to give protection to the agricultural industry of this country.

Our clothing is not on the free list. There is a duty of 35 per cent on fabrics made of wool, and there is a duty of 40 per cent on manufactured garments. Outside of one or two manufactured articles, there is nothing on the free list in the Underwood bill that is not on the free list in the pending bill. You put farming machinery on the free list, and it was an insult to the American farmer to tell him he could buy farming machinery cheaper because you put it on the free list, because the inventive genius on the American farm has led the whole world in providing improved farming machinery, and the whole world uses American-made farming machinery, as there is none made any

place on earth we can use or do use. So putting farm machinery on the free list did not help the farmer by giving him cheaper farm machinery.

The boot and shoe industry is not given much protection in this bill; only 5 per cent. You had it on the free list. Barbed wire you had on the free list. This bill puts it on the free list. But practically everything else the farmer uses in his home or upon his farm you put a high duty on, almost without an exception. Every tool he uses, every nail—whether that nail is in his coffin or used on his farm—you put a high duty on; practically everything that the farmer must buy.

I want to read a letter from a man, not in New England but in the great State of New York. I agree with the Senator from Massachusetts that there are a lot of things wrong in this country, things that have got to be made right. But I am not in favor of destroying the great principle of protection in order to make men honest in this country and to keep them from robbing the American people, nor is it necessary.

This is a letter sent to me by the Eldredge Clothing Co., of Twin Falls, Idaho. It is a letter written to them by Cohen, Goldman & Co. (Inc.), 45 West Eighteenth Street, New York. I understand they are large importers of goods and also what are called jobbers, who enter into contracts with woolen mills and cotton mills for the entire output of the plant and distribute it to the merchant tailors of the country. This is their letter to Mr. Eldredge, a citizen whom I know very well:

1 Foreign type.	2 Shrink.	3 London price in pence per pound scoure l basis.	4 London price in cents per pound for greasy wool.

Column 4 shows grease prices in cents per pound paid in London in May sales figuring exchange at $4.45.

Column 5 shows grade of domestic wool competing with foreign wool in column 1.

Column 6 shows shrinkage of domestic grade shown in column 5.

Column 7 shows Boston market price of domestic wool in cents per pound.

Column 8 shows clip on recent sales is costing laid down in Boston. This is bare cost freight paid to Boston and in most cases is a little higher than present Boston market prices.

Column 9 shows scoured cost types used in London in cents per pound.

Column 10 shows clean cost domestic equivalent in Boston at present market prices.

Column 11 shows clean cost new clip from west landed in Boston without profit based on sales during past week.

NEW YORK.

ELDREDGE CLOTHING CO.,
Twin Falls, Idaho.

GENTLEMEN: We feel it our duty to notify all of our customers that if the proposed tariff on raw wool is passed, the retail price of a man's all-wool suit of clothes will go up about $4 and an overcoat about $7.50 at retail. This would mean a curtailment of your clothing business, and we feel that you should be made aware of the facts.

The Senate is considering a tariff on raw wool of 33 cents on the clean content of the pound. If adopted, this will mean an 83 per cent increase over the high Payne-Aldrich tariff, which Ex-President Taft characterized as "indefensible."

It will cost the American people about $360,000,000 a year. And this to protect the raw-wool industry, with a total annual output of only $65,000,000.

The reason is that this 33 cents grows to $1 a pound after it has passed through the hands of the wool dealer, the spinner, the cloth manufacturer, the clothing manufacturer, and the retailer, after each one has added his overhead and profit.

Moreover, the tariff taxes all wools alike, regardless of quality or cost, which will practically put an embargo on the lower-grade wools, and the workingman and the average farmer will have to be satisfied with wool substitutes—cotton or shoddy.

The wool tariff will not even protect the farmer, because only 7 per cent of the farmers of this country grow any wool. Of those who do, only a small fraction of 1 per cent grow it in commercial quantities, so that the farmers as a class will be taxed more for their clothes than they will get in the enhanced price of wool.

The bill is not a protective measure, because half of this tariff would be ample protection. It will cost the American people $360,000,000 and will merely enrich a comparatively few large ranch owners in the West.

The only thing that will modify the bill is a widespread protest. If you will write to your Congressman, protesting against this useless extravagance, and if you will run one or two advertisements in your local newspaper letting your customers know how much this wasteful legislation is going to cost them, you will be protecting your own business and you will be doing your duty toward your community.

Very truly yours,

COHEN, GOLDMAN & CO.

If this letter states the truth, then there is a most deplorable condition in America. If this letter states the truth, every wool dealer, every manufacturer of cloth, every manufacturer of clothing, every retailer is a profiteer and a crook. If there is any truth in this letter, or if it is true that the 33 cents a pound on clean wool is increased to $1 a pound before it reaches the consumer, then I agree that there is something wrong in the country and some remedy has to be found to meet the profiteers who are robbing the people.

Mr. LODGE. Mr. President——

The PRESIDING OFFICER (Mr. ROBINSON in the chair). Does the Senator from Idaho yield to the Senator from Massachusetts?

Mr. GOODING. I yield.

Mr. LODGE. I am interested in the letter which the Senator has just read. I believe the fact is, and I think I am correct, that the rate on a pound of scoured wool to-day under the emergency tariff law is 45 cents. Am I not right?

Mr. GOODING. The Senator is correct.

Mr. LODGE. The writer of the letter is selling now at his present prices under a scoured content tariff duty of 45 cents a pound. The pending bill reduces the rate 12 points, to 33 cents a pound, and yet he says it is going to add $4 to a suit of clothes.

Mr. GOODING. Yes; the Senator is correct, and I am going to discuss that point.

First let me say that if this letter does not state the truth, if the retailers of the country and the wool dealers and the manufacturers of cloth and clothing are not profiteering, then these men are criminals for sending such a communication as this through the mails and ought to be dealt with as criminals and nothing less. This is the propaganda, if you please, that men such as Cohen, Goldman & Co. and others of their kind are putting out to destroy the great principle of protection and to break it down.

Four dollars on a suit of clothes. The present price in the Boston market for the best grade of American wool is $1.31 on a scoured pound. It is as good as any wool in the whole world; in fact, Ohio fine unwashed delaine wool, as it is called, is the best wool that is grown on earth. It stands the strongest tear, it is the best-wearing wool, and it is as fine as can be grown any place in the universe. The price of that wool to-day in Boston is $1.31 per scoured pound. It takes 3½ pounds of scoured wool to make 3½ yards of cloth of the average weight that is used to make a suit of clothes. What is the total cost of the cloth for a suit of clothes with the tariff of 45 cents a pound on the scoured basis, 15 cents on the grease pound, and 30 cents on the wash, if you please? There is a provision in the emergency tariff law which provides that when any part of the fleece was removed to reduce its shrinkage it should bear the wash duty of 22 cents per pound, which makes a higher duty, if you please, than 45 cents a pound on the scoured wool, because practically all the woolgrowing countries in the world skirt their wool, and they have not stopped skirting it. So the emergency tariff law is acting almost as an embargo at the present time, and nothing proves that more conclusively than the fact that there are 107,000,000 pounds of bonded wool waiting for what? Waiting for the time when the tariff duty will be reduced 12 cents a pound and when they can bring it in here at a material reduction of 35 per cent below what they could bring it in for under the present law. And yet Mr. Cohen and Mr. Goldman tell the country that 33 cents a pound is going to increase the cost of a suit of clothes $4.

But let me go on with my story. Scoured wool is $1.31 a pound in Boston. Three and one-fourth pounds of scoured wool is required to make a suit of clothes. The total cost of the

wool, after the farmer has paid the freight on it to Boston, which to-day from the West is 10 cents a pound, after he has paid the profits which the commission man charges, after the scouring charges have been paid, is only $4.26 for it all, even of the highest-priced Ohio fine wool, as good as is grown anywhere on earth, with a duty of 45 cents per pound on scoured wool.

Territory fine staple, which is wool that comes from the West, is worth $1.26 in Boston—$4.10 for all the wool required for a suit of clothes, including all the freight rates, all the tariff at 45 cents on the scoured content.

Mr. BURSUM. Mr. President——

Mr. GOODING. I yield to the Senator from New Mexico.

Mr. BURSUM. Does not the Senator from Idaho think that the kind of wool Cohen, Goldman & Co. would be likely to use would be worth about 60 cents a pound?

Mr. GOODING. Shoddy, of course, as much as he could get into it.

Mr. BURSUM. Two dollars and forty cents for the wool in the suit.

Mr. GOODING. Yes. I am going to tell the story about Cohen, Goldman & Co. before I get through.

Ohio one-half blood staple is worth $1.08 in Boston. Out of this wool a suit of clothes will cost $3.51 with the emergency tariff law in full force.

Territorial one-half blood good staple wool, worth $1.15 in Boston, will cost $3.74 for a suit of clothes.

Territorial three-eighths staple, worth 89 cents in Boston, will cost for a suit of clothes $2.89.

Territorial one-quarter blood, worth 72 cents in Boston, will cost $2.34 for a suit of clothes, with a tariff of 45 cents on the cleaned content.

Territory braid, and I presume there is some made out of territory braid, will cost $1.43 for a suit of clothes after the duty is paid.

So, Mr. President, I want to ask if there is a man in all America, who has a job, who can not pay $4.26 for an all-wool suit of clothes or all of the wool that goes into an all-wool suit of clothes?

The fact is, Mr. President, that a large percentage of all the cloth that is made now is blended with shoddy; so that the actual cost of the wool in a suit of clothes, when the shoddy, which is in it is taken into consideration, would be reduced to not more than $2.50 on the average suit, and that will include 90 per cent of all the cloth that is manufactured or used for making men's clothing.

Mr. President, to show Mr. Goldman in his true light, and to show how far men like Mr. Goldman will go in order to carry on a propaganda so as to help them in their business of importing into this country, in order that they may charge any price they please for distributing a yard of cloth to the merchant tailor and destroy protection in this country, I am going to send to the desk and ask to have read a portion of an address by Mr. Goldman before the American Association of Woolen and Worsted Manufacturers in New York on the 10th of last December. The article which I send to the desk is dated, but the letter I have is not dated, and I do not, therefore, know on what date he sent it out. However, he and those associated with him have been sending out these letters for the last two or three months.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

[From Commercial Bulletin, Boston, Saturday, December 10, 1921.]

LOWER CLOTHING PRICES PREDICTED AT MEETING OF WOOLEN AND WORSTED MANUFACTURERS THIS WEEK—BETTER TIMES AHEAD.

That prices on clothing will go to lower levels in the near future and that the outlook for the manufacturers of woolen and worsted goods is encouraging were among the outstanding statements at the annual meeting of the American Association of Woolen and Worsted Manufacturers, held in New York this week.

In his remarks about the future of clothing prices, William Goldman, of the clothing manufacturing firm of Cohen, Goldman & Co., said:

"I would say first of all that in spite of the gloom and pessimism in the minds of business men, and in spite of the fact that no profit has been made this year, the clothing industry has not only done a surprisingly large volume of business at retail, but, in my opinion, the number of units distributed to the consumer has been above 90 per cent of the distribution in any normal prosperous year.

"The minds of most of us are still attuned to the pitch of 1919, and we have not yet toned down to normality. We are most of us under the impression that during the latter years of the war and immediately thereafter our sales volumes were enormous, whereas if we actually analyzed the figures we would probably find that so far as number of garments is concerned, and ignoring the volume in dollars and cents, we did not sell at retail any more garments for civilian trade in 1917 and 1918 than we did in any normal year. And if it hadn't been for the demobilization of 5,000,000 troops that we had to reclothe, I do not believe we would have done so in 1919. The volume was in price in those years, not in units.

"We have all seen prices skyrocketing to an almost unheard-of degree in the short space of four years, and it is a perfectly natural thing to take a superficial view of this situation and look for a rapid readjustment and a reasonably quick deflation that will bring us down to earth in a period of two or three years. But don't let us fool ourselves. It is a very simple thing to pyramid prices and values in a short time during a great war, but it is a long and difficult process to squeeze out that inflation when nearly the entire population of the world has accustomed itself to new standards.

"It is my opinion that we have now entered an era of at least 15 or 20 years of gradually declining prices.

"I do not mean to say that within this era we shall not have good business—aye, even years of great prosperity and advancing prices. But the tendency will be downward, and each recession during that entire era of 15 or 20 years will take us to a somewhat lower level.

"I do not want to be misunderstood as spreading a doctrine of pessimism, because, on the contrary, I have found after years of experience that with ordinarily good business management as much or more money can be made and held on a gradually declining market as on a rapidly rising market.

"I say this for two reasons: First, that we have all of us learned within the past year or two that most of the profits made on a rapidly rising market are paper profits; and, secondly, that a gradually declining market continually presents opportunities for savings in production costs over estimates made months in advance."

Mr. GOODING. Mr. President, it is quite evident, so far as woolens are concerned and the articles with which Mr. Goldman has to do, that there is not going to be much lowering in prices, at least, according to the letter which he sends out. Of course, there is not any question as to what his intention is, if it is possible to carry it out, and that is to destroy the protective principle in America. The importers have all been trying to do so for some time. One of the curses of this country is that we have too many Goldmans in America to-day.

A few years ago, when I had the honor to be president of the National Wool Growers' Association, I made an investigation into the cost of clothing. I followed the wool from the West through the commission house, through the factory, and into the hands of men like Mr. Goldman and his kind, if you please, who enter into contracts with the manufacturers for the entire output of their mills, and I found that Mr. Goldman and his kind took more for distributing a yard of cloth to the merchant tailors of the country than the wool grower got for growing the wool, the railroad for hauling it, the commission merchant for selling it, and the manufacturer for manufacturing it, and the duty on the wool, all put together, and yet this is the man who is fighting protection to the wool growers of this country.

Twenty years ago we had 64,000,000 head of sheep in America. To-day we have but 35,000,000 head. The industry is almost a wreck compared to what it was 20 years ago, and it is Mr. Goldman's kind who have destroyed it.

Mr. President, I shall not take any more time of the Senate. I know that the senior Senator from Utah [Mr. SMOOT] is very anxious to get a vote on the rice paragraph, and I hope on peanuts also to-night. So I will yield the floor.

Mr. SMOOT obtained the floor.

Mr. WILLIS. Will the Senator from Utah yield to me for one moment?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Ohio?

Mr. SMOOT. I yield.

Mr. WILLIS. I ask permission to insert in the RECORD at this point a very illuminating editorial from the National Republican of June 24, bearing on the very subject which has been so ably discussed by the junior Senator from Idaho [Mr. GOODING], the title of the article being "Free traders trying to fool women." I do not ask to have the article read.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREE TRADERS TRYING TO FOOL THE WOMEN.

That Democratic politicians and foes of the Republican Party and the protective policy are exceedingly active at this time is evidenced by the organized movement brought into evidence at the convention of the Federation of Women's Clubs, at Chautauqua, N. Y., to commit that organization to the program of the so-called Nonpartisan Tariff League, a camouflaged antiprotective tariff organization.

A special appeal is made to women to fight a protective tariff. This appeal is based on the theory that protection means higher retail prices. We have had the highest cost of living and the most profiteering in necessities under the present tariff law the American people have ever experienced. In the long run the protective policy, as experience has demonstrated, brings about lower rather than higher retail prices through the stimulation of domestic production and competition. This appeal to women is promoted partly by theoretical free traders, but far more by huge importing interests engaged in charging enormous profits on articles bought abroad at low prices but sold to the ultimate consumer in the American market at all the market will bear.

Sensible women will not forget that they are interested in prosperous American production more than in foreign importations. Many hundreds of thousands of American women are directly employed in American productive industry. Every woman in the United States is affected by general business conditions in this country. When foreign production is promoted and domestic production discouraged, it means unemployment, and unemployment means hardship in the American home.

American women should stand for the American protective policy, which builds and safeguards American industry. Under that system the United States has become the most prosperous nation in the world, with women occupying a more desirable economic position than elsewhere on the globe. Women should not allow themselves to be deluded by organizations using high-sounding phrases about "non-

partisanship" and "fair tariff" but working all the time against tariff rates high enough to be protective of American industry, enterprise, and employment.

Mr. SMOOT. Mr. President, I am not going to take any time of the Senate now in the discussion of the pending amendment, if we may have a vote on it. I now ask for the yeas and nays on the first committee amendment in paragraph 728.

The PRESIDING OFFICER. The pending amendment will be stated.

The READING CLERK. On page 104, paragraph 728, line 15, before the words "1 cent per pound," the Committee on Finance proposes to insert "three-eighths of," so as to read:

PAR. 728. Paddy or rough rice, three-eighths of 1 cent per pound.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment, on which the Senator from Utah has asked for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

The roll call was concluded.

Mr. KING (after having voted in the affirmative). I have a general pair with the Senator from North Dakota [Mr. MCCUMBER]. I transfer that pair to the senior Senator from Missouri [Mr. REED] and allow my vote to stand.

Mr. HARRIS (after having voted in the affirmative). I transfer my pair with the junior Senator from New York [Mr. CALDER] to the senior Senator from Nebraska [Mr. HITCHCOCK] and allow my vote to stand.

Mr. NEW. I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. CAMERON. I transfer my pair with the Senator from Georgia [Mr. WATSON] to the junior Senator from Nevada [Mr. ODDIE] and vote "nay."

Mr. CURTIS. I desire to announce that the Senator from Pennsylvania [Mr. PEPPER] is necessarily absent.

I also wish to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The junior Senator from Kentucky [Mr. ERNST] with the Senior Senator from Kentucky [Mr. STANLEY];

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The Senator from Washington [Mr. JONES] with the Senator from Virginia [Mr. SWANSON];

The Senator from Missouri [Mr. SPENCER] with the Senator from Nevada [Mr. PITTMAN]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 12, nays 39, not voting 45, as follows:

YEAS—12.

Gerry	King	Pomerene	Trammell
Harris	La Follette	Simmons	Underwood
Heflin	Overman	Smith	Walsh, Mass.

NAYS—39.

Ashurst	Johnson	Moses	Sheppard
Brandegee	Jones, N. Mex.	Nelson	Shortridge
Broussard	Kellogg	New	Smoot
Bursum	Kendrick	Newberry	Sterling
Cameron	Keyes	Nicholson	Sutherland
Capper	Ladd	Norbeck	Townsend
Caraway	Lenroot	Phipps	Wadsworth
Curtis	Lodge	Poindexter	Warren
Gooding	McKinley	Ransdell	Willis
Harreld	McNary	Robinson	

NOT VOTING—45.

Ball	Ernst	McKellar	Spencer
Borah	Fernald	McLean	Stanfield
Calder	Fletcher	Myers	Stanley
Colt	France	Norris	Swanson
Crow	Frelinghuysen	Oddie	Walsh, Mont.
Culberson	Glass	Owen	Watson, Ga.
Cummins	Hale	Page	Watson, Ind.
Dial	Harrison	Pepper	Weller
Dillingham	Hitchcock	Pittman	Williams
du Pont	Jones, Wash.	Rawson	
Edge	McCormick	Reed	
Elkins	McCumber	Shields	

So the committee amendment was rejected.

Mr. SMOOT. Mr. President, I am directed by the Finance Committee to ask that the amendment on line 23, affecting brown rice, hulls removed, be rejected.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 104, line 23, it is proposed to strike out "1¼ cents" and insert "five-eighths of 1 cent," so as to read:

Brown rice (hulls removed), five-eighths of 1 cent per pound.

Mr. SMOOT. Upon that I ask for the yeas and nays.

Mr. KING. Mr. President, as I understand, the proposition of the committee now is to increase the rate from five-eighths of a cent to 1¼ cents per pound.

Mr. LODGE. To restore the House rate.

Mr. SMOOT. That will be the result; or, in other words, to restore the House rate.

Mr. KING. But if the action of the committee prevails, it will restore the House rate of 1¼ cents.

Mr. SMOOT. That is true.

Mr. WALSH of Massachusetts. I will say to the Senator that the committee have decided to restore all the House rates here. The vote on the last amendment shows that. This whole paragraph is going to be restored.

Mr. UNDERWOOD. But, as I understand, the question before the Senate is whether they will agree to the original committee amendment.

Mr. SMOOT. That is right.

Mr. UNDERWOOD. And the committee has merely abandoned its amendment itself.

Mr. WALSH of Massachusetts. Exactly.

Mr. UNDERWOOD. But the vote comes on the question of whether or not the committee amendment shall prevail.

Mr. WALSH of Massachusetts. The Senator is correct. I do not think the committee desire a roll call except on the previous amendment. They have us on record already.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 24 the committee proposes to strike out "2 cents" and to insert "1 cent," so as to read:

Milled rice (bran removed), 1 cent per pound.

Mr. SMOOT. I am directed by the committee to ask that the Senate reject that amendment.

Mr. WALSH of Massachusetts. That increases the rate 100 per cent.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. KING. Mr. President, the proposition, as I understand it, is to increase the rate 100 per cent over the committee amendment—that is, the Finance Committee reduced the inordinately high rate found in the House bill 100 per cent. But we are now asked to accept the House rate, which, as stated, will impose a duty 100 per cent higher than that which the Finance Committee, upon due consideration, felt to be adequate.

Undoubtedly the agricultural bloc, or the farm bloc, has brought pressure to bear upon the Finance Committee, and it has receded from its position and now recommends the placing upon the consuming public of a heavy burden of taxation involved in the duty which we are asked to impose. This is not a tariff bill for the purpose of raising revenue, or based upon any theory which has heretofore been accepted even by Republicans as the foundation or justification of tariff taxation. The able Senator from Wisconsin [Mr. LA FOLLETTE], in his address just concluded, has demonstrated that the Payne-Aldrich bill, as well as the pending measure, ignores all canons which heretofore have guided Republicans in levying tariff duties. There is no pretense that the difference in cost of production here and abroad is taken into account in the schedules found in this bill. It is admitted that labor costs in foreign countries are undergoing remarkable mutation; that the fluid condition in the political as well as in the economical life of the peoples of other lands make it impossible to ascertain in any fair and accurate way the costs of production in such lands.

This bill, therefore, is without any scientific data as a basis for its formulation; it is such a frightful medley of rates and schedules and duties, such a hodgepodge of facts and figures and greed and selfishness and cupidity, that it calls for the condemnation of those who love justice and desire the welfare of the people. Groups have been considered, their demands have been recognized, and the interests of the public entirely overlooked. We have condemned rivers and harbors bills and large appropriation bills because of the log-rolling, the trading and

trafficking which have secured their passage. What shall be said of this bill?

The supposed interest of sufficient States and sections have been recognized as to bring together in a cohesive way conflicting and incongruous elements and forces, but all united to secure the passage of the bill. Manufacturers who desire free raw materials support the bill because of the extortionate rates upon manufactured goods which are written in the various schedules. Agriculturists representing what has been denominated the agricultural bloc support the indefensible, not to say wicked, schedules which permit the manufacturers to rob and exploit the great mass of the American people because there are found in the bill schedules which impose enormous taxes upon the products of the field and the farm and the ranch. It looks as though this bill, which is an ugly and misshapen thing, was the product of concessions and demands, of contests and conflicts, all directed toward increasing the burdens upon the people, upon the theory and with the object of increasing the prices of the commodities and products which the contending forces manufactured and produced.

In my opinion, no more selfish, cruel, and heartless tariff bill was ever presented than the one which we are now considering. There is no pretense by its defenders that the interests of the people are taken into consideration in its passage. The proponents of the bill talk only of the benefits to be derived by the manufacturers and the interests who dictated, if they did not prepare, the bill.

It matters not whether the subject be food or clothing or medicine. The paramount consideration is how shall the rates be laid to increase the profits of the manufacturer and the producer. The agricultural bloc want increased prices for their products. It is unimportant what the effect will be upon the millions who are compelled to buy such products. The manufacturer demands the highest duties ever laid in any tariff bill, not to benefit the public but to increase his profits. Facts showing no competition, either domestic or foreign, fail to influence those who are cooperating to drive this bill through Congress. When it is shown that the imports are less than one-half of 1 per cent, or, indeed, when in some cases it has been established that there are no imports, those in control insist upon duties all the way from 60 to several hundred per cent. And when the facts show that we can produce in the United States given products cheaper than they can be produced anywhere in the world and that our exports are stupendous, there is no reduction in the tax and the high levels found in the bill are either maintained or raised. No rational basis of taxation is suggested or followed by the majority, nor is there the slightest evidence that the interests of the great mass of the people receive consideration.

This bill defies every economic principle, every safe and sane tariff policy, and the most elementary principles of justice and right. If the most selfish men in the land had written every schedule, it could not have been worse and its evil effects could not have been more serious.

But, Mr. President, it is obvious, as stated by the Senator from Massachusetts [Mr. WALSH], that no argument in favor of a reasonable tariff or a fair rate or a just system of taxation will be of any avail in this Chamber. Indeed, it falls upon deaf ears. I make no charges, but I do venture the statement that the record discloses that certain forces are operating in perfect harmony and that elements which ought to be antagonistic are brought into perfect apposition and all are cooperating to force this iniquitous bill through the Senate. We know that a tariff bloc was organized and that it impressed its views upon the Finance Committee and demanded rates which were finally written into the bill.

The claims of various commodities for protection have not been considered separately or independently, but representatives of various commodities and products have found common cause, have united in a common enterprise, and are unitedly supporting this bill. The agricultural classes, whose interests are not those of the manufacturers, are found supporting with a vehemence and zeal that is fanatical the extortionate rates found in the woolen schedule and the cotton schedule and the metal schedule and other paragraphs of the bill. Representatives of the chemical industries, of the cotton and the textile schedules, and of steel products feel perfectly secure that the extortionate rates found in the bill will not be changed; they feel that there is some sort of an understanding, some agreement or alliance, or subtle influence and power that will bring to their support strength from interests that in the very nature of things are antagonistic. This bill presents the spectacle of oil and water mixing, of light and darkness coalescing, of justice and injustice embracing. Indeed, the bill as it is now before us presents the triumph of injustice and exploitation.

When the steel schedule is before us these forces and interests will unite and impose high rates of duty, though it means increased prices to the farmers and the American people of all products and commodities of which iron and steel are constituent parts. It matters not that we export steel products, that we need fear no foreign competition, that the steel industry is practically a monopoly. These elements and forces blithely vote to increase the tariff and thus increase its power to further rob and exploit the American people.

Mr. President, I denounce this bill, and unhesitatingly declare that it is the most oppressive tariff bill ever proposed in the American Congress. Under the theory of raising revenue it is a bold and naked attempt to rob and plunder the American people. I am not opposing a fair revenue bill. I believe in raising revenue at the customhouses. I am willing to support a bill that will provide several hundred millions of dollars from tariff duties. But I am unwilling to subscribe to the proposition that the taxing power of the Federal Government may be prostituted and perverted to enrich any group or any class or any corporation or any section of our country. I believe in the Democratic theory of taxation as it was announced by Jefferson and as it has been proclaimed by genuine and not by hybrid Democrats. I am unwilling to adopt a theory that Congress has the power to tax one or more persons for the benefit of another. The Democratic Party, when it has been worthy of the confidence of the people, has championed the cause of constitutional government. It has been the defender of the Constitution, and in so doing it has been the protector of the American people. It has always opposed class legislation, special privileges, subsidies, and bounties and gratuities and the exercise of governmental powers in the interests of any section or any group.

I concede that the abuse of the taxing power may bring benefit to the few. Undoubtedly laws labeled "revenue laws" may be so adroitly drawn as to rob the many to benefit the few. In other ages it was considered entirely proper for the few to live in riches which were wrung from the masses of the people. An oligarchy or a despotic monarchy possessing unlimited power exploited the people and enacted laws or promulgated executive orders which transferred the results of the toil of the people to the pockets of a limited few. The great struggle for liberty and freedom at bottom was a struggle against the abuse of the taxing power. Our fathers averred that George III taxed the American colonists and denied them representation; that he cut off their trade with other nations. A free people will always guard the taxing power and will destroy any party or any class that perverts it and exercises it to enrich special favorites or particular classes. The Republican Party has departed from the principles of Lincoln and does not hesitate to employ the taxing power of the Federal Government to add to the fortunes of certain interests in the United States. This spirit finds exemplification in nearly every paragraph of this bill. The rates are increased far above those that are found in the Payne-Aldrich law, and they will place burdens upon the American people the aggregate amount of which it is impossible to calculate. Some who are familiar with its schedules declare that this bill will tax the American people several billions of dollars.

Mr. President, in my opinion, it will rob the American people of billions, perhaps exceeding $5,000,000,000 annually, and will indirectly affect the industrial life of the people. Indeed, it will affect the political life of the people; it will affect our relations with other nations; it will prove not only a burden to the American people but it will prove an evil to all other nations. It will interrupt the currents of trade and commerce which encircle the world. It will provoke animosity and retaliation that will disturb those amicable relations which should bind together the peoples of every land.

But notwithstanding the evils which this bill will inevitably produce, the forces behind it, the predatory interests which are backing it, the profiteering and greedy influences which are promoting it view with the utmost cynicism the consequences of their efforts and with jest and song acclaim the approaching day of victory. They know the bill will pass. They know there can be no referendum between now and the adjournment of this session of Congress when the American people could pass upon these schedules. They know they have the power and the votes; opposition irks them, arouses their resentment, and any criticism of the bill brings their wrath upon the head of the offender.

Mr. President, it has been indicated by the party in power, by the votes which have already been taken that they would be glad to interdict all importations and turn the American consumer over to the tender mercies of the greedy and devouring

monopolies that threaten the economic if not the political life of this Republic. I want to warn Republicans and warn these high-tariff robbers that there will be a day of reckoning, that the American people will not submit to this monstrous perversion of the taxing power, to the enactment of laws under the guise of revenue measures which are intended only to increase the wealth of special interests and to add to the power of certain groups and corporations to further impose their will upon the American people.

Mr. President, I regret that all Senators did not hear the address of the senior Senator from Wisconsin [Mr. LA FOLLETTE]. They would have learned if they do not now know the evils of the Payne-Aldrich law. The figures which he submitted and the tables which he presented demonstrated to a mathematical certainty what every patriotic American knows; that the Payne-Aldrich bill was a wicked and despotic measure which sought to bring industrial servitude to the American people and to concentrate in the hands of a limited few the great wealth and resources of this mighty Republic. That law was not only condemned, but it was damned by the American people. It aroused listless and apathetic taxpayers until in their wrath they smote the conspirators who foisted it upon the American people and drove from power the Republican Party which had drifted into the hands of sinister and predatory interests.

But that party seems not to have learned from its ignominious rout and defeat the lessons of prudence, and it certainly exhibits the fact that it has not learned how to be just or how to administer the great trust which has been committed to its hands by a deceived and overcredulous people. It proposes now to jam through this Congress a tariff bill more infamous, more indefensible, more oppressive than the Payne-Aldrich bill, which, as I have stated, was condemned and damned by the American people. It seems impossible to rouse Senators to a comprehension of the injustices and of the wrongs which this bill contains. The junior Senator from Idaho [Mr. GOODING], the head of the tariff bloc, undoubtedly feels secure, and he looks on with indifference at the assaults made upon the bill. He feels secure, doubtless, because he appreciates that back of the bill there is, I was about to say, a combination, but I withdraw the word and say that he feels secure because back of it there is a friendly and benevolent union and cooperation of the predatory interests and the agricultural interests, all of whom are seeking to foist upon the American people this most damnable and oppressive measure.

Mr. President, the rates in this bill are so high, so oppressive, that they have become offensive to decent people. Even many who are high protectionists appreciate that this bill is the result of combinations of greedy and selfish interests. And yet, cruel and oppressive as the bill is, it will go through. I can not express my abhorrence of this bill. I have examined each schedule and read every paragraph and my very soul revolts against its injustices and the patent evidences that it has been drawn by the interests and for the interests and without the slightest regard for the well-being of the American people.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from North Carolina?

Mr. KING. I yield.

Mr. SIMMONS. It may be that when this bill was first introduced the other side of the Chamber, even including some members of the committee, did not know of its iniquities, or did not know to the full extent of its iniquities. As the result of these discussions they now know of its iniquities, and they would like very much to get rid of it, but they do not know how to get rid of it.

Mr. KING. Mr. President, I hope that my distinguished friend is right. I want to believe, and I shall accept his view and I shall believe, that our friends upon the other side did not know of the infamies of this bill when it was first reported. I hope they are learning now of its iniquities. I hope they will have the moral courage to find some way by which they may get rid of it and not fasten it upon the American people. Of course our Republican friends have the power to drive it through. They have the power, because of the force of numbers, to use the taxing power of the Government to put their hands into the pockets of the American people and rob and plunder them at the command of the predatory interests who are here demanding the passage of this bill.

The able Senator from Idaho [Mr. GOODING] a moment ago confessed that the tariff does increase prices, and he complained of the attitude of the able junior Senator from Massachusetts [Mr. WALSH] because he was contending for a policy that would relieve the great consuming public from the burdens of taxation. The Senator from Idaho by his questions contended that because the New England manufacturers had robbed the public the junior Senator from Massachusetts should now join with him and rob the public to a still greater extent by imposing burdens upon them in order to benefit the agricultural classes of the country.

Mr. GOODING. Mr. President—

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Idaho?

Mr. KING. I yield.

Mr. GOODING. I did not say anything that I am aware of about the New England manufacturers robbing the American people.

Mr. KING. Oh, Mr. President, the inference was absolutely unmistakable. No other deduction could be drawn from the interrogatories propounded by the Senator from Idaho to the Senator from Massachusetts when he was addressing the Senate than that the tariff was for the purpose of increasing prices of commodities and products and the profits of the manufacturers and producers; and he complained of the attitude of the Senator from Massachusetts and said, with some sarcasm, that it was quite fitting for a Democratic Senator from New England, where the manufacturers had profited by the tariff, to vote against this tariff, which the Senator from Idaho averred would add to the profits of the agriculturists. However, the Senator from Massachusetts correctly stated the fact that this bill will prove a delusion to the farmers of the United States.

The position of the Senator from Idaho was, and it is now, that the tariff increases prices and profits. That is the reason he wants it. He wants a tariff on wool to increase the price of wool. He wants a tariff on sugar to increase the price of sugar. He wants a tariff on rice to increase the price of rice. He wants a tariff upon everything that enters into the lives of the people, as he has indicated, in order that the prices of all products shall be increased.

Mr. President, I have conceived that it was the duty of representatives of the people, Republicans and Democrats alike, to legislate in the interest of the masses of the people. No man has a right, even if he comes from a manufacturing State, or from an agricultural State, or from any State that derives particular benefit from any tariff, to stand here and defend tariff exactions which would rob and exploit the American people. No man has the right, no matter what benefit it might be to him or to his State, to prostitute the powers of the Government in order to enrich his State, his community, or himself.

It is immoral, from my point of view at least, for any Senator to take that attitude that taxes may be levied in order to enrich any section or class. We are here under our oaths to support the Constitution of the United States. We are here to see to it that there shall be no special legislation, no special privileges, no gratuities and bounties to any particular section or any class. The question before us always should be: What is for the good of the American people? What is just and right? What is the mandate of the Constitution? We may levy taxes for the legitimate expenses of the Federal Government. We may not levy taxes in order to benefit any man, any section, or any group.

I agree with the inferences of the Senator from Idaho. The New England manufacturers have been enriched far beyond the dreams of avarice by the protective-tariff system. The protective-tariff system, as it has been applied by the Republican Party, was not conceived in the interest of justice, in the interest of the American people, but was conceived in the interest of a special class, and for years, while the Republicans have been in power, Congress has been the forum into which came the predatory, grasping, greedy, selfish interests of the United States, which were willing to destroy the Constitution, ignore justice, trample upon the laws, morals, and decency, in order that they might plunder the American people.

This bill is the apotheosis of robbery and of infamy. Of all the damnable tariff bills ever passed by the Congress of the United States, this will stand preeminent because of its multitudinous infamies.

The able Senator from Wisconsin [Mr. LA FOLLETTE] a few moments ago closed his address by calling attention to the schedules, and the colossal height to which they have been raised, and the inevitable effects upon the American people.

Mr. President, the Senator from Wisconsin declared that this bill should be redrawn; that if it passed in its present form it would bring defeat to the Republican Party as defeat came to that party when it passed the Payne-Aldrich bill. I predict that the American people will be aroused when they learn, as they will, what this bill is, what interests were behind it, what evils must inevitably flow from it. The American people believe in the Constitution. They desire justice. They want to preserve unimpaired the heritage of liberty which has been

transmitted by the fathers. They know what an oligarchy is. They know how cruel wealth is and how certain destruction will come to any nation that by unjust laws filches from the people, robs them of the products of their toil, and transfers what should be their wealth to the possession and the ownership of special interests and privileged classes. This is a democratic Government, a government of the people. It must remain a government of the people, not a government of privilegd classes or favored individuals, of corporations, and trusts, and monopolies. The American people desire that their property shall be protected, and as they insist in the right to acquire and to hold property, they demand as a corollary that property shall not be taken from them by unjust taxation, by tariff laws which under the pretext of raising revenue seek only the spoliation of the many in order to enrich the few.

Mr. HEFLIN. Mr. President, we hear Senators on the other side pleading for a tariff on hides. I am not going to discuss that proposition now, but I want to remind you that the banking system of this Government is so conducted to-day that the cattlemen of the country can not borrow money on the living animal in order to make his industry a going and a prosperous industry. We are treated to a ridiculous spectacle when Senators become heated and enthusiastic in pleading for a tariff tax on the dead animal's hide, when they permit a condition to exist that denies aid to the great industry of living animals in the United States.

Not only that, Mr. President, but they take the hide off the cattle industry, as my friend from Ohio suggests, through the policies they employ, and then call upon the Congress to grant a tariff duty to protect the hide of the dead animal to which they refused aid while it was living. That is one of the things we see here in this monstrous tariff bill.

Mr. President, I have just been talking to a cattleman from my State who has 500 of the finest cattle that you can find anywhere, and he can not borrow the money on them which he needs in order to keep his industry going, and this day, the 8th of July, in the Capital of the country, Senators are pleading for protection of this and that, and protection for the hides of dead animals, when they are permitting live animals to be driven to the slaughterhouse and sacrificed by the thousands, to the injury of the great cattle owners of the country.

I want Senators to think of my suggestion: What a glorious exhibition of statesmanship it is to demand a tariff duty to protect the hide of the animal that is dead and shut the doors of the banking institutions in the faces of the owners of thousands of live and lowing herds upon the plains.

No credits are extended to them. The cattlemen of this country are in dire distress, and the deflation policy of the Federal Reserve Board destroyed in 18 months nearly half the mother herd of this country. But Senators turn red in the face and perspire as they plead for a tariff duty on hides. Mr. President, I plead for justice and fair play for the great industry of living cattle while my Republican friends plead for protection to the hides of cattle that are dead.

Mr. LODGE. Mr. President, I shall take but a moment. When I came into the House of Representatives, the first tariff I had any experience with was the Mills bill. At that time rice was one of the atrocities of protection, flung at us as one of the worst things we did. It seemed to me that to develop the culture of rice in this country was a very important thing. I have not the figures so that I can give the statistics back to the time when I first knew it, when it figured as an atrocity, and I have heard continually in the land the voice of those who love the people, but in 1904 the total number of acres in rice under culture was 662,000. In 1920 there were 1,337,000 acres.

The price of rice in New Orleans at the time of the latest figures I have been able to get was somewhat lower than the London prices. We produce 53,000,000 bushels; we supply our own market; we make a great export; and the industry has been a great benefit to the country. It has no possible relation to New England. I think we can defend our position there without much difficulty, and I shall not speak of that. This has no relation to New England at all. The industry has been built up in Louisiana, in Texas, in Arkansas, in California, and in that region of the country. The development of the industry has been a great benefit to the whole country, and the domestic competition has prevented a rise in prices, has kept the price down instead of increasing it, because the demand for rice in the eastern world has been steadily increasing.

I only wished to call attention to the effect of one protective duty which was more abused at the time I first knew of it than almost any I have ever heard of.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. CURTIS. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HARRIS (when his name was called). Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. KING (when his name was called). I have a general pair with the senior Senator from North Dakota [Mr. McCUMBER]. I transfer that pair to the senior Senator from Missouri [Mr. REED] and vote "yea."

Mr. NEW (when his name was called). Making the same announcement as on the previous vote, I vote "nay."

Mr. SWANSON (when his name was called). I have a general pair with the senior Senator from Washington [Mr. JONES]. In his absence I withhold my vote. If permitted to vote, I would vote "yea."

The roll call was concluded.

Mr. TRAMMELL. I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. CAMERON (after having voted in the negative). Making the same announcement as before, I allow my vote to stand.

Mr. CURTIS. I wish to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The junior Senator from New Jersey [Mr. EDGE] with the senior Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The junior Senator from Kentucky [Mr. ERNST] with the senior Senator from Kentucky [Mr. STANLEY];

The senior Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The Senator from Missouri [Mr. SPENCER] with the Senator from Nevada [Mr. PITTMAN]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 12, nays 37, as follows:

YEAS—12.

Dial	King	Pomerene	Trammell
Harris	La Follette	Simmons	Underwood
Heflin	Overman	Smith	Walsh, Mass.

NAYS—37.

Brandegee	Kellogg	New	Smoot
Broussard	Kendrick	Newberry	Sterling
Bursum	Keyes	Nicholson	Sutherland
Cameron	Ladd	Norbeck	Townsend
Capper	Lenroot	Phipps	Wadsworth
Curtis	Lodge	Poindexter	Warren
Gooding	McKinley	Ransdell	Willis
Harreld	McNary	Robinson	
Johnson	Moses	Sheppard	
Jones, N. Mex.	Nelson	Shortridge	

NOT VOTING—47.

Ashurst	Elkins	McCormick	Reed
Ball	Ernst	McCumber	Shields
Borah	Fernald	McKellar	Spencer
Calder	Fletcher	McLean	Stanfield
Caraway	France	Myers	Stanley
Colt	Frelinghuysen	Norris	Swanson
Crow	Gerry	Oddie	Walsh, Mont.
Culberson	Glass	Owen	Watson, Ga.
Cummins	Hale	Page	Watson, Ind.
Dillingham	Harrison	Pepper	Weller
du Pont	Hitchcock	Pittman	Williams
Edge	Jones, Wash.	Rawson	

So the amendment of the committee was rejected.

Mr. SMOOT. Mr. President, I am directed by the committee to ask the Senate to disagree to its amendment on page 105, line 1. While I am on my feet I want to ask the Senate to agree to the next amendment, and I will explain it briefly so Senators will know just what it is. The second amendment, on page 105, to which I refer, is to strike out the words "all the foregoing not specially provided for." That amendment we think the Senate ought to agree to because it applies only to the one kind of rice, and that is a Patua rice which has been put on the free list in paragraph 1643.

Mr. WALSH of Massachusetts. I simply desire to call attention to the fact that the substitute offered by the committee increases the rate 100 per cent over the rate originally named in the committee amendment.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in line 1, page 105.

The amendment was rejected.

The next amendment of the committee was, on page 105, lines 1 and 2, to strike out the words "all the foregoing not specially provided for."

The amendment was agreed to.

Mr. BROUSSARD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state the inquiry.

Mr. BROUSSARD. I think we have voted on only three amendments in the paragraph.

The PRESIDING OFFICER. All the amendments to paragraph 728 have been disposed of—five in all.

Mr. RANSDELL. Mr. President, I ask permission to have printed in the RECORD and referred to the Committee on Finance a protest from four prominent and well-known women of New Orleans, La., against the food, tableware, and women's wear schedules of the pending tariff bill.

There being no objection, the memorial was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

Hon. JOSEPH E. RANSDELL,
United States Senate, Washington, D. C.

DEAR SIR: Will you please read into the CONGRESSIONAL RECORD the following resolution and have a copy of the RECORD containing it sent to us:

"*Resolved*, That we protest against the food, tableware, and women's wear schedules of the Fordney-McCumber bill. These schedules will increase the costs of living in every American home. They are fines levied by American men upon American women and upon American children. They should not be allowed to become law."

Yours truly,

Mrs. J. A. STORCK,
Mrs. FLORIA H. CATORIE,
Mrs. STEPHEN E. SMITH,
Mrs. ANDREW J. REID,
New Orleans, La.

THE MUSCLE SHOALS PROJECT.

Mr. LADD. Mr. President, I desire at this time to introduce a bill providing for the disposal of Muscle Shoals. I will say that this bill as it now stands has had the approval of a large number of agricultural associations of this country. I present resolutions from the American Farm Bureau Federation, from the National Grange, a resolution adopted at the agricultural conference called by the Secretary of Agriculture at the request of the President, resolutions adopted by the Farmers' Union at their convention at Topeka, resolutions adopted by the American Federation of Labor, and a telegram from the president of the American Farm Bureau. I request that, without reading, these communications be referred to the Committee on Agriculture and Forestry and printed in the RECORD as part of my remarks.

The PRESIDING OFFICER. The Senator from North Dakota asks unanimous consent out of order to introduce a bill. Is there objection? The Chair hears none.

The bill (S. 3802) authorizing the acceptance of the proposal of Henry Ford for the completion and leasing of the dams and hydroelectric plants at Muscle Shoals and for the purchase of nitrate plant No. 1, nitrate plant No. 2, the Waco quarry, and the interest of the Government in the Gorgas Warrior River steam plant, all in the State of Alabama, dated May 31, 1922, was read twice by its title and referred to the Committee on Agriculture and Forestry.

The PRESIDING OFFICER. Without objection, the communications presented by the Senator from North Dakota will be referred to the Committee on Agriculture and Forestry and printed in the RECORD.

The communications are as follows:

THE AMERICAN FARM BUREAU AND MUSCLE SHOALS.

The executive committee of the American Farm Bureau Federation, at its meeting in Chicago, June 29, adopted the following with reference to Muscle Shoals:

The conservation of all the natural resources is one of the fundamental principles on which the farm organizations of the United States are founded. The preservation of our forests, the development of our inland waterways, the drainage of swampy land, the construction of great irrigation projects, and the maintenance of our soil fertility are such projects as challenge the attention not only of farmers but of all our population.

The operation of the Muscle Shoals project as contemplated under the terms of the Henry Ford proposal will serve to carry forward so many of these conservation projects as to deserve the whole-hearted and continued support of our organizations and of all our people, whether they live in cities or in the country. We reaffirm the former resolutions that have been passed relative to this undertaking by farm organizations and instruct our legislative departments to use all diligence in finishing this work.

CHICAGO, ILL., *June 29, 1922.*

Mr. HENRY FORD,
Dearborn, Mich.:

The American Farm Bureau Federation, by expression of its executive committee, remains your confident and steadfast supporter for Muscle Shoals project.

J. R. HOWARD, *President.*

NATIONAL GRANGE FOR MUSCLE SHOALS.

NATIONAL GRANGE, PATRONS OF HUSBANDRY,
Washington, D. C., July 7, 1922.

Hon. E. F. LADD,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR LADD: In reference to the disposition by the Government of the Muscle Shoals property and such action as the Senate may be about to take on the offer of Henry Ford to purchase and operate these properties, I beg to submit herewith a copy of the resolution which was taken by the national grange at its last annual session, held in Portland, Oreg., in November, 1921:

Resolution on Muscle Shoals air-nitrate plant.

"*Resolved*, That we favor the immediate sale of this plant by the Government to the highest bidder, subject to such safeguards as may be necessary to protect the interest of the public in power and products produced there, and providing for its use by the Government when needed."

This resolution was referred to the committee on agriculture, duly considered, and the committee made a report favoring its adoption, and the report was adopted. Reference: Page 130, Journal of Proceedings of the National Grange, 1921.

In my opinion this Henry Ford proposition more nearly conforms to the provisions of this resolution than any other pending proposition.

Yours sincerely,

T. C. ATKESON,
Washington Representative.

Resolution adopted at the agricultural conference called by the Secretary of Agriculture at the request of the President, January 23 to 27, 1922.

Resolved, That to accomplish results without any further delay whatsoever, we urge the Secretary of War to recommend and the Congress to accept Henry Ford's proposal to take over the hydroelectric power and air-nitrate plants at Muscle Shoals, under a guaranty to operate same for 100 years at its present capacity of approximately 100,000 tons of ammonium nitrate per annum, opening the Tennessee River to navigation, cheapening the production of fertilizer, metals, and other commodities, and assuring the United States nitrogen independence in peace or war.

FARMERS' UNION AND MUSCLE SHOALS.

We indorse the proposal made by Henry Ford to take over and operate the Government nitrate plant at Muscle Shoals, Ala., and urge that the offer be accepted.

Adopted by the Farmers' Union Convention at Topeka, November 15, 16, and 17, 1921.

THE AMERICAN FEDERATION OF LABOR

At its annual convention lately held in Cincinnati, June 20, 1922, adopted the following resolution with reference to Muscle Shoals:

"*Resolved* That this, the forty-second annual convention of the American Federation of Labor, sides with the farmers in their controversy as to the acceptance of the Ford bid, and that this convention instruct its executive council to use all means in its power to secure favorable action on the final offer of Mr. Ford to lease Muscle Shoals, and in view of the deterioration of the property at Muscle Shoals and the immediate and very urgent need of the farmers for more fertilizer, that the executive council use all haste possible in bringing pressure to bear on the Congress of the United States to secure favorable action at the present session on the Ford contract to develop Muscle Shoals."

Mr. LADD. Mr. President, I desire to make a few observations in connection with the bill introduced by me. The average importations of Chilean nitrate for five years, 1911–1915, inclusive, amounted to 551,714 long tons, with an average value at the Chilean port of $17,511,697 and with an export duty paid to Chile on this tonnage amounting to $6,910,978.92. The cost of ocean freight, insurance, commissions, and so forth, on this five-year period of Chilean nitrate importations can be conservatively estimated at $10 a ton, making a total cost at port of approximately $29,939,815.92.

Of this tonnage, during this period, there was consumed as a fertilizer by the farmers about 250,000 tons.

Chilean nitrate carries about 16 per cent of nitrogen plant-food or fixed nitrogen, and this 250,000 tons of Chilean nitrate used during this five-year period, therefore, yielded to the farmers 40,000 tons of nitrogen plantfood or fixed nitrogen.

Mr. Ford, in his final offer of May 30 (see section 15) expressly agrees and binds himself throughout the lease period to manufacture nitrogen and other commercial fertilizers, mixed or unmixed, and with or without filler, according to demands, and these fertilizers produced during the lease period shall have a nitrogen content of at least 40,000 tons of fixed nitrogen, and therefore Mr. Ford agrees to produce fixed nitrogen at Muscle Shoals equal to the fixed nitrogen contained in that portion of Chilean nitrate used by the farmers in the five-year period, 1911–1915, inclusive, and it will require 100,000 horsepower to produce this amount of fixed nitrogen, namely, 40,000 tons, and so 200,000 horsepower will produce as much fixed nitrogen as was carried in the total importations during the five-year period, 1911–1915, inclusive.

Shall the farmers continue to pay more than $3,000,000 annually export duty to Chile for nitrates, plus ocean freight, commissions, insurance, and so forth, when Mr. Ford offers to relieve the farmers of these burdens at Muscle Shoals?

AMENDMENT OF FEDERAL RESERVE ACT.

Mr. HARRIS. Mr. President, last week the Senator from Pennsylvania [Mr. PEPPER] reported from the Committee on Banking and Currency the bill (S. 3531) to amend section 9 of the Federal reserve act, a bill which I introduced and which has the favorable recommendation of that committee. The Senator from Utah [Mr. KING] asked that it go over until the next day, which was agreed to, but he was absent on that day and I did not call it up, so it has gone over until to-day. I am sure it will only take a moment to consider it. It is reported favorably by the Committee on Banking and Currency—a subcommittee of that committee composed of the Senator from Pennsylvania [Mr. PEPPER], the Senator from Virginia [Mr. GLASS], and the Senator from New Jersey [Mr. EDGE]. It is recommended by the Federal Reserve Board and by the governors of the Federal reserve banks, and also by the junior Senator from Alabama [Mr. HEFLIN], and many other Senators with whom I have discussed the matter. I do not think that there will be any opposition to it, and I ask unanimous consent for its present consideration.

There are a large number of small banks whose capital is less than is required by law to become members of the Federal reserve system. This amendment to the act will permit banks having 60 per cent of the required capital stock to become members of the system, provided they increase annually their capital stock amounting to 20 per cent of its net earnings until it meets the present requirement as to capital stock. This will give the small banks in the agricultural sections the benefits to be derived from the Federal reserve system and will help the system. It will also encourage the smaller banks to increase their capital stock and be in a position to better accommodate their customers. It will help greatly the small-town banks and greatly benefit the merchants, farmers, and others dependent upon these banks to finance them.

Mr. SMOOT. Does the Senator know whether the junior Senator from Utah [Mr. KING], who is at present out of the Chamber, has withdrawn his opposition to the bill?

Mr. HARRIS. The junior Senator from Utah told me to-day that he would make no objection to its consideration. I have held it over now more than a week on his account.

Mr. SMOOT. The reason why I ask is because I understood although I may have misunderstood him this morning when I was discussing the bill with him, that he still objects to it. But if he told the Senator from Georgia that he now has no objection to the consideration of the bill, I shall interpose no objection.

Mr. HARRIS. The junior Senator from Utah said he would not object to the bill coming up, but would vote against it. I did not know he was not in the Chamber when I called it up.

The PRESIDING OFFICER. The Senator from Georgia asks unanimous consent for the present consideration of the bill which the Secretary will report for the information of the Senate.

The reading clerk read the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate as in Committee of the Whole proceeded to consider the bill, which had been reported from the Committee on Banking and Currency with amendments, on page 2, to strike out "and, under such rules and regulations as the Federal Reserve Board may prescribe, it sets aside annually in a fund an amount not less than 20 per cent of its net income for the preceding year and it increases its capital from such fund from time to time until it possesses a paid-up and unimpaired capital not less than," and to insert "and, under penalty of loss of membership, complies with rules and regulations which the Federal Reserve Board shall prescribe, fixing the time within which and the method by which the unimpaired capital of such bank shall be increased out of net income to equal." And, after line 14, page 2, to add the following proviso: "*Provided*, That every such rule or regulation shall require the applying bank to set aside annually not less than 20 per cent of its net income of the preceding year as a fund exclusively applicable to such capital increase," so as to make the bill read:

Be it enacted, etc., That paragraph 9 of section 9 of the Federal reserve act as amended is amended to read as follows:

"No applying bank shall be admitted to membership in a Federal reserve bank unless (a) it possesses a paid-up, unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated under the provisions of the national bank act, or (b) it possesses a paid-up, unimpaired capital of at least 60 per cent of the amount sufficient to entitle it to become a national banking association in the place where it is situated under the provisions of the national bank act and, under penalty of loss of membership complies with rules and regulations which the Federal Reserve Board shall prescribe fixing the time within which and the method by which the unimpaired capital of such bank shall be increased out of net income to equal the capital which would have been required if such bank had been admitted to membership under the provisions of subdivision (a) of this paragraph: *Provided*, That every such rule or regulation shall require the applying bank to set aside annually not less than 20 per cent of its net income of the preceding year as a fund exclusively applicable to such capital increase."

The amendments were agreed to.

Mr. KING. Mr. President, I objected to the consideration of the bill the other day. I have conferred with the members of the Committee on Banking and Currency and they seem to approve of it. I did not object to its consideration, but I shall vote against it. I regard the bill as objectionable for two reasons, first, because it rather tends to encourage the formation of very small banks with limited and wholly inadequate capital; and secondly, the effect will be ultimately to drive State banks out of existence, not by any physical force or physical power, but because of the moral pressure which will be brought to drive them into the Federal reserve system.

I seem to stand alone in my views, although I know many entertain the same apprehensions as those which I have so imperfectly expressed. I believe it is unwise legislation, but I did not feel justified in opposing the consideration of the bill.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

DEEDS FROM FIVE CIVILIZED TRIBES.

Mr. HARRELD. Mr. President, I ask unanimous consent for the present consideration of the bill (H. R. 11054) to validate certain deeds executed by members of the Five Civilized Tribes, and for other purposes. The bill passed the House, and was referred to the appropriate committee, which made a favorable report on it.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

Be it enacted, etc., That any conveyance of allotted or inherited Indian lands by any member of the Five Civiliezd Tribes, or his or her heirs, which may have been heretofore approved by the Secretary of the Interior, or any order heretofore issued by the Secretary of the Interior authorizing the removal of restrictions from lands belonging to such Indians under and in accordance with, or purporting to be under and in accordance with, the acts of March 1, 1901 (31 Stat. L., p. 863), June 30, 1902 (32 Stat. L., p. 503), March 3, 1903 (32 Stat. L., p. 996), April 21, 1904 (33 Stat. L., p. 204), April 26, 1906 (34 Stat. L., p. 145), June 21, 1906 (34 Stat. L., p. 373), and May 27, 1908 (35 Stat. L., p. 312), or under any of said acts, be, and the same are hereby, confirmed, approved, and declared valid from the date of such conveyance or order: *Provided*, That nothing in this act shall be construed to confirm, approve, validate, or affect any conveyance, order, or action procured through fraud or duress.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

COCONINO AND TUSAYAN NATIONAL FORESTS.

Mr. ASHURST. Mr. President, I ask unanimous consent for the present consideration of the bill (H. R. 7812) to extend the time for cutting timber in the Coconino and Tusayan National Forests, Ariz. The bill has been reported unanimously and favorably from the Committee on Public Lands and Surveys. It proposes to extend the time within which the Arizona Lumber & Timber Co., in northern Arizona, may cut timber from certain lands. It has passed the House and there is a favorable report upon it from the department.

Mr. SMOOT. I am familiar with the bill and I have no objection to its passage if it does not lead to any discussion.

There being no objection, the bill was considered as in Committee of the Whole, and was read as follows:

Be it enacted, etc., That the Secretary of Agriculture is hereby authorized to extend the rights of the Arizona Lumber & Timber Co. and its successors in interest to cut and remove the timber from such of the following-described lands: Sections 3 and 9, township 19 north, range 5 east; section 33, township 20 north, range 5 east; section 31, township 21 north, range 5 east; section 35, township 20 north, range 6 east; section 31, township 20 north, range 7 east; all of the Gila and Salt River principal base and meridian within the Coconino and Tusayan National Forests, Arizona, as have been reconveyed, or are under contract to be reconveyed, to the United States, subject to outstanding timber-right contracts held by said company under the rules, regulations, and conditions imposed by the Secretary of the Interior at the time of said reconveyance or contract to reconvey until such time as he may determine to be in the public interest but not later than December 31, 1950: *Provided*, That said company executes and enters into an agreement with the Secretary of Agriculture to comply with such additional requirements upon the above-described lands and any other lands for which timber rights are claimed by said company within the Coconino and Tusayan National Forests, as may be mutually agreed upon to promote forest-fire protection, reforestation, and forestry administration: *Provided further*, That all its present rights to cut and remove timber from any lands within said national forests are to terminate on the date fixed by the Secretary of Agriculture and agreed to by the company, but this Act shall not be construed to confer upon said company any rights in

addition to those held by the company at the time of said reconveyance, and in the absence of the execution of such an agreement this act shall neither extend nor restrict the present rights of said company.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

FORREST R. BLACK.

Mr. WILLIS. Mr. President, I submit a request for the present consideration of the bill (H. R. 314) for the relief of Forrest R. Black, a sailor who lost his valuables at the time of his enlistment. If I may have permission to have it considered, I shall ask permission also to print in the RECORD a letter from former Secretary Daniels and one from present Secretary Denby, both of whom favor the passage of the bill. A similar bill has passed the House twice, but failed here because it was not reached on the calendar.

There being no objection, the bill was considered in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Forrest R. Black, out of any money in the Treasury not otherwise appropriated, the sum of $142, in reimbursement for money and valuables lost while they were properly in the custody of the United States Government.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. WILLIS. I ask permission to have printed in the RECORD the report of the Committee on Claims and the letter to which I referred from former Secretary Daniels.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[Senate Report No. 677, Sixty-seventh Congress, second session.]

MR. CAPPER, from the Committee on Claims, submitted the following report, to accompany H. R. 314:

The Committee on Claims, to whom was referred the bill (H. R. 314) for the relief of Forrest R. Black, having considered the same, report favorably thereon with the recommendation that the bill do pass without amendment.

The facts in the case are fully set forth in House Report No. 476, Sixty-seventh Congress, first session, which is appended hereto and made a part of this report.

[House Report No. 476, Sixty-seventh Congress, first session.]

The Committee on Claims, to whom was referred the bill (H. R. 314) for the relief of Forrest R. Black, having considered the same, report thereon with a recommendation that it do pass.

Facts in the case are contained in the following letter from the Secretary of the Navy, which is made a part of this report:

DEPARTMENT OF THE NAVY,
Washington, May 23, 1921.

The CHAIRMAN COMMITTEE ON CLAIMS,
House of Representatives.

MY DEAR MR. CHAIRMAN: Replying further to the committee's letter of May 6, 1921, inclosing a bill (H. R. 314) for the relief of Forrest R. Black, and requesting the views and recommendations of the department thereon, I have the honor to inform you as follows:

The proposed bill seeks to reimburse Mr. Black for valuables deposited at the Navy recruiting office, New York City, on June 1, 1918, while taking a physical examination for enrollment in the Naval Reserve Force, which valuables became lost and have not been recovered. The language of the proposed bill is identical with that contained in a proposed draft transmitted by this department to the Speaker of the House of Representatives by letter of September 11, 1918, to cover the item in question, and which was also introduced in the Sixty-sixth Congress as H. R. 9904. This department's report, dated October 25, 1919, on the bill H. R. 9904, contained a complete statement of the facts and information bearing upon the case. This report was printed as House of Representatives Report No. 552, Sixty-sixth Congress, second session, to which reference is hereby made for more detailed information.

In view of the facts contained in said report the department is still of the opinion that relief should be granted Mr. Black for the loss sustained by him, and therefore earnestly recommends that the bill H. R. 314 be enacted into law.

Sincerely yours,

EDWIN DENBY,
Secretary of the Navy.

—

DEPARTMENT OF THE NAVY,
Washington, October 25, 1919.

The CHAIRMAN COMMITTEE ON CLAIMS,
House of Representatives,

MY DEAR MR. CHAIRMAN: Replying to the committee's letter inclosing a bill (H. R. 9904) for the relief of Forrest R. Black, and requesting the views and recommendations of the department thereon, I have the honor to inform you that the department submitted a proposed draft of a bill for the relief of this man September 11, 1918, setting forth the facts bearing upon the case, as follows:

"On June 1, 1918, Forrest R. Black made application for enrollment in the Naval Reserve Force at the United States Navy recruiting station, 52 West Twenty-third Street, New York City. Before taking his physical examination he requested permission to deposit his valuables, consisting of $42 in cash and a solid-gold watch and fob, with a hospital apprentice who had charge of the desk in the recruiting office, and who had been directed by proper authority to take charge of valuables belonging to applicants. The money and watch and fob were placed in an envelope, the envelope was sealed, the name of the owner was written on the envelope, and the envelope was placed with other valuables that had been deposited for safe-keeping.

"On the date in question the recruiting office handled 474 applicants, of whom 130 were enlisted or enrolled. This large number of applicants greatly taxed the facilities and capacity of the office. During lunch time, through an excess of zeal and in an endeavor to expedite the work of examining applicants the man at the desk voluntarily performed in addition to his own the duties of a man near the desk, taking the height and weight of applicants.

"As soon as the physical examination of Black had been completed he made application for the envelope of valuables, and it could not be found. Immediately upon making discovery of the loss the doors of the recruiting office were closed, the police were called in, and every person in the rooms was searched. The valuables could not be found, the thief evidently having already escaped.

"After a thorough investigation no evidence could be found as to how the valuables had disappeared, the thought being that at some time when the attention of the deskman was diverted some unauthorized person took advantage of the situation and stole the envelope containing the valuables.

"The hospital apprentice was a duly authorized agent of the Government in accepting the valuables. He acted within the scope of his authority, and, apparently, through his efforts to expedite the work of the office rather than through any neglect of duty the valuables were lost. While the Government is not legally bound to reimburse this man for the amount of his loss, yet in the opinion of this department it is morally so bound. So far as known there is no existing appropriation from which payment can be made, and the attached proposed draft of a bill is therefore submitted, with the recommendation that it be enacted into law at as early a date as practicable, either as a separate bill or as a part of some appropriate measure."

The department again recommends the relief of Forrest R. Black, as set forth in bill H. R. 9904.

Sincerely yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

Attached herewith is also an affidavit from the claimant:

STATE OF OHIO,
County of Franklin, ss:

Forrest R. Black, being first duly sworn, deposes and says that he is 24 years of age and resides at 119 West Market Street, Tiffin, Ohio; that on June 1, 1918, he enlisted in the United States Naval Reserve Force at the Navy recruiting station, 52 West Twenty-third Street, New York City. Before taking his physical examination he requested permission to deposit his valuables at a "checking desk" established for that purpose by the recruiting office; that said valuables were placed in an envelope furnished for that purpose, and the same was sealed, and the deponent wrote his signature thereon; that as soon as the physical examination had been completed deponent made an application for the envelope of valuables, and it could not be found; that said valuables consisted of $42 in cash, a solid-gold watch valued at $100, and a gold fob containing two collegiate medals valued at $50.

FORREST R. BLACK.

Subscribed and sworn to before me this 17th day of October, 1919.

[SEAL.] HENRY F. VANDERLIP,
Notary Public.

—

DEPARTMENT OF THE NAVY,
Washington, October 25, 1919.

The CHAIRMAN COMMITTEE ON CLAIMS,
House of Representatives.

MY DEAR MR. CHAIRMAN: Replying to the committee's letter inclosing a bill (H. R. 9904) for the relief of Forrest R. Black, and requesting the views and recommendations of the department thereon, I have the honor to inform you that the department submitted a proposed draft of a bill for the relief of this man September 11, 1918, setting forth the facts bearing upon the case, as follows:

"On June 1, 1918, Forrest R. Black made application for enrollment in the Naval Reserve Force at the United States Navy recruiting station, 52 West Twenty-third Street, New York City. Before taking his physical examination, he requested permission to deposit his valuables, consisting of $42 in cash and a solid gold watch and fob, with a hospital apprentice who had charge of the desk in the recruiting office, and who had been directed by proper authority to take charge of valuables belonging to applicants. The money and watch and fob were placed in an envelope, the envelope was sealed, the name of the owner was written on the envelope, and the envelope was placed with other valuables that had been deposited for safekeeping.

"On the date in question the recruiting office handled 474 applicants, of whom 130 were enlisted or enrolled. This large number of applicants greatly taxed the facilities and capacity of the office. During lunch time, through an excess of zeal and in an endeavor to expedite the work of examining applicants, the man at the desk voluntarily performed, in addition to his own, the duties of a man near the desk, taking the height and weight of applicants.

"As soon as the physical examination of Black had been completed he made application for the envelope of valuables and it could not be found. Immediately upon making discovery of the loss, the doors of the recruiting office were closed, the police were called in, and every person in the rooms was searched. The valuables could not be found, the thief evidently having already escaped.

"After a thorough investigation, no evidence could be found as to how the valuables had disappeared, the thought being that at some time when the attention of the deskman was diverted some unauthorized person took advantage of the situation and stole the envelope containing the valuables.

"The hospital apprentice was a duly authorized agent of the Government in accepting the valuables. He acted within the scope of his authority and apparently through his efforts to expedite the work of the office, rather than through any neglect of duty, the valuables were lost. While the Government is not legally bound to reimburse this man for the amount of his loss, yet, in the opinion of this department, it is morally so bound. So far as known there is no existing appropriation from which payment can be made, and the attached proposed draft of a bill is therefore submitted, with the recommendation that it be enacted into law at as early a date as practicable either as a separate bill or as a part of some appropriate measure."

The department again recommends the relief of Forrest R. Black as set forth in bill H. R. 9904.

Sincerely yours,

JOSEPHUS DANIELS,
Secretary of the Navy.

RECESS.

Mr. SMOOT. I move that the Senate take a recess, the recess being under the unanimous-consent agreement, until Monday at 11 o'clock.

The motion was agreed to; and (at 5 o'clock and 15 minutes p. m.) the Senate, under the order previously entered, took a recess until Monday, July 10, 1922, at 11 o'clock a. m.

SENATE.

MONDAY, *July 10, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

REINTERMENT OF SOLDIER DEAD.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Quartermaster General of the Army, inclosing a list of American soldier dead returned from overseas to be reinterred in the Arlington National Cemetery Thursday, July 13, 1922, which will lie on the desk of the Secretary for the information of Senators.

DISTRIBUTION OF SPEECHES BY FEDERAL RESERVE BANKS.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the governor of the Federal Reserve Board, transmitting, pursuant to Senate Resolution 308, letters from the Federal reserve banks of Cleveland, Chicago, and Kansas City, which will be printed and lie on the table.

Mr. McLEAN. Mr. President, on Saturday last other replies to the so-called Heflin resolution were received, and on request of the junior Senator from Alabama [Mr. HEFLIN] the order for printing those replies was rescinded in order to await the receipt of replies from other banks, that all the replies might be printed together. I inquire how many replies have been received from the banks, numbering 11 in all?

The VICE PRESIDENT. Only six replies have been received. Those replies will, therefore, be held in anticipation of the receipt of the rest.

CALL OF THE ROLL.

Mr. HARRISON. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll and the following Senators answered to their names:

Ashurst	Gooding	McLean	Sheppard
Borah	Harris	McNary	Simmons
Brandegee	Harrison	Moses	Smith
Bursum	Heflin	Nelson	Smoot
Calder	Johnson	New	Spencer
Cameron	Jones, N. Mex.	Newberry	Sterling
Capper	Jones, Wash.	Nicholson	Underwood
Caraway	Kellogg	Norbeck	Wadsworth
Colt	Kendrick	Oddie	Walsh, Mass.
Culberson	Keyes	Overman	Walsh, Mont.
Curtis	Ladd	Pepper	Warren
du Pont	La Follette	Phipps	Watson, Ind.
Ernst	Lodge	Poindexter	Willis
Fernald	McCumber	Ransdell	
France	McKinley	Robinson	

The VICE PRESIDENT. Fifty-eight Senators have answered to their names. A quorum is present.

APPOINTMENTS BY EXECUTIVE ORDER.

Mr. HARRISON. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state the inquiry.

Mr. HARRISON. On the calendar day of April 24 the Senate passed a resolution (S. Res. 258) requesting the President of the United States to furnish to the Senate the names of persons appointed by Executive order since the 4th day of March, 1921, and the reasons therefor. Has there been any response to that request, may I inquire?

The VICE PRESIDENT. There has been no response, as the Chair is advised.

Mr. HARRISON. Mr. President, nearly three months have elasped since the Senate of the United States passed the resolution. It was a reasonable request. The request merely stated that the Senate desired the names of persons who had been appointed by the President of the United States since the 4th of March of last year through Executive order where exceptions had been made to the civil-service rules, and the reasons therefor. When the Senate passed the resolution, and it was passed unanimously, of course many of us thought there were a good many of such appointees who had been excepted from the civil-service rules. We did not think, however, it would take more than three or four days to get the information to the Senate. We knew there was Marion, Ohio, and some other places, but I had no idea and I am sure no other Senator had any idea that the list was so long that it would take three months to prepare the list.

It may be that it requires a good deal of time to get some reasons for the appointments which were made under exceptions to the civil-service rules, but the Senate is entitled to be respected by the President of the United States, the same as he would have the Senate respect him. I submit that a resolution passed three months ago by the Senate of the United States unanimously making such a simple request should be heeded.

I submit that unless some report is made to the Senate within a reasonable time other action upon the part of the Senate, if it can be taken—anything from mandamus to quo warranto proceedings—should be instituted to extract from the President, if possible, this large list of names of those who have been appointed through Executive order in violation of the civil-service rules, and the reasons therefor. If there were no reasons for the appointments, then the Senate is entitled to know that. If there were reasons, whether good or bad, then certainly the President has had sufficient time to give them.

PETITIONS AND MEMORIALS.

Mr. ROBINSON presented a resolution adopted by the General Federation of Women's Clubs at Chautauqua, N. Y., protesting against the passage of House bill 8086, to prohibit the shipment of filled milk in interstate or foreign commerce in its present form, and suggesting amendments thereto, which was referred to the Committee on Agriculture and Forestry.

He also presented memorials of the American Bank of Commerce & Trust Co., of Little Rock, Ark., and the O. K. Houck Piano Co., of Memphis, Tenn., remonstrating against a reduction of zone rates on second-class mail matter, which were referred to the Committee on Post Offices and Post Roads.

Mr. TOWNSEND presented petitions of sundry citizens in the State of Michigan praying that only a moderate rate of duty on kid gloves be imposed in the pending tariff bill, which were referred to the Committee on Finance.

Mr. POINDEXTER presented numerous petitions of various lumber and shingle companies and sundry citizens in the State of Washington, praying for inclusion in the pending tariff bill of a duty of 50 cents per thousand on imported shingles, which were referred to the Committee on Finance.

BILLS AND JOINT RESOLUTIONS INTRODUCED.

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WALSH of Massachusetts:

A bill (S. 3803) amending section 2 of the act entitled "An act making appropriations for the naval service for the fiscal year ending June 30, 1921, and for other purposes," approved June 4, 1920; to the Committee on Naval Affairs.

By Mr. BORAH:

A bill (S. 3804) granting an extension of time for the repayment of construction charges on reclamation projects; to the Committee on Irrigation and Reclamation.

By Mr. SHORTRIDGE:

A bill (S. 3805) to confer jurisdiction upon the Court of Claims to ascertain the cost to the Southern Pacific Co., a corporation, and the amounts expended by it from December 1, 1906, to November 30, 1907, in closing and controlling the break in the Colorado River; to the Committee on Claims.

By Mr. POINDEXTER:

A bill (S. 3806) fixing the salary of the United States district attorney for the western district of Washington; to the Committee on the Judiciary.

A bill (S. 3807) directing the resurvey of certain lands; to the Committee on Public Lands and Surveys.

A bill (S. 3808) authorizing the Secretary of the Interior to investigate and report to Congress upon the Columbia Basin irrigation project; to the Committee on Irrigation and Reclamation.

By Mr. WATSON of Indiana:

A joint resolution (S. J. Res. 220) authorizing the Secretary of War to loan certain cots, blankets, tents, chairs, etc., to the executive committee of the American Legion for the Department of Indiana for use at the State convention of the American Legion to be held at Terre Haute, Ind., September 25, 26, and 27, 1922; to the Committee on Military Affairs.

By Mr. SPENCER:

A joint resolution (S. J. Res. 221) providing payment of judgment in favor of Robert L. Owen and associates in the case known as the Mississippi Choctaws Case No. 29821, Court of Claims (with an accompanying paper); to the Committee on Indian Affairs.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The Secretary will state the pending amendment.

Mr. McCUMBER. I ask that the Senate now consider paragraph 713, page 102, eggs of poultry.

The VICE PRESIDENT. The amendments to paragraph 713 will be stated.

The first amendment of the Committee on Finance in paragraph 713 was, on page 102, line 6, before the word "cents," to strike out the numeral "6" and to insert the numeral "8," so as to read:

PAR. 713. Eggs of poultry, in the shell, 8 cents per dozen——

Mr. WALSH of Massachusetts. Mr. President, there are three amendments proposed by the Senate Committee on Finance to paragraph 713. I shall discuss all of those amendments together and not take the time of the Senate to discuss each amendment separately, so that when the discussion is over we may vote immediately upon all three amendments.

The Senate committee amendment proposes to increase the duty on eggs in the shell from 6 cents, as provided in the House bill, to 8 cents per dozen; on whole eggs, egg yolk, and egg albumen, frozen or otherwise preserved, from 4 cents to 6 cents per pound; and on dried whole eggs, dried egg yolk, and dried egg albumen, from 15 cents to 18 cents per pound. Under the Underwood law eggs in the shell were on the free list; on eggs frozen or otherwise prepared a duty of 2 cents per pound was imposed; on frozen or liquid egg albumen there was a duty of 1 cent per pound; on dried whole eggs a duty of 10 cents per pound; on dried egg yolk a duty of 10 per cent ad valorem; and on dried egg albumen a duty of 3 cents per pound. So that it is to be observed that paragraph 713 represents a proposed increase of 200 per cent over the Underwood rates on frozen or otherwise prepared eggs and a jump from the free list to 8 cents per dozen on eggs in the shell.

Under the Payne-Aldrich law all eggs, with the exception of dried eggs, were dutiable at 5 cents per dozen; dried eggs were dutiable at 15 cents per pound, egg yolk at 25 per cent ad valorem, and egg albumen at 3 cents per pound. It is to be observed, therefore, that the proposed increase in the duty on eggs in the shell in paragraph 713 over the Payne-Aldrich rate represents an increase of 60 per cent, and the proposed increase of the duty on dried eggs over the Payne-Aldrich rates represents an increase of 20 per cent.

The egg problem is largely confined to frozen eggs. There are practically no imports of consequence into this country of eggs in the shell. There has been a growing increase of importations of frozen eggs from China. So that the duty which is likely to most affect prices is the duty upon preserved or frozen eggs.

It will not be amiss to consider briefly the imports and exports of eggs. The domestic production of eggs in 1919 was 1,577,000,000 dozen, valued at $641,000,000. Our average imports are about 2,000,000 dozen and our average exports are about 30,000,000 dozen. Imports come mainly from China, but it is to be noted that even during the years of the operation of the Underwood tariff the imports in comparison to production were more than offset by our exports. Our imports do not average one-seventh of 1 per cent of our production. Our main imports are in frozen, dried, or otherwise preserved eggs, of which we export practically none. Imports of frozen and dried eggs come from China and are used by wholesale bakers and confectioners. In 1920 we imported 9,000,000 pounds of frozen whole eggs, 9,000,000 pounds of frozen or dried egg yolk, and 3,000,000 pounds of frozen or liquid egg albumen.

The reason advanced for the proposed increased rates, increases over the Payne-Aldrich law and over the House rates, is the removal from the domestic market of the competition of frozen eggs which come from China. It is to be noted that we import comparatively few eggs in the shell, and that our imports consist mostly of egg products. The producers of eggs urge a high duty on egg products in order to force the consumers to use domestic eggs in the shell. They think this is one step toward getting a monopoly of the domestic market on eggs and egg products; that shutting out importations of frozen eggs and egg products will stimulate the domestic industry and lead to a greater demand for eggs in the shell and consequently higher prices.

The domestic production of frozen eggs and egg products has not up to the present time taken care of the demand, and production could be increased, it is urged, if imports were shut out. We have had to import frozen eggs in order to take care of the demand, chiefly on the part of the bakers and confectioners of the country. It is claimed, however, if frozen eggs and egg products were eliminated from competition in the domestic market that the industry would be developed here, that there would be a greater demand for eggs in the shell, and that in time the domestic market could take care of the demand for necessary egg products.

The industries engaged in the production of frozen eggs and egg products are located in the Middle West. Those industries are separate and distinct from the agricultural industries, and in my opinion the farmer can derive no benefit from the high rates upon eggs and egg products proposed by the committee. The middlemen, who buy the eggs from the farmer and who have established manufacturing plants so as to freeze eggs and to extract and put upon the market egg products, may be beneficiaries of this protective tariff, because the rate is so high that the importation of these products will be almost prohibited and the confectioners and bakers of the country will be dependent upon these middlemen for their supply of egg products.

The drying of eggs is a factory process involving very heavy overhead expense. The imposition of a high duty will be a serious burden to the users of dried eggs and will be reflected in increased prices for pie, pastry, cakes, and confectionery.

It is claimed that with a duty which will practically shut out imports of egg products the demand for shell eggs will be increased and that there will be reflected a corresponding benefit to the farmer by an increased price; yet our annual production has always been more than our consumption, and we have exported considerable quantities of eggs, while the importations of eggs in the shell have been negligible and have largely been eggs sold along the Canadian border.

There is very little difference between the price paid for the Chinese frozen eggs delivered in New York and the frozen eggs produced in this country delivered in New York. The bakers claim that they will be unable to get sufficient egg products to take care of the demands of their business, and they are therefore very insistent in their opposition to the high rates provided in paragraph 713 of this bill.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER (Mr. ODDIE in the chair). Does the Senator from Massachusetts yield to the Senator from Montana?

Mr. WALSH of Massachusetts. I yield.

Mr. WALSH of Montana. I should like to inquire of the Senator from Massachusetts how far the principle of the difference in the cost of production here and abroad enters into these rates? Take the eggs in the shell, on which a duty of 8 cents a dozen is imposed. From where do the eggs in the shell come which are imported into this country?

Mr. WALSH of Massachusetts. From Canada.

Mr. WALSH of Montana. And does it cost 8 cents a dozen more to produce eggs in this country than it does to produce them in Canada?

Mr. WALSH of Massachusetts. I think not. There are also some eggs imported from China in the shell, but the quantity is negligible.

Mr. WALSH of Montana. How do they come in the shell?

Mr. WALSH of Massachusetts. They are imported as case eggs.

Mr. WALSH of Montana. As case eggs from China?

Mr. WALSH of Massachusetts. Yes; they are transported in refrigerators.

Mr. WALSH of Montana. What evidence is there showing the difference in cost of production of eggs in this country and in China?

Mr. WALSH of Massachusetts. There is no evidence at all. There is some evidence that the Chinese eggs sell at a cheaper price.

Mr. WALSH of Montana. So that really the rate proposed represents an arbitrary figure merely imposed for the purpose of prohibiting imports, does it not?

Mr. WALSH of Massachusetts. There is no doubt about that, and that is true of nearly all of the commodities in the agricultural schedule.

Mr. JOHNSON. Mr. President, may I ask the Senator from Montana what was the question he addressed to the Senator from Massachusetts? It was impossible to hear him over here.

Mr. WALSH of Montana. I was very desirous of ascertaining how far the principle of the difference in the cost of production here and abroad has entered into the items of this particular paragraph, and I inquired of the Senator from Massachusetts from what country we import eggs in the shell? He tells me from Canada.

Mr. JOHNSON. And also from China.

Mr. WALSH of Montana. Exactly. I inquired if it cost 8 cents a dozen more to produce eggs in this country than in Canada. The Senator from Massachusetts then informed me that we also import eggs in the shell from China, and I inquired of the Senator what evidence there is to show that 8 cents is the difference in the cost of production of eggs in this country and in China.

Mr. JOHNSON. The difference is even greater than that; and if the Senator will glance at the testimony taken before the Senate Finance Committee——

Mr. WALSH of Montana. The testimony of cost of production?

Mr. JOHNSON. Yes.

Mr. WALSH of Montana. Where can I find the testimony concerning the cost of production?

Mr. JOHNSON. I have before me the tariff hearings before the Committee on Finance of the Senate, page 2862.

Mr. WALSH of Montana. Just what does that testimony show as to what the cost of producing a dozen eggs in China is?

Mr. JOHNSON. In a word, the difference between 6 cents and 25 cents.

Mr. WALSH of Montana. What is the testimony concerning the cost of production of eggs in China?

Mr. JOHNSON. I think substantially 6 and 8 cents in China, as against 25 cents in this country.

Mr. McCUMBER. Mr. President——

Mr. WALSH of Massachusetts. Mr. President, I should like to call the attention of the Senator from Montana to some statements made with regard to eggs and egg products in the Tariff Information Survey on the articles in paragraphs 203 and 204 of the tariff act of 1913. That survey comments upon the difference in the price of eggs from China and eggs sold in the American market that are produced here in America. The paragraph to which I refer reads as follows:

During that season—

Referring to the season of 1921—

frozen-egg products prepared in one of the largest factories in China and landed in New York, all charges paid (customs included) were slightly over 2 cents per pound cheaper than similar products prepared in a large breaking plant in the Central West and delivered at New York.

This report says that there was a difference of 2 cents per pound in frozen eggs. The House provisions of this bill fix a tariff duty of 4 cents per pound on frozen eggs. The Senate Finance Committee has increased that to 6 cents per pound. How can this be defended in view of the information as to the difference in cost at New York?

Mr. JOHNSON. Mr. President, will the Senator from Massachusetts yield?

Mr. WALSH of Massachusetts. I desire to finish my statement about this matter. In the face of the information that there is a difference of 2 cents, the Senate Finance Committee proposes to fix the rate here at 6 cents per pound.

Mr. JOHNSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from California?

Mr. WALSH of Massachusetts. I yield to the Senator.

Mr. JOHNSON. I wanted, with the Senator's permission, to furnish to the Senator from Montana the information that he desired: First, in the testimony of Knox Boude that is found at the page that I suggested; secondly, the detailed information that was given by Prof. James E. Rice, representing the American Poultry Association, Ithaca, N. Y., found at page 2877. Therein will be found the details that the Senator from Montana doubtless desires, and the answer to any question he may wish to put respecting the difference in cost.

In addition to that, let me correct—unless I misunderstood the Senator from Massachusetts—a statement of his respecting the place or the country from which eggs now come in competition to us. The principal place with which we come in competition now is China.

Mr. WALSH of Massachusetts. I stated that particularly about dried eggs.

Mr. JOHNSON. Then I did not hear the Senator. I misunderstood the answer.

Mr. WALSH of Massachusetts. There is no doubt at all about the fact that egg products are imported from China.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from North Dakota?

Mr. WALSH of Massachusetts. I yield to the Senator from North Dakota.

Mr. McCUMBER. Will the Senator allow me to put in a single paragraph of the statement of the Tariff Commission?

Mr. WALSH of Massachusetts. Will the Senator wait until I get through? I desire to finish my remarks on this subject.

Mr. McCUMBER. This is simply on the question of the difference in cost, which the Senator was discussing.

Mr. WALSH of Massachusetts. That will, no doubt, be in order after I have completed my statements. I am practically through now.

Mr. McCUMBER. Certainly; I will wait.

Mr. WALSH of Massachusetts. Mr. President, from the information at hand these high rates are not justified. If any benefit accrues to anybody, it is going to accrue to the so-called middleman; and the information which the Tariff Commission furnishes to the Finance Committee is to the effect that there is not such a difference in the price of Chinese eggs as compared with the domestic eggs as to warrant this very great increase in the price of eggs and egg products—an increase of 200 per cent over present law.

I ask that two letters with reference to the proposed rates on eggs and egg products be inserted in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letters are as follows:

FROZEN EGGS, EVAPORATED EGGS.

WASHINGTON, D. C., *June 15, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: Permit me to offer a suggestion relative to the tariff on the above-mentioned items, in which I believe the Senate committee has been persuaded to make a mistake that might prove very costly. It has increased the rates 140 to 700 per cent, and I doubt whether you can afford to do it.

My clients tell me that the proposed rates would be absolutely prohibitive, and that if they are insisted upon it will totally obliterate our commerce in these products. But leaving them out entirely, an embargo of these commodities would seriously affect certain lines of food production and some very considerable American industries depending thereon. It should not be done.

It should be noted that frozen and evaporated eggs are simply raw materials used in manufacturing, and only by bakers of commercial importance in a few of the big industrial centers. They never come in competition with the domestic egg in the home. To this extent they are noncompetitive. The bakers say they have no facilities for breaking and testing eggs, and that they would simply have to curtail their production if deprived of these prepared eggs.

A rate of 2 cents per pound on frozen and of 7 cents per pound on evaporated eggs would be fair and reasonable. It would yield a good revenue and help American industry, besides aiding the physical well-being of millions.

Any considerable increase over these rates will (1) put the importers entirely out of business, (2) curtail the productiveness of many big manufacturing establishments, (3) react detrimentally upon about 50 per cent of American families, and (4) result in cakeless dinner pails everywhere, besides (5) decreasing the revenue of the country, and all without the slightest compensating advantage to any of the people. I don't believe you want to do it.

Very sincerely yours,

C. E. RICHARDSON.

NEW BEDFORD, MASS., *May 16, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: We understand that a tariff bill (H. R. 7456) is now being debated in the Senate, and I desire to call to your attention certain matter in it which, if passed, would be a decided hardship on ourselves and all others in our industry. If we are correctly informed, increases in the tariff as follows are outlined in this bill:

	Per cent.
Dried whole egg	100
Sugar	100
Gelatine	300
Lemon and orange oil	200
Shelled peanuts	400
Shelled almonds	275
Shelled walnuts	200

Cocoa butter, a very large increase, figures of which we have not at hand.

All of these materials are used largely in our business, and the increases outlined would materially affect an industry which has been struggling for a year and a half past to keep its head above water.

I doubt if any of the four so-called independent cracker baking companies in the State of Massachusetts have shown any profits at all in that period, and while not having any desire to shirk any responsibilities, it does seem as though an increase in tariff of the size apparently contemplated would be a burden almost too heavy to bear.

We earnestly request you to use your great influence to the end that we may be relieved from this proposed burden.

Yours very truly,

SNELL & SIMPSON BISCUIT CO.,
EDWARD H. WHITMAN, *General Manager.*

Mr. McCUMBER. Mr. President, the Senator from Massachusetts says that these high rates are not justified. Undoubtedly, from the standpoint of those who want to get their eggs cheaper, they may not be justified, but from the standpoint of those who produce eggs and sell them in the United States I think they are amply justified. I do not know anyone in the farming business or in the poultry business who is making an unreasonable return upon his investment in poultry. I do not think they are making as much in percentage upon their capital invested as are the bakers and those who consume the product of the American poultry farms.

The Tariff Commission report says, on page 661:

In China 2 to 3 dozen can be bought at seaports for the price of 1 dozen here.

From 2 to 3 dozen can be purchased at Chinese seaports for the price of 1 dozen in the United States.

Mr. WALSH of Montana. Mr. President——

Mr. McCUMBER. Now, Mr. President, if that be true, in view of the fact that China is a good-sized country, there is ample opportunity for an enormous development of the Chinese trade and the destruction of the industry in the United States, where it costs from two to three times as much as in China.

I yield to the Senator from Montana.

Mr. WALSH of Montana. Mr. President, I notice that the following sentence appears in connection with the statement just read by the Senator:

When carefully selected and handled, these eggs can be placed on the American market and sold to bakers, who use principally cheaper grades known as "seconds."

That is to say, that out of these eggs that you encounter in the Chinese seaports, when you select them—of course, that means, when you throw out the ones that are more or less tainted——

Mr. McCUMBER. Oh, no, Mr. President; I want to correct the Senator there. It does not mean when you throw out any of them.

Mr. WALSH of Montana. And then when you bring them across the ocean to San Francisco—and I observe that New York is the principal market for them—they are there sold as seconds to bakers who make use of them. The context leads one to the conclusion that the eggs are not of very high character; and, as some one has said, if an egg is bad at all, it is useless.

Mr. McCUMBER. Mr. President, the Senator made a statement there that the record will not bear out at all, namely, that those which are not carefully selected are thrown away. That is not the case at all. They are carefully selected. Those of the better quality are used directly and sold as eggs in the shell. The others are not thrown away at all. They are dried or preserved in other manners, and are used also by the bakers. There is no evidence anywhere that there is any waste whatever in the eggs that are brought over. Of course, if an egg came over rotten, I presume it would be thrown away; but there is no evidence of anything of that character. So we get right down to this proposition: The cost of production in China is about one-third the cost of production in the United States. Of that we have direct evidence. The selling price at the ports in China is about one-third of the selling price of the American egg, as shown by the tariff reports.

Mr. WALSH of Montana. However that may be, it appears that the foreign competition is not substantial, as represented by the following figures: During 1920 there were 1,708,701 dozen eggs introduced into this country, of a value of $617,909, and there were 38,000,000 dozen exported from this country. The total production ran to something like 1,575,000,000 dozens, and the imports amounted to 1,708,000 dozens, or less than one-half of 1 per cent.

Mr. McCUMBER. Yes, Mr. President. Cuba gives us a differential, I believe, of 20 per cent, and that enables us to export heavily to Cuba; and we export to Canada a certain class of very high-grade eggs, which are reexported to England.

Now, let us get the proportionate figures.

In 1913 Canada imported 16,894 dozen eggs into this country. That was under the Payne-Aldrich bill. China imported 95,639 dozen. In 1921 Canada had increased her 17,000 to 763,000 in round numbers, and China had increased her 95,000 to 1,348,000 dozen in round numbers. That shows a pretty rapid progress in the introduction of the Chinese egg, and to some extent also of the Canadian egg, and it certainly justifies the duty we have placed upon eggs in the shell of 8 cents per dozen. Of course, we can buy eggs cheaper for the benefit of these bakers if we will allow the American producer to go out of business and the Chinese producer to supply the American market; but with this protection we do not expect that we will increase the Chinese importation at the expense of the American producer.

Now, Mr. President, I simply want to place in the RECORD the equivalent ad valorem duty.

In 1921 the imports amounted to 3,062,518 dozen eggs, valued at $922,839, or 30 cents per dozen. On the basis of 30 cents per dozen the 8 cents per dozen rate is equal to 27 per cent ad valorem. Compared with the ad valorem given in every other line of industry it will be found that this is much below the average.

Mr. WALSH of Massachusetts. Mr. President, for the further information of the Senator from Montana I want to call his attention to Table 1, summary of trade in eggs and egg products, on page 14 of the Tariff Information Survey on eggs and egg products. The Senator will learn from that table that the proposition briefly is this, to eliminate the importation of eggs and to continue the exportation of eggs, to keep from buying anything abroad, but to let out of America everything that we possibly can sell to the world. This table shows that the value of the imports of eggs and egg products has never exceeded the value of the exportations of eggs and egg products. The figures for the year 1919 show that the imports of eggs and egg products were valued at $3,885,387, while our exports were valued at $12,785,000. In the year 1920 the imports of eggs and egg products were valued at $12,991,000. The value of the domestic eggs and egg products exported was $19,431,000. The following year, 1921, the imports were valued at $10,000,000 and the exports at $11,452,000.

This table shows that there is no serious competition, that our export business has always been worth more than the small amount of imports which are shipped into the country. The committee amendments are based upon the theory that by increasing these high duties we will entirely shut out the imports, we will stop everybody from selling to us, but we will retain the business we are doing with the outside world, and perhaps increase it.

Mr. WALSH of Montana. This matter of a duty on eggs is a question in which I have no interest at all. I do not imagine it amounts to anything. I can not conceive that the importation of the inconsequential amount of eggs or egg products into this country, which the information before us shows comes in, can really be an element in the fixing of the price of eggs throughout the country. That it may affect some one producing eggs in California, where they come in immediate competition with the eggs from China, may possibly be true, but so far as the country at large is concerned, it is an inconsequential matter. I simply spoke of it to show that the claim that these rates represent the difference in the cost of production here and abroad is just a pretense, without any foundation whatever.

I have before me the testimony referred to by the Senator from California, and if I interpret it correctly, it does not at all sustain the contention he makes that the evidence shows a difference in the cost of production between this country and China of 8 cents, or any other amount. I have before me the testimony to which he referred, and I do not find anything in it to show the cost of producing eggs either in this country or abroad. The gentleman to whom he referred said:

We always figure the cost of producing eggs at 25 cents a dozen.

That is all there is on that subject, so far as the United States is concerned, so far as I can discover.

Mr. JOHNSON. Mr. President——

Mr. WALSH of Montana. If the Senator will pardon me, Mr. Boude said:

I am going to put in evidence in a few moments the pre-war prices of sending Chinese eggs as reported by our consuls. Here is a report of an investigation made by the University of Oregon. It shows that the costs before the war were from 2 to 6 cents per dozen as paid by exporters over there, or importers here, whichever way you wish to put it.

Mr. JOHNSON. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from California?

Mr. WALSH of Montana. I yield?

Mr. JOHNSON. I was endeavoring to furnish the testimony to the Senator, who thought there was no testimony upon the subject. He now has had an opportunity, during the debate, to look at the testimony of one witness. If he will take the trouble to look at the testimony of the other witness, Professor Rice, he will see the costs mapped out in the various charts.

It is unfortunate in debating a proposition of this sort that, first, there shall be a statement that there is no testimony of any sort; then, when the Senator has had three or four minutes in which to investigate some of the testimony, he shall reach a conclusion upon that without looking at the rest of the testimony.

I commend to him, not at this time, because it is no time for us to be reading for the first time testimony with which we ought to be familiar, the tariff hearings, the testimony taken before the Finance Committee, where he will find answered in detail and definitely every single query he can put. But I beg him not to take the time to ascertain it now, upon the floor, in a matter in which he says he is not interested at all; but subsequently, during his leisure hours, if he will peruse what has been said by Professor Rice about the egg, doubtless there will be an illumination upon the subject that will be charming to him, and that will make it unnecessary, without adequate information, for him to indulge in his animadversions.

Mr. WALSH of Montana. I looked at the source indicated by the Senator, and I was not able to find the information which he said I would find. Of course, it may be somewhere else.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the committee was, in paragraph 713, page 102, line 9, to strike out "4" and insert "6"; and on line 10, to strike out "15" and insert "18", so as to read:

Whole eggs, egg yolk, and egg albumen, frozen or otherwise prepared or preserved, and not specially provided for, 6 cents per pound; dried whole eggs, dried egg yolk, and dried egg albumen, 18 cents per pound.

The amendment was agreed to.

Mr. McCUMBER. I ask that we now go to page 110, paragraph 757—peanuts.

The first amendment of the committee, in paragraph 757, was, page 110, line 23, to strike out "3 cents" and to insert in lieu thereof "three-fourths of 1 cent," so as to read:

Peanuts, not shelled, three-fourths of 1 cent per pound.

Mr. WALSH of Massachusetts. Mr. President, I desire to call attention to the fact that there has been a very great reduction made in the committee amendment in the rate upon peanuts. I have been unable to find any explanation for this action, except that peanuts are raised in the Southern States that are represented here by Democratic Senators. I think it is a drive to embarrass Democratic members of this body. I know of no other explanation to be made for reducing the rates upon peanuts to the extent they have been reduced in this amendment. It is an attempt to belittle and embarrass, and provoke opposition to the Democratic Party among the constituents of certain Democratic Senators in this Chamber. It amounts to an attempt to discriminate against constituencies that differs with the majority party.

Mr. TRAMMELL. Mr. President, I do not know by what line of logic or reasoning the committee proposes this reduction. Only a few moments ago we considered, and the Senate adopted, a committee amendment raising the duty on eggs from 6 to 8 cents per dozen. There is no question but that the peanuts produced in this country have considerable competition. When this matter was considered, at the time we passed the emergency tariff bill, it was agreed by both Houses that the rate should be fixed at 3 cents per pound. To reduce that rate to three-fourths of 1 cent per pound is a reduction of practically 75 per cent on this particular farm production.

In certain sections of my State we produce large quantities of peanuts. While we do not favor the policy of a high protective tariff, the position of a great many of my people and of myself is that if everything bought by the people of my State must be purchased where a high tariff prevails, then we feel that our products coming in competition with foreign products should have the same policy of an increased tariff applied. Any other policy is unfair and would work a great injustice upon the producers of my State. I do not want the peanut producers of Florida and other States discriminated against.

I hope the committee amendment will not be adopted, and that the rate as fixed in the emergency tariff act, and as fixed in the pending bill by the House, will be allowed to stand. Under the bill we are now considering the farmers of my State are going to have to pay an increased price for most everything they have to buy on account of the high tariff rates imposed by this measure. This being true, why should they not have the benefit, if there is any, by having the tariff of 3 cents per pound on their peanuts?

I do not know why it is suggested that this rate should be reduced. We have heard a great deal of discussion on the question of the tariff duties fixed upon various products, products which, if the information furnished is correct, have but little foreign competition, products of which we export a great deal more than we import. Yet upon this one article, produced entirely in Southern States, the committee for some reason recommended a reduction in the rate of duty. I hope the reduction will not be made.

Mr. WALSH of Massachusetts. Mr. President, I want to call attention to the difference between what we have just discussed—the duty on eggs—and the duty on peanuts. The only eggs imported into this country which come into competition with domestic production are from China. The only peanuts imported into this country come from China.

Mr ASHURST. Mr. President, what is the difference between the cost of a peck or quart of peanuts in the United States and in China?

Mr. WALSH of Massachusetts. I have not that information.

Mr. ASHURST. That may be important to some of us when we come to vote on this.

Mr. WALSH of Massachusetts. I am calling attention to the fact that the Finance Committee, with a record of importations of eggs from China of an insignificant amount, increased the tariff duties very substantially; with a record before them of a much larger importation of peanuts, compared with the number of peanuts exported, they reduced the rate substantially, and the peanuts come from the same country from which the eggs come; that is, China.

Let us look at these figures to see in what a position the committee is placed when we compare these two cases.

Mr. ROBINSON. Mr. President, I think the statement the Senator is making is accurate and that the same principle applies to the duties we considered last Saturday in relation to rice. There never was an effort made by the committee, or anyone representing the committee, to justify the reductions proposed in the rates upon that commodity. From the beginning it was announced that in all probability the committee would recede from its amendment cutting the rates on rice. The only rates upon agricultural products carried in the emergency tariff law which were reduced by the committee, to my knowledge, were those on rice and peanuts, and, as I have already said, the chairman of the committee and his active supporter, the Senator from Utah [Mr. SMOOT], were good enough to admit, when the matter was discussed by the Senator from Louisiana [Mr. BROUSSARD], the Senator from Arkansas [Mr. CARAWAY], and myself some weeks ago, that the committee had made a mistake in its action in recommneding a reduction of those rates. I then said the amendment was a discrimination against rice, a southern product. As I have already said, no effort was made to justify the reductions, and I am looking for some justification of this reduction.

Mr. WALSH of Massachusetts. Let me call the Senator's attention to these figures. The production of peanuts in the year 1921 was 816,000,000 pounds. The imports were 40,000,000 pounds, the exports only 14,000,000 pounds. Three times as many peanuts were imported as were exported. Yet the rate is reduced very substantially, from 3 cents to three-fourths of 1 cent.

In the case of eggs, we exported more than we imported, and the rate was increased very substantially. How can you explain it? Here is a perfect illustration of the haphazard, bargain-counter method by which this bill has been framed. How can you explain increasing the rates upon eggs, with a record of exports greater than imports, and reducing the rate upon peanuts, imported from the same country, with a record of exports very much larger than imports?

Mr. WALSH of Montana. Mr. President, I merely wish to suggest that perhaps the chairman of the farm bloc will be able to make that explanation.

Mr. WALSH of Massachusetts. I understood the chairman of the farm bloc to have prepared an amendment which he was going to propose, so as to embarrass some Democrats by making them vote for or against it. But I fail to see any justification, in view of this information and a comparison of the tables on eggs and peanuts for this discrimination.

Mr. McCUMBER. Mr. President——

Mr. WALSH of Massachusetts. The Senator will note I am not arguing for an increase. I am simply calling attention to the difference between this rate and the rate upon eggs, and to the further fact that these two products and the rates levied disclose the want of any definite protective tariff principles in preparing this bill.

Mr. McCUMBER. And I want to call the Senator's attention to the difference between the Underwood rate and the rate in the pending bill. The Senator is complaining because we do not give a higher duty upon peanuts and has intimated that it was a discrimination against the industries of one of our Southern States. The Senator forgot to mention that the Underwood-Simmons law put eggs on the free list, while it did take care of peanuts. It gave a duty upon peanuts, but eggs were left off the dutiable list.

Mr. WALSH of Massachusetts. Eggs in the shell.

Mr. McCUMBER. Yes; eggs in the shell.

Mr. WALSH of Massachusetts. There was a duty upon egg products.

Mr. McCUMBER. The committee did not do anything of that character. It raised the Underwood-Simmons duty upon peanuts, and it did it in the face of the fact that some of the industries of the South came and demanded that we should not raise it, but should put peanuts upon the free list. The argument was made by the crushers of peanuts that the Chinese peanut does not come in competition at all with the American peanut; that it is used only for oil; and that the American peanut is used only for edible purposes. I do not think that view was entirely correct. It was surprising, however, to me—it may be through timidity of those who believe in the Democratic theory of tariff—that they did not appear before the committee and ask for a protective tariff in the face of the fact that their own law gave them no protection according to their own theory.

The committee has always been open to Senators from any section of the country who desire a higher duty or a lower duty. Both the Senators from Louisiana were not slow in presenting the case of sugar and molasses to the Senate Committee on Finance. They believed in the protection of those products and they made their views known to the committee.

The Senator from Massachusetts was mistaken when he said that we lowered the duty. We raised the duty above the pres-

ent Underwood-Simmons rate. But I agree with the Senator from Florida [Mr. TRAMMELL] in that I think the committee rates are too low, and on behalf of the committee I ask that the Senate disagree to the committee amendments reducing the rates on peanuts.

Mr. KING. Mr. President, may I inquire of the Senator having the bill in charge if it would not be wise—and I thought I had that understanding with those on the other side—to postpone action upon peanuts until we discuss the oils? I understood that we would treat them all together—peanuts, peanut oil, coconut oil, and so forth.

Mr. McCUMBER. We will go right on to the oil-bearing seeds next, but we should take peanuts first.

Mr. KING. What I had in mind was the oils themselves—soya-bean oil and cottonseed oil—because those subjects are all so interrelated that it is difficult to discuss one without touching the other.

Mr. McCUMBER. That is true, but before we discuss the oil we must dispose of the raw product from which the oil is produced. We must decide that question first. The question of the duty on peanuts themselves will be a controlling element in fixing all the other duties.

Mr. SIMMONS. Mr. President, I understood the Senator to say a little while ago that Chinese peanuts are used principally for the purpose of crushing oil therefrom.

Mr. McCUMBER. No, the Senator misunderstood me. I stated it was claimed by those who are producing the oil—and they were gentlemen from the South, though I do not remember whether they were from the Carolinas or not—that the Chinese peanuts do not come in competition because they claim that the Chinese peanuts are used for oil only. I think they do come in competition, and so stated.

Mr. SIMMONS. Very few peanuts are imported directly from China, though most of them originate in China and are imported through Japan, but practically all which are imported come from the Orient. I think the bulk, though I would not say all, of the peanuts imported into this country are not used as the American peanut is used. The American peanut is used largely in the manufacture of peanut butter and sometimes, to a small extent, in oleomargarine, and to a larger extent for eating purposes, and for the purpose of making candy. As a general proposition it may be said, I think, that practically all the importations of peanuts into this country are converted into oil.

Mr. KING rose.

Mr. McCUMBER. Mr. President, I was about to ask for a yea and nay vote on the question, but if the junior Senator from Utah [Mr. KING] desires to speak I withhold the request for the present.

Mr. KING. As I understand the Senator from North Dakota, his proposition is to recede from the committee amendment.

Mr. McCUMBER. It is.

Mr. KING. And to restore the rate——

Mr. McCUMBER. On unshelled peanuts 3 cents, and on shelled 4 cents per pound.

Mr. KING. Mr. President, the amendment which was recommended by the committee more nearly approximates what would be right and fair—assuming that any duty at all should be levied, which I deny—than the House provision of the bill. I think this provision will prove to be futile in raising the price of peanuts, because of the close relationship between this commodity and other nuts which produce oil and because of the lack of competition from abroad. I shall not say that it is offered to secure support for the bill, but I will say that there are some indications which would lead to that conclusion. It is in harmony with a number of the provisions found in the bill which will not increase the prices of certain agricultural products, but which have gained the support of some for the entire bill upon the theory that agriculture will be benefited This bill seems to be drawn upon the theory of granting tariff rates to all who demand them, and it presents evidences of rivalry to see who could get the highest rates of duty.

Mr. McCUMBER. Mr. President, will the Senator yield?

Mr. KING. Certainly.

Mr. McCUMBER. I say to the Senator, in all fairness, that it is not done for any such purpose. I do expect that some of those who oppose the bill generally will vote that we recede from the Senate committee amendment, but I do not expect to have a single one of them, after they get what they want, to vote for the bill. So I do not want the Senator for a moment to think that the Senate is asked to disagree to the committee amendment with the idea that we will change one single vote on the final passage of the bill. I think that the committee amendments, the same as I think the present bill—and they are very close together—give too low a duty upon peanuts.

Mr. KING. I may not have made myself clear and I may not have fully comprehended the meaning of the Senator or properly interpreted his remarks. What I meant to say was that the provision, like other provisions in the bill, is a sop to the agriculturists for the purpose of securing, if possible, the support of Senators in this body and Representatives in the other body to the entire bill.

Mr. McCUMBER. In reply to that, Mr. President, I state that that is not the purpose, neither is it the expectation.

Mr. KING. Well, Mr. President, it does seem to me that men of the great intelligence of the Senator from North Dakota—and he is an able man, one of the ablest men in public life—must know that a tariff upon many of the products found in the bill, particularly in the agricultural schedule, will not increase the prices of the agricultural products to which those particular paragraphs and schedules refer. The Senator knows that we produce in the United States not hundreds of millions but billions of pounds of corn; that we export corn and wheat and rice and other agricultural products. To say that a tariff upon these products will increase their price in the domestic market it seems to me is to deny the fundamentals of trade and commerce and accepted principles of political economy.

The Senator knows that we produce in the United States of cottonseed oil hundreds of millions, indeed, more than a billion, of pounds; that of animal fats we produce more than a billion pounds, and that our exports exceed 1,000,000,000 pounds annually. Approximately one-third of our total production of animal and vegetable fats is exported. The United States makes the world market and fixes the world's prices. To impose a duty upon vegetable oils, upon peanuts, upon lard, upon animal fats, Mr. President, is a foolish and fatuous proceeding, and demonstrates that those who advocate that policy have given no adequate thought to the situation, or they hope that by some species of psychology or ledgerdemain the agriculturists of the United States can be made to think that they are to receive additional prices for their surplus products, products which find their way into Europe and other countries of the world. Perhaps our Republican friends who are proposing these schedules are giving a lesson in psychology to the farmers and others; they are not dealing in accepted facts with respect to trade and commerce nor are they following accepted principles of political economy.

The Senator from North Dakota has been contending, I suppose—and I came into the Chamber after he had concluded his address—that a duty upon peanuts is important to the American producer. Let me briefly submit a few pertinent facts relating to this matter. The production of peanuts in the United States increased from 1909, when we produced 19,000,000 bushels plus to 46,000,000 bushels in 1918. In 1920 the production declined to approximately 35,000,000 bushels.

The increase was largely due to the peanut-oil and peanut-butter industries, but while the peanut production was increasing more than twofold between the years to which I have referred, the importations of peanuts and peanut oil increased practically threefold. Exports also increased threefold during the same period.

Of the 108,000,000 pounds imported—peanuts and oil—in 1918, 80,220,130 pounds came from Japan. Approximately 3,000,000 pounds came in at Atlantic ports and 103,000,000 pounds at Pacific ports. Freight rates from Suffolk, Va., to San Francisco are high—around 3 cents per pound—while the ocean rate from Japan to Seattle and San Francisco is less than 1 cent per pound. Peanuts can be grown in California, but they are less profitable than other crops.

The haul from Virginia is much shorter to Canada than to San Francisco, and the freight only about one-fourth as much. Canada imposes an import duty of 2 cents per pound.

The prices of peanuts during the past seven years, and the rapid increase in production and consumption, indicate that American growers have not as yet materially suffered from foreign competition. The maintenance of the peanut-oil and peanut-butter industries probably will continue to require foreign-grown peanuts unless American production is appreciably increased. Other uses for peanuts have also increased. It should also be noted that nearly one-half the domestic acreage in peanuts is pastured or "hogged off," and that peanuts often compete in the crop rotation with such products as tobacco, cotton, and corn.

There has been no competition from foreign countries, nor will there be any such as to affect the domestic growers. What limited quantities were imported did not compete with the American crop. If it was suitable for edible purposes, it was

used on the Pacific coast when, because of the high freight rates from the producing sections of the United States, the domestic product could not go.

But the important fact is that the peanuts imported were not comparable for confection or "butter" purposes with the American product and were largely used for their oil content. The peanut oil, because of its relationship to other vegetable oils, particularly cottonseed oil, and its interchangeability with such oils as well as animal fats, can not be regarded as a competitor with them even though it comes from other lands.

Mr. President, the high prices which prevailed in 1919—because, I might say, high prices prevailed with respect to all commodities—made the demand for peanuts grown in the United States for confection purposes and for what is called peanut butter so great that there were none available for oil purposes. Mills which had crushed peanuts for the oil they contained were deprived of the opportunity of doing so. The consumption increased faster than production, and the confection demand and the light import in 1918 caused prices to remain during 1919 and 1920 very high; so, as I have indicated, peanuts in the domestic market were used for other purposes, and thus the oil producers were deprived of the opportunity of acquiring peanuts for the manufacture of oil.

The tariff summary states that—

During the year ended June 30, 1919, there was a decided falling off in importation of peanuts, due mostly to restrictions imposed by the War Trade Board. Imports of oil, on the other hand, increased about 37 per cent over the preceding year, thus bringing the peanut equivalent for 1918–19 up to over 12,000,000 bushels.

* * * * * *

During the fiscal year 1920 general imports of shelled nuts amounted to 120,344,425 pounds and of unshelled nuts 12,067,988 pounds. There were also imported over 22,000,000 gallons of peanut oil. While these imports are the largest on record, it should be noted that the corresponding domestic harvest was 13,000,000 bushels less than in the preceding year.

The operation of the emergency tariff act is discussed as it relates to peanuts in the report of the Tariff Commission recently transmitted, and it is there stated—

In summarizing the effects of the emergency tariff changes upon the trade in peanuts distinction should be made between the trade in shelled and unshelled. Imports of unshelled peanuts, which have been relatively unimportant in recent years, were not materially reduced after the increase in duty.

Imports of shelled nuts, however, after the increase in duty from three-fourths of 1 cent to 1 cent per pound in the 10 months following the change declined to 6,410,000 pounds, as compared with 22,440,000 pounds, which came in during the same period of the previous year.

But that was, as indicated, chiefly due to the low prices which prevailed, and there was a diminution in the prices of many of the oil products and of many other commodities in the United States. But, as I have endeavored to point out, the imports, whether of peanuts or peanut oil, had no appreciable effect upon the price of the domestic products. The nuts suitable for edible purposes as nuts did not affect the price of the nuts grown in the United States. Nor does the oil compete with the peanut oil produced in the United States.

It must be borne in mind in discussing this question that the price of vegetable oils and animal fats determine the price of peanuts, cotton seed and cottonseed oil, soy beans, soy-bean oil, and coconut oil; or perhaps it might be said that because of their nature and qualities each influences the price of all the others, and all influence if they do not determine the price of each. So I repeat, the price of peanuts is governed largely by the price of vegetable oils and animal fats.

Peanut oil is interchangeable with cottonseed and other vegetable oils and with animal fats. The importation of oriental vegetable oils has not reduced the price of domestic vegetable oils or animal fats because of the enormous surplus produced by the United States, which have established the world price except when by unwise legislation—the emergency tariff act—we prevented such oils from entering the United States. This legislation diverted the oriental vegetable oils, or most of them, except coconut oil, from the Philippines, to Europe, where they came into competition with American products, forcing down the level of world prices and thus affecting, of course, the domestic market.

A tariff upon peanuts, Mr. President, because of the interchangeability of the oil derived from peanuts and for other reasons stated, in my opinion, will not affect the price. Because of the fact that we export vegetable oils and animal fats to the extent of hundreds of millions of pounds annually and because of the fact that peanuts and the oil derived therefrom are taken into account in determining the domestic price of animal and vegetable fats, it is obvious that the price for peanuts is determined by world prices for animal fats and vegetable oils. The result has been, as I have indicated, that when by the emergency tariff act there was in the world only one buyer, treating Europe as one buyer for vegetable oils, including those of the Orient, that situation eventuated in a reduction in the prices of the vegetable oils of the Orient.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield to me for a moment?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Massachusetts?

Mr. KING. I yield.

Mr. WALSH of Massachusetts. I want to call the Senator's attention to the price of peanuts after the passage of the emergency tariff law. The Senator will recall that under that act on peanuts a protective tariff rate of 3 cents per pound was imposed. I read two advertisements, appearing in the Farmers' Exchange, one of the leading farm papers of North Carolina, of the issue of Saturday, April 12, 1922, under the head of peanuts:

Selected recleaned seed peanuts: North Carolina Runners, 4 cents per pound; White Spanish, 4½ cents. Any amount shipped. Strickland & Baxter, Clio, Ala.

Selected No. 1 seed or roasting peanuts: Alabama Runners, 4 cents per pound; White Spanish, 4 cents per pound. No order accepted for less than 100 pounds. Cash with order. Goff-Hutchison Merc. Co. (Inc. $50,000), Enterprise, Ala.

It appears that cleaned peanuts, seed peanuts, which are the very best grade of peanuts, were selling for 4 cents a pound on April 1, with a protective tariff duty of 3 cents. What would they have sold for without the tariff protective duty upon the theory of this bill? I am informed that peanuts were never selling at such a low price as to-day since the war; that the price is lower than ever before, showing conclusively that the emergency tariff law has not helped the farmers who raise peanuts one particle, as the rates fixed upon other agricultural products have not helped the farmers engaged in raising the products on which duties have thus been imposed.

Mr. ROBINSON. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER (Mr. McNARY in the chair). Does the Senator from Utah yield to the Senator from Arkansas?

Mr. KING. I yield.

Mr. ROBINSON. Supporting the statement just made by the Senator from Massachusetts, there has been called to my attention a publication known as The Progressive Farmer, published at Raleigh, N. C., of Saturday, April 8, 1922, in which peanuts for seed are advertised, and the rates are substantially the same as those mentioned in the publication referred to by the Senator from Massachusetts. I desire to insert in the RECORD, with the consent of the Senator from Utah, the advertisement to which I have referred. This shows that cleaned peanuts of the highest grade for seed purposes were advertised for sale at 1 cent per pound more than the present rate provided under the emergency tariff law.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

PEANUTS.

Seed peanuts: Small Running, Bunch, and Jumbo; good stock. Write for prices. Slade, Rhodes & Co., Hamilton, N. C.

Selected recleaned seed peanuts: North Carolina Runners, 4 cents per pound; White Spanish, 4½ cents. Any amount shipped. Strickland & Baxter, Clio, Ala.

Seed peanuts: The highest-yielding variety of North Carolinas. J. W. Canady, Sneads Ferry, N. C.

Selected No. 1 seed or roasting peanuts: Alabama Runners, 4 cents per pound; White Spanish, 4 cents per pound. No order accepted for less than 100 pounds. Cash with order. Goff-Hutchison Mercantile Co. (Inc.) ($50,000), Enterprise, Ala.

Mr. ROBINSON. If the Senator from Utah will be kind enough to yield to me further——

Mr. KING. I shall be glad to yield to the Senator.

Mr. ROBINSON. I want to state in this connection that it is extraordinary, beyond my comprehension, that at a time when there is widespread agitation in justification of high tariffs on farm products as necessary for the protection of the American farmer, at a time when the policy of protection is being written into law, the Finance Committee of the Senate should report to this body amendments reducing rates on two agricultural products, and only two agricultural products, and continuing in force or increasing the rates under the emergency tariff law as to all other agricultural products, and that those products should by the law of nature be confined to the southern section of this country, the representatives of which in this body are Democrats. There could have been no other purpose than to play "peanut politics" by attempting to force on record Senators who are committed to a policy of tariff for revenue as favoring protection for the products grown in their own communities.

I am not afraid to meet this issue here or anywhere else. If the policy that is to be written into our tariff laws is a policy of protection, I do not find myself justified, as a representative

of the people of the State of Arkansas, in voting to discriminate against the products of that State. I should prefer to see tariff rates for revenue purposes only, and if the rates now levied under the Underwood law could remain effective as to all products, I should be glad to see that end accomplished. I will not indifferently see a tariff levied for political purposes discriminatory against the products of the section that I represent.

I shall probably vote to restore the House rate. I do not find myself inconsistent in taking that course to prevent discrimination. If I represented a State where peanuts are produced, realizing that the action of the committee justified me in concluding that the amendment was reported for the sole purpose of embarrassing Senators who do not believe in the policy of protection, I would not hesitate to support the action of the committee now, when it proposes to withdraw this discriminatory amendment. Indeed, unless something comes to my knowledge which makes it appear my duty to pursue a contrary course, I shall vote to sustain the proposal of the committee to recede from its amendment.

Mr. POMERENE. Mr. President, will the Senator yield to me a moment?

Mr. KING. I yield.

Mr. POMERENE. In connection with what the Senator from Arkansas has been saying, it may be of interest to some Senators—I mean, some Democrats and some Republicans—for me to say that two leading Republican business men from my own State this morning were in my office, and in talking about the high rates of this bill they said that they were both protectionists, but they feared that the effect of the high rates of duty contained in this bill would be to create such a resentment against the protective tariff policy of the country that it would be ruined.

Mr. KING. Mr. President, the statement just made by the Senator from Ohio reflects the attitude of many liberal-minded and sincere protectionists in the United States. There are many Republicans who honestly believe in the protective theory, but who do not believe in a tariff that amounts to an embargo upon many of the products entering into the lives of the people. There are men in the Republican Party who have the vision of the Senators from Wisconsin, if I interpreted their remarks correctly, who took the position that a tariff bill which is so prepared that certain interests—the steel interests, the textile interests, the woolen interests—will be permitted to charge extortionate prices and exercise monopolistic control over such commodities, is not a protective tariff bill but a bill which legalizes exploitation and robbery.

I may differ from one who honestly believes that there should be reasonable protection upon certain industries, and that that protection should be determined by the difference in the cost of production abroad and the cost of production in the United States, but I can respect his sincerity; but anybody who reads the testimony taken by the Finance Committee and by the Committee on Ways and Means of the House—indeed, who reads the speeches coming from the proponents of this bill—will be struck with the fact that the difference in cost of production abroad and the cost of production at home has been entirely ignored and has not been taken into consideration in the preparation of this bill. Indeed, there are in every schedule of the bill many instances where we export large quantities of given products and import less than one-tenth of 1 per cent of such products. Nevertheless the bill carries inordinately high tariff rates—in some instances being over 300 per cent. What is the reason for such a course? Either to deceive the people or, if the product to which the duty applies is susceptible of monopolistic control, to enable those who have the power to exercise a monopoly to form one and to exploit the American people.

Mr. President, I repeat that upon no rational theory, no honest theory as the basis for a protective tariff, can this bill be justified. No argument which has been addressed to the American people by protectionists in the past can be advocated to support the major part of the provisions of this bill.

The Senator from Arkansas calls attention to the fact that the agricultural schedule increased the rates upon practically every agricultural product except two—two which were produced in the South. I am not going to state the reason which prompted the Finance Committee to lower the rates upon rice and peanuts, but it does not need much perspicacity or very much power of discernment to determine the reasons which prompted that most extraordinary and phenomenal procedure upon the part of the committee.

Mr. President, coming now to the item before us, attention was called by the Senator from Massachusetts [Mr. WALSH] to the fact that under the emergency tariff law, which was to be the panacea for the farmers, the price of peanuts has gone down. The Tariff Commission furnishes statistics which exemplify the truth of the statement just made by the Senator.

On page 31 a table is submitted which shows the decline in domestic prices following the passage of this act. The average f. o. b. market price of Virginia and Spanish type peanuts November, 1919, to April, 1922, is shown in this table.

In November, 1919, the price of the Virginia-North Carolina peanuts, jumbo, unshelled, was 15 cents per pound; fancy, unshelled, 11¾ cents per pound; extra large, shelled, 17½ cents per pound; and No. 1 Virginia, shelled, 14¾ cents per pound. The price of the Southeast Spanish—that is one of the varieties produced in the United States—No. 1 shelled was 16¾ cents per pound.

In December the price of the jumbo had declined. The other prices were substantially the same. There had been a slight decline in one or more.

In January, 1920, the prices were substantially the same. There were some slight reductions.

That is also true of February and March.

In April the prices had declined to the following figures: Jumbo, unshelled, 13¾ cents per pound; fancy, unshelled, 10¾ cents per pound; extra large, 15½ cents per pound.

The report does not show the prices for May, June, July, August, September, and October, except as to Southeast Spanish No. 1, shelled; and those prices declined from 16¾ cents in November, 1919, to 13 cents per pound in September, 1920.

In November and December there was a further decline. The fancy, unshelled, went down to 6¾ cents per pound.

In January, 1921, the prices were for jumbo, unshelled, 10¾ cents per pound; fancy, unshelled, 6 cents a pound; extra large, shelled, 12 cents per pound; No. 1 Virginia, shelled, 4¾ cents per pound; Southeast Spanish No. 1, shelled, 5½ cents per pound; and Southwest Spanish No. 1, shelled, 6 cents per pound.

The prices were substantially the same for a number of months. In August jumbo, unshelled, were 11¾ cents a pound; fancy, unshelled, 7⅛ cents; extra large, 12 cents. No. 1 Virginia were down to 4¾ cents; Southeast Spanish No. 1, 4⅜ cents; Southwest Spanish No. 1, approximately 6 cents per pound.

There was a decline in December. Jumbo dropped to 8½ cents; fancy, unshelled, 6⅜ cents; extra large, shelled, 8⅜ cents; No. 1 Virginia, shelled, 6¼ cents; Southeast Spanish No. 1, shelled, 4¾ cents; Southwest Spanish No. 1, shelled, 5⅞ cents.

During the first four months of 1922 the prices were still lower. In January the price of jumbo, unshelled, was 7¾ cents; 7¼ cents for the fancy, unshelled. In April, 1922, jumbo, unshelled, sold for 6¼ cents; fancy, unshelled, 5¼ cents; extra large, shelled, 8⅜ cents; No. 1 Virginia, shelled, 5⅝ cents; Southeast Spanish No. 1, shelled, 5⅛ cents; and Southwest Spanish No. 1, shelled, 6⅜ cents.

The commission states:

> Of greater importance than the import duty in restricting imports was the progressive decline in the price of domestic peanuts in 1921–22. The price of extra large Virginia shelled nuts declined from about 17 cents per pound in January, 1920, to 8⅛ cents in March, 1922. Of especial importance is the fact that the premium on extra large shelled nuts, which amounted to nearly 8 cents in the spring of 1921, due to the shortage of this size in the 1920 crop, was cut down to 3 cents in the spring of 1922.

Mr. President, these figures demonstrate that the imposition of the higher tariff duty was of no advantage to the producers of peanuts in augmenting the price of their product. I repeat, therefore, that the emergency tariff law, so far as it relates to many of the commodities covered by it, was a delusion and a snare. It was a deception practiced upon the farmers for the purpose of inducing them to support the Republican Party. It was to prepare the way for a tariff bill the important schedules of which would be either dictated by the predatory interests of the United States or their influence would be potential in the formulation of such schedules.

Some of the Republican leaders undoubtedly knew, although their platform did not contemplate a tariff revision upward or did not promise the kind of a tariff bill we have before us, that there would be introduced a tariff bill which would be of great advantage to certain interests in the United States which have for so many years profited by the perversion of the taxing power of the Federal Government.

Undoubtedly the steel interests knew that a tariff bill would be reported by the Republican Congress which would enable the steel manufacturers of the United States, who have a monopoly upon steel products, to either maintain their high prices or to increase them, as they may desire. You may not measure the evils or the iniquities of a tariff bill solely by the level of prices which may be maintained for an indefinite period with respect to the commodities to which the bill refers.

The natural tendency following the war, when we should have returned more nearly to normal conditions, was a decline

in prices. It would be just as wrong to use the taxing power to enable monopolies to perpetuate war prices and project them into peace times as to put it into their power to increase those prices.

Mr. WATSON of Indiana. The Senator has said over and over again that the tariff is a tax, and that the amount of the tariff is added to the price in the United States of the product which the consumer has to pay.

Mr. KING. The Senator is in error; I have not stated it that broadly.

Mr. WATSON of Indiana. That has been stated over and over again. I merely wish to ask the Senator how he reconciles the present speech he is making with his oft-repeated declaration of a general character, because he is now arguing that, notwithstanding the imposition of a 3-cent rate on peanuts as against three-eighths of a cent under the Underwood tariff law, the price of peanuts has gradually declined.

Mr. KING. Mr. President, if the Senator had done me the honor to follow what I have said during the discussion of this bill he would have a different view as to my attitude upon tariff questions.

I have said that tariff rates may be a tax; indeed, I have said that the reason assigned by protectionists for the laying of duties was to increase the price of domestic products, and therefore the tariff was a tax. I have challenged attention to commodities which we were exporting and when we were making the world prices, and have stated that as to such commodities the tariff rates fixed in this bill were a delusion and a snare—I used that expression a number of times—and that such rates would not affect the prices of the domestic products.

Mr. WATSON of Indiana. I would like to ask the Senator another question. It is the oft-repeated cry of those who are opposed to the protective system that the tariff is a tax and is always added to the price of the article on which the rate is imposed. Peanuts are being sold for 3 cents, as I understand it, by Virginia and Carolina farmers. The tariff is 3 cents. I suppose, therefore, if we take the tariff off they would get the peanuts for nothing?

Mr. KING. My friend from Indiana——

Mr. WATSON of Indiana. If the tariff is a tax, always added to the price the consumer pays, how does the Senator explain that?

Mr. KING. Does not the Senator believe that the tariff raises prices?

Mr. WATSON of Indiana. I gave my view of the tariff, and I am trying to get the Senator's view.

Mr. KING. I am answering the Senator by asking him a question, if he will permit me to be a Yankee for the moment, as he is sitting by a Yankee.

Mr. WATSON of Indiana. I will permit the Senator to be a Yankee. On a new industry the tariff does raise the price until the home competition cuts the price down. That has been demonstrated over and over for 130 years of American history. Now that I have answered the Senator's question, will the Senator answer the question I asked him? If the tariff is a tax and is always added to the price, how does the Senator account for the fact that we have a tariff of 3 cents a pound on peanuts, and yet peanuts are selling for 3 cents a pound?

Mr. KING. I have answered that and have fully discussed it when other paragraphs of the bill were under consideration. Perhaps the Senator was not in the Senate when I discussed that feature of this matter before. Of course, where we control the world market and fix the world price, where it is an international world price and we determine it, as we do with respect to the price of peanuts and vegetable oils and animal fats, then tariff rates, no matter how high they are placed, are unimportant. If you should put a dollar a pound upon peanuts, it would affect the price, if at all, only as I have indicated heretofore in discussing this item. Peanuts are used in part for the making of vegetable oils. We fix the price of vegetable oils and of animal fats not only here but in the world. In the emergency tariff law certain vegetable oil producing commodities imported from the Orient were subjected to high tariff duties; this resulted in their being sold to Europe, where they were converted into vegetable fats, and took the place, in part, of products which heretofore had come from the United States. If it had not been for the tariff, these oil-producing products would have been brought to the United States, where they would have been crushed and the oils derived therefrom refined, thus giving employment to many Americans. This oil would then have been exported to Europe or used for industrial purposes in the United States. This would have liberated more of our oils and fats for export at higher prices than were obtained. But I say to the Senator from Indiana [Mr. WATSON] that the history of all Republican tariffs shows that the purpose has been to increase domestic prices—to enable the domestic producer to charge more for his product than the foreign market establishes.

The tariffs laid by Republicans have been designed to increase prices, to tax the people, to permit corporations to exploit the people. In this they have been eminently successful. I repeat, if there is no possible competition from abroad, then the tariff is either a palpable frand and designed to deceive the American people, or it is to enable in some way the domestic producers to effectuate stronger combines with respect to commodities which are important to the people and, if possible, increase the prices of the same.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from North Dakota?

Mr. KING. I yield.

Mr. McCUMBER. I think the Senator will agree with me that prices are fixed by the law of supply and demand at the point of consumption, and the point of consumption of peanuts is in the United States. If the price is affected by the law of supply and demand—and in agricultural products there are no combinations of the producers—and we cut off 110,000,000 pounds in a single year by reason of a tariff duty which prevents their importation, will not the Senator agree that the cutting off of that 110,000,000 pounds will have some tendency, at least, toward increasing the price of the product in the United States?

Mr. KING. Let me ask the Senator why prices went down when you passed the emergency tariff law?

Mr. McCUMBER. Prices went down for several reasons. I can give the important reason. It was due to the very close, hard times which have followed since 1920; less demand for peanuts, the same as there was less demand for other things which were more of a luxury than a necessity, and which would feel the effect of the stringent conditions in the country. We can not say, of course, just what the price would be if there had been no importations, or if the 110,000,000 extra pounds had come in. All I want to insist is this, that if the law of supply and demand governs, if you decrease the supply, then necessarily it must have some effect upon the price.

Mr. KING. Mr. President, the record which has been submitted conclusively demonstrates that the emergency tariff law, which was offered by our friends upon the other side as a panacea for the evils from which the American people were suffering, failed to give any relief to the growers of peanuts. Indeed, in the face of this high tariff, the prices of all grades of peanuts have progressively declined.

I submit that because of the close relation of peanuts to other nuts, and the interchangeability, if I may be permitted that expression, of the oil contents of peanuts with cottonseed oil particularly, this rate, in my judgment, will prove abortive in affording any benefit to the growers of peanuts.

But aside from that—and I do not care to take any time in arguing it—I contend that it is not justifiable to impose tariff rates merely for the purpose of enhancing the price of any particular product.

No great revenue will be derived from this product, and the contention of the able Senator from North Dakota, if he contends that prices will be raised by the provision, must be that he is willing to impose a tax upon the people for the purpose of increasing the profits of those who may be engaged in the business. The Senator certainly contends that this is a tax, and he is arguing that the effect of the tax will be to increase the price. Of course, if it is to increase the price, it is to increase the burdens upon the consumer. He justifies that course and defends the position of his party in exercising the taxing power for the purpose of increasing prices. But I protest against—I shall not use the word "hypocrisy," but against the pretense so often exhibited by the proponents of this bill that it will result in great benefit to the agricultural interests of the United States.

There has been a cooperation that is most astounding, for it argues an agreement, a hard and fast agreement, between certain interests to work together and to support all the schedules, notwithstanding the fact that many of the schedules will result inevitably in increasing the prices of the products which the farmers and the agriculturists must purchase. They will be compelled under the provisions of the bill to pay more for their agricultural implements, for their clothing, for their shoes, for all the things they buy, than they would have to pay were it not for the bill and the schedules of the bill. The farmers of the United States are being fooled now, as they have been fooled in the past, by the leaders of the protective school in the United States.

Mr. President, the steel interests and the textile interests in the past have been beneficiaries of the tariff system, and they

have grown rich at the expense of the people by reason of the tariff rates which have been imposed. Several days ago I was discussing the tariff, and alluded to a number of States which had been particular beneficiaries of high tariffs. I alluded among others to the State of Connecticut. The able Senator from Connecticut [Mr. McLEAN] challenged some of the statements which I made. I then said that protection undoubtedly had enriched some in his State, but that the great wealth of Connecticut, Rhode Island, and certain protected States was in the hands of a limited number of corporations and individuals. I called attention to the strikes in the mills of his State, to the impoverishment of the people at work in the mills, to the poverty which existed, and called attention to the fact that the Republicans had by their legislation made it possible for certain industries to reap enormous profits, and that those industries had driven out the American workmen and had imported labor from abroad and forced the wages of the worker down until the wages paid were so pitifully small that poverty and, in too many instances, gaunt hunger were the constant companions of the employees.

A few days later I received a letter, which I have before me, from Mr. Patrick F. O'Meara, president of the Connecticut Federation of Labor, with his office, I think, in New Haven, in which he said that he had read the colloquy between the Senator and myself, and, if I may be pardoned, in his reference to myself he extended congratulations for the defense against a—

system that if permitted to continue will have the serf and slave system that existed in the South before the Civil War beaten all to atoms.

Your statement of the employment of the cheap-wage foreigner in the State of Connecticut is so true that, as I read the speech, I was thinking whether or not your information came as if you were a resident of Connecticut.

Then he said:

During the World War the writer was honored by being selected for membership on one of the three district boards of this State. This, as you will recollect had to do with all appeals over local boards' decisions and all industrial exemptions, and as the secretary of the board for the war term the great part of the evidences submitted on questionnaires brought forth conditions that no State should be proud of, and thousands of these questionnaires had to be written up and completed by others than the registrant, for the reason that the said registrant could neither read or write.

Why I wish to call your attention to the latest reports coming from the United States Department of Labor, which shows that the illiteracy in this State is shameful, and this is the State, little that we are in square miles, that Senators McLEAN and BRANDEGEE wish to convey the information that matters are all serene up here.

During the latter part of the year 1921 the city of New Britain, Conn., had to make an appropriation out of the municipal funds to send back to Spain and Portugal large numbers of cheap foreign laborers that they had brought in there (I refer to the manufacturers), and who were living in such filthy conditions that the city authorities of New Britain thought the best thing to do was to send them out of the city.

Your statement on page 6562—

Speaking of the RECORD—

relative to this State having industrial disturbances is as true as any words coming from the mouth of man, I do hope that on account of the position in the life of the community that I hold that you will not feel that I am entirely biased in my claims, for I have plenty of letters in my office from employers of labor, large and small, in this State thanking the writer for the fairness that I have entertained at all times.

But I can not sit idly by and have conditions go on as they are without protesting from time to time against them, and I was elated when I read of your indictment against Senator McLEAN and his constituents—I refer to the manufacturers of Connecticut. * * *

If the proposed tariff bill goes through they will again reap the harvest that they have for years, and I smile when I read of the claims that German-made watches are being sold so cheaply in the United States, when, as a matter of fact, such a big and influential concern as the New Haven Clock Co., in my home city, is to-day paying wages so low that they never would be accepted only that men are forced to take them to earn a few dollars for their families; the wages are even lower than before the war.

Then he said:

In order to have you feel that the specific information is coming from a person that knows, I wish to state that the writer is a product of the State of Connecticut, born in the city of New Haven, Conn., and know full well of the conditions whereof I write, and if either one of the Senators from Connecticut will deny any of the statements that I have written about I will gladly furnish them to you in affidavit form to back them up.

Mr. President, I repeat the bill is in the interest of certain protected manufacturing concerns, and in order to pass it and to maintain these extortionate rates representatives of the farmers, or the farm bloc, have given their support to the bill, and the farmers, at least some of them, have been made to believe that the bill is in their interest. It is not. It penalizes the farmers and places additional burden upon them. They will be the ones upon whom the burden will fall the most severely when the bill shall be enacted into law and when opportunity shall have been given for the full effect of it to be realized by the American people.

Mr. President, the rate in the item under consideration as recommended by the Senate committee, if any rate at all is required, is adequate, and I hope the action just indicated by the chairman of the committee will not receive the approval of the Senate.

Mr. McCUMBER. Mr. President, I want the attention of the Senator from Utah for just a moment. The Senator asked me a question or two. One of them was, If I was willing to tax the American consumer, if it was a tax, for the benefits that might be derived by the producer. I want to answer him most candidly. I have driven through that section of the Southern States which produces the bulk of the peanuts. I have looked at their homes and at their farm buildings. I have noted that as a rule they are rather dilapidated. Many of them have not had the paint brush upon them for half a century or more. When I compare the condition of those who produce peanuts with the condition of the average people who buy peanut candy and peanut butter, I say to the Senator from Utah, Yes; if I could increase the price of peanuts to those farmers 3 cents a pound and if it added 3 cents a pound to the price of peanut butter, I would do it, and I would do it quickly. If the purpose of a protection is to protect where it is needed, then I would vote for that protection where it is needed, even though it be at the cost of the consumer.

Answering the Senator in that respect, I now want to have his attention to a question which I may ask him. I notice that in the calendar year 1921 we collected in duties on imported peanuts $365,876.48. The Senator will admit that we need the money. The Senator has stated that the emergency tariff duty has not raised the price of peanuts. All right, then. We have obtained $365,000 in revenue from importers without costing the American people one penny. I will admit that, if the Senator wishes. Why, then, does the Senator wish to reduce the rate of duty? Why does he wish to deprive the Government of $365,000, when he admits that it has not added one penny to the cost of the consumer in the United States? I do not think it has added very much to the cost; I will admit that it is mostly a revenue duty.

I want the Senator to give the matter his fair consideration and not his partisan consideration. The Senator is generally very fair in the discussion of these subjects; and while I think his arguments are overloaded with adjectives I am certain that he tries to arrive at a conclusion that is fair and just. The Senator knows, as well as I do, that in a country which is not an exporter of a given product to any considerable extent, but which imports that product, the prices are fixed by the combined production and importation. The Senator must agree with me as to that. If that be true—and no one can deny it—then the Senator must admit if in this country, the place of consumption, the volume of the commodity is reduced to a considerable extent, necessarily the price of the product within the country will be buoyed up. There may be such a depression that we can not prevent the price going lower and still lower, but, nevertheless, the law of supply and demand will hold good, namely, that the greater the surplus the less the price; the greater the deficiency the greater the price.

Let us examine the importations and see whether the emergency tariff rate had any effect upon importations; in other words, whether it had any effect upon increasing or decreasing the volume of the commodity in the United States. I will take the importations for 1920. In 1920 the importations were 8,703,000 pounds, in round numbers, of peanuts not shelled. Now, remember that we did not pass the emergency tariff law until May 27, 1921. Therefore the emergency tariff act was in operation only during six months.

Mr. KING. I hope the Senator from North Dakota will keep in mind, as he is discussing this phase of the case, the fact that our importations of peanuts are largely used on the Pacific coast; that our exportations—and the Senator knows that we exported last year some 14,000,000 pounds—are largely to Canada. Because of the freight rates from Virginia and the Southern States to the West, it is almost impossible at 3 cents a pound to ship there and find a market.

Mr. McCUMBER. The good peanuts which are raised in North Carolina go a great way west.

Mr. KING. The Senator will see by the RECORD, if he will read it, that the freight rates make almost prohibitive the sale on the Pacific coast of peanuts raised in the Eastern and Southern States. By the raising of the tariff duty we are going to provoke retaliation from Canada, and we shall cut off our market for peanuts in Canada. So we are going to hurt the farmer, even conceding that the tariff does swell the price of the domestic product.

Mr. McCUMBER. It is a surprise to me, Mr. President, that we are going to have retaliation from Canada. Canada does not raise any peanuts. I do not know what she would have to retaliate about.

Mr. KING. The Senator from North Dakota certainly did not deduce the idea that I meant that Canada would discriminate in the matter of peanuts, for there is more than one method of retaliation. For instance, when we passed the emergency tariff act imposing a tariff on cottonseed oil, Italy, which does not produce cottonseed oil, retaliated against us, as did also France. There are more ways than one for one nation to retaliate against another. We export many commodities.

Mr. McCUMBER. But countries, as a rule, retaliate by imposing a duty on an article which is competitive.

Mr. KING. Oh, no.

Mr. McCUMBER. But certainly Canada would not have any reason to retaliate one way or another. Our tariff on peanuts is not going to affect Canada in the slightest degree.

Mr. KING. Let me say to the Senator from North Dakota—and I hope he will pardon me for interrupting him——

Mr. McCUMBER. Certainly.

Mr. KING. I make the prediction now that the Senator from North Dakota, in the quiet retreat of his North Dakota home—and we regret very much that he is going there—will find a verification of the prediction that if Congress passes this bill, with the high rates fixed in the schedules, that Canada and other countries that have sought commodities here, either by a combination or otherwise, will seek to find markets elsewhere in which to purchase the products which we now produce and sell to them. We shall, therefore, be the sufferers and our exportations to foreign countries will, in part, fail by reason of the inhibitions against importations which the pending bill provides.

Mr. McCUMBER. Mr. President, I have complained several times about the long speeches which the Senator from Utah has made upon this general aspect of this bill, and I do not want to encourage him to go over them again. I am to-day discussing peanuts, and while I do not claim to have any expert knowledge upon the subject of the raising of peanuts, or, as some one has suggested, "peanut politics," I do know something about the law of supply and demand as to every commodity as it applies at the point of consumption. The suggestion I wish to make is that, first, we derived $365,000 of revenue from the imports of peanuts. If the duty did not raise the price of peanuts, then it did not cost the American public a penny. If it did raise the price or keep the price from falling to the point to which otherwise it would have sagged, then I am glad that we kept the price up at least that high.

I believe that, notwithstanding the fact that, with the depressed conditions prevailing throughout the United States, peanuts went down in value per pound, as did every other commodity. The fact that 110,000,000 pounds of shelled peanuts and some 25,000,000 pounds, as I now remember, of the unshelled were kept out by reason of the tariff duty indicates that the protective duty in the emergency tariff act did some good, or prevented a worse condition ensuing, if Senators prefer to put it in that way. All I am stating is that, so long as we can get nearly a half million dollars in revenue from importations of a certain commodity without affecting the American price, we certainly ought to continue the duty.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. SIMMONS. Mr. President, I wish to correct the Senator from North Dakota in an implied statement which he made a little while ago which related to the character of the homes he said he saw in the sections of the South in which peanuts are grown. The effect of his statement was, I think, to create the impression that the peanut growers are not so prosperous as other agricultural classes of the South. The Senator is mistaken. I live in that part of North Carolina where both cotton and peanuts are grown, and I think that the peanut farmers in my State have been about as prosperous in the years that have passed as have the cotton farmers; in fact, there is a feeling among many farmers of the State that the net profits of peanut growing at the prices that have obtained in recent years are as great, if not greater, than the net profits of cotton growing. I myself am rather inclined to think so.

The tenant classes to which the Senator referred—and I assume he was referring to their homes in the agricultural districts of the South—do not live in imposing mansions; they live in small cottages; but I wish to say to the Senator that the houses in which the farmers, especially the tenant farmers, live in the sections where peanuts are largely or chiefly grown are just as good as those in which the farmers and tenants live in the sections where cotton is grown.

Mr. McCUMBER. If the Senator will allow me, what the Senator really means to say, then, is that the difference is about the same in one section as it is in another. The Senator will not claim that during the last few years either of them have been very prosperous?

Mr. SIMMONS. No; they have not, and were not before the war. What I mean to say, and all I meant to say, was that I think the peanut growers of the section in which I live have been just about as prosperous as those who have engaged in other lines of agriculture.

Mr. President, I am quite sure that up to this time the emergency tariff duty of 3 cents a pound on peanuts has added nothing to the price of peanuts; indeed, the farmers of my State are getting on their farms only about 3 cents, although sometimes for a good quality they may get 3½ cents a pound. They are getting, therefore, practically only about the amount of the emergency tariff duty, and, of course, that tariff duty has not been added.

Mr. President, nobody has ever contended, I think, that a tariff duty would add to the price of a domestic product the full amount of the duty where there was actual competition between producers, where there was produced practically enough to supply the domestic demand, and where the producers actively compete.

The trouble about the protective tariff just at this time is that the domestic competition which Mr. McKinley claimed was so essential to the protective principle does not obtain in the United States as to the great majority of manufactured products. As to those in many, if not most, instances, there is no domestic competition. The price is controlled by combination, agreement, association, or understanding; but where there is active competition, as in the case of the peanut industry, nobody would contend that the full amount of the duty could be added to the price, especially where the production is equal to the consumption, or practically equal. There is no competition in this country that is sharper than that between the indpendent growers of peanuts. It is a product that is not grown in large quantities by the individual producer. One hundred acres in peanuts is a very large peanut farm in my State. The average peanut grower probably has no more than 30 or 40 acres in peanuts. They are sold in the open market in competition with the product of all the other growers.

We produce in this country all the peanuts that we need for edible purposes and for purposes of making so-called peanut butter and to meet the large demands of the confection trade of the country. Our importations of peanuts have varied. They have been larger when our domestic crop was subnormal than they have been when our crop was normal. In fact, if you will follow the importations, beginning just about the time of the war, you will see that the importation of edible peanuts was about the difference between the normal production and the abnormal production of peanuts.

Peanuts are imported into this country for an entirely different purpose than that for which the bulk of the peanuts raised in this country are used. Probably between one-fourth and one-third of these nuts grown in this country are never gathered at all.

They are converted into meat. That part which is marketed, that portion which is in good condition—that is to say, not broken and not faulty—is used to supply the market for edible purposes and these other commercial purposes that I have indicated. Practically the only part of our domestic product that is crushed and converted into oil is the faulty peanut and the broken peanut, which have no market value for the other purposes, mainly for food.

The peanuts which we import, probably not altogether, but almost altogether, are used for the purpose of conversion into peanut oil. I think I could show beyond question, Mr. President, if I had the time, that that is true. I do not suppose that will be controverted, however. It is a fundamental law of the trade that the price of peanuts and the price of soya beans and cotton seed are affected by two things—first, the competition between the producers, and secondly, the price of oils. A large operator told me the other day that the prices of these oil nuts—whether coconuts, peanuts, soya beans, cotton seed, or otherwise, and there are a good many of these oil nuts—have for many years followed the price of oils, especially cottonseed oils, where they are used for the purpose of making oils. The price of oils in this country is regulated by the price of oils in Europe, and that is because we either export our great surplus of oils, or we convert it into lard substitutes and export them. So that the prices of oils and the products made out of oils in this country—and that includes all the oils, cotton oil, peanut oil, and all the rest—are fixed in this country by the price of the oil in the great markets of Europe. That is what we import these peanuts from Asia for, to convert them into oil to be sold in part in this country but chiefly abroad. We have built up an enormous and an exceedingly profitable industry

in the sale of our oils and oil products to Europe, practically our only foreign purchaser for these oils.

Europe buys her peanuts and her soya beans just where we buy those that we import for the purpose of conversion into oil. She buys them in Asia and in certain parts of India. In the markets of Asia and in the markets of India the United States and Europe—and Europe is represented in that respect almost entirely by Great Britain, for she is the chief European producer of oil—are the only foreign purchasers of these nuts which are purchased for the purpose of being converted into oil. The effect of the emergency tariff putting a duty upon these low-grade peanuts that are purchased abroad and brought here to be converted into oil has been practically to exclude the American purchaser from those foreign markets.

In the past 10 months we bought only four hundred and thirty-odd thousand bushels of these peanuts. These things can be understood better when the quantity is stated in bushels than when it is stated in pounds. In the past 10 months, therefore, we bought less than half a million bushels of these peanuts. We practically abandoned the market for the purchase of these nuts to our foreign competitors, greatly to the distress of the oil crushers of this country. They see it as clearly as I see it. They have been to my office in great numbers; there have been 15 or 20 of them in there at one time—representatives, delegates appointed to see me, from their several sections declaring that they had been driven by this duty out of the only market where they could get anything like a supply for oil purposes, and were now confined to the faulty peanuts, as here, the American market taking practically all of the good peanuts for edible purposes and paying for them a price that they could not afford to pay for peanuts to crush. They had been driven out, had abandoned the market, with what effect, Mr. President? With the effect that only one foreign purchaser of these nuts was left, and that purchaser was our foreign competitor for our oils. The effect, as they declare to me and as is manifest, is that our foreign competitor in these oils, having no competitor in the markets where he gets his raw material, has been able to beat down the price in that market and to get his peanuts for crushing at a price at which he has never before been able to purchase them, with the result of lowering the price of oils in Europe, thus reducing the price for our exportable surplus. With the emergency tariff duty applying, our buyers could not compete and purchase the foreign peanuts for crushing.

Would it not be much better from every standpoint for us to be permitted to buy our raw material there and maintain the standard of price in that country instead of letting our only competitor without competition buy these nuts at his own price and then convert them into oil, forcing us to meet the competition of that lower-priced oil? This lower price for exportable surplus is undoubtedly reflected in the price of the nuts that we grow in this country, whether those nuts are used for crushing or other commercial purposes.

Mr. President, all I wanted to show in this connection—and I am speaking now more especially about the duty on peanuts—was to show the effect of that duty on growers of edible peanuts; to show that it has operated to prevent our crushers from getting from abroad their supply; and has prevented them from protecting the price of their product in our export market, and that the resulting decline of prices in that market has been inevitably reflected in the domestic price of our oils and all of the domestic products out of which those oils are produced.

I am repeating what these gentlemen have stated to me and what I believe the facts to be. These gentlemen assert that they are not asking for these high duties upon vegetable oils; that they are protesting against them; that their foreign business has been practically ruined as a result of these duties; and that the falling away of their foreign business has resulted in a reduction of prices in their foreign market which has reflected itself disastrously upon the prices of their products in the domestic market.

I have tried to be as brief and concise as possible because I do not wish to take up any unnecessary time.

Mr. KING. May I inquire of the Senator, in view of the situation relative to peanuts, some of the imported articles having been used for oil purposes, if it would not be fair, or at least much fairer than the present provision, to submit an amendment by which peanuts of the grade to be crushed for the oil content should come in in bond, and upon evidence that they were converted into oil, relieved of the duty?

Mr. SIMMONS. That can be done when the bill is open to amendments offered by individual Senators.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). The question is on agreeing to the committee amendment.

Mr. CURTIS. I ask for the yeas and nays on agreeing to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. CURTIS. I ask for the yeas and nays.

Mr. TRAMMELL. Are we about to vote on the amendment in regard to the tax on peanuts?

The PRESIDING OFFICER. That is correct.

Mr. TRAMMELL. My understanding is that the chairman of the committee stated to the Senate that he felt that the proposed decrease was too much, and that the bill should stand as originally reported, with a duty of 3 cents per pound on peanuts. That is the rate carried in the emergency tariff bill and in the bill as it passed the House, and I hope very much that it will be retained at that figure, instead of as the committee amendment proposes, which the chairman says he realizes is too small and should be defeated. That is my understanding of the statement made by him.

Mr. WALSH of Massachusetts. I understand that a negative vote will restore the House rate, and an affirmative vote support the Finance Committee in the lower rate?

The PRESIDING OFFICER. That is correct. The question is on the committee amendment to strike out "3 cents" and to insert in lieu thereof "three-fourths of 1 cent."

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. WATSON of Indiana (when his name was called). I transfer my pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the junior Senator from Vermont [Mr. PAGE], and vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON].

Mr. NEW. I transfer my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. MCKINLEY. I transfer my pair with the junior Senator from Arkansas [Mr. CARAWAY] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

Mr. CAMERON. I transfer my pair with the junior Senator from Georgia [Mr. WATSON] to the senior Senator from Iowa [Mr. CUMMINS] and vote "nay."

Mr. FERNALD. I transfer my pair with the senior Senator from New Mexico [Mr. JONES] to the senior Senator from Connecticut [Mr. BRANDEGEE] and vote "nay."

The result was announced—yeas 13, nays 52, as follows:

YEAS—13.

Dial	Owen	Smith	Walsh, Mont.
Harrison	Pomerene	Stanley	
King	Shields	Underwood	
La Follette	Simmons	Walsh, Mass.	

NAYS—52.

Ashurst	France	Lodge	Poindexter
Borah	Frelinghuysen	McCumber	Ransdell
Broussard	Gooding	McKinley	Sheppard
Bursum	Hale	McLean	Shortridge
Calder	Harreld	McNary	Smoot
Cameron	Harris	Moses	Spencer
Capper	Heflin	Nelson	Sterling
Colt	Johnson	New	Swanson
Curtis	Jones, Wash.	Newberry	Townsend
du Pont	Kellogg	Nicholson	Trammell
Elkins	Kendrick	Oddie	Warren
Ernst	Keyes	Pepper	Watson, Ind.
Fernald	Ladd	Phipps	Willis

NOT VOTING—31.

Ball	Fletcher	Myers	Robinson
Brandegee	Gerry	Norbeck	Standfield
Caraway	Glass	Norris	Sutherland
Crow	Hitchcock	Overman	Wadsworth
Culberson	Jones, N. Mex.	Page	Watson, Ga.
Cummins	Lenroot	Pittman	Weller
Dillingham	McCormick	Rawson	Williams
Edge	McKellar	Reed	

So the committee amendment was rejected.

The next amendment of the committee was, in paragraph 757, peanuts, on page 110, line 24, to strike out "4" and insert "1½," so as to read:

Shelled, 1½ cents per pound.

Mr. SMOOT. I am directed by the committee to ask that this amendment of the committee be disagreed to.

The amendment was rejected.

The next amendment of the committee was, on page 111, line 11, to strike out "25" and insert in lieu thereof "40," so as to read:

Flaxseed, 40 cents per bushel of 56 pounds.

FLAXSEED AND LINSEED OIL—PARAGRAPHS 760 AND 50.

Mr. WALSH of Massachusetts. Mr. President, the Senate committee amendment to paragraph 760 increases the rate on flaxseed from 25 cents per bushel of 56 pounds, as provided in the House bill, to 40 cents per bushel; and the amendment to paragraph 50 increases the rate on linseed oil from 2½ cents per pound, as provided in the House bill, to 3½ cents per pound.

DIFFERENCES BETWEEN SENATE BILL AND PREVIOUS LAWS.

Under the Underwood Act flaxseed was dutiable at 20 cents per bushel, and linseed oil was duitable at 10 cents per gallon of 7½ pounds (1⅓ cents per pound).

Under the Payne-Aldrich Act flaxseed was dutiable at 25 cents per bushel, and linseed oil was dutiable at 15 cents per gallon of 7½ pounds (2 cents per pound).

Under the emergency act flaxseed is now dutiable at 30 cents per bushel, while the Underwood rate of 10 cents per gallon of 7½ pounds of linseed oil remains unchanged.

The pending bill increases the rate in the Underwood Act on flaxseed by 100 per cent, and the rate on linseed oil by 162½ per cent. It increases the rate in the Payne-Aldrich Act on flaxseed by 60 per cent. and the rate on linseed oil by 133⅓ per cent. It increases the present rates—the Underwood Act, as amended by the emergency tariff act—by 33⅓ per cent on flaxseed and 162½ per cent on linseed oil.

Mr. President, a clear and accurate understanding of the problem of a tariff on flaxseed is possible only when considered in conjunction with the duty on linseed oil. Flaxseed is grown in the United States exclusively for the production of linseed oil.

FLAXSEED—EFFECT OF DUTY UPON DOMESTIC CROP.

Our average production for the years 1914 to 1920 has been 12,000,000 bushels, and our average yearly imports have been 14,000,000 bushels. Our consumption has closely approximated our production plus our imports. Our production has averaged 45 per cent of our consumption and our imports have averaged 55 per cent of our consumption.

It is clearly established that on this particular product—flaxseed—the American grower will collect an increased price for his seed equal to the amount of any tariff levied on imports of foreign flaxseed. It has been proven conclusively that previous tariffs in both Democratic and Republican tariff bills have never operated so as to induce the growing of a greater quantity of flaxseed in the United States. The statistics show that these previous tariffs have never resulted in promoting the development of flax growing to the end that we might eventually grow all we require.

The duty on flaxseed has never had the effect of being a "protective" tariff in the commonly accepted idea that a duty is protective when it protects the production of an article at home against the same article produced abroad so that the industry may be developed. It has merely operated as a bounty for flax growers when they chose to grow flax instead of wheat. This is made very clear by the Tariff Commission in their publication entitled "Agricultural Staples and the Tariff, Information Series No. 20" (p. 127).

Neither have high prices for flaxseed caused by great demand contributed to an increase in its production. Price fluctuations of from $2 to $3 per bushel have taken place without creating a larger production.

There can be no question regarding the accuracy of the Tariff Commission's statements that the fundamental obstacles to the production of flaxseed in the United States are such that the production of flaxseed is not one that can be encouraged or developed in a practical manner, no matter how high a tariff might be imposed on foreign flaxseed.

The levying of a duty on flaxseed can not, therefore, be justified on any other theory than that of its being merely a bounty, and if the leaders of the agricultural bloc think they are obtaining a bounty for American flaxseed growers through the combination of rates on linseed oil and flaxseed they have advocated and vigorously forced into this bill they are very much mistaken.

COMPARATIVE DUTIES ON FLAXSEED AND LINSEED OIL.

There are 19 pounds of linseed oil obtained in actual practice from a bushel of flaxseed, weighing 56 pounds. Imports are in the form of both flaxseed and linseed oil, and therefore American flax growers when seeking protection require a duty on imports in the form of linseed oil that has been crushed in the linseed-oil mills of Holland and England, as well as upon flaxseed from Canada, the Argentine, or India.

So far as our flaxseed growers are concerned, the total duty on 19 pounds of oil must be relatively the same as the duty on 1 bushel of flaxseed. Let us see what the duty actually is on flaxseed as provided for in this bill.

The Senate committee amendment to paragraph 760 of this bill fixes the duty on flaxseed at 40 cents per bushel of 56 pounds, as compared with 3½ cents per bushel on oil or 66½ cents upon the 19 pounds of oil in a bushel.

Mr. President, flax growers who are interested in what the farm bloc has done for them would naturally notice with gratification the proposed rate of 40 cents, which is double the duty of 20 cents per bushel in the Underwood-Simmons law; but if they examine the discount list and the penalty list, which is inserted in the later paragraphs of this bill, and fathom the intricacies of all of the strings that are tied to the regular schedules they would doubtless be less jubilant.

On page 269 of this act a joker has been inserted which by actual operation would reduce the flax growers' net protection from 40 cents per bushel, as provided for in paragraph 760, to 30 cents per bushel. This special drawback provision reads as follows:

Where two or more products result from the manipulation of imported merchandise, the drawback shall be distributed in accordance with their relative values at the time of separation.

In order to be sure that this special provision would operate to reduce the amount of the specified duty on flaxseed by 25 per cent, due to the nondutiable by-product obtained therefrom, I addressed a letter to the Treasury Department and asked their opinion relative to the operation of this drawback provision, and I have received a letter from the Treasury Department from which I will read:

Under the act of 1909 it was the practice to distribute the drawback accruing to linseed oil and linseed-oil cake produced from imported flaxseed according to their relative values at the time of separation in accordance with the decision of the court in the case of the United States v. Dean Linseed Oil Co. (87 Fed. 453). The provisions of section 313 of the pending tariff bill as amended by the Senate Finance Committee appear to be substantially the same as the drawback provisions of the act of 1909.

A bushel of flaxseed will be separated into 19 pounds of linseed oil and 37 pounds of oil cake. The flaxseed importer will then export the 37 pounds of oil cake to Europe and claim a drawback in spite of the fact that oil cake itself is on the free list. The Treasury Department will calculate the value of the products which the flaxseed importer obtained through the simple process of separating the oil and cake by adding the value of the 19 pounds of oil according to the market price existing at the time of separation and the value of the 37 pounds of linseed cake which the importer has shipped to Europe. It will then be found that the value of the 37 pounds of linseed cake which has been reexported will average slightly over 25 per cent of the combined value of the 19 pounds of oil and 37 pounds of linseed cake, and the flaxseed importer will receive a drawback from the Treasury Department approximating 25 per cent of the duty which he paid on the bushel of flaxseed.

The drawback of 25 per cent of the 40 cents duty which the flaxseed importer paid will amount to 10 cents and thereby the net duty which the flaxseed importer will have paid will amount to only 30 cents and not 40 cents as provided for in paragraph 760.

Mr. President, we must therefore consider these tariff rates on flaxseed and linseed oil on the basis of the duty on flaxseed being actually 30 cents per bushel of 56 pounds and not 40 cents per bushel, as the agricultural bloc would have the farmers believe.

Let us now see what the duty is on linseed oil. Paragraph 50 of this bill fixes the duty at 3½ cents per pound, and 3½ cents multiplied by 19—there are 19 pounds of oil obtained from a bushel of flaxseed—equals 66½ cents. Therefore the facts are that the duty on flaxseed in this bill for the benefit of flax growers is 30 cents per bushel, and the duty on the oil content of a bushel of flaxseed after it is separated from the cake is 66½ cents per bushel.

In other words, Mr. President, the importers of flaxseed—only 14 in number—are invited by the farm bloc and the majority members of the Senate Finance Committee to collect a subsidy amounting to 36½ cents on the 19-pound linseed oil content of every bushel of flaxseed grown in the United States and on every bushel that is imported from Canada and the Argentine.

To suppose that a small band of 14 importers who control this business will decline such an invitation when they have already been shown to have adopted other means of accomplishing the same thing without the aid of a tariff would be absurd. Is it not amazing that the farm bloc should be promoting with

all of their energy and vigor a system whereby 14 closely cooperating flaxseed importers should collect on the American farmers' production of flaxseed more protection than the grower received himself, and in addition thereto a subsidy at the same extortionate rate on all of the flaxseed that is imported?

Mr. President, the process of separating linseed oil and cake from the flaxseed is very simple. In fact, the process is so simple that I believe the importers of bird cages, hair dryers, and cuckoo clocks, against whom a Member of this body spoke so vehemently a few days ago, employ more labor in unpacking the foreign cuckoo clocks, hair dryers, and bird cages than do these flaxseed importers employ in removing linseed oil from its container—the flaxseed. It would, therefore, be just as logical to grant the importers of cuckoo clocks some special rates to protect the workmen who unpack the boxes of them as they come from Germany as it is to provide special rates for these 14 flaxseed importers so that they may be enabled to swell their treasuries by $9,400,000 in excess of what their legitimate profits would be.

The favorable consideration accorded the flaxseed importers is due to the fact that they have qualified in the eyes of the majority members of the Finance Committee as captains of industry. They must have linseed-oil mills as an adjunct to their domestic and importing business in order to separate the linseed oil from the flaxseed, but there is no diversity of interest. They all work together and they all ask the farm bloc and the majority members of the committee to rate them as American manufacturers and to overlook the fact that more than half of their business is importing. They have insisted that they be given high rates of duty for the protection of their "manufacturing industry," although at least 60 per cent of their subsidy would be collected by them through importing operations.

Linseed-oil mills crushing flaxseed with 33 per cent oil yield only pay wage earners an amount equal to 2½ per cent of the value of their production. The following is an extract from the report of the United States Bureau of the Census for 1919:

Number of linseed mills	26
Number of wage earners	2,173
Wages paid wage earners	$3,052,000
Value of products	$120,638,000

Tariff protection for linseed-oil mills above the protection they pay on flaxseed can not be justified by any appreciable difference in the labor costs here and abroad.

Sometimes excessive tariff rates are automatically reduced by keen competition in the home market. In the case of the linseed-oil industry 26 linseed-oil mills, owned by about 14 companies, crush all the oil that is crushed in America, and 5 companies control 75 per cent of this business.

It is, therefore, certain that the tariff will be collected in its entirety by such a small number of operators. A representative of one of these linseed-oil mills stated before the Committee on Ways and Means that the difference in labor costs in linseed-oil mills here and abroad was not a serious matter. The American mills, with their superior facilities for distribution, can also secure a premium on domestic linseed oil over the prices of foreign linseed oil with the tariff added.

The Payne-Aldrich Act created a differential for the American linseed-oil mill operators of 17½ cents on the oil content of a bushel of flaxseed.

Those who framed the Underwood-Simmons law found that there was little labor cost in the crushing of flaxseed and reduced the Payne-Aldrich differential to 5 cents on the oil content of a bushel of flaxseed. This differential fully protected our linseed-oil mills, as shown by the small imports of linseed oil as compared with the large imports of flaxseed.

The Republican Party upset the scientifically adjusted rate in the Underwood-Simmons law by their ill-advised emergency tariff, which raised the duty on flaxseed from 20 cents per bushel to 30 cents per bushel without granting any increase in the duty on linseed oil. This reversed the differential in favor of foreign oil mills, and since the present law became effective we have imported relatively larger quantities of linseed oil than flaxseed; and pointing to the results of this haphazard emergency tariff, the American linseed-oil monopoly are now using this as an argument to obtain a differential in their favor far in excess of any slight difference that may exist between the cost of crushing linseed in the mills abroad and in this country.

Here is what the linseed crushers, the Government, and the farmers will receive, based on an average year of 12,000,000 bushels domestic crop and 14,000,000 bushels of imported flaxseed:

The Government will collect duties on 14,000,000 bushels of imported flaxseed at 30 cents per bushel	$4,200,000
The farmer will collect tariff protection on 12,000,000 bushels at 30 cents per bushel	3,600,000
After deducting the above amounts paid by linseed crushers in duties and tariff protection for their flaxseed, their excessive subsidy of 36½ cents on the oil content of a bushel of flaxseed will equal	$9,490,000
Total cost of this scheme to be paid by the manufacturers and others using linseed oil as a raw material equals	17,290,000

American paint, varnish, oilcloth, and linoleum industries which use linseed oil as a raw material will have to add the 66⅔ cents collected by the American linseed-oil monopoly to the price of their products, and this amount will be unavoidably multiplied as the linseed oil passes through the channels of industry and trade, to be paid by the consumer at the retail stores.

This tariff, at its cost to consumers as above explained, will be paid one-half by American farmers and one-half by American consumers. The result to the farmer, on the basis of 66⅔ cents protection given the linseed-oil mills, not to mention the increase which will accrue as the manufactured products pass through the hands of the manufacturer, wholesaler, and retailer, will be as follows:

Cost to farmer in purchase of products made from linseed oil	$8,645,000
Protection received by the farmer from the tariff on flaxseed	3,600,000
Loss to the farmer	5,045,000

If the farmers' tariff on flaxseed is allowed to be so prostituted by the rates on linseed oil as proposed in the pending bill, the result to the farmer is a tremendous loss, while thousands of substantial industries and American consumers will be forced to submit to exploitation.

Mr. President, I have a very large number of letters and telegrams from paint manufacturers and organizations in the State of Massachusetts protesting against this duty, particularly upon linseed oil, which I ask to have inserted in the RECORD.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Without objection, it will be so ordered.

The letters and telegrams are as follows:

HOLYOKE CENTRAL LABOR UNION,
Holyoke, Mass., April 24, 1922.

Hon. DAVID WALSH,
United States Senator, United States Senate, Washington, D. C.

HONORABLE SIR: The Holyoke Central Labor Union desire to protest to you against the exorbitant rate of duty on linseed oil and flaxseed oil. We believe that there is no justification for such a differential in the rates on flaxseed and linseed oil, as the labor in linseed crushing is very small.

We also want to protest against the proposal of Senator LADD of North Dakota, as made by him on January 5, relative to flaxseed and linseed oil.

It is the hope of the above named body that you will see your way clear to work and vote for an amendment to the bill, making a radical reduction in the duty on both linseed and flaxseed oil, as the proposed high tariff on both linseed and flaxseed oil will be one of the causes of stopping a great deal of repairs on buildings as well as retarding much new work for some time to come. Thanking you in advance for past and present favors, I remain,

Respectfully yours, JOSEPH L. MARION, *Secretary.*

—

MILFORD, MASS., *April 13, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: We desire to protest to you against the exorbitant rate of duty of 2½ cents per pound on linseed oil in paragraph 50 of the Fordney tariff bill. As there are 19 pounds of linseed oil obtained from a bushel of flaxseed, this rate of 2½ cents per pound on linseed is equal to 47½ cents per bushel.

There is no justification for such a differential in the rates on flaxseed and linseed oil, as the labor in linseed crushing is very small. The Bureau of the Census extract for the year 1919 shows the wages paid in linseed oil mills to be only 2½ per cent of the value of the products produced.

We also protest against the proposal of Senator LADD, of North Dakota, made by him on January 5 before the Senate Finance Committee urging that the rate of duty on flaxseed be increased to 40 cents per bushel, and that the duty on linseed be increased from 2½ to 3½ cents per pound.

We urge that a duty of 20 cents per bushel net, and not subject to any drawback on oil cake, be adopted on flaxseed, and a duty of not over 12 cents per gallon of 7½ pounds be adopted on linseed oil.

Hoping you will see that this injustice is eliminated from the pending tariff bill, we remain,

Yours very truly,

LOCAL NO. 216, BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPERHANGERS OF AMERICA,
By CHAS. E. DEWING, *Secretary.*

—

BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPERHANGERS OF AMERICA,
Boston, April 4, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: I have been instructed to write you, on behalf of Local 258, protesting the passage of a bill now pending in regard to the tariff on flaxseed and linseed oil.

Yours respectfully, R. W. BENNETT,
Recording Secretary.

BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPERHANGERS OF AMERICA, LOCAL UNION NO. 257,
Springfield, Mass., March 31, 1922.

MY DEAR SENATOR: We desire to protest to you against the exorbitant rate of duty of 2½ cents per pound on linseed oil in paragraph 50 of the Fordney tariff bill. As there are 19 pounds of linseed oil obtained from a bushel of flaxseed, this rate of 2½ cents per pound on linseed oil is equal to 47½ cents per bushel. As the duty on flaxseed in paragraph 760 is 25 cents per bushel, which after deducting the drawback amounts to 18½ cents per bushel, the duty on linseed oil is most unjust, as it forces all linseed oil consumers to pay 29 cents per bushel more protection to the linseed oil mills than the oil mills pay to American farmers or to our Government in duties on imported flaxseed.

There is no justification for such a differential in the rates on flaxseed and linseed oil, as the labor in linseed crushing is very small. We also protest against the proposal of Senator LADD, of North Dakota, that the rate of duty on flaxseed be increased to 40 cents per bushel and that duty on linseed oil be raised from 2½ to 3½ cents per pound.

We urge that a duty of 20 cents per bushel net, and not subject to any drawback on oil cake, be adopted on flaxseed, and a duty of not over 12 cents per gallon of 7½ pounds be adopted on linseed oil.

Hoping that you will see that this matter is given attention, I am,
Respectfully yours,

P. H. TRIGGS,
Secretary of Local Union No. 257.

BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPERHANGERS OF AMERICA,
Union No. 253, of Holyoke, Mass., April 12, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: We desire to protest to you against the exorbitant rate of duty of 3½ cents per pound on linseed oil in paragraph 50 of the Fordney tariff bill. We also protest to you against the duty on flaxseed. Hoping you will see that this injustice is eliminated from the pending tariff bill, we remain,

Yours very truly, ROBERT GOODWIN, *Recording Secretary.*

—

BROTHERHOOD OF PAINTERS, DECORATORS, AND PAPERHANGERS OF AMERICA,
Union No. 75, of Fall River, Mass., April 2½, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: The Senate Finance Committee has reported out the tariff bill with a provision for a duty on linseed oil and flaxseed. If the recommendation becomes a law, it will greatly increase the cost of linseed-oil varnish and all painting material. So I ask you to try and work for an amendment to the bill, as it will greatly reduce the amount of our work. I remain,

Fraternally yours, P. O. DUCHARME,
Recording Secretary Local 75.

—

HOLYOKE, MASS., *April 20, 1922.*

Hon. DAVID WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: We desire to protest to you against the exorbitant rate of duty of 2½ cents per pound on linseed oil in paragraph 50 of the Fordney tariff bill. As there are 19 pounds of linseed oil obtained from a bushel of flaxseed this rate of 2½ cents per pound on linseed oil is equal to 47½ cents per bushel. As the duty on flaxseed in paragraph 760 is 25 cents per bushel, which, after deducting the drawback, amounts to 18½ cents per bushel, the duty on linseed oil is most unjust as it forces all linseed oil consumers to pay 29 cents per bushel more protection to linseed oil mills that the oil mills pay to American farmers or to our Government in duties on imported flaxseed.

There is no justification for such a differential in the rates on flaxseed and linseed oil, as the labor in linseed crushing is very small. The Bureau of the Census extract for the year 1919 shows the wages paid in linseed oil mills to be only 2½ per cent of the value of the products produced.

We also protest against the proposal of Senator LADD, of North Dakota, made by him on January 5 before the Senate Finance Committee, urging that the rate of duty on flaxseed oil be raised from 2½ to 3½ cents per pound. This proposal would make the duty on flaxseed exorbitant and make the rates of duty on linseed oil even more unjust than those originally contained in the Fordney bill.

We urge that a duty of 20 cents per bushel net and not subject to any drawback on oil cake be adopted on flaxseed and a duty of not over 12 cents per gallon of 7½ pounds be adopted on linseed oil. Any rates higher than these will cause an unjust increase in the cost of linseed oil products, such as paint and enamel, and furthermore, any greater differential than 10 cents per bushel on flaxseed and linseed oil would result in an exploitatory subsidy for linseed oil mills to which they have no just claim. Hoping you will see that this injustice is eliminated from the pending tariff bill, we remain,

Yours very truly,

HOLYOKE BUILDING TRADES COUNCIL,
FRANK R. ELTING, *Secretary.*

—

BOSTON, MASS., *January 20, 1922.*

DAVID I. WALSH,
United States Senate, Washington, D. C.:

We protest the proposed tariff on flaxseed of 40 cents per bushel and 26½ cents per gallon on linseed oil. We think it an outrage against the paint and varnish manufacturers. This is legislation for the few against the many. Is this American justice we have been proud of?

WADSWORTH, HOWLAND & CO. (INC.).

BOSTON, MASS., *August 25, 1921.*

Hon. DAVID I. WALSH,
United States Senator, Washington, D. C.

DEAR SENATOR: We dislike to bother you with the many cares and troubles that must constantly arise for you as our Senator, but we do feel that it is of the utmost importance that we enter our protest against the Fordney tariff bill as it now reads regarding animal and vegetable oils and fats.

It would seem to the writer that any man would know that there should not be any tariff on these raw materials. Take, for instance, China wood oil. Under this Fordney bill there will be a tariff of 40 cents per gallon, which is nearly as much as we used to pay for it. What will be the result of any such tariff as that? The foreigners will make the goods up and ship it right into the United States and beat us.

There should be no tariff on flaxseed. Every manufacturer of paints and varnishes knows that we are no longer an export country in flaxseed, but are only one of the large importing countries; still they go to work and put a tariff on flaxseed. It seems as if they are working in every way to put manufacturers in our line out of business.

For instance, normally we use 30,000,000 bushels of flaxseed per year in this country, and this year if we can raise over 8,000,000 or 9,000,000 bushels in this country we will be doing well, and our production of flaxseed is growing less and less while the demand is increasing.

It does not seem possible that men who think could go over this bill as regards these two items and have a broad-minded love of our country in view when they promote any such bill as this.

Yours very truly,

WADSWORTH, HOWLAND & CO. (INC.),
ARTHUR P. FELTON, *President.*

DAVID I. WALSH,
Senate Finance Committee, Washington, D. C.:

We protest against a tariff of 40 cents a bushel on flaxseed and 26½ cents on linseed oil. It is an outrage on the paint industry.

JAS. H. PRINCE PAINT CO

—

NORFOLK DOWNS, MASS., *March 31, 1922.*

Senator WALSH,
Washington, D. C.:

Understand Finance Committee is considering adoption of 3½ cents per pound duty on linseed oil. This exorbitant duty on the principal raw material of our industry will greatly curtail consumption of our products. We emphatically oppose a duty in excess of 12 cents per gallon.

NORFOLK VARNISH CO.

Mr. WALSH of Massachusetts. Mr. President, I hold in my hand a very remarkable letter, which I am going to ask to have read from the desk. It is a letter from a manufacturer of Philadelphia, Pa., who uses linseed oil in very large quantities. This letter shows the extent of the burden which will be placed upon him by the exaction of the very high prices that will follow the imposition of this high duty. It is a letter which I am sure is similar to letters that have been received by other Senators from like manufacturers in various parts of the country; but he states the whole story better than I could state it, and I am going to ask the Secretary to read the letter in full to the Senate.

Mr. McCUMBER. The Senator, I understand, asks that the letter be read?

Mr. WALSH of Massachusetts. Yes.

Mr. McCUMBER. I think every Senator has received that letter and read it. It is quite a lengthy letter, as I now recall.

Mr. WALSH of Massachusetts. Ordinarily, I should not ask that it be read; but this is a very important subject, and I think it will contribute something to the debate.

The PRESIDING OFFICER. Without objection, the letter will be read.

The reading clerk read as follows:

CONGOLEUM CO. (INC.),
Philadelphia, Pa., July 6, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: As a manufacturer of linoleums and felt base floor coverings and a large user of linseed oil, we desire to protest against the proposed compensatory duty of 3½ cents per pound on linseed oil, which is based on a proposed duty of 40 cents per bushel on flaxseed.

This duty on linseed oil is equivalent to an increase of approximately 16 cents per gallon over the Underwood rate, which means that if the duty becomes effective we will be obliged to pay 16 cents more per gallon for linseed oil.

This company uses at least 1,000,000 gallons of linseed oil per year. An increase of 16 cents per gallon would mean that our cost of production would be increased $160,000 annually. To cover this increase in the cost of production it would be necessary to increase our selling prices by $240,000 per year, which in turn would be increased by the retailers to $360,000 per year. Therefore for this $160,000 increase in our production cost the ultimate consumer would pay approximately $360,000.

This condition arises from the fact that any increase in the cost of raw materials entering into a manufactured article is charged into the cost of production. The selling price of the manufactured articles is based on certain percentages of the cost of production. For example, if an article costs $1 to manufacture, the selling price might be 133 per cent of this cost. Should the raw materials entering into the said article be increased 16 cents, then the total production cost becomes $1.16 and the selling price would then become 133 per cent of $1.16. This same principle also applies to the retailers' cost and selling prices; consequently any increase in the cost of production means a greater increase in the selling price to the retailer and still greater increase to the ultimate consumer.

According to the Bureau of Census report for 1921, the oilcloth and linoleum industry consumed over 9,000,000 gallons of linseed oil, which means that the increased cost to the whole industry and to the consumer would be nine times the above figures, which amounts to an increased cost to the industry of $1,440,000 and an increased cost to the ultimate consumer of at least $3,240,000.

A bushel of flaxseed, which weighs 56 pounds, yields 19 pounds of linseed oil, or approximately 2½ gallons. Under the Underwood Tariff Act there was a duty of 20 cents per bushel on flaxseed. This made the market price of flaxseed 20 cents a bushel higher than if there had

been no duty, because a large portion of the flaxseed used was imported, and therefore the domestic price would equal the imported price plus the duty of 20 cents per bushel. This additional cost of 20 cents per bushel was equivalent to 8 cents per gallon, which meant that the Underwood tariff rate on flaxseed increased the cost of linseed oil by 8 cents a gallon. The linseed-oil producer was given a duty of 10 cents per gallon, which enabled him to absorb this additional cost plus a profit of 25 per cent on the increase of 8 cents.

Under the proposed duty flaxseed will be increased at the net rate of 10 cents per bushel over the Underwood rate. The gross rate is 40 cents, but there is a drawback equivalent to 10 cents per bushel on linseed cake in the drawback provisions of the bill, which makes the net rate of 30 cents per bushel. This increase of 10 cents per bushel over the Underwood rate is equivalent to an increase in the cost of linseed oil of 4 cents per gallon, which means that the linseed-oil producers should have a duty of 5 cents more per gallon over the Underwood rate to cover this increased cost of production and allow them a 25 per cent profit on the increase. This would then make the total rate of duty on linseed oil 15 cents per gallon as a compensatory rate of 30 cents net per bushel on flaxseed.

Instead of this the linseed-oil manufacturers are granted a rate of 26¼ cents plus per gallon, which means that for an increase in their cost of production of 4 cents per gallon over the Underwood rate they wish to obtain an increased duty of 16¼ cents, which will enable them to get 16¼ cents more for their oil to offset an increase in the cost of 4 cents. If this rate becomes effective, the linseed-oil producers will receive 11¼ cents per gallon more than they actually need to offset the increased cost of production plus a 25 per cent profit on the increase. This 11¼ cents excess profit means that the linoleum and oilcloth industry would be obliged to pay $990,000 more for its linseed oil, while in turn the consumer would pay $2,227,500.

In a statement made by Senator LADD, as reported in the CONGRESSIONAL RECORD of May 15, 1922, it was claimed that the cost of conversion of flaxseed into linseed oil was 50 cents per bushel, and that the European cost was 25 cents per bushel. Also, that labor in Europe is not receiving anything like 50 per cent of the wages paid in the United States. This company investigated the labor costs in England and received from the National Seed and Crushers' Association, of London, the average rates of pay paid in England by the linseed-oil crushers. This letter is attached hereto.

These rates of pay expressed in our money, with exchange at $4.40 per pound sterling, are as follows:

	Cents per hour.
Molders	26.1
Pressmen	28.8
Grinders	25.6
Parers	25.2
General labor	25.2

Although we do not employ any molders, pressmen, or parers, we employ common labor and grinders in the linoleum business, and the wages in these classes of labor range between 30 cents and 35 cents per hour at the present time.

The rates of pay for general labor paid by the linseed-oil crushers in England are approximately the same as paid for the same class of labor in other industries of which we have authentic records. It can be readily seen that England is paying considerably more than half of the wages paid in the United States.

The conversion cost or crushing cost of linseed oil is analogous to the crushing of cotton seed, excepting the cotton seed requires more work and labor in preparing the seed for the crusher. The cottonseed crushers have always been able to crush their products as cheaply as any foreign country, and even requested that there be no tariff on cottonseed and similar foreign oils. The reason for this condition is due to the fact that the labor cost in crushing oil seeds is an exceedingly small increment. In the crushing of linseed oil the labor cost is 2½ per cent of the total value of the product as shown by the 1919 census. The above rates of English labor indicate that their rates per hour are approximately 70 per cent of the American rate, which would mean that the actual labor saving would be 70 per cent of 2½ per cent, or approximately three-fourths of 1 per cent of the value of the products. This means that if the British labor was as efficient as the American labor, the cost of production would be reduced by three-fourths of 1 per cent of the value of the products. This saving is so small that it will not begin to pay the transportation costs on the finished products between England and America. At the present time, however, American labor, from personal observations that the writer has made in other industries in England, is far more efficient than the English labor, and although the rates of pay per hour in England are lower than the rates of pay in the United States, the output per hour in the United States is much greater, thereby offsetting to a large extent the advantage gained by lower rates per hour.

If the proposed rates of duty on linseed oil become effective, the costs of certain grades of floor coverings which this company manufactures and is now exporting will be increased to the point where it will probably be necessary to either discontinue the export business or else manufacture such products in the countries where such floor coverings are now being exported. In either case, this will mean the withdrawal of this amount of business from the United States, resulting in a reduction in purchases and employment of labor, which again reacts on the linseed-oil crusher and on the farmer.

We furthermore wish to state that we are urging that the proposed rates of duty on linoleums be reduced, as they are much higher than is necessary to equalize the difference in the cost of production between linoleums manufactured in England and those manufactured in the United States. The exact amount of the reduction that we are urging in the rates on linoleum is dependent upon the rate of duty that will apply to linseed oil.

Approximately 60 per cent of the floor coverings manufactured by this company are sold in the agricultural districts, and we believe that this ratio of distribution will apply to the other manufacturers of linoleums and oilcloths. Consequently 60 per cent of the burden of the excessive duty on linseed oil, as carried by the ultimate consumer of floor coverings, falls upon the farmer.

The farmer is also a very extensive user of linseed oil in the form of paints which he buys to paint his buildings and equipment. Here again the excessive duty on linseed oil will fall upon the farmer.

There are nearly 1,000 paint manufacturers in the United States who use linseed oil as a basic material. We can not understand how the proposed duty on linseed oil can be regarded as protective when it imposes an unwarranted burden upon the American farmers and all other consumers and accomplishes nothing but the creation of an excessive profit for the few operators of a simple oil-separating process.

We feel that it is incumbent upon the Senate to reduce the proposed 3½ cents per pound duty on linseed oil to 2 cents per pound, which would be equivalent to 15 cents per gallon. This rate will provide ample compensation and ample protective margin for the flaxseed-crushing operation as compared with the proposed rate of 40 cents per bushel (30 cents net) on flaxseed.

Very truly yours,

A. E. VAN BIBLER, *Secretary.*

THE NATIONAL SEED CRUSHERS' ASSOCIATION,
London, June 23, 1922.

H. SHELDON TIEL, Esq.,
The Congoleum Co. (Inc.), Philadelphia.

DEAR SIR: With reference to your call here to-day, I have pleasure in giving you information as to the rates of wages paid to the employees in the English oil mills.

As you will understand, the rates vary slightly in different towns, country mills mostly paying slightly lower rates than city mills. The following, however, are the principal rates applicable in Hull, which is the center, by about 50 per cent of the seed-crushing business of the United Kingdom:

	Shillings.
Pressmen	63
Molders	57
Grinders	56
Parers	55
General labor	55

The above rates are for a working week of 6 shifts of 8 hours each, say a week of 48 hours. The practice on this side is to work three squads of men in the 24 hours, the first start working from 6 a. m. till 2 p. m., the second set from 2 p. m. till 10 p. m., and the third set from 10 p. m. till 6 a. m.; each squad of men takes rotation. The men on the first shift one week take the second shift the next week and the third shift the following week, and so round. In actual practice there is one shift of eight hours dropped in the three weeks, owing to the intervention of the Saturday, so that a man in his three weeks cycle really works 48 hours the first week, 48 hours the second week, and 40 hours only the third week. No deduction of wages is made for the third week; he receives the same wage for that period. In each shift of 8 hours there is a break of 20 minutes for meals at half time.

We shall be happy to give you any further information you desire.

Yours faithfully,

J. W. PEARSON, *President.*

Mr. WALSH of Massachusetts. Mr. President, when paragraph 50 is taken up I shall move to reduce the rate on flaxseed oil from 3½ cents to 2 cents.

Mr. McCUMBER. Mr. President, I am profoundly affected by the plea which has just come from the manufacturers of linoleum, who, of course, use considerable flaxseed or linseed oil in the manufacture of their product. However, I am not prepared to shed copious tears when I recall that they have asked and received the full compensatory duty upon the flaxseed oil in the rates which have been given them for the protection of their product against English and other manufactures. I do not find that any one of them is requesting that their product be placed upon the free list or that the rate on it be materially reduced.

Mr. WALSH of Massachusetts. I understood the objection made by the writer of the letter which has just been read was that these rates would compel him to charge such a high price for his product that he would be unable to do any export business.

Mr. McCUMBER. However, I think they will continue to import just as long as we are producing less than one-third of the product consumed in the United States, and I have no doubt that the duty may possibly also affect their export trade. That would naturally follow.

I read with great interest how these extra duties would be charged to the consumer, and that the consumer would have loaded upon his shoulders the extra weight of 3½ cents a pound on the oil that is used in the linoleum.

I can not help pausing a moment and casting my eyes over the record of their charges for linoleum in 1920. They were not mourning at that time about the consumers. At that time they were asking several times the former value of their product, and they were importing their linseed oil without the payment of any of these higher duties.

They are just like all other human beings; they are going to get all they can for their product, and the measure of what they will receive will be the ability of the public to purchase. That is what they have done in the past and that is what they will do in the future, and they will charge all that the trade will bear, and they will do this, tariff or no tariff. They would like to charge that and at the same time prevent the producer of the flaxseed from receiving due compensation for his labor in producing their raw product. But, Mr. President, this duty will not be added to the cost of linoleum for the simple reason that the trade will not allow an increase in price. The price of this product will come down, as the prices of all other products will recede.

I was not in the Chamber when the Senator from Massachusetts began his argument, but I am going to presume that he abandoned the stock argument which we have heard on the other side so often, that the farmer got no benefit out of the emergency tariff. I do not think he mentioned that subject. It was mentioned with a great deal of vehemence when the crop of the world sent peanuts down, but it is forgotten when the conditions of the world send flaxseed up.

I am trying to be as reasonable as possible in the consideration of the effect of a duty on any commodity. I have never

claimed that the tariff was going to change the whole world prices of any commodity, and have always insisted that prices in the United States would go up and down to correspond with general world production. That was true of the peanut crop; it is true of the flaxseed crop.

But I want to call attention to this one fact, that while world prices of flaxseed, after we passed the emergency tariff bill, went upward, the American prices were sent upward away beyond the world level of prices, and the difference between the world level of prices and the American level of prices during the same period measures accurately the benefit we obtained from the emergency tariff law.

We passed the emergency tariff law in the month of May, 1921. In the month of April, the preceding month, the price of No. 1 northwestern American flaxseed was $1.54 a bushel. We passed our law the next month, and during that month the average was $1.79. It then went upward each month until May, 1922, when the average price per bushel was $2.76. So the farmer is receiving now $1.22 a bushel more than he received just prior to the passage of the emergency tariff act. That does not mean he is getting a benefit of $1.22 a bushel by reason of the emergency tariff act, not by any means; but if we look at the world level of prices, which is measured in the free-trade port of Buenos Aires, we will find that the price at Buenos Aires of La Plata flaxseed in April, 1921, was $1.15 and in May, 1922, it was $1.91. It was 76 cents higher than it was the month previous to the enactment of the emergency tariff law. Therefore, while the world's level of prices advanced 76 cents a bushel, American prices advanced $1.22 a bushel, or a difference of 46 cents a bushel. We at least got that benefit.

We did not get the full benefit for another reason. When the emergency tariff bill came over from the House we were in a hurry to get it through so that, as far as possible, we could check the downward tendency of prices of the products covered by it. The weakness of that bill was that while it gave a sufficient protection upon the flaxseed, it gave no differential to take care of the importations of the linseed oil. The result was that linseed oil came into the country in enormous quantities, instead of the raw product, the linseed itself, and that held the prices down. Except for that, during the entire year we would have had the full benefit of our tariff difference, and in fact, even as it was, we received practically the same difference that was measured by the emergency tariff.

Mr. President, I want to make the record complete in regard to a few items. The act of 1909—the last Republican tariff bill—gave a duty of 25 cents per bushel upon flaxseed. The act of 1913 cut it down only 5 cents, making it 20 cents per bushel. The bill as it passed the House gave back the old Payne-Aldrich rate of 1909 of 25 cents a bushel. The emergency tariff law gave us 30 cents a bushel, and the proposed law fixes 40 cents per bushel as the rate.

Now, during the calendar year 1921 the imports amounted to 12,326,244 bushels as compared with a production in the United States of 8,112,000 bushels. But in addition to that nearly 20,500,000 bushels came into the United States in the shape of linseed oil, and that brought the entire importations to the equivalent of about 33,000,000 bushels.

We derived some revenue from this product independent of the protection. Under the act of 1913, in the first half of the year 1921, we collected in duties $903,636.20. After the emergency act passed we collected $2,341,408.80, or a total of $3,245,045. On the basis of $1.65 per bushel, the average unit value for the calendar year 1921, the rate of 40 cents per bushel is equal to 24 per cent ad valorem.

Now, Mr. President, we have shown a great advantage to the American farmer in the emergency tariff. We will be able to maintain a very much better average, I think, with the present proposed tariff rate. As to the differential of 3½ cents per pound, my colleague, the junior Senator from North Dakota [Mr. LADD], having had long experience as a professor in the agricultural college of that State and also as president of the college, has very extended knowledge concerning the matter of a proper differential in the matter of this particular tariff duty, and if that Senator will allow me to impose upon him I will ask his opinion and judgment as to the proper differential.

Mr. LADD. Mr. President, in speaking at this time I want to give attention to both flaxseed and the soya bean, which come under this paragraph. The Senator from Massachusetts [Mr. WALSH] called attention to the fact that a large amount of the oil imported into this country of late had been imported by the crushers, and that is true. Why by the crushers? Because they were unable to compete with European countries in the importation of flaxseed. The tariff on flaxseed was placed at 30 cents under the emergency tariff law and the oil remained at 10 cents per gallon. Naturally the oil was being imported into the country by the importers; so the crushers, in order to retain their customers, found it necessary to meet the demands of the markets to become able to import flaxseed and became importers of the oil for no other purpose than to keep their customers until they could again become buyers of the flaxseed.

We had a tariff of 30 cents on flaxseed in 1890, and at that time the tariff on oil was greater than the tariff on flaxseed, being 32 cents per gallon. In 1894 the tariff was reduced to 20 cents per bushel on flaxseed, and on oil to 20 cents, just the same as on the flaxseed per bushel. In 1897 it was changed to 25 cents per bushel on the seed, and remained the same—20 cents—on the oil. In 1909 it was 25 cents on the seed and reduced to 15 cents on the oil. Under the Payne-Aldrich bill the tariff was 20 cents on the seed and 10 cents per gallon on the oil.

In 1913, when the Underwood-Simmons law went into effect, we were producing in this country 28,853,000 bushels of flaxseed. We were producing about 25,000,000 bushels each year, with the exception of one year, when there was a shortage of crop due to nearly complete failure, drought, and so forth, when it fell to something like 12,000,000 bushels. In 1920, because of lack of protection, we find the amount of flaxseed produced here was only 7,661,000 bushels. In 1913 we were importing 5,000,000 bushels of flaxseed. In 1920 we were importing 23,000,000 bushels of flaxseed. Of oil, in 1913 we imported 172,522 gallons, but of linseed oil, in 1920 we imported 4,550,391 gallons.

Mr. KING. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from North Dakota yield to the Senator from Utah?

Mr. LADD. I yield.

Mr. KING. Can the Senator give the differences in prices for finished product—that is, for linseed oil—in 1912, 1913, and 1914, and also in 1918, 1919, 1920, and 1921?

Mr. LADD. I do not know that I have those data here.

Mr. KING. Let us see how much the advance was, not only on the oil from pre-war years to a period during and since the war but as well the prices before the war and since, on flaxseed.

Mr. LADD. I have the prices for the flaxseed, but not for the oil.

Mr. KING. That range was about 300 or 400 per cent above the pre-war price, was it not?

Mr. LADD. In 1912, on the basis of 100 cents, it was 114.7, or $1.147. In 1919 it was $1.99, in 1920 it was $1.766, in 1921 it was $1.629; the data was furnished me, I may say, by the Department of Agriculture. On the oil I can not give the figures, as I do not have them with me at this time.

In the first four months of 1922 we imported 8,954,958 gallons of oil, or about twice the amount in four months as for the preceding year. In other words, to put it in another form, during the month of January, 1922, we imported thirty-one times as much linseed oil as in the same month for 1921. During the month of February, 1922, we imported sixty-nine times as much as in the corresponding month for the preceding year. In March, 1922, we imported eight hundred and seventy-three times as much oil as in March, 1921. In April, 1922, we imported sixty-five and one-half times as much as in April, 1921. In May, 1922, we imported sixty-three and one-half times as much as was imported for the corresponding month in 1921. In other words, we imported in May, 1922, 3,716,209 gallons, as compared with 58,399 gallons in May, 1921.

I asked the Department of Agriculture to furnish me certain data, and I want to call attention to what they say with regard to the duty:

> A still more important factor perhaps is the localization of our linseed-oil industry along the eastern seaboard. The eastern mills, far removed from the flax-producing sections of the United States, have come to depend almost entirely upon Canada, Argentina, and British India for their raw materials. More recently even the western crushers located in Minneapolis and Chicago have begun to use Argentina seed. The freight rate on flaxseed from Minneapolis and Duluth to New York is 86½ cents per 100 pounds, or at the rate of 52 cents per bushel. In contrast with this rate the ocean freight rate from Argentina to New York is from $3.50 to $4.50 a ton of 2,240 pounds. The $4.50 rate applies to up-river ports and is at the rate of 11 cents per bushel. In September of last year, when large quantities of flaxseed were being imported from Argentina, the freight rate was approximately 35 cents per bushel.

Mr. KING. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota again yield to the Senator from Utah?

Mr. LADD. I yield.

Mr. KING. I may not have heard at a distant part of the Chamber, but I understood the Senator to fix the highest price of flaxseed at less than $2.

Mr. LADD. No; I stated that in 1912 the price was $1.14. I am speaking of the farm price, the price which the farmer received. The data was received from the Department of Agriculture. In 1913 the farm price was $1.19; in 1920, $1.766; and in 1921, $1.629.

Mr. KING. If the Senator will in his time indulge me for a moment, I find in the United States Department of Agriculture Yearbook for 1920 the following figures, which seem to be somewhat at variance with those given by the Senator. We find the low price at Cincinnati in 1913 was $1.50 per bushel; at Minneapolis, $1.23¼ per bushel; at Milwaukee, $1.25½ per bushel; at Duluth, $1.22⅝ per bushel. In January, 1914, substantially the same figures are given. In 1915 $1.70 is given as the low price in Cincinnati, $1.59½ in Minneapolis, $1.51½ in Milwaukee, and $1.61½ in Duluth. Those are the low prices.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to his colleague?

Mr. LADD. I yield.

Mr. McCUMBER. The Senator from Utah is in error as to any variance between his statement and that of my colleague. My colleague is quoting the farm prices and the Senator from Utah is quoting the prices at the city. If the Senator from Utah will turn back to page 601 of the document to which he was referring, he will find the farm prices which correspond with what the junior Senator from North Dakota has stated.

Mr. KING. There may not be any variance in the sense implied by the Senator. If those prices indicated the commercial prices, then, of course, there is a variance.

If the Senator from North Dakota will pardon me a moment further, in 1916 prices had risen to $2.85 in Cincinnati and corresponding increases at the other points which I shall not take the time to indicate. In 1917 the price was $3.75 per bushel in Cincinnati. The highest price was $4.25 per bushel. In Minneapolis the high price was $3.46; in Milwaukee the high price $4.32; in Duluth the high price $4.36 and the low price $3.46. In 1918, $3.75 was the low and $4.25 the high in Cincinnati, and there were corresponding increases at the other points. In January, 1919, $3.25 was the low and $5.50 was the high in Cincinnati, with corresponding increases at the other points, the price being as high as $6.73 at Duluth. In 1920 the low price in Cincinnati was $4.50 and the high price was $5, the average being $4.62. In Minneapolis the low was $4.63 and the high $5.45. In Milwaukee the low was $4.70 and the high $5.35. At Duluth the low was $4.68 and the high $5.36. The prices increased from January right along down to July of that year, when the low price was $5 in Cincinnati. In Minneapolis the price was lower, being $3.11 and $3.87½, while $3.94 was the high price at Duluth.

So there was considerable spread, to use a word which has been employed a great deal during the debate, between the farm and the commercial price of the seed to which I have referred.

Mr. LADD. Mr. President, there is no question about that, but the prices I am giving are the prices which the producer is going to receive for the crop which he grows. During the war, of course, there were higher prices paid because of the demand, and the expense of production was also greater.

Mr. KING. The Senator will see that the prices went up over 300 or 400 per cent, and I presume that the prices now are very much higher than they were in 1913. There must be some profiteering somewhere which reflects itself in higher prices for linseed oil which are carried on to the farmer and to everybody else who employs linseed oil in painting and for other purposes for which it is legitimately used.

Mr. LADD. Can the Senator from Utah give the price of linseed oil per gallon during the war and the price of linseed oil at the present time?

Mr. KING. I do not have those prices here.

Mr. LADD. Linseed oil was as low as 69 cents a gallon during the past winter, and I think it is something like 72 cents wholesale according to the last quotation of the price that I noticed.

Mr. KING. My recollection is that the last price I saw was 87 cents a gallon. The pre-war price was 50 cents, or thereabouts, a gallon. A short time ago the price was from 75 to 100 per cent above the pre-war price, which, of course, is an impediment to painting and to building operations and to the general use of this very essential commodity.

Mr. LADD. That is very true; but that does not give the producer of the commodity any greater return. The report which has been furnished by the Secretary of Agriculture further states:

> It does not require any extended calculations to show that American flaxseed can not, on the basis of present production and transportation costs in this country, compete with Argentine flaxseed which, after paying an import duty of 30 cents a bushel can still be landed in New York more than 20 cents cheaper than flaxseed from the Middle West.

Mr. WALSH of Massachusetts. Will the Senator yield to me for a moment?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Massachusetts?

Mr. LADD. I yield.

Mr. WALSH of Massachusetts. I understand that the Payne-Aldrich law levied a duty of 25 cents per bushel upon flaxseed and that that law contained a drawback provision, and that the Underwood law levied a rate of 20 cents per bushel without any drawback provision. I further understand that the price of flaxseed has constantly increased from 1913 to 1920; in fact, that it has increased from $1.75 a bushel to nearly $5 a bushel. In the face of the fact that, despite the elimination in the Underwood law of the drawback provision of the Payne-Aldrich law and a reduction from a rate of 25 cents to 20 cents, the prices have increased, does the Senator say that the reduction of the rate and the elimination of the drawback in the Underwood law are responsible for the reduction in the production of flaxseed in this country?

Mr. LADD. They are in part responsible; but that reduction is not the only factor; there are other factors that enter into the question. The Senator from Massachusetts spoke of one of those. I can not agree with him wholly. The Senator said that flax was a sort of a "catch crop" for a part of the farmers. That I do not think to be true. Flax is a crop grown by farmers on new soil or newly broken land. On the old land years ago the farmers were obliged to abandon the production of flax for the reason that a disease, known as flax wilt, destroyed the plant and the crop did not succeed. The cultivation of flax was then confined more largely to new land, but that condition has been overcome at the present time. For the past six or seven years there has been on the market a variety of flaxseed which is immune to these diseases. Just as a person who has been vaccinated for smallpox is immune to smallpox, so one of these varieties of flaxseed is immune to the flaxseed wilt. So flax is coming back into cultivation in the older parts of the West where it was formerly grown. Flax yields an income to the farmer which is less than yielded by wheat in the wheat-growing sections, as is shown in the report of the Secretary of Agriculture, from which I have quoted. That flax production has rapidly decreased in this country since 1913—that it has fallen from 25,000,000 or 29,000,000 bushels a year to from 7,000,000 to 8,000,000 bushels a year—is due in a large measure to the lack of protection, and the fact that the emergency tariff failed to furnish proper protection on the oil has been the means of closing practically every crushing plant in this country. Without adequate protection on both the oil and the flax, the farmer would have no home market for the flax that is produced in this country.

The demand for linseed oil in 1913 was about 40,000,000 gallons, but during the past few years the demand has increased to approximately 75,000,000 gallons, while the quantity produced in this country has rapidly decreased. Under proper protection flaxseed, in my judgment, would come back as a large and important crop all through the Northern States, from New England to Montana, and would be grown not only on new lands but on the old lands.

In the report which is furnished by the Department of Agriculture they say further:

> Furthermore, since the United States is at the present time a large importer, an increase in the tariff which would reduce our importations would probably result in lowering the price in foreign markets to points which would enable American importers to buy in foreign markets in spite of the protection afforded by the higher tariff, so that the farmer would not profit to the full extent of the increase in the tariff rates.

I ask that this report may be printed in full as part of my remarks.

The PRESIDING OFFICER. Without objection, that order will be made.

The report referred to is as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF MARKETS AND CROP ESTIMATES,
Washington, October 29, 1921.

(Memorandum for Dr. H. C. Taylor, Chief Bureau of Market and Crop Estimates.)

PROPOSED INCREASE IN THE IMPORT DUTY ON FLAXSEED, WITH SPECIAL REFERENCE TO ENCOURAGEMENT OF FLAXSEED PRODUCTION IN THE UNITED STATES.

DEAR DOCTOR TAYLOR: The undersigned, acting as a special committee, under your oral instructions of October 3, 1921, submit the following report on the production and international trade in flaxseed, with particular reference to the possibilities of encouraging the production of flaxseed in this country by increasing the import duty from 30 to 50 cents per bushel.

Respectfully submitted.

O. C. STINE,
Agricultural Economist, Office of Farm Management and Farm Economics.
C. R. BALL,
In charge Cereal Investigations, Bureau of Plant Industry.
C. L. LUEDTKE,
Assistant in Market Information, Foreign Information Section, Division of Agricultural Statistics and Prices.

PROPOSED INCREASE IN THE IMPORT DUTY ON FLAXSEED, WITH SPECIAL REFERENCE TO ENCOURAGEMENT OF FLAXSEED PRODUCTION IN THE UNITED STATES.

FAXSEED A PIONEER CROP.

Flaxseed has always been know as a pioneer crop, thriving on the frontier and moving with it. It has been produced generally on the first soil of newly cleared or newly broken lands and has been a cash crop for the new settler or farmer distant from market. In all of the northern States it has been for a period an important crop. Before the Revolution the northeastern and middle States produced and exported considerable quantities of flaxseed. Before the Civil War, Ohio and Kentucky had become important producers and Cincinnati was an important primary market for flaxseed. Flax production has shifted west with the westward movement of settlement until now the most important producing centers are in the most recently developed lands in the northern Great Plains area, embracing the States of Minnesota, South Dakota, North Dakota, and Montana.

FLAX WILT AND COMPETITION WITH OTHER CROPS.

Flax wilt and profitableness of other crops have been two important factors in causing the shift in flax production. The wilt by causing the crop to fail after the second or third year on the same land compelled farmers to shift cultivation. After a few years it could have been grown again, but markets for other farm products had developed and so it was not as profitable to grow it as other products. If these two factors continue to operate in this way our flax production may soon be a thing of the past and the United States will be compelled to depend upon foreign countries for its entire supply. Fortunately, wilt resistant varieties have been developed which will enable farmers to grow flax continually on their farms. These varieties thus far have not yielded as well as the flax commonly grown; therefore the use of wilt-resistant seed will increase the cost per bushel of producing flaxseed.

However, in those portions of the corn belt where flax has not been grown recently, it is probable that the organism causing wilt is not present, at least, not abundantly. In that case it would not be necessary to use seed of resistant but lower yielding varieties until the wilt appears and becomes destructive. Seed free from wilt infection should be used wherever possible. Such seed, generally, can be obtained in Montana or western North Dakota, where wilt is not widely destructive. Those needing seed of the wilt-resistant variety probably can obtain it from the North Dakota Agricultural College, Agricultural College, N. Dak.

If the growing of flaxseed is to be encouraged in the corn belt, it should be made a neighborhood or community enterprise in order to facilitate the distribution of seed and the marketing of the crop. It would be most economical to distribute at least a carload of seed in each producing community. At any rate, a sufficient acreage should be sown in each community to insure the production of at least a carload of seed so that it could be shipped economically to a central market. One difficulty in growing flax, even on the border of the flax area, is that there is not a ready market for small lots of seed. It is very desirable that a group of farmers grow a sufficient acreage to insure production of a crop that can be marketed economically.

UNITED STATES PRODUCTION DECLINES.

The period since 1908 has seen a general decline in the production of flaxseed in the United States. North and South Dakota, Minnesota, and Montana now produce 84 per cent of the domestic crop, which in 1920 amounted to 10,990,000 bushels. The production this year is estimated at 8,878,000 bushels. This decline in production, coupled with the growing demand for linseed products, has made the United States essentially a flaxseed importing country.

WORLD ACREAGE AND PRODUCTION.

Argentina is the largest producer of flaxseed in the world. The average acreage is around 3,000,000 acres. India follows a close second. The United States is third with 2,000,000 acres; then comes Canada with an average of 1,000,000 acres, while Uruguay, Japan, and several European countries each cultivate from 50,000 to 100,000 acres. In most of the European flax-growing regions the flax is raised primarily for its fibers. In the United States, Canada, and Argentina, as well as in India, flax is produced primarily for the seed. The area and production in the principal flax-producing countries of the world in 1921 and for a five-year period, 1909–1913, were as follows:

Countries.	Area.		Production.	
	Average 1909–1913[1]	1921	Average 1909–1913[1]	1921
	Acres.	*Acres.*	*Bushels.*	*Bushels.*
Argentina	3,683,000	[2] 3,484,000	31,989,000	[2] 42,025,000
India	3,821,000	[2] 2,234,000	19,773,000	[2] 10,760,000
Russia in Europe (except Poland)	3,217,000	.....	19,772,000	.....
United States	2,490,000	1,242,000	19,505,000	8,252,000
Canada	1,036,000	786,000	12,068,000	7,160,000
Other countries	1,014,000	.....	7,073,000	.....
Total	15,261,000	7,746,000	110,180,000	[3] 68,197,000

[1] 5-year average, except in a few cases where 5-year statistics were not available.
[2] Harvest in February.
[3] Exclusive of Russia and "Other countries."

It will be observed from the foregoing table that the 1921 flax acreage in the principal flax-producing countries of the world was about one-half the average acreage during the five-year period from 1909 to 1913. It will further be noted that the 1921 production, exclusive of Russia and other countries not shown, was about 62 per cent of the five-year pre-war average. Prior to the war the Russian Empire produced about 20,000,000 bushels annually, and Europe, outside of Russia, produced about 3,000,000 bushels. Russia, however, may now be left out of the discussion because she is not yet producing quantities in excess of her demands.

The acreage sown to flax in Argentina has been around 3,000,000 acres since 1903, showing little change from year to year. No acreage or production estimates have been received as yet for the 1921–22 crop. The acreage in Canada this year is almost one-half that of 1920. The latest reports give the production this year at 7,160,000 bushels, which is about 800,000 bushels less than the 1920 crop. The 1920–21 crop in India this year was 10,760,000 bushels, or about 6,000,000 bushels less than the crop of the previous year.

INTERNATIONAL TRADE IN FLAXSEED.

Argentina leads not only in production but also in her exports of flaxseed, which amount to approximately 90 per cent of her production. India exports about 80 per cent of her production. Russia, however, exports only about 25 per cent or 5,000,000 bushels. The average annual imports of the United States and certain European countries during the three years preceding the war (1911–1913), and in 1919 and 1920 are shown in the following table compiled from official and other sources:

Average annual net imports of flaxseed into principal flax-consuming countries.

	Average 1911–1913	1919	1920
	Bushels.	*Bushels.*	*Bushels.*
Austria-Hungary	1,872,000	.....	.....
Belgium	3,348,000	979,000	716,000
Bulgaria	.....	.....	.....
Denmark	520,000	709,000	1,054,000
France	6,243,000	.....	1,217,000
Germany	15,102,000	.....	2,075,000
Italy	1,698,000	519,000	871,000
Netherlands	6,254,000	3,718,000	3,647,000
Norway	445,000	351,000	332,000
Sweden	904,000	695,000	1,085,000
United Kingdom	15,091,000	20,536,000	15,575,000
Total	51,477,000	27,507,000	23,412,000
United States	7,290,000	14,036,000	24,616,000
Grand total	58,767,000	41,543,000	48,028,000

Prior to the war the total consumption of all Europe averaged around 63,000,000 bushels, of which 40,000,000 bushels were imported. During the three years immediately preceding the war the total imports of Europe averaged over 51,000,000 bushels, and those of the United States during the same period averaged around 7,000,000 bushels. In 1918, with Germany, Belgium, Hungary, Denmark, and the Netherlands taking no flaxseed and Italy taking very little, we find Europe's net imports in that year reduced to about 11,000,000 bushels. Following the armistice, after readjustments began to be made, the Netherlands, Italy, Denmark, and France imported quantities more nearly approaching their normal imports, until in 1919 the European net imports aggregated 28,000,000 bushels. In 1920 her imports dropped to 23,000,000 bushels, less than half the average imports during the three years immediately preceding the war. This decrease was due largely to reduced importations of the United Kingdom, which imported 5,000,000 bushels less in 1920 than during the previous year. Most of the other countries, however, notably Denmark, France, Germany, Italy, and Sweden, all showed increases in their 1920 imports.

Europe is gradually recovering her former position as a flax-importing country. The best evidence of this will be found in the following table, showing the exports of flaxseed from Argentina—the chief source of European and American flax imports—during the first seven months of the present calendar year compared with the totals for 1920:

Exports of flaxseed from Argentina.

Countries.	1920	Jan. 1 to July 31, 1921
	Bushels.	*Bushels.*
United Kingdom	5,079,714	5,709,678
France	469,501	784,129
Belgium	1,435,470	1,684,629
Germany	947,151	1,290,163
Italy	278,362	19,762
Netherlands	3,547,280	2,805,590
Denmark	1,391,493	605,281
United States	18,770,476	7,390,095
Other countries	9,434,589	12,249,742
Total	41,352,036	32,539,069

From an analysis of the foregoing table it will be observed that the exports of flaxseed from Argentina to the United Kingdom, France, Belgium, and Germany during the first seven months of this year exceed the total exports to those countries during the calendar year 1920. Attention is particularly directed to the relative volume of flaxseed taken by the United States and the United Kingdom this year as compared with a year ago.

In considering the world's trade in flaxseed as a whole it is not necessary to give any consideration to the trade in linseed oil, because the principal producing countries export very little oil, though some countries export linseed oil crushed from imported seed. In studying the trade of any one country, however, it is well to consider the seed equivalent of the oil.

IMPORTS OF FLAXSEED INTO THE UNITED STATES.

The average annual imports of flaxseed into the United States from 1911 to 1913 were 7,297,000 bushels. In 1919 there were 14,036,000 bushels imported, while in 1920 the imports amounted to 24,641,000 bushels, all of which, with the exception of 1,863,000 bushels, came from Argentina. So far this year (January 1 to September 30, 1921) 8,602,884 bushels of flaxseed have been imported into the United States, as against 19,301,932 bushels for the corresponding period of 1920. Of the 8,602,884 bushels imported so far this year Argentina contributed 5,938,596 bushels, while Canada furnished 2,370,378 bushels,

the remainder (293,910 bushels) coming from other countries. The imports of flaxseed into the United States during the past 10 years are given in the following table:

Imports of flaxseed into the United States.

	From Argentina.	From Canada.	From other countries.	Total.	
				Fiscal year.	Calendar year.
Fiscal years ending June 30:	*Bushels.*	*Bushels.*	*Bushels.*	*Bushels.*	*Bushels.*
1910	3,209,087	1,410,398	383,011	5,002,496	9,158,779
1911	5,021,137	2,251,083	3,227,007	10,499,227	7,480,115
1912	1,210,628	3,510,883	2,120,295	6,841,806	7,833,180
1913	429,254	4,732,316	132,726	5,294,296	6,580,154
1914	None.	8,647,168	6,067	8,653,235	9,246,530
Calendar years:					
1914	73,555	9,166,249	6,726	.....	9,246,530
1915	11,097,624	3,447,372	151,627	.....	14,696,623
1916	8,744,795	4,210,197	143,012	.....	13,098,004

1921 (9 months)[1]	5,938,596	2,370,378	293,910	.....	8,602,884

[1] Preliminary.

ACREAGE NECESSARY TO PRODUCE UNITED STATES REQUIREMENTS.

Increase in the production of flaxseed in the United States may be brought about either by increased acreage or by increased yield per acre, or both. The average acreage planted to flaxseed in the United States during the period 1910–1920 was 1,900,000 acres, the tendency being a gradual reduction during the decade. The average annual production during the period was about 14,700,000 bushels, with a 7,500,000-bushel crop in 1919, which was the smallest crop harvested since 1879. The average excess of imports over exports for the period, including the seed equivalent of linseed oil, was about 11,900,000 bushels, making our average net supply about 26,500,000 bushels. The largest supply for any one year was in 1912, when it amounted to 33,000,000 bushels, followed by 31,000,000 bushels in 1919 as a close second. The large supply in 1912 was the result of a good crop from a large acreage, while in 1919 it was due to the large import of 24,500,000 bushels of flaxseed.

Acreage, production, yield per acre, and average farm price per bushel of flaxseed in the United States, 1902–1921.

Year.	Acreage.	Production.	Average yield per acre.	Average farm price (Dec. 1) per bushel.
	Acres.	*Bushels.*	*Bushels.*	*Cents.*
1902	3,740,000	29,285,000	7.8	105.2
1903	3,233,000	27,301,000	8.4	81.7
1904	2,261,000	23,401,000	10.3	99.3
1905	2,535,000	28,478,000	11.2	84.4
1906	2,506,000	25,576,000	10.2	101.3
1907	2,864,000	25,851,000	9.0	95.6
1908	2,679,000	25,805,000	9.6	118.4
1909	2,712,000	25,856,000	9.4	.....
1909[1]	2,083,000	19,513,000	9.4	153.0
1910[2]	2,467,000	12,718,000	5.2	231.7
1911	2,757,000	19,370,000	7.0	182.1
1912	2,851,000	28,073,000	9.8	114.7
1913	2,291,000	17,853,000	7.8	119.9
1914	1,645,000	13,749,000	8.4	126.0
1915	1,387,000	14,030,000	10.1	174.0
1916	1,474,000	14,296,000	9.7	248.6
1917	1,981,000	9,164,000	4.6	296.6
1918	1,910,000	13,369,000	7.0	340.1
1919	1,572,000	7,661,000	4.9	438.3
1920	1,785,000	10,990,000	6.2	176.6
1921	1,242,000	8,878,000	7.2	[3] 162.9

[1] Census returns.
[2] Figures adjusted to census basis.
[3] Farm price Oct. 1, 1921. Price on Oct. 1, 1920 was 279.7 cents.

The additional acreage necessary to produce an amount equal to our net imports of flaxseed and seed equivalent of linseed oil, based upon a 10-year average yield per acre—7.6 bushels, 1911–1920—would have been 3,000,000 acres in 1919, when the net imports—during the fiscal year ending June 30, 1920—were approximately 24,700,000 bushels. The required additional acreage in 1920, when our net imports were 16,700,000 bushels, computed on the above basis, would have been 2,000,000 acres. It is interesting to note in this connection that the average yield for the United States in 1920 was only 6.2 bushels, so that 2,000,000 additional acres actually planted in 1920 would not necessarily have produced an amount equal to our net imports during that year. On the other hand, it should be remembered that our imports in 1919 and 1920 were unusually heavy—the heaviest, in fact, on record. Based on our average net imports during the past 10 years, including the heavy imports in 1919 and 1920, it would only have required 1,500,000 additional acres to produce an amount equal to our net imports.

Another fact to be kept in mind is the variation in the average yield per acre in the several States in which flaxseed is grown. The 10-year average yield in Wisconsin, for example (1911–1920), was 12.2 bushels per acre; in Minnesota, 9.3 bushels per acre; in North Dakota, 7.5 bushels per acre, and in Montana, the State with the largest flax acreage, 6.7 bushels per acre. The following table shows the acreage, production, and average yield per acre of flaxseed in the principal flax-producing States during 1920, with the average yield covering a 10-year period (1911–1920):

Acreage, production, and average yield per acre, 1920, and average yield, 1911–1920.

States.	Acreage.	Production.	Average yield per acre.	Average yield 1911–1920.
	Acres.	*Bushels.*	*Bushels.*	*Bushels.*
Wisconsin	9,000	99,000	11.0	12.2
Minnesota	320,000	3,040,000	9.5	9.3
Iowa	12,000	120,000	10.0	9.9
Missouri	6,000	45,000	7.5	7.0
North Dakota	735,000	3,896,000	5.3	7.5
South Dakota	220,000	2,200,000	10.0	8.3
Nebraska	5,000	45,000	9.0	7.6
Kansas	23,000	159,000	6.9	5.8
Montana	451,000	1,353,000	3.0	6.7
Wyoming	4,000	33,000	8.2	8.5
United States	1,785,000	10,990,000	6.2	7.6

The variation in the average yield per acre in the different States clearly shows how the localization or distribution of the additional flax acreage among the several States might change the basis for an estimate of this kind.

COMPARISON OF YIELD AND COST OF PRODUCTION.

In the period from 1908 to 1916, inclusive, the average yield of flaxseed per acre was 5.07 bushels in Russia, 5.08 bushels in British India, 8.42 bushels in the United States, 9.11 bushels in Argentina, and 11.07 bushels in Canada. Unfortunately there are no comparable data as to the cost of producing flaxseed in these countries, except in the case of Canada, where flaxseed production is confined to the newer farming regions and where the methods of cultivation are substantially the same as in the United States. The general level of prices and wages and the methods of cultivation in the other countries are so obviously different as to render all comparisons in the absence of authoritative cost data misleading and valueless.

RELATION BETWEEN PRICE AND COST OF PRODUCTION.

In considering the price necessary to obtain increased production we must take into account the long-time average price of the crops with which flax competes. In the Northwest flax competes with oats and wheat. In the corn belt the competition of corn would also be a factor. The average farm price, yield, and value per acre of flax in the United States, 1905–1914, compared with oats, wheat, and corn, are given in the following table:

	Average price per bushel.	Average yield per acre.	Average value per acre.
	Cents.	*Bushels.*	
Flax	132.7	8.8	$11.68
Oats	38.7	29.6	10.46
Wheat	85.1	14.8	12.59
Corn	54.5	26.6	14.50

It will be observed that the farm price of flax is greater than that for any of the competing crops, but the yield of flaxseed per acre is less than the yields of the other crops. The average value of flaxseed produced per acre was greater than the value of oats but less than the value of wheat or corn. If the cost per acre of producing each crop were equal, the prices should rank as indicated in the following table:

Relative value per acre.

Flax	100
Oats	90
Wheat	103
Corn	124

However, the cost of production is not the same in each case. The office of Farm Management and Farm Economics has conducted cost of production studies of these crops. The following table shows some of the most important items of cost for each crop and the relative costs per acre:

Relative cost of production per acre, flax, oats, wheat, and corn.

	Yield per acre.	Man labor.	Horse labor.	Seed.	Twine.	Other costs, per cent of total.	Man labor cost.	Relative total costs.[1]
	Bushels.	*Hours.*	*Hours.*	*Bushels.*	*Pounds.*	*Per cent*	*Per cent*	
Flax (North Dakota)	7.5	5.6	19.5	0.5	[2] 1.8	40.1	22.4	100
Oats (North Dakota)	33.0	5.6	17.4	2.0	1.9	41.4	23.4	96
Wheat (Minnesota)	8.1	8.2	22.4	1.4	2.2	32.9	20.5	160
Corn (corn belt)	43.0	19.0	46.2	.14	0.0	14.6	31.1	244

[1] Computed by finding the per cent 1 hour of man labor was of the total cost of production in each case and dividing the result obtained for flax by each of the other results.
[2] Comparatively little of the flax crop is bound either in North Dakota or other States.

It will be seen from the foregoing data that an acre of flax can be produced more cheaply than an acre of wheat or corn, but is more expensive than oats. If the yields were the same the prices per bushel would rank in the order of relative costs, but the yields differ. In the following table are shown the relative prices per bushel of flax, oats, wheat, and corn from 1905 to 1914, with the price of flaxseed as a basis. The second column shows the relative prices on September 1, 1921, and the third column shows what the prices of the other products

should have been to have kept the normal price relations or to have been relatively as profitable as flaxseed:

	Relative farm prices per bushel 1905–1914.	Farm prices Sept. 1, 1921.	Prices on the basis of pre-war relations.
	Cents.	*Cents.*	*Cents.*
Flax	100	165	165
Oats	29	30	48
Wheat	64	101	106
Corn	41	56	68

SUMMARY AND CONCLUSIONS.

As we have already pointed out, the amount of additional acreage necessary to produce the equivalent of our net imports of flaxseed would vary according to the average yield per acre selected as a basis for the estimate. The possibility of securing this additional acreage, however, would be dependent in a large measure upon the relation between the cost of production of flax and other farm products and the prices received for them. While the gross return per acre on flaxseed is less than that for any of the competing crops except oats, it is a very difficult problem to determine what price for flaxseed would be necessary to stimulate production. Since the flaxseed production has been continually declining with the pre-war relation between these crops, it seems evident that the price of flax must be maintained relatively higher than it was before the war. If the elements of cost change, an adjustment of the price to meet an increase in the relative cost of producing flaxseed must follow.

There are also a number of other factors which should be considered in this connection. Among these are the difficulties that would be encountered in obtaining and distributing the right kind of seed, in the event it were proposed to increase the flax acreage. Then there is the problem of marketing flaxseed in an area which does not commonly grow it. While soil and climate would permit flax to be grown in most parts of the United States, it can not be suddenly reintroduced into areas in which it is not now being grown and be advantageously marketed. In many isolated places it could not be marketed with advantage and it would, therefore, be desirable to have any additional acreage in flaxseed confined to or in proximity to existing flax areas.

A still more important factor perhaps is the localization of our linseed-oil industry along the eastern seaboard. The eastern mills, far removed from the flax-producing sections of the United States, have come to depend almost entirely upon Canada, Argentina, and British India for their raw materials. More recently even the western crushers, located in Minneapolis and Chicago, have begun to use Argentine seed. The freight rate on flaxseed from Minneapolis and Duluth to New York is 86½ cents per 100 pounds, or at the rate of 52 cents per bushel. In contrast with this rate, the ocean freight rate from Argentina to New York is from $3.50 to $4.50 a ton of 2,240 pounds. The $4.50 rate applies to up-river ports and is at the rate of 11 cents per bushel. In September of last year, when large quantities of flaxseed were being imported from Argentina, the freight rate was approximately 35 cents per bushel. In addition to the freight rate there is an export tax payable in Argentina amounting to approximately 8 cents per bushel at the present time.

The comparative cost of production and the prevailing prices in Argentina and other foreign countries are two additional factors. While it has not been possible to obtain any comparable data on production costs in foreign countries, the following comparison of prices for flaxseed in Argentina and Minneapolis on certain dates in September, 1921, is of interest:

	Argentina.	Minneapolis.
	Per bushel.	*Per bushel.*
Sept. 1	$1.71	$1.93½–$1.96½
Sept. 8	1.67	2.01½–2.02½
Sept. 15	1.51	2.08 – 2.11

The Minneapolis prices represent official closing cash prices on the above dates. The Argentine prices are the cash prices based on the rate of exchange prevailing on the above dates. The difference between Argentine and Minneapolis prices is from 22½ cents a bushel on September 1 to 57 cents a bushel on September 15. While this is hardly a fair comparison, it at least serves to illustrate the spread between Minneapolis and Argentine prices.

It does not require any extended calculations to show that American flaxseed can not, on the basis of present production and transportation costs in this country, compete with Argentine flaxseed which, after paying an import duty of 30 cents a bushel, can still be landed in New York more than 20 cents cheaper than flaxseed from the Middle West.

No discussion of this subject would be complete without pointing out the danger of the largely increased production of flaxseed with resulting lower prices. While the United States imports flaxseed the price in this country will be determined by the price in foreign markets plus the cost of transportation including the tariff. A tariff which would result in raising the price of linseed oil and paints in which it is used above the point at which they could be exported would put this country in a position of producing for the home market only. The price of flaxseed could then be maintained on the basis of the home demand and supply until our production increased to the point where a larger market was demanded, when we would again meet foreign competition, with the possible result of lower prices. Furthermore, since the United States is at the present time a large importer, an increase in the tariff which would reduce our importations would probably result in lowering the price in foreign markets to points which would enable American importers to buy in foreign markets in spite of the protection afforded by the higher tariff, so that the farmer would not profit to the full extent of the increase in the tariff rates.

Mr. LADD. Mr. President, I have a letter from one of the linseed companies in this country, in which they state:

We have with us in this country at the moment our South American representative, who advises us that growing conditions were never better in the Argentine for a bumper flaxseed crop. Last year it is estimated that they raised a crop which permitted an exportation of something like 32,000,000 bushels of flaxseed. This was considerably less than the crop of the previous year, from which was shipped, including carry over, something like 54,000,000 bushels.

It is our representative's opinion that if weather conditions do not change the present favorable outlook Argentina this year can raise a crop which will permit the exportation of over 40,000,000 bushels of flaxseed. Indications in our own Northwest, particularly in North Dakota, show a slight increase in acreage, with very favorable weather conditions. * * *

With an increase of from eight to ten million bushels in the Argentine and industrial conditions not improving in the United Kingdom and the Continent, unless the flaxseed and linseed oil tariff schedule is corrected, we may look for considerable recession in the price of the coming crop of flaxseed in this country, as it is evident from reports that we get from the other side that the industrial condition is not improving and we can expect a repetition of the competition under which the linseed industry and the flaxseed farmer have been laboring during the life of the emergency tariff bill.

With regard to the question of the rate on linseed oil. In the CONGRESSIONAL RECORD of May 15, on page 6962 and following pages, I presented data furnished me by the mills as to the difference of cost based on the actual figures of mill production. For instance, one of the large mills that crushed in 1921 1,274,085 bushels of flaxseed furnishes a table of costs, and on the basis of those costs, using an average of 50 cents per bushel conversion here and 25 cents per bushel abroad, which latter figure is borne out by sales prices of foreign oil here, it is demonstrated as of March 24, 1922, that the difference in conversion cost would be 3.4 cents per gallon, or approximately 3.5 cents per gallon. The same is true of Montreal, Canada, factories and other factories.

This data has been presented and may be found in full in the CONGRESSIONAL RECORD, and it clearly indicates that the difference in the cost, the difference in exchange, and the difference in freight as compared with the ocean rate, warrant the belief that 3.5 cents is none too great in order to protect both the farmer and crushers from the importation of oil rather than of flaxseed.

I wish also, while I am on my feet, to speak of the soya bean.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Massachusetts?

Mr. LADD. I yield.

Mr. WALSH of Massachusetts. Do I understand the Senator has concluded his explanation of the high compensatory duty upon linseed oil?

Mr. LADD. I may have something further to say as I discuss the question of the soya bean.

Mr. WALSH of Massachusetts. I wish to know if the only information which the Senator has obtained in reference to the cost of production here and abroad is the information which he has just said he received from one of the large crushers.

Mr. LADD. I received information from several mills, as indicated in the RECORD of May 15, not only in this country but in Canada as well, and also from the data which I presented from the Department of Agriculture.

Mr. WALSH of Massachusetts. I thought possibly the Senator in discussing the compensatory duty had overlooked the drawback provision of this bill. I hardly think the Senator and the committee have taken that into account?

Mr. LADD. I do not think I understand the Senator.

Mr. WALSH of Massachusetts. The drawback provisions of this bill reduce from 40 cents per bushel to 30 cents per bushel the high duty which will have to be levied upon imported flaxseed, and I fear that the committee and the Senator from North Dakota in fixing the compensatory duty upon linseed oil have not borne in mind that there is to be a reduction of 25 per cent upon the duty paid upon the imported flaxseed. That, of course, ought to reduce very materially the compensatory rate to the linseed-oil manufacturer. I do not think the Senator has had that called to his attention heretofore.

Mr. LADD. Yes; and I have the figures as to the difference made by the drawback.

Mr. WALSH of Massachusetts. Has the Senator calculated upon a reduction of 25 per cent in the duty upon the imported flaxseed by reason of the drawback provision of this bill?

Mr. LADD. I am not ready to concede that the reduction amounts to 25 cents per bushel.

Mr. WALSH of Massachusetts. The Senator knows that when flaxseed cake is exported, as it is exported, the duty paid on the imported flaxseed will be refunded and that rebate will amount to 25 per cent of the duty paid.

Mr. LADD. That is taken into consideration in these data that I have given there, showing the drawback.

Mr. WALSH of Massachusetts. I thought the Senator was simply stating conversion costs.

Mr. LADD. All the data were summarized in the conversion costs.

Mr. WALSH of Massachusetts. Does the Senator dispute my allegation that the labor cost in the crushing of flaxseed is only 2½ per cent of the cost of production?

Mr. LADD. That depends on whether——

Mr. WALSH of Massachusetts. The Census Bureau figures show that.

Mr. LADD. I have here the data that were furnished last year by the Government of the rates in 1921. In the United States the rate for pressmen and molders was 50 cents per hour, while in England the rates were 31 and 28 cents per hour, respectively.

Mr. WALSH of Massachusetts. That is only of consequence if the labor item is a serious one. The letter which was read at the desk has annexed to it a letter from an English crusher showing what he paid his laborers who work in the crushing factories; but the basic argument here is that the cost of labor is only 2½ per cent of the total cost of production, so that if there is a difference between the English labor cost and the American labor cost, it can only affect the 2½ per cent of the cost of production.

Mr. LADD. As stated, I want to take up at this time the question of the soya bean.

I call attention to the fact that in Wallace's Farmer for May 19, 1922, appears an editorial article on the soya bean, in which the growing of the soya bean is encouraged, and it says:

Soya beans have been grown in the Corn Belt for 30 years, but until very recently we have been cautious about advising our readers to grow them on any very extensive scale. Nine out of ten of the varieties as introduced from Manchuria have not been adapted to Corn-Belt conditions. Moreover, until recently we have not known how to plant, cultivate, and harvest the crop with the minimum of labor.

* * * * * * *

Of course, the most practical way to utilize soya beans on the average farm is to plant them with corn. The object of this article, however, is to urge more farmers to give soya beans a trial as a seed and hay crop. Wherever winter wheat and corn are grown, we believe that the soya bean has a potential field of usefulness. * * * We believe that in one-half of the State of Iowa it is worth while to consider introducing winter wheat and soya beans into the rotation as a substitute for oats, and perhaps also as a partial substitute for clover.

I ask that this article be published in full as part of my remarks.

The PRESIDING OFFICER. Without objection, leave will be granted.

The article is as follows:

TRY SOY BEANS.

Soy beans have been grown in the Corn Belt for 30 years, but until very recently we have been cautious about advising our readers to grow them on any very extensive scale. Nine out of ten of the varieties as introduced from Manchuria have not been adapted to Corn-Belt conditions. Moreover, until recently we have not know how to plant, cultivate, and harvest the crop with the minimum of labor.

During the past five or six years soy beans have been rapidly passing out of the experimental stage. Fairly well adapted varieties have been found for every section of the Corn Belt. It has been found that weeds can be kept down with the minimum of labor by giving one or two harrowings before the beans come up and then two or three harrowings in the afternoon, when the bean plants are dry, when they are from 3 to 6 inches high. More and more grain threshermen are learning to thresh soy beans by reducing the speed of the cylinder to 300 or 400 revolutions per minute and removing the concaves and part of the cylinder teeth.

Of course the most practical way to utilize soy beans on the average farm is to plant them with corn. The object of this article, however, is to urge more farmers to give soy beans a trial as a seed and hay crop. Wherever winter wheat and corn are grown we believe that the soy bean has a potential field of usefulness. In Missouri and the southern half of Illinois they are substituting soy beans more and more extensively every year for oats, using a rotation of corn, soy beans, wheat, and clover. And in case of clover failure they can double up on the soy beans. Soy beans harvested for grain or hay in early September leave a stubble on which wheat may be drilled without preparation of any kind. We believe that in one-half the State of Iowa it is worth while to consider introducing winter wheat and soy beans into the rotation as a substitute for oats and perhaps also as a partial substitute for clover.

We still do not know enough about varieties and harvesting methods of soy beans. In every community, however, are men who are willing to lead the way and who get paid for leading the way by selling seed at a good price. We hope that those of our readers who are experimentally minded and who have the least bit of time available will start experimenting this year with soy beans. The beans can be planted any time during May or the first 20 days of June.

Circular 65 of the Iowa station at Ames, Farmers' Bulletin 973 of the United States Department of Agriculture, and Bulletin 195 of the Missouri station at Columbia, all of which may be secured free on application, give excellent information on soy beans. We are convinced that soy beans are a coming crop, and that 10 years from now the acreage will be ten times as great as it is to-day.

Mr. LADD. There were imported during the past year 12,322,877 bushels of soy beans at a cost of $1.65 per bushel.

I have here a letter that I call attention to, from the Department of Agriculture, in which the writer says:

I might say that the soy bean has been slowly but steadily increasing in importance in America during the past 10 years. It is one of the most productive as regards seed production of the legumes adapted to the temperate climates. The value of the crop for seed, pasture for sheep and hogs, for hay, silage, soil-improving purposes, and the possibilities of the seed for the production of oil and meal and as a food give the soy bean a high potential importance.

Although grown primarily for forage purposes, the production of seed in many sections of the South and in the Corn Belt has become a very profitable industry, especially during the past three or four years. The large increase in acreage for seed production has led to the seeking of an outlet for surplus seed. At the present time agricultural authorities in Indiana, Ohio, and Illinois have taken up the oil-crushing proposition with several manufacturers. We are informed that several mills in these States have installed, or will install in the near future, machinery for crushing the 1922 crop of soy-bean seed for oil and meal. One mill in Ohio at the present time is utilizing domestic-grown seed for this purpose.

Mr. KING. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Utah?

Mr. LADD. I do.

Mr. KING. I was interested in the statement made by the Senator that arrangements have been made for crushing soya beans in Indiana and other places. Does not the Senator know that there are more than 700 seed-crushing machines in the United States which will crush soya beans as well as cotton seed, and that they are employed only about half the time because of a lack of sufficient seed to crush?

Mr. LADD. I will also call the attention of the Senator to the fact that the same facilities and machinery that crush cotton seed and linseed are not adapted to the handling of soya beans. I have had quite a little experience in the extraction, having made an investigation in practically every State in the section where soya beans are grown, and I found that the methods used for soya beans were quite different.

Mr. KING. I think the Senator will admit that the crushing machines now in existence have handled soya beans and have crushed them successfully and extracted the limited amount of oil which they possess, and their owners have only regretted that there were not more soya-bean seeds produced so as to give them employment during a greater part of the year.

Mr. LADD. As I have stated—

One mill in Ohio at the present time is utilizing domestic-grown seed for this purpose. Moreover, many associations, particularly in Illinois, are investigating the possibilities of community oil mills.

All indications point to a greatly increased acreage for seed production in 1922. The latest crop estimates show the following acreages of soya beans for seed production: In 1919, 1920, and 1921, 155,000, 156,000, and 186,000 acres, respectively; the seed produced for these years being 2,045,000, 2,278,000, and 2,815,000 bushels, respectively. It must be borne in mind that these figures represent only the soya beans grown for grain production. In some of these States growing large acreages of the crop it has been estimated that about 90 per cent of the crop is grown for hay, silage, pasture, and soil-improving purposes.

Although the production of seed in 1921 was greater than in any previous year some concern was felt in the large seed-producing States that there would be considerable surplus seed left in the hands of the growers. From the latest reports from these States indications are that the entire supply of seed will be required for increased acreage, and there is a likelihood of seed shortage in several sections.

The soya bean is one of the most important crops that can be grown for the improvement of the soil, for the introduction of nitrogen into the soil, and for enriching the soil for other crops. It is perhaps as widely grown as any other crop in this country, and under proper protection there would be a very large increase, to the advantage of our people in this country.

I take just two oils, calling attention first to the soya bean:

In 1912 we imported 28,000,000 pounds of soya-bean oil. In 1919 we imported 337,000,000 pounds, an enormous increase.

In the case of coconut oil, in 1912 we imported 32,000,000 pounds, and in 1919, 490,000,000 pounds.

From 1912 to 1919 the increase in these two oils—that is, coconut and soya-bean oil—amounts to 767,000,000 pounds. These are displacement oils for the cottonseed, the peanut, the linseed, and other oils; and the soya bean could be produced in this country with great advantage to the farmers, and at the same time furnish the necessary soya-bean oil for use in this country, if there were adequate protection.

Mr. FRELINGHUYSEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from New Jersey?

Mr. LADD. I yield to the Senator.

Mr. FRELINGHUYSEN. For information, I should like to ask the Senator, who has made a considerable study of this question, whether in this production in the State of Ohio any of the crop was utilized for industrial purposes. Were any of the soya beans crushed and used commercially, outside of the forage crop?

Mr. LADD. This letter states that one factory in Ohio is at the present time utilizing domestic grown seed for the purpose of extracting the oil. I am informed that one of the large houses in Chicago is preparing to handle the seed from Indiana for the present year of 1922, and is putting in crushers and necessary machinery to handle the seed from Indiana.

Mr. FRELINGHUYSEN. Can the Senator state to what extent the oil is used and what is the nature of the industry that is using it? Is it used to any appreciable extent? What is the production of this factory?

Mr. LADD. That I can not tell the Senator. I have not the information, except as it is furnished in this letter. I knew that it was in existence, and knew that these arrangements were being made in Chicago for the Indiana crop. The oil itself is used, of course, as a substitute for linseed oil; it is used in linoleum production; it is used in soap manufacture, and various other industries

Mr. FRELINGHUYSEN. But there is no actual evidence that this domestic oil is now being used in any industry?

Mr. LADD. No; for the reason that the bean has been grown almost wholly as a forage and soil-improvement crop thus far; but attention has been called to the value of the crop for oil production for a number of years, beginning with about 1912 or 1913. For example, at the North Dakota Agricultural College many experiments were carried on each year, from that time on up until the present time, in securing the seed and experimenting with the soya bean as produced in nearly every State. I might say, for the Senator's information, that the two States that furnished the soya bean richest and best in oil were New Jersey and Utah.

Mr. President, I believe that the rate asked for flaxseed is not unreasonable. It is not higher in proportion to conditions at this time than the rate accorded under the Payne-Aldrich law. If we are to build up in this country the industry of flax production we must furnish adequate protection, and with reasonable protection it will again become one of the important crops of the Northern States.

Mr. KING. Mr. President, before the Senator takes his seat, I heard a portion of the statement of the Senator from Massachusetts. As I recall, he directed the attention of the Senate to the fact that certain manufacturers of linseed oil, some 9 or 10 of them, were making enormous profits, and it is quite likely that the farmers were not getting an adequate price for their product or, at any rate, were not getting a sufficient proportion of the cost of the product to the consumer. Does the Senator challenge the accuracy of the statement made by the junior Senator from Massachusetts as to the enormous profits which are made by this Linseed Oil Trust?

Mr. LADD. Mr. President, I will not attempt to answer that, but I do believe that during the war there were enormous profits made by those companies, as there were by many other companies. In other words, there was profiteering all along the line. I have every reason to believe they were profiteering with the rest.

Mr. KING. Is not this bill, as now fashioned, with the differential which is provided between the flax and the linseed oil, in the interest of those profiteers?

Mr. LADD. I do not think so. In 1890, when the duty was 30 cents on flaxseed, it was 32 cents on the oil, and there was then a large amount of flax grown in the country. But the fact that Argentina is now producing the flax in enormous quantities, since the country has been opened up, much more cheaply than we can produce it, and with water rates much less than our farmers can obtain, makes it impossible for our farmers to compete.

Mr. KING. Is it not true that this is a frontier crop, and that there has been a diminution of production?

Mr. LADD. Yes.

Mr. KING. And whatever increase there was was under the Underwood law, when it was practically free, or was entirely free?

Mr. LADD. No; under the Underwood law there was a rapid falling off in production. In 1912 we produced over 28,000,000 bushels. In the previous years we produced about 25,000,000 bushels, with the exception of one year, but in 1921 it was down to 8,000,000 bushels. Under the war pressure there was some stimulation. I know that in North Dakota, at the request of the Government the North Dakota Agricultural College did everything it could to encourage the production of flax and wheat in order to meet the demands, and in 1912 there were produced 28,000,000 bushels, in round numbers.

Then in 1913 the production was 17,000,000, in 1914 it was 9,000,000, and in 1918 it had increased again to 13,000,000 bushels. In 1919 it was 7,000,000, in round numbers. In 1920 it was 10,000,000, and in 1921 it was 8,878,000 bushels. So that there was not an increase but a decrease.

The Senator asked whether this was not a frontier crop. It has been a frontier crop in the past. It has been a crop grown on newly broken land. But the reason it was not grown on other land was because of the wilt disease, which destroyed the crop. As soon as the flax was from 4 to 6 inches high the disease attacked it, and completely destroyed fields of it. The farmers therefore did not attempt to grow it. But with the production of a wilt-resistant flax grown at the present time, which is immune from the disease, the flax is now grown, for example, in the eastern part of North Dakota much more largely than on the new lands of the western part of the State, and it is coming on as a crop in Minnesota and Wisconsin.

Mr. KING. Mr. President, the matter under discussion is flaxseed oil, but the Senator from North Dakota has directed attention to soya-bean oil, and just for a moment I want to detain the Senate.

A study of the facts shows that under the emergency tariff law the import of soya beans has been very small. No beans have been crushed for oil in the United States since 1918, and through 1921. The oil, as stated by the Senator, is imported in the crude form and refined in the United States, and is used largely in the soap industry.

A few days ago the Senator made a speech in which he referred to certain vegetable oils, and I am in receipt of a communication which I desire to read, in view of the Senator's statement to-day, because I think it explains one part of the Senator's address which he did not fully amplify, and from which misapprehensions or deductions may be drawn which perhaps the Senator did not intend to be drawn.

The writer of the letter states as follows:

We note in some recent remarks of the Hon. E. F. LADD, Senator from North Dakota, that he has made, as reported in the CONGRESSIONAL RECORD, statements relating to foreign vegetable oils (duties on which we are actively opposing for reasons set forth in detail in the remarks of our special committee printed on pages 5162 to 5173, inclusive, in the tariff hearings) which require correction.

On page 6962, CONGRESSIONAL RECORD of May 15, 1922, Senator LADD states "Our excess of importation for vegetable oils above exports amount annually for the same period (1914–1920) to 292,317,000 pounds."

May I add, in parentheses, that the Senator has repeated practically the same statements during his remarks to-day.

The imported vegetable oils to which Senator LADD refers are cottonseed oil, soya-bean oil, peanut oil, and coconut oil.

We desire to point out how entirely erroneous and misleading such statements as those of Senator LADD might be to those not properly informed.

By those acquainted with the inseparable market relationship of edible oils and fats of both vegetable and animal origin the mistake would never be made of endeavoring to compare imports of the four named vegetable oils with exports of edible vegetable oils.

Any comparison of imports with exports of edible domestic oils and fats, of which cottonseed oil is second most important, is meaningless unless it includes the edible animal fats and oils, such as hog lard, oleo oil, neutral lard, and oleo stearin.

The combined domestic production of edible fats and oils of animal and vegetable origin, exclusive of butter, is 3,600,000,000 pounds per annum. Any tariff discussion must consider this great figure in the aggregate.

To discuss domestic edible oils and fats without including the edible animal fats and oils would be tantamount to discussing the currency system and referring only to the silver thereof, without reference to the gold and other kinds of currency.

It is no more logical to compare the imports of foreign vegetable oils with the exports of cottonseed oil than it would be to compare the latter with the imports of automobiles. Cottonseed oil is an edible oil and the imported oils are largely used for industrial purposes in this country, although in Europe the tendency to utilize them in edible products to the exclusion of our cottonseed oil has about destroyed all of our export business, owing to the exclusive monopoly of foreign vegetable oils Europe has enjoyed since the passage of the emergency tariff.

In order that you may have complete information on this subject, we attach hereto a sheet carrying detailed figures relating to the period between 1914–1920, to which Senator LADD referred.

I ask to have the statement referred to printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Table showing exports of edible fats and oils from United States for the seven years from 1914 to 1920, inclusive, and imports of these fats and oils for industrial and to a limited extent for edible usage.

Item.	Imports.	Exports.
	Pounds.	*Pounds.*
Lard		3,610,652,741
Cottonseed oil	113,734,372	1,379,000,000
Lard substitutes		427,339,565
Oleomargarine		67,305,166
Oleo oil		530,681,388
Neutral lard		146,377,970
Corn oil		65,542,346
Stearin (animal)	16,830,137	90,348,109
Peanut oil	374,345,945	6,513,000
Soya bean oil	1,088,231,531	98,985,000
Coconut oil of non-Philippine origin	502,096,892	159,640,000
Coconut oil expressed from copra of non-Philippine origin	705,000,000	
Total	2,800,238,877	6,582,384,286

Coconut oil coming from the Philippines and coconut oil made from Philippine copra is not included in the above table because this movement is equivalent merely to a shipment from one part of the United States to another. Such coconut oil and copra would never be subject

to a duty and will therefore have to be treated strictly as American production when matters in relation to the tariff are under discussion.

Total exports of American edible oils and fats for the seven years exceeded imports by 3,782,145,409 pounds, or an average annual excess of exports of 540,000,000 pounds.

A most significant fact is that the highest prices ever obtained for cottonseed oil in the history of the cotton-oil industry were obtained in the years when the importations of foreign oils were heaviest. In the year 1919, third in importance of imports, and following on 1917 and 1918, greater still in imports, crude cotton oil reached the peak price of 25 cents per pound.

Price deflation when it came was not caused by importations of foreign oils but by the same conditions which caused the slump in the price of cotton, hogs, corn, wheat, hides, and all other agricultural products. Importations of foreign vegetable oils had then greatly diminished.

The period from 1914 to 1920 is, of course, not comparable with what has gone before or will come after. Imports were larger then than they could ever be under normal conditions because our country was supplying Europe with munitions of war and was itself at war. Vegetable oils were one of the most valuable items in the production of munitions of war.

That importations fell when war conditions were past may be seen by comparison of the following table of imports and exports for the individual year 1920, the last complete year available before tariff restrictions interfered with importation.

For the year 1920.

	Pounds.
Combined imports of oils and fats listed in table above and also exclusive of Philippine production	398,712,408
Combined exports of hog lard, cottonseed oil, oleo oil, etc., as listed above	1,043,423,732
Excess of exports over imports for the year 1920	644,711,324

Mr. KING. The statement shows no lard imports, but exports of 3,610,662,741 pounds; of cottonseed oil there was imported 13,734,372 pounds, and the exports were 1,379,000,000 pounds. No lard substitutes were imported, but our exports were more than 427,000,000 pounds. There was no oleomargarine imported, but our exports were more than 67,000,000 pounds. There was no oleo oil imported, but our exports were more than 530,000,000 pounds. Of neutral lard there were no imports, but 146,000,000 pounds of exports. Of corn oil there were no imports, but more than 65 000,000 pounds of exports. Of stearin (animal) there were 16,000,000 pounds of imports, but 90,000,000 pounds of exports. Of peanut oil there were 374,000,000 pounds imported and 6,513,000 pounds exported. Of soya-bean oil there were 1,088,000,000 pounds imported and 98,000,000 pounds exported in that form. That would be the reexports; that is, in the original form. Of coconut oil of non-Philippine origin there were 502,000,000 pounds imported and 159,000,000 pounds exported. Of coconut oil expressed from copra of non-Philippine origin there were 705,000,000 pounds imported. So that the imports were 2,800,000,000 pounds, and for the same period the exports were more than 6,500,000,000 pounds.

The total exports of American edible oils and fats for the seven years exceeded imports by 3,782,145,908 pounds, or an average annual excess of exports over imports of more than 540,000,000 pounds.

This report says:

The period from 1914 to 1920 is, of course, not comparable with what has gone before or will come after. Imports were larger then than they could ever be under normal conditions, because our country was supplying Europe with munitions of war and was itself at war. Vegetable oils were one of the most valuable items in the production of munitions of war.

For the year 1920 I find that the combined imports of oils and fats listed in the table above, also exclusive of Philippine production, amounted to 398,712,408 pounds, but the exports of hog lard, cottonseed oil, oleo oil, and so forth, as listed above, amounted to more than 1,043,000,000 pounds. I therefore think that the writer very justly complains of the statement of the Senator from North Dakota, because if you speak of imports and exports of vegetable oils only, without considering their interchangeability with animal fats, you must necessarily leave an incorrect impression in the mind of the auditor, when we take into account that the vegetable oils serve the place of animal fats, and vice versa; and when you take into account the fact, to use the Senator's expression, which I do not quite admit is accurate, that there are displacements, you must take into account the fact that if a displacement occurs it merely furnishes opportunity to fill the void or the vacancy by some other suitable product, and thus increase our exports. For instance, if we import soya-bean oil, or other low-grade vegetable oils, which we do not see fit to use for edible purposes because of their inferiority measured by the American product, the American cottonseed oil for instance, it simply means that those oils are used for industrial purposes instead, perhaps, of some of the higher grade American oils, and thus the higher grade American vegetable oils find a better market at better prices in European countries.

If the soya-bean oil and other low-grade vegetable oils produced in the Orient are not brought here and refined or used for industrial purposes they are absorbed readily by European buyers, we not being in competition if we have a high tariff, in consequence of which the American export market is to that degree impaired, and Europeans who are so greatly in need of edible fats will be compelled perhaps to use for edible purposes inferior grades of oil, which they would ordinarily use for industrial purposes, and thus take the place of our edible oil and to that extent diminish our edible exports.

The Senator, it seems to me, in the position which he is taking is advocating a policy which is injurious not only to the more than 700 companies engaged in the crushing of seeds, who have more than $200,000,000 invested, who have more than 32,000 employees, but is injurious to the farmers who grow the cotton seed and other vegetable products, the oils of which constitute a part of the edible products of the United States as well as of foreign countries.

Mr. LADD. Mr. President, I can hardly agree with the statement of the Senator. I am fairly familiar with the letter he read and the source of his information and the purpose of it. If we produced soya-bean oil in this country it would be identically the same as the soya-bean oil produced from the soya beans grown in Manchuria. As long as we are using in this country 337,000,000 pounds of soya-bean oil in a single year, as we did in 1919, after the war, as against only 28,000,000 pounds in 1912, it would seem to indicate that much more of our home-produced oils—our cottonseed, peanut, and linseed oils—have been displaced and this other oil has taken its place in the manufactures.

I was not comparing the animal oils. I shall compare those when we come to that question. I was, rather, dealing with the question of vegetable oils as they occur. The same is true of coconut oil. Four hundred and ninety million pounds of coconut oil in 1919 took the place of that much American oil that might have been produced by the American farmers.

Mr. FRELINGHUYSEN. Mr. President, I want to ask the Senator a question. He referred to the year 1919 as the high-water mark of importation of soya-bean oil. As I understand it, the emergency tariff act placed a duty of 2 cents a pound on soya-bean oil, did it not?

Mr. LADD. Yes.

Mr. FRELINGHUYSEN. What has been the importation since that duty was placed upon soya-bean oil?

Mr. LADD. For the three months following the enactment of the emergency tariff law, and that is the only data I have, it was 2,054,000 pounds. That was for the three months following the enactment of the emergency tariff law. Since that time I have no data.

Mr. FRELINGHUYSEN. Then for three months it was a little over 2,000,000 pounds, as against 195,000,000 pounds in the year 1919. Would it not seem to indicate, I ask the Senator from North Dakota, that the duty of 2 cents on this oil, which is not produced in this country, had diverted that oil to other markets?

Mr. LADD. Yes, Mr. President, but at the same time we are still importing of the foreign oil to take the place of the oils produced in this country, and instead of importing oils I would use the products produced by the American farmer, North, South, and West.

Mr. FRELINGHUYSEN. I want to take a fair view of the question. If an industry could be created that would supply the domestic market and not interfere with the tremendous business that the farmer has in edible fats, I would be willing to support a tariff for that purpose. But has the duty in any way encouraged the production of soya-bean oil or any increased planting of soya beans for the purpose of its use in commercial lines?

Mr. LADD. It is true that for the first time Ohio has now taken the lead and is operating a factory. In Chicago they have made preparations to handle the 1922 crop, and this has all come about under our tariff. For 28 years, or, as the Secretary of Agriculture said, for 30 years, we have been experimenting and have only reached a stage where we have begun to encourage production in this country.

Mr. FRELINGHUYSEN. But the Senator has not assured me that the amount of production has increased here. He has not given me any figures to show that this tremendous consumption of imported oil, utilized in the industries, can be supplied by our domestic productive area. It is only a small portion and, therefore, unless the farmer can produce in quantity sufficient to meet the needs of the industries and also to supply the refining industry of this country which utilizes the soya-bean oil for rerefining purposes and export, it would seem as if it was a direct tax until we could produce it in this country in sufficient quantities to meet the demand.

Mr. GOODING. Mr. President, I want to ask the Senator from New Jersey if he thinks we will ever produce soya beans unless we give them proper protection? The fact is that they

are grown in almost every State in the Union. They are one of the most important fertilizer crops that we grow. There is no question about growing enough to supply this country, and the whole world, so far as that is concerned. There is not a State in the Union in which they can not be grown, but they can not be grown and never will be grown by America until they are properly protected.

Mr. FRELINGHUYSEN. I am ready to answer the Senator. He asks a perfectly reasonable and fair question. No; I do not believe soya beans will ever be grown in this country. Soya beans are at the present time used for forage purposes and will continue to be used for forage purposes. I do not believe that the farmers of the West will ever find it profitable, even with the 4-cent duty, to grow a sufficient crop to supply the domestic market. More than that, if that is done it will reclaim the present tremendous export market that we have and it will deprive the farmer himself of his outlet for his edible hog lard and other products, because while that transition is going on it will drive these vegetable oils into the European market, and there they will meet the farmer of the West with his hog lard and the farmer of the South with his cottonseed oil.

I am perfectly willing to go to a certain length, as the bill provides, and to put a duty upon the vegetable oils where they grow in edible quantity. That is what the committee did. But I am unwilling to put a tax of millions of dollars upon the industries of the country and at the same time to deprive the farmer himself of his export market. I am a protectionist, but I do not believe in this case as does the Senator from Idaho, who is also a good protectionist. I want to go along with him in his policy of protection, but I do not believe that the optimism which he has for this product will ever be realized.

Mr. GOODING. The Senator goes along very nicely as long as it does not interfere with some manufacturing concern over in New Jersey. There he stops all the time.

Mr. FRELINGHUYSEN. That is manifestly unfair, and the Senator knows it. I have voted, religiously and consistently, for the duties on the farm products of the West; but when I see a duty placed upon a product that I do not believe will be manufactured here, which will simply be a tax, I can not go along with the Senator. I ask the Senator if he believes that any of the duties which have been imposed upon the industries of the East have been unfair, and which he is unwilling to support? I am supporting this proposition and I am supporting the committee proposition.

Mr. GOODING. Mr. President, I want a spirit of fairness all the way round. That is all I am asking. The people who are asking for soya-bean oil to be placed on the free list are none other than the soap people of the country. The purpose, if the Senator will permit me, is to bring in soya beans with practically no duty at all upon them and beat down the prices of the American vegetable oils and soya beans and soya-bean oil in this country. That is the purpose.

I happened to be present when Mr. Heldman was presenting his testimony in the interest of a duty on soya beans, when he told the story of the production of soya beans in Manchuria, where, after the crop is harvested, it is hauled to the seaport from 150 to 200 miles distant. The natives start out with a few sacks of soya beans on a wooden cart with wooden axles, with a driver and a greaser, and they proceed to the seaport to sell their soya beans. When they reach a tavern at night, the droppings from the horses pay for the lodging of the driver and the attendant. That is the condition, if you please, which the American farmer is forced to compete with, as evidenced by the natives in Manchuria growing soya beans. Of course we will not grow soya beans in America as long as we have to meet that condition under free trade. We will only grow them when we get a proper protection, and that is all we are asking for in this instance.

Mr. McCUMBER. Where did the hired man carry his wages?

Mr. GOODING. I do not know whether he had a safe along with him for that purpose or not, and he did not have to stop in a hotel in America overnight or it would have taken all the soya beans that he could carry to market to pay his hotel bill.

Mr. FRELINGHUYSEN. Mr. President, I have heard before this argument regarding the soap manufacturer utilizing the soya bean and vegetable oils. It is true that he does. It is also true that he purchases large quantities of the farmer's products. It is also true that he asks for a moderate protection on certain of his products. But I venture to say that the most important of the soap maker's business in the United States is his export business, and that he very little cares about the duty on the lower-cost products of laundry soap. I venture to say he would be willing to have it removed. But he is concerned with the cost of his raw material. I know that if there is a duty placed upon those raw materials which are not produced here, it increases the cost of production or affects his export trade, because Europe can buy those raw materials and meet his product in this market with free raw materials on which he pays a duty.

Mr. GOODING. Mr. President, I realize that in reexporting the soap makers will get their duty refunded, of course, so it will not interfere with the soap makers in their export trade at all. There is a general provision in the bill which takes care of that matter. There is a general provision of the bill relative to that.

Mr. FRELINGHUYSEN. Mr. President, whenever it becomes necessary for a manufacturer to go to a customhouse in order to get a refund, it necessitates an increased overhead charge, and every transaction of that character increases the cost of production. That is the reason why the provision for a refund, or a drawback, as it is called, is not attractive so far as this immediate question is concerned. I desire to say to the Senator from Idaho [Mr. GOODING] that the point is this: This duty has been placed upon this commodity in the hope that under the provisions of the pending bill the western farmer may raise soya beans and that some one will build factories in which they may be crushed. That is a hope which, in my opinion, is not to be realized, because other crops are more profitable than are soya beans. If America is not to be an outlet for vegetable oils, it simply means that Europe will be, and the result will be to back up the production of 750,000 barrels, I think it is, of cottonseed oil that is exported. I am a protectionist; I wish to protect every industry that may be fostered in this country; but when the imposition of a duty would affect the farmers so seriously, I do not believe in such imposition.

Mr. GOODING. Will the Senator yield to me?

Mr. FRELINGHUYSEN. I refuse to yield further. The Senator from Idaho may make his speech after I shall have concluded.

The PRESIDING OFFICER. The Senator from New Jersey declines to yield further.

Mr. FRELINGHUYSEN. Mr. President, the complaint of the milk producers, the dairy farmers of the country, who came before the Committee on Finance was that these vegetable oils were largely used in food products, and for that reason they wanted a tariff against adulterations such as filled milk and butter substitutes. In the Committee on Finance I supported that policy, and a duty was imposed, although such action is in face of the experience of three months of the emergency tariff law which shows that our imports have dropped practically to a negligible quantity. I took the position, however, that where vegetable oils went into the industry throughout the country and were not produced here the imposition of a duty on them increased the cost of consumption, and, therefore, that we should not impose a duty. That is the position of the committee and that is the position I am defending. I do not believe it is either wise or practicable or that it will help the farmer one iota to impose this proposed duty without the bonding provision on these vegetable oils. I repeat, I am defending the committee's position. I believe that if the duty be imposed without the bonding provision it will seriously affect the market for the farmers' edible products, such as hog lard and cottonseed oil.

I still further believe—and I have believed all along—that, as to the vegetable oils which are produced only in foreign countries it would be better that they should be admitted free of duty.

Mr. LADD. Under date of May 19, 1922, Wallace's Farmer has an editorial, of which I merely desire to read a few words as follows:

> It is more important that there be a tariff of 2 or 3 cents a pound on those tropical fats and oils that are used for nonedible or soap purposes than that there be a tariff of 3 or 4 cents a pound on the edible fats and oils.

The editorial further on says:

> Such a tariff will be a very real benefit to the farmers of the cotton South, the Corn Belt, and the cattle country of the West.

I ask that the editorial may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, that order will be made.

The editorial is as follows:

PUT A TARIFF ON TROPICAL OILS USED FOR SOAP.

The Senate tariff bill which is now up for discussion provides for a tariff of 3 to 4 cents a pound on such vegetable oils as coconut oil, soy-bean oil, etc. It is provided, however, that in case these oils are used for the making of soap, or other nonedible purposes, that they can come in free. This means that we shall import into the United States every year free of tariff charges several hundred million pounds of coconut oil and soy-bean oil—or two or three times as much as we imported of these oils previous to the war. During the war, when

Germany, England, and Holland lost their grip on the cheap tropical oil trade of the Orient, the American soap manufacturers stepped in. And now they are using about three times as much coconut oil and soy-bean oil in the manufacture of soap as they did before the war. The coconut oil and soy-bean oil is being substituted in soap manufacture for home-grown oils and fats, such as tallow, lard, cottonseed oil, corn oil, etc.

The United States can produce her own fats. We don't want to make the mistake of Germany and build up an agriculture which in time of war can not be rapidly modified to furnish our full supplies of fats at home. Our soap manufacturers should be taught again to depend as largely on the fats and oils coming from American farms as they did before the war.

It is more important that there be a tariff of 2 or 3 cents a pound on those tropical fats and oils that are used for nonedible or soap purposes than that there be a tariff of 3 or 4 cents a pound on the edible fats and oils. As a matter of fact, there is enough coconut oil coming in free from the Philippine Islands every year to supply the demand for edible fats and oils. Even more important than the tariff on hides is the tariff on tropical oils used for soap purposes. Such a tariff will be a very real benefit to the farmers of the cotton South, the Corn Belt, and the cattle country of the West.

Mr. McCUMBER. Mr. President, we are climbing this soya bean hill, but it seems to have been soaped down before we got to it; so I hope we shall go back and consider the matter on which we are to vote, I hope, in a very short time. Before doing so, however, I wish to correct an error which I think was made by the junior Senator from Massachusetts [Mr. WALSH] in arriving at the conclusion that the crushers of flaxseed, the manufacturers of linseed oil, after having sold and exported the linseed cake and meal would receive practically a rebate of 10 cents, which would reduce the duty paid by them to 30 cents instead of 40 cents. In arriving at that conclusion the Senator from Massachusetts, of course, has to assume that the crushers export every pound of the meal and of the by-products from their mills. As a matter of fact, I understand they do not export more than about 45 per cent, as shown in the last four or five years by the figures of our exportations. Therefore, the rebate the crushers would get would only have been upon above 45 per cent of their product. Even if it were 50 per cent, the rebate would only be half of what the Senator from Massachusetts has assumed it would be, and would amount to about only 5 cents per bushel instead of 10 cents per bushel.

Mr. WALSH of Massachusetts. My authority for the statement is the brief of Spencer Kellogg & Sons, who are one of the importing flaxseed crushers. They state plainly in the beginning of their brief that these drawbacks on the exportation of linseed cake, on which there is no duty itself, amounted to 6½ cents rebate on each bushel of flaxseed which they imported, and which would be equal to 25 per cent of the duty which they paid when importing the flaxseed.

Mr. McCUMBER. That is all right, but the Senator will see that if the manufacturers of linseed oil only exported about 45 per cent of what they have imported, they could get a rebate not on the whole but only on the 45 per cent; and the 45 per cent would be 4½ cents per bushel instead of 10 cents per bushel, the estimate as made by the Senator from Massachusetts. I simply wish to make that correction. The Senator's figures would be accurate if all of the product were exported and if the manufacturers received the full hundred per cent; but they receive only 99 per cent, and they receive that on about 45 per cent of the importations and not upon 100 per cent.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WALSH of Massachusetts. Of course, the figures I gave were based upon the exportations under the Underwood law, under which no drawback was allowed; in fact, there has been no drawback since the Payne-Aldrich law. Of course, all of the flaxseed cake has not been exported, but the right to export it exists, and the greater the quantity which is exported the larger would be the drawback, and it is possible on previous estimates that it might reach 25 per cent.

Mr. President, I have waited patiently to hear some explanation for this very high compensatory duty, a duty of 36½ cents upon a bushel of flaxseed when converted into oil, but I have not heard any explanation, and I can not let this debate close without again protesting against such a tremendous subsidy to the flaxseed crushers of the country.

Let me repeat the figures very briefly. The crushers' subsidy under the Underwood law was 5 cents; the crushers' subsidy under the Payne-Aldrich law was 19 cents; the crushers' subsidy under the House provisions of this bill is 29 cents, and the Senate amendment makes the crushers' subsidy 36½ cents per bushel of flaxseed. It is indefensible.

Either the Underwood law did them a tremendous injustice, the Payne-Aldrich law did them an injustice, and the House provision did them an injustice, or we are giving the crushers a gift, a subsidy of 36½ cents, that is not warranted or justified by the facts. The farmer gets only 30 cents a bushel, while the crushers get 36½ cents for simply crushing the seed into oil, and the public must pay 66½ cents per bushel increased price for flaxseed when purchased as linseed oil. This is one of the worst provisions of the pending bill. It can not be justified. It involves an increase from 5 cents under the present law to 36½ cents, an increase of nearly 700 per cent.

I am frank enough to say that under the emergency tariff the crushers were not treated fairly, for there was no provision made to give them an increased compensatory duty, the emergency tariff act merely increasing the duty upon flaxseed and not increasing the duty to the crushers. I am willing to be fair to them, but I can not see how any Senator in this Chamber can justify taxing the American people 36½ cents per bushel simply for the process of crushing flaxseed into linseed oil.

I am going to repeat the figures before the vote is taken. The farmers will get out of this protection $3,600,000, if this duty shall be reflected in increased prices to the farmer. The Government will get $4,200,000 revenue on the importations, and the crushers, after paying the farmers their $3,600,000 and the Government its $4,200,000, will put in their pockets $9,500,000. Senators talk about protecting the farmers, and yet you give the farmers $3,600,000 and give the crushers $9,500,000, and the thousands and tens of thousands of farmers and other consumers will be compelled to pay the subsidy given to the crushers.

The cost of labor in the linseed crushing mills of this country is only 2½ per cent of the cost of production. The duty proposed is a gift, pure and simple, and every paint manufacturer and user of paint in this country, and every manufacturer of other products in which linseed oil is used, know that to be the fact. As the Senator from New Jersey said, their attitude is not so much on account of the business they do in America, where possibly they can obtain increased prices, but they know that their export business—and our manufacturers of paint and linoleum and oilcloth are doing a very extensive export business—when these rates are pyramided on the finished product will make prices prohibitive for export purposes.

Now, I am going merely to quote a few sentences from letters addressed to me from the crushers of other oil seeds, and each of them says that there is absolutely no need of a protective duty upon these vegetable oils. A compensatory duty may be necessary by reason of the duties levied upon the raw product, but they do not want protection and they do not need it, because there is practically no difference—little difference, if any—between the cost of crushing abroad and in this country.

The first letter that I have is from Aspegren & Co., of New York. The writer states:

I am interested in a great many mills in the South, and I have practically all my money invested in same, which I mention so that you can realize the importance of the subject to me. The mills I am interested in are located in Virginia, Louisiana, North Carolina, Georgia, and Texas.

I am not familiar with the linseed oil, castor oil, and rapeseed oil business, but I am fully familiar with the cottonseed oil, soya-bean oil, peanut oil, and coconut-oil crushing.

The cost of crushing oil seeds abroad and in the United States is a comparatively small one, the Bureau of Census, I believe, giving the cost at from 2½ to 4 per cent of the value of the product. It is therefore a negiligible factor, and we have so many other advantages that we can easily offset the small difference in cost.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Louisiana?

Mr. WALSH of Massachusetts. I do.

Mr. BROUSSARD. From whom is this letter?

Mr. WALSH of Massachusetts. That letter is from Aspegren & Co., of New York, and is signed by John Aspegren, president of the company.

Another letter I have is from the French Oil Mill Machinery Co., who are cottonseed crushers, located at Piqua, Ohio:

We are in receipt of your favor of the 13th in reference to the relative difficulty in crushing linseed, cotton seed, and copra. There is no great difficulty in crushing either material. The method of preparation is considerably different. Cotton seed is the most complicated, requiring not only the cleaning of the seed but also the linting and separating of the hulls from the meats.

And there is a lower duty upon cottonseed oil than there is upon linseed oil, though the process is much more difficult and much more expensive.

With either linseed or copra it is simply a cleaning process preparatory for the crushing, and the linting and hulling operations are not required.

Another letter from Mr. Albert G. Kahn, of Little Rock, Ark., says:

The American vegetable crude-oil mills do not need to be subsidized by a tariff in order to operate successfully. In fact, these mills have no direct concern in a tariff. The function which they perform is a manufacturing one. They are presumed to buy their raw materials,

crush them, and sell the manufactured products at a margin sufficient to reimburse them for their service. You will therefore see that they are only interested in maintaining this margin or toll. What arguments have recently been made in favor of a tariff by some cottonseed-oil mill operators are presumably in the interest of the American farmer or producer of oil-bearing materials.

I personally think that even from the farmer's point of view, so long as we have an exportable surplus of American edible fats, a tariff would be a boomerang.

Yours very truly, A. G. KAHN.

Another letter from the South Texas Cotton Oil Co., of Houston, Tex.:

Answering question in your letter of May 27, I do not believe American vegetable-oil mills need to be subsidized by a tariff in order to operate successfully, if for no other reason than that the industry has grown to its present size and importance in the United States without any tariff.

Another letter from the Palestine Oil & Manufacturing Co., of Palestine, Tex.:

Without going into any exhaustive argument, I will answer the second paragraph of your letter by stating most emphatically that I do not think American vegetable-oil mills need to be subsidized by a tariff in order to operate successfully. On the other hand, I believe the Fordney-McCumber tariff bill will work a hardship on not only our industry but all industries producing edible fats, including manufacturers of finished edible products, the cotton raiser, the cattle and hog raisers, and I might say the soap industry.

Another letter, which I will not take the time to read, from the American Cotton Oil Co., of New York, is to the same effect. I ask unanimous consent to have it printed as a part of my remarks:

The PRESIDING OFFICER. Without objection, it will be so ordered.

The letter referred to is as follows:

THE AMERICAN COTTON OIL CO.,
New York, May 31, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I beg to acknowledge your letter of May 27, requesting information as to our views concerning the necessity of tariff protection for the American oilseeds-crushing industry.

In reply we beg to advise that the operation of crushing oilseeds and oleaginous materials is a comparatively simple process of separating the oil content of oilseeds and oleaginous materials from the fibrous content, which operation is almost entirely a mechanical one.

The American cottonseed-oil industry, which is now composed of over 700 mills, has been built up without any tariff protection, and the copra-crushing industry in the United States has also been built up without any tariff protection. The labor cost in crushing cotton seed is approximately 4 per cent of the value of the finished product, and considering the comparatively small factor of labor cost it is clear that if the foreign labor cost was only 50 per cent of the American cost, that the difference in the cost of crushing oilseeds here and abroad would not exceed 2 per cent of the value of the finished products. However, when oilseeds are crushed in the United States a great advantage is gained, because of the fact that the shipment of these oils from foreign oil mills entails considerable loss in leakage as compared with no loss when the oil is transported to the United States in the form of seed.

The American industry, on account of its economical facilities for distribution, also enjoys further advantages, the sum total of which, in our opinion, more than offsets the small difference which may exist between the labor cost in foreign mills and the labor cost in American mills. We own 24 cottonseed oil mills, scattered throughout the cotton-growing States, and these mills have always been operated by us without any tariff protection whatever. There has been no change in the world situation which would now cause us to advocate tariff protection for American vegetable oil mills, as we believe they are in a position to compete with foreign vegetable oil mills.

If I can be of any further assistance I shall be very glad to have you advise me.

Respectfully yours, W. J. CASSADY,
Vice President.

Mr. WALSH of Massachusetts. Mr. President, these letters show that the difference in the cost of crushing abroad and in this country is very insignificant. They show that the labor cost is a very insignificant item in the total cost of production, and they show that this compensatory duty of 36½ cents per bushel upon the linseed oil in a bushel of flaxseed can not be justified, can not be defended; and I say it is an outrage to tax the American people 66½ cents on every bushel of flaxseed when they purchase it as linseed oil.

Mr. BROUSSARD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Louisiana?

Mr. WALSH of Massachusetts. I do.

Mr. BROUSSARD. May I inquire of the Senator whether he has read all of the letters from the crushing companies?

Mr. WALSH of Massachusetts. I have read only part of them; only the portion that refers to the difference in cost.

Mr. BROUSSARD. Has the Senator any letters from soap manufacturers?

Mr. WALSH of Massachusetts. I have letters from soap manufacturers, yes; but I have not read them, because I have myself been interested in only one item in this paragraph—flaxseed and linseed oil. The Senator from Utah [Mr. KING] has charge of the other items, so I have confined my discussion entirely to flaxseed; and, as the Senator knows, linseed oil is not used in making soap. Some of the other vegetable oils are used in soap making.

Mr. BROUSSARD. I was led to ask the question on account of the fact that the Senator read letters only from cottonseed crushers.

Mr. WALSH of Massachusetts. Simply to learn from them what I had been informed of, and I wanted to have it confirmed, that the most expensive seed to crush is the cotton seed. I think the Senator will agree with me in that; and yet the rate here on cottonseed oil is less than on linseed oil, which is made by a very much simpler process, does not require nearly as much expense, and the labor item is very much less; and yet here the rate is higher than the rate upon cottonseed oil.

Mr. President, I want to be fair about this. I consider this duty one of the most outrageous in the whole agricultural schedule. I think it is the most indefensible. I think it is an outrage to burden the industries of this country and the consumers who must use linseed oil with this excessive duty.

I do not think it can be defended, and I think the committee ought not to give such a high compensatory duty to 14 crushers who have been under indictment for violating the laws of the land and seeking to control prices, and who will be the beneficiaries of this increased protective tariff duty. It seems to me that there is absolutely no justification for this increased duty to the crushers.

I have not said much about flaxseed. I do not think it is of nearly so much importance as the duty given to the crushers. Let the farmers know that when they vote for this duty for the crushers they vote about 30 cents protection to themselves and 66 cents protection to the crushers who crush the seed into oil. It can not be justified.

Mr. President, I ask permission to have printed at the end of my remarks a table showing the differentials between duties on linseed oil and flaxseed in various tariff acts.

There being no objection, the table referred to was ordered to be printed in the RECORD, as follows:

Table showing differentials between duties on linseed oil and flaxseed in various tariff acts.

	Cent per bushel.
Senate rate (H. R. 7456):	
Flaxseed, 40 cents per bushel (less drawback on cake)	30
Linseed oil, 3½ cents per pound (19 pounds per bushel)	66½
Crushers' subsidy	36½
House rate (H. R. 7456):	
Flaxseed, 25 cents per bushel (less drawback on cake)	18½
Linseed oil, 2½ cents per pound (19 pounds per bushel)	47½
Crushers' subsidy	29
Emergency act:	
Flaxseed, 30 cents per bushel (no drawback)	30
Linseed oil, 10 cents per gallon (7½ pounds)	25
Crushers' penalty	5
Underwood Act:	
Flaxseed, 20 cents per bushel (no drawback)	20
Linseed oil, 10 cents per gallon (7½ pounds)	25
Crushers' protection	5
Payne-Aldrich Act:	
Flaxseed, 25 cents per bushel (less drawback on cake)	18½
Linseed oil, 15 cents per gallon (7½ pounds)	37½
Crushers' subsidy	19

House rate (H. R. 7456) granted linseed-oil crushers increase in subsidy between Underwood differentials of 5 cents per bushel and House differential of 29 cents per bushel, or an increase of 480 per cent.

Senate rate (H. R. 7456) grants linseed-oil crushers increase in subsidy between 5 cents per bushel in Underwood Act and differential in the Senate rates of 36½ cents per bushel, or an increase in the crushers' subsidy of 31½ cents per bushel, or 630 per cent increase over the Underwood differential, whereas farmers' duty on flaxseed has only been increased by 10 cents per bushel, or 50 per cent increase.

The Underwood differential of 5 cents per bushel gave the crushers a 98½ per cent monopoly on imports of linseed oil by forcing its importation to this extent in the form of flaxseed. Why increase the 5 cents per bushel protection for the crushers by 630 per cent when the 5-cent differential gave them a monopoly?

Mr. McCUMBER. Mr. President, I desire to place in the RECORD three exhibits from the testimony which was presented to the Finance Committee.

Exhibit A is the cost of production of linseed oil in the United States from Argentine linseed.

Exhibit B is the cost of production of linseed oil in Europe from Argentine linseed.

Exhibit C is a calculation of drawback on exported oil cake manufactured from 1 bushel of imported linseed oil dutiable at 40 cents per bushel of pure seed.

All three of these take as the basis the landed cost in the port of New York, and the three together show, after making every allowance for drawback, and so forth, that there is a necessity for a duty of 3.4 cents per pound. The committee, to make it an even figure, placed it at 3½ cents, or 3.5 cents per pound.

The PRESIDING OFFICER. The Senator from North Dakota asks unanimous consent to have printed in the RECORD as

part of his remarks the documents which he has described. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

FLAXSEED CRUSHERS' TARIFF COMMITTEE,
March 28, 1922.

Hon. P. J. MCCUMBER,
Chairman Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR: The flaxseed crushers in the United States beg to present herewith their exhibits, dated March 24, 1922.

Exhibit A: Cost of production of linseed oil in the United States from Argentine linseed.

Exhibit B: Cost of production of linseed oil in Europe from Argentine linseed.

Exhibit C: Calculation of drawback on exported oil cake manufactured from 1 bushel imported linseed dutiable at 40 cents per bushel of pure seed.

Accordingly we submit that if imported flaxseed is made dutiable at 40 cents per bushel, then—

Linseed oil should be made dutiable at 3½ cents per pound if without provision for drawback allowance for exported oil cake.

If provision for drawback on oil cake is made in the pending tariff law linseed oil should be made dutiable at 3 cents per pound.

Exhibits A and B herewith show that at the same base price for imported linseed from Argentina the conversion costs in the United States are 3.4 cents per pound of oil higher than in Europe.

Exhibit C herewith shows drawback on exported oil cake if provided by law is the equivalent of 3.6 cents per gallon, or forty-eight one-hundredths cent per pound of oil—hence a difference of one-half cent per pound in the above proposlas for duty on linseed oil.

The method of our calculations and the figures incorporated in the accompanying statements have been submitted to Messrs. De Long and Zapoleon, experts of the United States Tariff Commission.

Very respectfully,

FLAXSEED CRUSHERS' TARIFF COMMITTEE,
C. T. NOLAN, *Member.*

(Inclosure as indicated.)

MARCH 24, 1922.

EXHIBIT A.

Cost of production of linseed oil in the United States from Argentine linseed.

	Per bushel.
Price of Argentine linseed at New York, this date, for but 96 per cent purity	$2.18
4 per cent additional to bring cost to 100 per cent seed purity to conform to oil-yield calculations	.0872
Duty added to cost of seed	.40
Manufacturers (United States of America) cost of conversion of seed into oil and oil cake packed, sold, and ready to ship, not inclusive of plant depreciation nor of trade discount, cartage, and freight	.50
	3.1672
Less value of oil-cake product, 37 pounds, at normal price, $30 per 2,000 pounds	.555
	2.6122

	Per gallon.
Divisor, 19 pounds of oil, the yield from 1 bushel of seed equals cost of 1 pound of oil, $0.1375, or per gallon of 7.5 pounds	$1.03125
Cost of linseed oil manufactured in Europe, including its transportation in barrels to United States, Atlantic seaports (see accompanying statement B)	.7760
Difference per gallon	.25525
Difference in conversion costs per pound of oil	.034

EXHIBIT B.

Cost of production of linseed oil in Europe from Argentine linseed.

	Per bushel.
Cost of Argentine linseed calculated the same in Europe as in New York this date, basis 96 per cent purity	$2.18
Four per cent additional to bring cost to 100 per cent seed purity to conform to oil-yield calculations	.0872
Duty, none	.00
Manufacturers (European) cost of conversion of seed into oil filled into barrels, sold and ready to ship	.25
	2.5172
Less value of oil-cake product 37 pounds, at normal price $30 per 2,000 pounds f. o. b. steamer, New York basis, equivalent in England to $36.75 per 2,000 pounds	.68
	1.8372

	Per gallon.
Divisor—19 pounds of oil, the yield from one bushel of seed, equals cost of one pound of oil $0.1375, or per gallon of 7.5 pounds	$0.7275
Plus transportation of oil in barrels to United States Atlantic seaports	.0485
Total cost to United States Atlantic seaports per gallon of oil	.7760
Difference in conversion costs per pound of oil	.034

NOTE.—Where international money exchange rate enters in the above the calculation is at $4.40 per pound sterling—current exchange rate.

EXHIBIT C.

Calculation of drawback on exported oil cake manufactured from 1 bushel imported linseed dutiable at 40 cents per bushel of pure seed.

	Bushel.	Per cent.
Linseed oil yield, 19 pounds: value, 10 cents per pound	$1.90	77.4
Oil cake yield, 37 pounds; value, 1½ cents per pound	.555	22.6
	2.455	100.0

Duty on cake yield from 1 bushel of linseed, 22.6 per cent of 40 cents, is $0.0904, which reduced to oil equivalent per pound is 0.48 cents per pound, or 3.6 cents per gallon.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. On line 14, page 111, it is proposed to strike out the word "pound," and to insert the same word with a semicolon and the following words:

Soya beans, four-tenths of 1 cent per pound; cotton seed, one-third of 1 cent per pound: *Provided*, That no allowance shall be made for dirt or other impurities in seed provided for in this paragraph.

Mr. LADD obtained the floor.

Mr. WALSH of Massachusetts. Mr. President, I was about to ask that the Senator from Utah [Mr. KING] be sent for, because he is interested in this item. May I ask the senior Senator from North Dakota [Mr. MCCUMBER] whether he intends to take up, immediately following the action upon paragraph 760, paragraph 50, which deals with the oils?

Mr. MCCUMBER. Yes, Mr. President.

Mr. WALSH of Massachusetts. I ask because I want to make a motion to reduce the rate on linseed oil. That will be taken up immediately?

Mr. MCCUMBER. Yes.

Mr. LADD. Mr. President, I move to amend line 14 by striking out "four-tenths of 1 cent" and substituting therefor "1½ cents."

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Dakota [Mr. LADD] to the amendment of the committee.

Mr. WALSH of Massachusetts. Let the amendment be stated, please.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to amend the committee amendment on lines 14 and 15 by striking out, after the words "soya beans," the words "four-tenths of 1 cent," and in lieu thereof inserting "1½ cents."

Mr. WALSH of Massachusetts. Mr. President, in view of the fact that the Senator from Utah [Mr. KING] is not in the Chamber I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Heflin	Moses	Simmons
Borah	Johnson	Nelson	Smith
Broussard	Jones, N. Mex.	New	Smoot
Bursum	Jones, Wash.	Newberry	Spencer
Calder	Kellogg	Nicholson	Sterling
Cameron	Kendrick	Norbeck	Sutherland
Capper	King	Oddie	Townsend
Colt	Ladd	Overman	Trammell
Curtis	La Follette	Pepper	Underwood
Dial	Lenroot	Phipps	Wadsworth
Ernst	Lodge	Poindexter	Walsh, Mass.
Frelinghuysen	McCumber	Ransdell	Walsh, Mont.
Gooding	McKinley	Sheppard	Watson, Ind.
Hale	McNary	Shortridge	Willis

The PRESIDING OFFICER. Fifty-six Senators having answered to their names, a quorum is present. The question is on the amendment offered by the Senator from North Dakota [Mr. LADD] to the committee amendment, which the Secretary will again report.

The ASSISTANT SECRETARY. In the amendment proposed by the committee, page 111, lines 14 and 15, after the words "soya beans," strike out "four-tenths of 1 cent," and insert in lieu thereof "1½ cents."

Mr. KING. Mr. President, I presume that no appeals to the blocs, groups, alliances, and confederations on the other side, who perhaps get some assistance on this side, will affect the result with respect to the matter under consideration.

A few moments ago the Senator from North Dakota made complaint because in describing the pending bill I had employed some of the language of Mr. Roosevelt in describing Republican tariff bills, Senator Dolliver in describing the Payne-Aldrich bill, and the distinguished Senator from Wisconsin [Mr. LA FOLLETTE] and other eminent Republicans in describing former Republican tariff bills. The Senator from North Dakota would be very glad if I would employ the adjective "good" and say that this was a good tariff bill. He would be more gratified if I should say it was a just tariff bill; but if I should say either I would be wholly inaccurate. It is neither good nor just. It is bad and it is unjust, and I expect my friend would complain about those two adjectives.

It is astonishing the point of view we entertain. Any Republican or Democrat who says that this bill is a delightful, a beautiful, a delectable, and a just measure would sing a song that would come with great delight to the ears of the able Senator from North Dakota. But the able Senator does

not like to have anybody tell the truth about this bill. To call it an inequitable bill is exceedingly offensive to him. He does not like that adjective. He will hear the adjective now; he will hear it when he retires to the quietude of his private life. He will hear it many years after this, because the American people believe that it is a bad bill, an inequitable bill, and that belief will be confirmed after the bill goes into operation.

We are confronted with an amendment, recommended, I am told, by the committee, to increase the rates reported by the bill, after due consideration, I suppose, from four-tenths of a cent to a cent and a half, which would be an increase of nearly 300 per cent.

Mr. SMOOT. It is not a committee amendment.

Mr. KING. Then I was laboring under a misapprehension. I congratulate the committee upon their moderation. May I inquire whether the committee is suggesting this at all?

Mr. SMOOT. The junior Senator from North Dakota offered the amendment.

Mr. KING. With that understanding, I do not think I shall take the time to discuss it. I understood the committee itself was offering this amendment.

Mr. McCUMBER. The Senator may possibly omit one or two of his adjectives.

Mr. KING. No; I still say it is a bad bill, because even if this amendment should not prevail there are so many other bad provisions in the bill that I would not want to withdraw the criticism heretofore made. But in view of the fact that this is not offered by the committee I can not believe it will get any support. I shall not, therefore, take any of the time of the Senate to discuss it.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Dakota to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now is on the committee amendment.

Mr. McCUMBER. Mr. President, the committee moves to amend this amendment by striking out, after the word "pound," on line 16, page 11, the balance of the said line and all of line 17; in other words, to strike out the words: "*Provided*, That no allowance shall be made for dirt or other impurities in seed provided for in this paragraph." That would leave the matter so that the screenings and impurities, instead of bearing the higher rate, would bear a 10 per cent duty.

The PRESIDING OFFICER. The chairman of the committee desires to modify his amendment, and the question, therefore, is on the committee amendment as modified.

Mr. GOODING. Mr. President, I do not think those who have been supporting the amendment offered by the Senator from North Dakota understood just what they were voting for. I am not finding any fault with the Chair at all, who is perfectly fair, but we expected a roll call. Possibly we are to blame for not calling for it. I ask the chairman of the committee if he will permit a reconsideration of the vote just taken on soya beans?

Mr. McCUMBER. I have no objection.

Mr. WALSH of Massachusetts. Neither have I any objection.

Mr. GOODING. Then I would like to discuss the amendment of the Senator from North Dakota relating to soya beans for just a few minutes.

The PRESIDING OFFICER. Let the parliamentary situation be straightened out. Without objection, the vote whereby the amendment to the amendment, on page 111, line 14, was disagreed to will be reconsidered.

Mr. WALSH of Massachusetts. Then the question is on the amendment offered by the Senator from North Dakota [Mr. LADD] to the Committee amendment?

The PRESIDING OFFICER. The question is on the amendment offered by the junior Senator from North Dakota [Mr. LADD] to the committee amendment, on which the Senator from Idaho will be heard.

Mr. GOODING. Mr. President, I doubt if there is any duty in this bill more important to the American farmer than the duty that is asked for by the Senator from North Dakota on soya beans.

Just a few days ago I placed in the RECORD a statement of farm changes that have been taking place in this country. In the year 1920, as I remember, 60,000 men, women, and children left the farms in the States of Ohio, New York, and Michigan simply because the soil was so poor that they were unable to earn a living.

Soya beans are coming into a great use in this country as fertilizer. Possibly no other crop is doing more to bring back the fertility of the soil in America than soya beans in those States where they are used, and it is a bean grown to a very large extent now in many of the States.

In the South, in those sections where the boll weevil has made it impossible to grow cotton any longer, soya beans are being grown to quite an extent, and since the passage of the emergency tariff law, which gave 2 cents a pound on vegetable oil and soya bean oil, we are establishing crushers in this country, and we are growing beans for seed.

I have here an article appearing in the Country Gentleman, which I shall not read much of, but I shall ask that it be printed in the RECORD, because to my mind it is a very good article. The title of the article is "More Soys," and it is written by J. Sidney Cates. I read just a paragraph:

MANY FARMERS SEE IN THE BEANS A SOUND NEW MONEY CROP.

Last year witnessed a 20 per cent increase in acreage of soya beans planted for seed, and the harvested crop totaled but slightly under 3,000,000 bushels. The Corn Belt seems suddenly to have discovered the possibilities of the soy as a money crop, just as six or eight years ago the farmers out there found the great value of beans for growing along with corn for soil improvement and for hogging down.

I ask that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Country Gentleman, April 1, 1922.]

MORE SOYS—MANY FARMERS SEE IN THE BEANS A SOUND NEW MONEY CROP.

(By J. Sidney Cates.)

Last year witnessed a 20 per cent increase in acreage of soy beans planted for seed, and the harvested crop totaled but slightly under 3,000,000 bushels. The Corn Belt seems suddenly to have discovered the possibility of the soy as a money crop, just as six or eight years ago the farmers out there found the great value of beans for growing along with corn, for soil improvement, and for hogging down.

Recently I journeyed into Illinois to find out how the men on the farms were handling this new money crop, and what it was displacing in the old and well-established systems. At the office of C. H. Oathouse, farm adviser for Champaign County, I interrupted a conference with four or five farmers who were arranging for a cooperative shipment of a car of beans to a large paint and oil manufacturer at Cleveland.

"There is a big surplus of beans in the county," explained Mr. Oathouse, "although we estimate the area planted for seed here next season is going to increase fivefold. We are, however, having no difficulty at all in finding a market. There will be ample oil-mill facilities near by for handling any quantity of beans we may produce."

"Our new rotation to include soy beans eliminates oats," explained one of the farmers. "We are working a four-field system—corn, soy beans, wheat, pasture; the pasture being made up of alsike, sweet clover, and timothy. The oat crop has never been satisfactory, but nothing else seemed to fit in after corn.

"With the better varieties of beans which have come on the market the past few years the problem seems to be solved. And there is not such a rush of early spring work as with the oat crop. After corn is planted and before it requires cultivation the bean crop is put out. We plant everything solid with a grain drill, using about a bushel of beans to the acre. Planting in rows and cultivating, as is done so extensively in North Carolina, does not give such good results in yield here as does the plan we follow; and besides, the land is left ridged to some extent when the crop is removed and takes considerable work to get in shape for wheat which follows."

"How do you handle the weed problem?" I inquired, going on to explain that experience in most sections showed that the beans started off so slowly in the early season that weeds and grass often choked the broadcast crop and seriously cut down yields.

"We have worked up our own system of keeping the crop clean," spoke up Mr. Oathouse. "To begin with, we harrow the land well before starting to seed with the grain drill. At this time a lot of weed seeds have already germinated and are killed. Then, when the beans break through the ground, we go over it with a weeder. It does not seem to do any damage to the beans, and is very effective in cleaning out grass, provided the land is not baked to a hard crust. On baked land what we call a rotary hoe is the tool to do the business. You might compare this instrument to a disk harrow with just the spokes of the wheel instead of solid disks. The rotary hoe can be used until the beans are 6 to 8 inches high, and it does not seem to injure them at all. After that time they will smother weeds. When harvest time comes we go in with an ordinary grain binder."

"Don't you shatter a lot of the beans with a binder?" I asked.

"That would be the case with your row-grown beans," he replied. "But our crop grown thick on the land, develops an upright habit of growth with no wide-spreading branches to be crushed in the grain binder. No, we do not figure any more loss from shattering in harvesting beans than we do in harvesting wheat or oats, though if the crop is very dry we do like to carry on the work as much as possible early in the morning, when it is more or less damp from the dew."

Wheat follows beans under the Illinois system, without any further preparation of the land. In fact, the grain drill is started right after the reaper, the two implements often going around the field 50 yards apart, the bean bundles being dropped off on land already seeded to wheat.

"In Champaign County," said Mr. Oathouse, "we have had a couple of meetings of those interested in growing beans. We have figured that about twenty-five or thirty thousand bushels are grown in the county. We believe that this acreage will increase fivefold in 1922. Every fellow who had beans last year will increase his planting, and he will be joined by all his neighbors. This increase will be at the expense of corn as well as oats. All the farmers are waiting for is full and definite assurance of a general market. We believe there need be no uneasiness on this point. One factory in Decatur, which now handles

30,000 bushels of corn a day, will put in bean equipment. A cotton-oil mill in East St. Louis has equipment and is asking for 15,000 tons next year."

A YEAR OF RECORD YIELDS.

Yields last year were the highest ever known. A number of small-acreage yields averaged more than 40 bushels to the acre. One farmer told me he had out 100 acres of the poorest land on his farm and lacked 3 bushels of making 2,000. The crop brought $3,000. I dare say there is not a hundred-acre cornfield which last year yielded so much in money value.

Will Riegel, manager of the Mahary farms at Tolono, Ill., where a 6,100-bushel crop was grown last year, told me their average was approximately 35 bushels to the acre. The first cash crop of beans was raised on these farms in 1909, and the manager declares that beans have been the most profitable crop raised ever since. Mr. Riegel says that now the land, through long growing of beans, is getting too rich and that the rotation will have to be changed.

Doctor Smith, over at the University of Illinois, told me they were recommending soys to take the place of red clover in rotations.

"From the standpoint of soil fertility," said he, "the soy has a rather prominent place with us here in Illinois. The last 10 years we have had five failures with red clover; that is, it failed to come up the second year of its biennial life. Sweet clover is filling this gap where there is lime in the soil. In the presence of lime sweet clover practically never fails. The soy can be depended on to make a crop under either circumstance."

I found a number of Corn Belt men making an excellent go of soys as the main crop.

The three Fouts brothers, at Camden, Ind., own farms close together, and they call the group Soyland. They are not only making money selling seed, but by feeding hogs and sheep. Soys are the main crop on all three farms.

Edwin Johnson, of Stryker, Ohio, has made an excellent thing of soys as the main money crop. He has three farms devoted to the business, and also gets the neighbors far and wide to grow beans for him on contract. His production runs into the thousands of bushels.

I encountered one Illinois farmer whose main enterprise is pork production. He fed this pork last year on corn, balanced up with soy beans instead of tankage. But he did not grow a stalk of corn on the place; the whole farm was put out to beans. These he sold and with the proceeds bought corn. He figures that he got in this way three times the corn that he would have secured by planting it.

At present the price of soy beans in the Corn Belt is the lowest in many years, seed selling on farms at $1.30 to $1.60 a bushel. But seemingly this is going to stimulate rather than retard the production of beans as a money crop. In the first place, it simplifies the problem of getting seed for planting. And, in the second place, the present price of beans expands the market demand, not only through the greater use of seed but for oil and meat production. It is a practical certainty, I was told, that several crushing establishments will go up in the Middle West this year.

Probably the most important thing developed at the Chicago meeting of the Central States Soy Bean Growers' Association, held in November, was a move to standardize the variety names. A committee was formed to take over the work of getting rid of duplicate names of varieties. This committee was made up of one experiment-station man who works on soy beans and one prominent grower for each of the States represented in the association. Soy Bean Specialist Morse, of the Department of Agriculture, was made chairman of this committee. The department and the station men of the committee have agreed to grow all the present varieties having several names this coming season. The study of duplicate names will be made during the growing season.

Approximately 150 variety names are now in common use, though the number of really different varieties is probably less than 100. The Mongol, for instance, is sold under the name of Hollybrook, Roosevelt, Medium Yellow, Medium Early Yellow, and several other aliases. The Ito San is also called Early Yellow, Medium Early Yellow, and Medium Yellow. The old Mammoth Yellow is sold as both Early and Medium Yellow. The old Tar-Heel Black has been sold through the North as Early Black, Early Mammoth Black, and Medium Black. The Peking is sold as Sable, Essex, Red Sable, Black Champion, and Extra Select Sable. And this list could be greatly extended.

HEAVIER-YIELDING VARIETIES.

As the soy-bean crop is just beginning to reach out for a larger place in our agriculture, it is particularly important that these duplicate names be eliminated. The crop is grown now all the way from the Gulf to the Canadian border, and success with it depends far more than is the case with ordinary crops on getting a well-adapted variety. When variety names become meaningless, important studies in variety adaptation are lost in the resulting confusion.

In North Carolina, where more seed beans are raised than anywhere else, 34 per cent of the crop is grown for seed. Illinois now comes next with 28 per cent of the whole planted area harvested for seed. No other State saves for seed as much as 21 per cent of the total planted area. Throughout the Corn Belt a great deal more than half the total soy area represents interplanting with corn. This is also true in North Carolina. In other parts of the South the soy bean, to a greater extent, occupies the land all by itself. In Virginia only 29 per cent of the crop is interplanted; in South Carolina, 39 per cent; and in Georgia, 35 per cent.

It is common talk through the Middle Western States that soy beans yielded last year almost double what they ever did before. I am at a loss whether to lay this merely to a very propitious season or to consider that in large part it is due to better cultural methods and the use of heavier-yelding varieties. Probably all three factors enter into the equation. It is a pretty clear case, however, that the recent greatly increased interest in soys through the Corn Belt, particularly the northern edge of the corn States, can be attributed to better varieties.

We have at last gotten round to searching similar latitudes in northeastern Asia for soy varieties adapted to the northern edge of this country. For unrecorded ages orientals have depended largely on the soy for food, and they have naturally accomplished much in seed selection. By beginning where they left off—or perhaps I had better say, reached—we have been able to make a rapid stride in pushing the beans north.

New varieties, some 300 in number, were brought in from Manchuria during the winter of 1913–14. The whole importation was tested out at the Government farm at Arlington, Va., and the markedly inferior ones were discarded.

Before this importation of seed the soys had a very cramped northern limit of maturity. The new kinds mature a crop farther north than a corn crop is dependable. From West Branch, Mich., and from northern Wisconsin there came back reports of one sort yielding more than 40 bushels to the acre. The yield for forage in these northern latitudes is also heavy. There are numerous reports of more than 6,000 pounds to the acre of air-dry material throughout Michigan and Wisconsin, coming from the new Manchuria beans.

Over in New England, where the heavy freight rate on western grain is a serious burden to dairymen, these new Manchurian kinds seem to deserve a large place. The old varieties were not considered safe in New England farther north than Amherst; frost would come before the beans matured. Now, well up in New Hampshire and Vermont and over in south Maine, the Black Eyebrow and Mandarin, probably the most promising of the Manchurian kinds, ripen a heavy crop of seed.

Heretofore we have made large importations of both soy beans and soy oil. Now that we have got tested seed of varieties adapted to the climate of our richer lands there is a prospect of our not only filling our own needs but of producing a bean surplus to send out to other countries.

The soy bean is worked up into a great variety of table products. And in this, as in all lines of soy appreciation, we are merely taking a leaf from the history of Asiatic people. Over there it has stood the tests of unrecorded thousands of years.

Mr. GOODING. In this country to-day, Mr. President, we are growing 40,000,000 acres more of farm crops than we are consuming. It is estimated that the increased consumption in this country of farm products is equal to 2,000,000 acres a year. At that rate it is going to take 20 years in this country for our consumption to catch up with our farm production.

Now, if we are going to bring any permanent prosperity back to America we have to have a balanced condition upon the farm. The trouble is we are growing too much wheat and not enough wool; we are growing too much cotton and not enough sugar; and so it goes on down the line. If we will make an effort to protect the agricultural industries which have been on the free list, so as to bring about a balanced crop condition on the farm, we will not be forced for very many years to find a foreign market for farm products of the country, and we will stabilize our agricultural industry. We will never have prosperity, if you please, until we develop every agricultural interest up to our own requirements at least, and that is what we are not doing. If we will develop the crops in this country in which we have not yet reached our own consumption it will take care, if you please, of the 10,000,000 acres of farm products for which we are now forced to find a market in foreign countries. Above all, soil exhaustion is taking place in every State in the Union. There is no exception to that rule. Above everything we ought to encourage a crop such as soya beans, which mean so much to the soil fertility.

There is not going to be any prosperity in this country until the farmer gets better prices for his product, and he is not going to get a better price until we have a balanced condition, nor is there going to be any return to the farm until the farmer gets a square deal in the country and is able at least to furnish the American people with the farm products which we can grow so successfully in this country. Therefore I hope the amendment of the Senator from North Dakota [Mr. LADD] will prevail.

The Senator from New Jersey [Mr. FRELINGHUYSEN] is entirely mistaken in one of his statements. The farmers are growing soya beans in this country and they are growing them for seed. We are crushing them, and if we can be given an opportunity by proper protection, so that we do not have to compete with the natives of Manchuria, we can do vastly better. There they will haul the soya beans 100 or 200 miles to market, taking a week or 10 days to make the trip, with only three or four bags; and that is the competition the farmers of this country have to meet. We can not develop the soya-bean industry and we can not develop any other industry in the face of such competition.

The Senator from New Jersey also said there was not much importation of the soya bean. I send to the desk a short article, which I would like to have read, telling the story of a cargo of soya-bean oil just reaching Norfolk.

Mr. FRELINGHUYSEN. Before the article is read and before the Senator takes his seat I would like to correct a statement he made. He stated I said there were no soya beans grown in this country. I did not say that. I said there was no appreciable crushing of soya beans for soya-bean oil. I have here a letter from the United States Department of Agriculture——

Mr. GOODING. I agree with the Senator in that statement, but they are crushing and starting to crush more, and they will crush a great deal more if they are given the opportunity.

Mr. FRELINGHUYSEN. The United States Department of Agriculture on June 19 said:

If any domestic grown soy beans are being crushed at all, it is only in negligible quantity.

The Senator spoke of large quantities of soy-bean oil being imported, and said that I said there was none being imported.

Mr. GOODING. The Senator said very little was being imported.

Mr. FRELINGHUYSEN. I did not make that statement. I said that the record would show that 195,000,000 pounds of soy-bean oil had been imported in 1919, and as to the first three months after the emergency tariff act went into effect, placing a duty of 2 cents per pound on soy-bean oil, the Senator from North Dakota [Mr. LADD] read the figures showing that only 2,000,000 pounds had been imported. I called attention to the decline in the importations after the duty became effective.

The PRESIDING OFFICER. The Secretary will read the article as requested by the Senator from Idaho.

The reading clerk read as follows:

[From the Norfolk Ledger-Dispatch, Tuesday, June 30, 1922.]

CUSTOMS DUTY ON SINGLE CARGO HERE IS ABOUT $100,000—SHIP ARRIVES WITH BIG LOAD SOY-BEAN OIL—REVENUE TO BE PAID BY PORTSMOUTH COMPANY AS OIL IS TAKEN FROM TANKS.

Uncle Sam will get more duty out of the cargo being discharged at the Army base to-day by the Japanese steamer *Mayebashi Maru* than out of any single importation of merchandise at Hampton Roads since 1914.

M. M. Vipond, deputy collector of customs, had it figured out this morning that the 1,800 tons of soy-bean oil brought from Darien, Manchuria, in the deep tanks of the Japanese steamer would eventually increase the revenue of the Norfolk customhouse by approximately $100,000. The money will not be received right off the bat, however, for the Portsmouth Cotton Oil Refining Co., the owners of the oil, recently bonded the tanks at their Portsmouth plant in which the oil is to be stored and the duty will be paid upon it as it is gradually withdrawn for refining.

The oil brought here from Darien by the *Mayebashi Maru* is one of a number of shipments recently received by the great refinery at Portsmouth, but heretofore no duty has been paid at Norfolk, the oil having been transshipped to Manila, where the duty was collected. Other direct importations, it is understood, will be made this summer by the same concern, which is among the three largest refiners of vegetable oils in this country.

DUTY 20 CENTS A GALLON.

Until the passage of the emergency tariff bill a few months ago soy-bean oil was upon the free list. Now the duty is 20 cents per gallon. The heavy duty was imposed at the solicitation of American producers of soy beans and of peanuts. There is little difference between peanut and bean oils.

The *Mayebashi Maru* is expected to complete discharge of the oil to-day and proceed to Philadelphia.

At the Army base the oil is being discharged in the company's own tank cars which bear it over the belt line to the Portsmouth plant.

Mr. RANSDELL. Mr. President, I wish to say just a few words in regard to the pending item. I would like to have my Democratic friends from the South, before voting upon this item, to consider that the soya-bean industry is one of the most promising in the South, in my judgment, as a successor, to some extent, of cotton in the region which is now being devastated largely by the boll weevil. It is extremely difficult, especially for a Caucasian, in the South to make a living by planting cotton.

I have looked into the question of the soya bean considerably, and am convinced that a white man, in the cotton portion of the South where soya beans grow better than they do in the northern portions of the country, can by the use of improved machinery make a great deal more money annually as the result of his labor than he could possibly make from cotton. It requires about as much labor to cultivate soya beans as it does to cultivate corn. Soya beans can be planted by machinery, cultivated by machinery, harvested by machinery, and ordinarily produce pretty nearly, if not quite, as much yield per acre as can be obtained from corn. A considerably better price can be secured per bushel for soya beans than for corn. More money can be made, considerably, as the result of a year's labor in soya beans than in cotton. I am thoroughly convinced of that fact.

Let us see some of the uses of the soya bean. They produce the most remarkable hay. Southern farmers all know there is no better hay than pea-vine hay. Soya-bean hay is just as good as pea-vine hay. It is easier to cure than the pea-vine hay. Soya beans carry into the ground just about as much nitrogen as the pea vines. They improve the soil just about as much as the pea vines, and are tremendously valuable in the South for improving the soil.

All agriculture in the country is interested in improving the soil. Our yields are diminishing all over the land. Cotton is coming down in its annual production, as corn is coming down and as wheat is coming down. Everything that grows from the soil is coming down in its annual production per acre, and one of the very interesting problems before the Senate to-day is whether or not we shall lease Muscle Shoals to Mr. Henry Ford in order that he may give us cheap fertilizer for the improvement of the land for agriculture.

Mr. President and Senators, if we can plant a crop of soya beans in the soil and make as good financial returns out of that crop and at the same time build up the soil wonderfully, to be followed by crops of cotton or corn or sugar or rice or wheat or any other product, because all crops that grow out of the ground are wonderfully benefited by the nitrogen placed in the soil by nature's best feeder, the soya bean, it would seem wise to make more use of that crop. It is a most valuable crop in that connection.

I wish to impress upon my friends from the South, and especially those along the Atlantic coast, where the boll weevil is becoming so bad, that they have got to do something in that section to fight that awful pest. They have got to have some money crop other than cotton. They can not live if they do not have a money crop. They can get that money crop from the soya bean and at the same time save the tremendous fertilizer bill they are now obliged to pay. If they could keep their cotton lands reasonably fertile without having to pay the perfectly colossal fertilizer bills which they are now obliged to pay, the returns on their agriculture would be very much heavier. I say to them that they can get that kind of a crop through the intelligent use of the soya bean. The crop also will add materially in producing fine hogs and fine beeves. In a small way I have had a few acres of soya beans on my plantation, and I know the nature of the crop, and that nothing fattens hogs more rapidly than the soya bean. Soya-bean meal is a splendid feed for beeves.

When the oil is extracted from soya beans that oil makes a splendid substitute for paint. It answers the purposes of a mixture of turpentine and linseed oil, which I believe are used largely in the manufacture of paint. Soya-bean oil to a great extent takes the place of linseed oil in the manufacture of paint. It is a valuable commodity.

The growing of soya beans is very largely a new industry in our country. We seek by tariff duties to build up new industries. When they are thoroughly well established there is probably no reason for placing an import duty on their products; but, I repeat, this is a new industry in our country. It is beginning to grow up in practically every State in the Union, for while, to a great extent, the soya bean flourishes best in the South, there are certain varieties which flourish in the most northern State of the Union. I am satisfied that varieties will be developed which will flourish along the Canadian border, and every part of the Union will ultimately be able to grow this plant successfully.

We need new plants in this country, Mr. President; we ought to do something to develop a new industry in America; and I say to you, sirs, in the most serious manner, that, to my mind, this is the most promising new agricultural plant with which I am familiar. I sincerely hope the amendment to the committee amendment proposed by the Senator from North Dakota [Mr. LADD] to increase the duty on soya beans may be adopted.

Mr. GOODING. I desire to call the Senator's attention to the fact that there is a duty of 3 cents a pound on soya-bean oil; and, in my judgment, that duty will be of little use with a duty of only four-tenths of 1 cent a pound on soya beans. The importers will ship in soya beans and crush them and, of course, in that way bring in soya-bean oil for about a cent a pound duty, as I understand, or not more than a cent and a quarter a pound, as compared with the 3-cent duty which the committee has given to soya-bean oil. So, if we wish to make effective the duty on soya-bean oil, there should be imposed a duty of at least 1½ cents a pound on soya beans.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from North Dakota [Mr. LADD] to the amendment of the committee.

Mr. GOODING. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. SMITH. I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. SMITH. Is the vote about to be taken directly on the question of the proposal to impose a duty of 1½ cents on soy beans?

The PRESIDING OFFICER. The Senate is about to vote on the amendment offered by the Senator from North Dakota [Mr. LADD] to the committee amendment providing a duty of 1½ cents a pound on soy beans.

Mr. KING. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Utah will state his parliamentary inquiry.

Mr. KING. We are about to vote now, as I understand, upon the amendment offered by the Senator from North Dakota increasing the rates provided by the committee amendment about 300 per cent.

The PRESIDING OFFICER. The question has been correctly stated. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. CALDER (when his name was called). I am paired with the senior Senator from Georgia [Mr. HARRIS]. On this question I am informed that he would vote as I intend to vote. Therefore I feel at liberty to vote, and vote "nay."

Mr. UNDERWOOD (when Mr. HARRISON'S name was called). The junior Senator from Mississippi [Mr. HARRISON] is absent. He is paired with the junior Senator from West Virginia [Mr. ELKINS]. If the Senator from Mississippi were present he would vote "nay."

Mr. MCKINLEY (when his name was called). Transferring my pair with the junior Senator from Arkansas [Mr. CARAWAY] to the junior Senator from Oregon [Mr. STANFIELD], I vote "yea."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Vermont [Mr. PAGE], I vote "yea."

Mr. WATSON of Indiana (when his name was called). I have a general pair with the senior Senator from Mississippi [Mr. WILLIAMS]. I am informed that if he were present he would vote as I intend to vote on this question. Therefore I feel free to vote, and vote "nay."

The roll call was concluded.

Mr. CAMERON. Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. HALE. I have a general pair with the senior Senator from Tennessee [Mr. SHIELDS]. I have been informed that if he were present he would vote as I intend to vote. I therefore feel at liberty to vote, and vote "nay."

Mr. JONES of Washington (after having voted in the affirmative). I understand that the senior Senator from Virginia [Mr. SWANSON] has not voted. I promised to pair with him for the afternoon, but I find I can transfer my pair with him to the junior Senator from Maryland [Mr. WELLER]. I do so, and allow my vote to stand.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON]; and

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES].

The result was announced—yeas 28, nays 28, as follows:

YEAS—28.

Ashurst	Heflin	McNary	Ransdell
Broussard	Johnson	New	Sheppard
Bursum	Jones, Wash.	Nicholson	Shortridge
Cameron	Kellogg	Norbeck	Sterling
Capper	Kendrick	Oddie	Townsend
Gooding	Ladd	Phipps	Warren
Harreld	McKinley	Poindexter	Willis

NAYS—28.

Borah	Frelinghuysen	Nelson	Smoot
Calder	Hale	Newberry	Spencer
Colt	King	Overman	Underwood
Curtis	Lenroot	Pepper	Wadsworth
Dial	Lodge	Pomerene	Walsh, Mass.
Ernst	McCumber	Simmons	Walsh, Mont.
France	Moses	Smith	Watson, Ind.

NOT VOTING—40.

Ball	Fernald	McCormick	Robinson
Brandegee	Fletcher	McKellar	Shields
Caraway	Gerry	McLean	Stanfield
Crow	Glass	Myers	Stanley
Culberson	Harris	Norris	Sutherland
Cummins	Harrison	Owen	Swanson
Dillingham	Hitchcock	Page	Trammell
du Pont	Jones, N. Mex.	Pittman	Watson, Ga.
Edge	Keyes	Rawson	Weller
Elkins	La Follette	Reed	Williams

So the amendment of Mr. LADD to the committee amendment was rejected.

Mr. LADD. I desire to reserve the right to present and to have a separate vote upon the amendment to the committee amendment when the bill reaches the Senate.

The PRESIDING OFFICER. The Senator has that right under the rule. The question is on agreeing to the committee amendment as modified.

Mr. MCCUMBER. Mr. President, I desire to modify the committee amendment by striking out the colon after the word "pound," in line 16, page 111, and inserting a period; and also by striking out the words:

Provided, That no allowance shall be made for dirt or other impurities in seed provided for in this paragraph.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. KING. Mr. President, I have a statement on the question of soya beans and oil, vegetable oils and animal fats and their interchangeability, and the effect of importing soya beans and soya-bean oil, which tends to show that importations are beneficial, in that they not only give employment to a large number of American people but give us a market for cottonseed oil about which the Senator from Louisiana is so solicitous. I ask that the statement be inserted in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The statement referred to is as follows:

The proposed tariff on foreign vegetable oils is a boomerang. It will depress the price of hog lard, corn oil, cottonseed oil, and other oils and fats produced by American farmers. The proposed tariff on coconut oil, peanut oil, soya-bean oil, and cottonseed oil will depress the price of domestic vegetable and animal oils used in the manufacture of butter and lard substitutes, and thereby the price of butter and lard will be adversely affected.

The proposed tariff on foreign vegetable oils will make the price of cottonseed oil lower, and thereby the price of vegetable lard will be lower. Consequently hog lard will be made lower in price by the competition of lower-priced vegetable lard made from domestic vegetable oils. This will adversely affect the price of hogs and corn.

The proposed tariff on foreign vegetable oils will depress the price of oleo oil, neutral lard, and cottonseed oil—the principal ingredients of oleomargarine or butter substitutes. This will adversely affect the dairy farmer.

Tariffs on commodities of which we produce an exportable surplus, however, are totally inoperative as "protection," and are in fact actually injurious to American farmers, forcing them to sell their crops at reduced prices. Let us demonstrate this to you as it applies to vegetable oils and animal fats:

The United States is the greatest producer of edible oils and fats in the world.

We give herewith our production for a typical year, 1921. These are the same figures appearing on the pictorial chart, but converted into carloads of 30,000 pounds each.

Please note the tremendous exports:

TABLE 1.—*United States production and exports of edible oils and fats, calendar year 1921.*

	Production.	Exports.
	Carloads.	*Carloads.*
Hog lard	63,333	29,766
Cottonseed oil	43,333	8,400
Vegetable lard, produced from above cottonseed oil	.....	1,600
Oleo oil	4,033	4,266
Oleo stearine	2,366	1,090
Neutral lard	2,133	766
Corn oil	2,900	146
Peanut oil	1,300	60
Total	120,298	46,094

These are the primary fats from which are produced other articles, such as oleomargarine, salad oils, etc. These derivative products are not included because this would cause duplication.

America must ship abroad 46,000 carloads of edible vegetable oils and fats and sell them at international prices in order to dispose of our total production of 120,000 carloads. American farmers, who produce these products, have to sell nearly as much outside the tariff wall as they sell inside. Refer to pictorial chart on reverse side and you will see clearly how the American farmer is necessarily interested in maintaining good market conditions outside the tariff wall. If the conditions outside the tariff wall—in Europe—are maintained in as favorable condition as possible, the markets inside the wall or at home will be good; but the wall deprives the United States of any voice in making prices outside the wall, and while killing the American farmer's voice in price making outside the wall and giving this power entirely to the astute strategists of Europe the wall has also depressed our home market, because when selling exportable surplus crops like the great group of interchangeable edible oils and fats produced in the United States the home market on the average can be no better than the export market.

The domestic buyer will not pay our farmers any more than the export buyer will pay. The wall is a boomerang, because it removes the United States as a rival bidder in other agricultural countries and the buyers in Europe, on whom we must depend for the sale of our 46,000 carloads of surplus, are given a clear field and complete power to bargain us against foreign farmers in Asia, Africa, and South America, who also have surpluses which they must sell to Europe. Thus it is clearly proven how these duties on exports are absurd and actually of negative effect.

We are not telling you what may happen in the future, but what has actually happened during the past 12 months under the emergency tariff bill, which shut foreign soya-bean oil, cottonseed oil, and peanut oil out of the United States by high duties.

When the fall crops of 1921 were ready for market, European buyers had undisputed control of the new crops of soya-bean oil, peanut oil, cottonseed oil, and other foreign fats. They let us "hold the sack." They made us offers for our surpluses at prices measured by the depressed prices at which they could purchase the foreign vegetable oils. They did exactly what is stated on the reverse side of this folder. We therefore were helpless sellers, with no power to bid and still forced to meet the competition of foreign vegetable oils in the surplus-consuming area of the world—Europe. Instead of meeting the competition with some control over it we met it in aggravated form.

This report from the American consul at Dairen, Manchuria, dated February, 1922, shows exactly what happened:

"The new American tariff on soya-bean oil prevented export to the United States, and the consequent withdrawal of an important purchaser caused the price to drop. Europe was a large purchaser, how-

ever, and the stock of soya-bean oil at present on hand is proportionately much smaller than that of bean cake."

Europe made lard substitutes out of these foreign vegetable oils, and our exported hog lard had to compete with a foreign product which had been depressed in price by our emergency tariff. Our corn growers and hog raisers suffered in place of being "protected." They were forced to sell hog lard to Europe at low prices by the action of the emergency tariff, which lowered the price of foreign vegetable oils and then diverted them into our own export market.

Europe would not buy our cottonseed oil at price asked by our farmers. Our exports of refined cottonseed oil have declined tremendously, as shown by the following comparison:

	Period 1921.	Period 1920.
	Pounds.	*Pounds.*
November	3,033,884	18,231,215
December	5,054,022	37,471,254
January	4,915,632	66,458,248
February	3,546,072	35,321,571
Total	16,549,610	157,482,288

Europe bought 5,249 carloads of our refined cottonseed oil during the above four months' period before the emergency tariff, and only 552 carloads during the same period after the emergency tariff, a reduction of 4,697 cars, or nearly 90 per cent. Had not our cotton crop been very short this year our cotton growers would have been unable to sell their seed to the cottonseed-oil mills. They would have been obliged to use it on the farm for fertilizer and feed, owing to the destruction of their export market for cottonseed oil by the action of the emergency tariff.

Some dairymen, because of their lack of knowledge concerning this subject, demanded that foreign vegetable oils be excluded from the United States, claiming that these foreign vegetable oils were so cheap that substitutes for butter would be made from them, and thereby the price of butter would be depressed. Is this not absurd? You have seen from the foregoing tables that we exported in 1921, a typical year—typical with the exception of cottonseed oil—8,400 carloads of cottonseed oil, 4,933 carloads of oleo oil, 766 carloads of neutral lard, 146 carloads of corn oil, and 60 carloads of peanut oil, or a total of 13,638 carloads of American edible oils and fats that are the very prime ingredients of butter substitutes. These quantities, exported, vastly exceed the quantity used in our domestic oleomargarine industry. Had our cotton crop been normal our exportable surplus of domestic oils and fats suitable for butter substitutes would have been 20,000 carloads.

The American dairymen, therefore, have been badly advised. Foreign vegetable oils and fats, such as coconut oil, soya-bean, cottonseed oil, and peanut oil are on the average inferior in quality for butter-substitute making to our own domestic oils and fats, and are used principally in the United States for industrial purposes, such as soap making, tanning, rubber substitutes, etc. The foreign oils, therefore, if freely admitted to the United States, turn the wheels of our industries, enable us to manufacture soap and other products at prices that are in line with world prices, and thus enable the American manufacturer to sell his finished product at home and abroad, and at the same time this quantity of these foreign vegetable oils and fats thus diverted from Europe will leave a corresponding demand in Europe for edible products to be filled from our great exportable surplus of higher-grade edible oils and fats made up of 893,000,000 pounds of hog lard, 252,000,000 pounds of cottonseed oil, 48,000,000 pounds of vegetable lard, 32,700,000 pounds of oleo stearine, 23,000,000 pounds of neutral lard, 4,400,000 pounds of corn oil, 128,000,000 pounds of oleo oil, and 1,800,000 pounds of peanut oil.

American dairymen produce 1,700,000,000 pounds of butter, or 53,333 carloads. This is a tremendous quantity. The American dairyman's competition from butter substitutes is right in his own front yard—American cottonseed oil, corn oil, peanut oil, oleo oil, and neutral lard. These very products are exported in tremendous quantities, and in favoring a tariff on foreign vegetable oils he has gone hunting with the wrong end of the gun.

The American dairyman should know that he can not escape the competition of butter substitutes and that any tariff procedure that depresses the price of the great surplus quantity of domestic butter-substitute making vegetable oils and fats produced by other American farmers will only increase his competition from butter substitutes made from domestic fats and oils. If he persists in his ill-advised demands for duties on foreign vegetable oils he will accomplish nothing but the reverse of what he desires.

(a) By killing the United States as a rival buyer of these foreign vegetable oils in the Orient we would allow their price to be depressed in the primary markets.

(b) These oils will then go to our foreign customers in Europe at the depressed price, depressed by our inability to bid for them.

(c) They will then displace a relative quantity of our own higher-grade edible oils and fats in Europe or will be the means by which we are bargained down to lower prices for our own surplus.

(d) Thereby our own home markets will be correspondingly reduced and the American dairyman instead of being obliged to compete with butter substitutes made from cottonseed oil costing, say, 10 cents per pound, will have to compete with butter substitutes made from cottonseed oil selling at 9 cents per pound; he will have to compete with lower-priced oleo oil, neutral lard, peanut, and corn oils. All choice ingredients for oleomargarine.

The oils and fats which America produces in great quantities command the best price when sold for edible usage. Our great cottonseed-oil industry, when it first started, had to seek a market for its cottonseed oil in the soap kettle. Scientists then found out how to refine this product and make vegetable lard from it, or imitation hog lard. The cottonseed oil proved of much greater value for this purpose than for its original and less valuable use in the soap kettle. American soap makers, therefore, had to give up this oil and American cotton growers found the price of cotton seed greatly enhanced by the better paying market for the oil in edible usage. This has been true of practically all American oils and fats. As fast as their production has been developed they have proven to be the premier oils and fats of the world for edible purposes, and our industries have been continuously hard pressed to find new supplies suitable for soap and other inedible products.

We do not produce sufficient industrial oils and fats for our needs, as shown by the following table:

TABLE 2.—*United States production and exports of inedible oils and fats.*

	Production.	Exports.
	Carloads.	*Carloads.*
Tallow	10,883	460
Greases	11,366	(1)
Lard oil	566	20
Fish and whale oil	1,666	26
Total	24,481	506

[1] Not available.

By comparing our exports of edible oils and fats (Table 1), 46,094 carloads, and our exports of inedible oils and fats (Table 2), 506 carloads, it will be seen that our exports of inedible oils and fats are very small. In fact, these exports merely result from unusual circumstances and conditions and the fact that our supply of industrial oils and fats is less than our requirements is illustrated by the following table:

TABLE 3.—*United States imports and reexports of foreign industrial oils and fats, calendar year 1921.*

Carloads of 30,000 pounds.	Imports.	Reexports.	Net imports.
Coconut oil	6,000	300	5,700
In form of copra	3,764	90	3,674
Soya-bean oil	576	82	494
Peanut oil	100	None.	100
Cottonseed oil	22	None.	22
Palm oil	770	12	758
Palm-kernel oil	79	None.	79
Tallow	60	None.	60
Olive-oil foots	532	5	527
Total	11,903	489	11,414

Linseed oil, flaxseed, castor oil, rapeseed oil and chinawood oil, cod oil and cod-liver oil are omitted because they are not interchangeable with the major edible and soap-making oils and fats in general usage.

It will thus be seen that our net imports of these foreign industrial oils and fats was 11,414 carloads, while from Table No. 1 it will be seen that we exported 46,094 carloads of our domestic high-grade edible fats during the same period. These foreign industrial oils are used in the United States almost entirely for industrial purposes. Only a small quantity of these foreign oils and fats are used in low-grade edible products.

It is perfectly clear that our domestic vegetable and animal oils are of such superior quality for edible purposes that after supplying our own requirements of them for food we export the balance for use as food in foreign countries. Instead of using our surplus of high-grade edible fats for industrial purposes at lower prices in our factories, we sell them abroad at the higher edible price level and import the lower-grade and cheaper varieties for our industries. A highly profitable arrangement for all concerned—the American farmer and the American consumer.

Furthermore, for the sake of argument, if it were to be admitted that all of these foreign vegetable oils were used for edible purposes, the entire net imports of foreign vegetable oils, per Table No. 3—11,414 carloads—would only be 25 per cent of our exports of edible oils and fats, per Table No. 1. Foreign coconut oil is used principally in the manufacture of laundry soap. Most of our foreign coconut oil is imported from the Philippines and no tariff can be collected on these imports, and hence the futility of any duty at all on coconut oil. Soya-bean oil is used principally in soap making. Foreign cottonseed oil is of inferior quality and is used principally for soap making.

The foreign oils and fats in the above table and the oil-bearing seeds and materials from which they are expressed should all be allowed duty-free entry into the United States. Our industries would thus be supplied with suitable oils and fats for industrial purposes and the markets of Europe would thus be maintained in favorable condition to receive our exportable surplus of edible oils and fats at higher prices. A balance sheet for any previous year will show large exportations of edible oils and fats, with foreign vegetable oils imported principally for industrial purposes. Even during the World War years, of the quantity of foreign vegetable oils and fats imported the quantity used in low-grade edible products was trivial compared with our exports of American edible oils and fats.

Some who have never studied this problem may say, "If we are producing more vegetable oils and animal fats in the United States than we need, we should shut the foreign oils and fats out and use our own for every purpose; we don't need any more." Where is there an American hog raiser, corn grower, or cotton grower who would prefer to sell his surplus hog lard, corn oil, or cottonseed oil to an American soap factory for 5 cents per pound for soap making when he could sell his surplus for edible purposes abroad at from 10 to 12 cents per pound? Any farmer will agree that he should sell his products wherever and for whatever purpose they will bring the highest price, and the market in which he can get the best price and sell for the most valuable usage is the market he really should protect, whether it be England, Holland, or Turkey makes little difference. Europe can not produce sufficient foodstuffs for her large population. Her people must eat; they will pay more for hog lard, cottenseed oil, oleo oil, corn oil, neutral lard, and peanut oil for edible purposes than Americans would ever pay for these fats in the form of soap with which to wash their hands. To endeavor to force these high-grade fats back into the soap kettle would be absurd and disastrous to American farmers and dairymen.

* * * * * * *

Europe is the world's food surplus consuming market. Our proposed tariff on products of which we produce an exportable surplus can not by any stretch of imagination force Europe to pay us higher prices;

but these tariffs actually reduce world-price levels by transferring the power to dictate prices from the sellers to the buyers, from the United States to Europe.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment reported by the Committee on Finance.

Mr. McCUMBER. I ask now to return to paragraph 50, on page 21.

The PRESIDING OFFICER. The amendment in paragraph 50, on page 21, will be stated.

The ASSISTANT SECRETARY. On page 21, paragraph 50, line 17, after the words "Castor oil," it is proposed to strike out "4½" and in lieu thereof to insert "3," so as to read:

PAR. 50. Oils, expressed or extracted: Castor oil, 3 cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. KING. I move to strike out "3" and insert in lieu thereof "2."

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Utah to the amendment reported by the committee.

The amendment to the amendment was rejected.

The amendment of the committee was agreed to.

The PRESIDING OFFICER. The Secretary will report the next committee amendment.

The ASSISTANT SECRETARY. On the same page, line 18, it is proposed to strike out the words "cottonseed oil, coconut oil, and soya-bean oil, 2 cents per pound."

The PRESIDING OFFICER. The question is on the amendment reported by the committee.

The amendment was agreed to.

The next amendment of the Committee on Finance was, in the same paragraph, same page, line 20, after the word "oxidized," to strike out "2½" and insert "3½," so as to read:

linseed or flaxseed oil, raw, boiled, or oxidized, 3½ cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. WALSH of Massachusetts. Mr. President, that is the oil upon which I argued against the imposition of such a high rate. I move now that the numerals "3½" be stricken out from the committee amendment and that the numeral "2" be inserted in place thereof.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Massachusetts to the amendment reported by the committee.

Mr. WALSH of Massachusetts. On that amendment I ask for the yeas and nays.

The PRESIDING OFFICER. Let the Secretary report the amendment to the amendment.

The ASSISTANT SECRETARY. On page 21, line 20, the committee propose to strike out "2½" and to insert "3½"; the Senator from Massachusetts [Mr. WALSH] now moves in lieu of the numerals "3½" proposed to be inserted by the committee that there be inserted the numeral "2."

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Massachusetts to the committee amendment, upon which the yeas and nays are demanded.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. CALDER (when his name was called). I am paired with the senior Senator from Georgia [Mr. HARRIS]. I therefore withhold my vote.

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the senior Senator from Connecticut [Mr. BRANDEGEE] and will vote. I vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. McKINLEY (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HARRIS (when the name of Mr. WATSON of Georgia was called). I desire to announce that my colleague the junior Senator from Georgia [Mr. WATSON] is detained on account of sickness.

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the senior Senator from Pennsylvania [Mr. CROW] and will vote. I vote "nay."

The roll call was concluded.

Mr. HARRIS. I transfer my pair with the Senator from New York [Mr. CALDER] to the Senator from Rhode Island [Mr. GERRY] and will vote. I vote "yea."

Mr. CAMERON. Making the same transfer as before, I vote "nay."

Mr. SUTHERLAND. I transfer my general pair with the senior Senator from Arkansas [Mr. ROBINSON] to the junior Senator from Iowa [Mr. RAWSON] and will vote. I vote "nay."

Mr. ERNST (after having voted in the negative). I transfer my pair with my colleague the senior Senator from Kentucky [Mr. STANLEY] to the senior Senator from Illinois [Mr. McCORMICK] and will let my vote stand.

Mr. COLT (after having voted in the negative). I transfer my pair with the junior Senator from Florida [Mr. TRAMMELL] to the junior Senator from Vermont [Mr. PAGE] and will let my vote stand.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. McKELLAR];

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS].

The result was announced—yeas 12, nays 44, as follows:

YEAS—12.

Ashurst	Heflin	Pomerene	Underwood
Dial	King	Simmons	Walsh, Mass.
Harris	Overman	Smith	Walsh, Mont.

NAYS—44.

Borah	Hale	McKinley	Sheppard
Broussard	Harreld	McNary	Shortridge
Bursum	Johnson	Moses	Smoot
Cameron	Jones, Wash.	Nelson	Spencer
Capper	Kellogg	Newberry	Sterling
Colt	Kendrick	Nicholson	Sutherland
Curtis	Ladd	Norbeck	Townsend
Ernst	La Follette	Oddie	Wadsworth
France	Lenroot	Pepper	Warren
Frelinghuysen	Lodge	Phipps	Watson, Ind.
Gooding	McCumber	Ransdell	Willis

NOT VOTING—40.

Ball	Elkins	McKellar	Reed
Brandegee	Fernald	McLean	Robinson
Calder	Fletcher	Myers	Shields
Caraway	Gerry	New	Stanfield
Crow	Glass	Norris	Stanley
Culberson	Harrison	Owen	Swanson
Cummins	Hitchcock	Page	Trammell
Dillingham	Jones, N. Mex.	Pittman	Watson, Ga.
du Pont	Keyes	Poindexter	Weller
Edge	McCormick	Rawson	Williams

So the amendment of Mr. WALSH of Massachusetts to the amendment of the committee was rejected.

The PRESIDING OFFICER (Mr. STERLING in the chair). The question now is on the amendment of the committee.

Mr. WALSH of Massachusetts. Mr. President, I think this is such an excessive duty, amounting to a subsidy of over $9,000,000 annually on linseed oil to 14 crushers in this country, that I must ask for the yeas and nays upon the committee amendment.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. CAMERON (when his name was called). Making the same transfer as before, I vote "yea."

Mr. ERNST (when his name was called). Making the same transfer as before, I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. UNDERWOOD (when Mr. HARRISON'S name was called). I desire to announce that the Senator from Mississippi [Mr. HARRISON] is absent, and is paired with the Senator from West Virginia [Mr. ELKINS]. If the Senator from Mississippi were present, he would vote "nay."

Mr. JONES of Washington (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. McKINLEY (when his name was called). Making the same announcement as before, I vote "yea."

Mr. SUTHERLAND (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "yea."

Mr. HARRIS (when the name of Mr. WATSON of Georgia was called). I desire to announce that my colleague, the junior Senator from Georgia [Mr. WATSON], is detained on account of sickness.

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "yea."

The roll call was concluded.

Mr. COLT (after having voted in the affirmative). Has the junior Senator from Florida [Mr. TRAMMELL] voted?

The PRESIDING OFFICER. He has not.

Mr. COLT. I have a general pair with that Senator. I transfer that pair to the junior Senator from Vermont [Mr. PAGE], and will allow my vote to stand.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR];

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS].

The result was announced—yeas 41, nays 16, as follows:

YEAS—41.

Broussard	Hale	McNary	Smoot
Bursum	Harreld	Moses	Spencer
Calder	Johnson	Nelson	Sterling
Cameron	Kellogg	Newberry	Sutherland
Capper	Kendrick	Nicholson	Wadsworth
Colt	Keyes	Oddie	Warren
Curtis	Ladd	Pepper	Watson, Ind.
Ernst	Lenroot	Phipps	Willis
France	Lodge	Poindexter	
Frelinghuysen	McCumber	Ransdell	
Gooding	McKinley	Shortridge	

NAYS—16.

Ashurst	Jones, Wash.	Pomerene	Townsend
Borah	King	Sheppard	Underwood
Dial	La Follette	Simmons	Walsh, Mass.
Harris	Overman	Smith	Walsh, Mont.

NOT VOTING—39.

Ball	Fernald	McLean	Robinson
Brandegee	Fletcher	Myers	Shields
Caraway	Gerry	New	Stanfield
Crow	Glass	Norbeck	Stanley
Culberson	Harrison	Norris	Swanson
Cummins	Heflin	Owen	Trammell
Dillingham	Hitchcock	Page	Watson, Ga.
du Pont	Jones, N. Mex.	Pittman	Weller
Edge	McCormick	Rawson	Williams
Elkins	McKellar	Reed	

So the amendment of the committee was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. The two following amendments have been agreed to heretofore, after modifications by the committee.

The next amendment is, on page 21, lines 24 and 25, where it is proposed to strike out "peanut oil, 2½ cents per pound," and the semicolon.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The ASSISTANT SECRETARY. On page 22, line 1, after the words "rapeseed oil," the committee proposes to strike out "1½ cents per pound" and to insert "6 cents per gallon."

Mr. KING. Mr. President, I should like to inquire what the ad valorem would be under that rate?

Mr. MCCUMBER. The rate in the House text is 1½ cents per pound. There are about 7½ pounds to a gallon. Therefore the 6 cents per gallon would be a reduction of about 50 per cent.

Mr. KING. I move to strike out the numeral "6" and insert in lieu thereof the numeral "4."

Mr. MCCUMBER. Before we vote upon the motion I would like to answer the Senator's question as to the equivalent ad valorem. The equivalent ad valorem is 7½ per cent, and the rate, I desire to say, is the same as that in the Underwood law.

Mr. KING. I withdraw the motion, in view of the statement as to the ad valorem.

The PRESIDING OFFICER (Mr. MCKINLEY in the chair). The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment on page 22.

The ASSISTANT SECRETARY. On page 22, beginning with line 4, the committee proposes to insert a new paragraph, as follows:

PAR. 50a. Coconut oil, 4 cents per pound; cottonseed oil, 3 cents per pound; peanut oil, 4 cents per pound; and soya-bean oil, 3 cents per pound: *Provided*, That such oils may be imported under bond in an amount to be fixed by the Secretary of the Treasury and under such regulations as he shall prescribe; and if within three years from the date of importation or withdrawal from bonded warehouse, satisfactory proof is furnished that the oil has been used in the manufacture of articles unfit for food, the duties shall be remitted: *Provided further*, That if any such oil imported under bond as above prescribed is used in the manufacture of articles fit for food there shall be levied, collected, and paid on any oil so used in violation of the bond, in addition to the regular duties provided by this paragraph, 3 cents per pound, which shall not be remitted or refunded on exportation of the articles or for any other reason.

Mr. KING. Mr. President, a parliamentary inquiry.

A number of instances have arisen during the consideration of the bill where the situation was substantially as it is here, and I inquire whether or not, when we reach the paragraph providing for nondutiable commodities, that paragraph may be amended by taking one or more of the items in the paragraph now under consideration and transferring them by appropriate motion?

The PRESIDING OFFICER. The Chair will settle that question when it is reached.

Mr. KING. Of course, I presume that will be done, and I do not ask the Chair to decide the case in advance. Yet the Chair will see that if a failure to make the motion would preclude, when we reached the nondutiable list, a motion to transfer any of the items in this paragraph to the nondutiable list, I would feel constrained to submit the motion now. But it seems to me that the proper time to make the motion would be when we reach the nondutiable list. I think it has been decided heretofore, during the progress of the bill, that an amendment to an amendment such as this would not preclude, when we reach the nondutiable list, an amendment to transfer to the nondutiable list an item agreed to now. With the understanding that I may move to transfer to the free list some of the items in this paragraph, if not all, I shall not submit the motion to transfer now.

I move to strike out the numeral "4," in line 4, and to insert in lieu thereof the numeral "2," so as to read:

Coconut oil, 2 cents per pound.

Mr. MCCUMBER. Mr. President, I want to make a very short statement concerning this added paragraph.

The Committee on Finance, in considering the duty on vegetable oils, faced one of its most difficult tasks. The committee was confronted, on the one hand, by a plea to protect dairy and agricultural industries against imports of cheaper foreign oils. On the other hand, there were large manufacturing industries, principally those producing soap, paints, and varnishes, which would be adversely affected by a duty on these oils. These industries are on a substantial export basis. For example, the foreign shipments of soaps in 1919 were in excess of $15,000,000, or approximately 5 per cent of the total domestic production, and the exports of pigments, paints, and varnishes were more than $25,000,000, or about 7 per cent of the domestic output. It is evident that these domestic industries would be placed at a disadvantage in the world's market if forced to pay a premium for raw materials as compared with their European competitors.

The question of protection to American industries involves domestic cottonseed and linseed oils and the large dairy industries. In the case of cottonseed and linseed oils the committee, after careful consideration, reached the conclusion that so far as manufacturing uses other than for food products are concerned the displacement of these oils by imports is not serious. About 85 per cent of the cottonseed oil consumed in the United States is used for edible purposes, primarily in the manufacture of lard substitutes. Cottonseed oil, because of the better price that can be obtained for its use in food products, has a very limited use for inedible purposes and has been replaced by cheaper oils. It can therefore be seen that any competition to domestic vegetable oils from imported oils is largely in the manufacture of edible products.

Linseed oil may be replaced by soya-bean oil to a limited extent in the manufacture of paints, linoleum, and oilcloth. However, it is very inferior to linseed oil and will not be used unless the linseed oil exceeds it very much in price. At the present time the linseed oil is lower than the soya-bean oil, and therefore soya-bean oil would not be used at all.

In 1919 the quantity of soya-bean oil used in the paint and varnish industry was approximately 10 per cent of the linseed oil so used and was 5 per cent of the entire domestic production of linseed oil. But it will be remembered that at that time flaxseed, the raw product, was from $4 to $5 per bushel. It is therefore evident that the replacement of domestic linseed oil by soya-bean oil is relatively small and has definite limitations due to technical superiority of the former.

The question as to protection on vegetable oils narrows itself to competition with domestic cottonseed and peanut oils in the manufacture of edible products, and the more severe competition offered by those cheaper imported oils to the American dairy industry. Although butter must face competition from butter substitutes made from domestic cottonseed oil, regardless of the tariff, this competition becomes more intense from substitutes made from cheaper imported oils—coconut and peanut. The committee therefore reached the conclusion that if the proposed duties were levied on imports of coconut, cottonseed, peanut, and soya-bean oils, when imported for use in the manufacture of edible products, they would ade-

quately protect the domestic oil industry and would serve as a stimulus to further developments of the dairy industry in the United States.

We therefore propose this provision in the bill, which allows a rebate if the imported oils are not used for edible purposes. This would protect the dairy products and at the same time give the soap manufacturers the benefit of those cheaper products which they desire to use in order to maintain their export business.

Mr. KING. May I inquire of the Senator if the investigations of the committee did not disclose the fact that the coconut and soy-bean and peanut oils imported into the United States are substantially all used in industrial concerns, or for industrial purposes, and to that extent perhaps displace the higher grade domestic products which, in America, we are permitted to manufacture into edible products for export, and thus get control of the export market of the world in animal and vegetable fats?

Mr. McCUMBER. No; I think that is hardly accurate. They are used, of course, for both edible and unedible products. They are used in the manufacture of soap; they are used in the manufacture of imitation butter, and so forth; and by this proviso we protect the dairy interests of the country against the use of the cheaper foreign oils to take the place of butter fats, and at the same time we do not interfere with the interests of the soap makers in their export trade.

Mr. KING. Mr. President, I think the able Senator from North Dakota has not quite accurately stated all the facts with respect to the imported vegetable oils. I will qualify that. My information is that these vegetable oils which are imported—soya-bean, coconut, and a very little amount of peanut oil—are all used for industrial purposes, the soya bean particularly for the manufacture of soap.

Mr. McCUMBER. May I ask the Senator what scope he desires to give to the statement "for industrial purposes"? Of course, making butter is an industry.

Mr. KING. I did not mean that making butter is an industrial purpose. I mean, principally, for soap, for automobiles, and so forth.

Mr. McCUMBER. The Senator means for nonedible purposes?

Mr. KING. Yes; for nonedible purposes.

Mr. McCUMBER. Of course, that would be true of soy bean oil, but I think it would not be true of coconut oil, or of peanut oil, or other oils used in the manufacture of edible products.

Mr. KING. I have not time to refer to all the information and the data which I have here, but the statements in the data I have show, as I now recall, that substantially all the soy-bean oil and the coconut oil and the peanut oil is used for soap purposes and for industrial purposes—that is, for nonedible purposes—and by using those oils for those purposes, it liberates the edible oils and the animal fats produced in the United States for the production of butter fats and other edible products not only for use at home but for export, and as a result we have secured the markets of the world.

The effect of a tariff duty such as this would be the same as the result of the emergency tariff act, which diverted these industrial vegetable oils from the United States to Europe. There many of them were manufactured into edible products, though the edible products were inferior to the edible products which we would have sent to Europe, but because of the necessities of the people they were compelled to utilize those oils for that purpose. Now, every pound of oriental oil that is diverted from America and sent to Europe is an injury to the cottonseed growers of the South and to the farmers, I might also say, of the United States. The result is that when the emergency tariff law was enacted there was only one purchaser in the Orient for the vegetable oils, and that was Europe. Prior to that there were two purchasers; that is, the competing oil men of the United States and the competing oil men of Europe.

That resulted in higher prices for the vegetable oils of the Orient, and the higher prices of the oils in the Orient were reflected in the United States and higher prices were paid for the oils produced here. But just as soon as the emergency tariff law was enacted, so that the producers of the oriental oil had only one market, to wit, Europe, their price went down. There was no competition in the bidding, and with the lowering of their prices, because there was only one bidder, to wit, Europe, those lower prices were reflected in diminished prices here and the cottonseed men of the South obtained a less price for their oil than they otherwise would have received.

What was the result? Those oils which would have come to the United States and have largely entered into industrial uses were sent to Europe and there manufactured into edible products, and the American oil men and shippers of edible and inedible oil products lost a large part of their market. So instead of the emergency tariff law being a benefit to the oil producers of the United States, either the producers of vegetable oils or the producers of animal fats, it was a detriment.

There was also another injury which resulted from this procedure. When we import those oils from the Orient we must refine them. That furnishes work for a large number of people. As stated, that oil goes into soap and into other inedible products of the United States. So American manufacturers and American employees were injured by the exclusion of these oils which formerly were brought from the Orient. It is absurd to say that there is any benefit to the producer of these animal fats or vegetable oils by the imposition of the tariff duty when, as everybody knows, the United States is a great field for the production of animal fats, as well as for the development of vegetable oils.

I call attention now to a chart which I have here, which corroborates, I think, the statements I have made.

Mr. McCUMBER. Mr. President, before introducing the chart will the Senator yield to me to present a unanimous-consent request?

Mr. KING. Certainly.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it take a recess until to-morrow at 11 o'clock a. m.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KING. May I inquire of the Senator if he expects to get a vote this evening? It will take me some time to analyze this chart.

Mr. McCUMBER. I do not think we can get a vote to-night upon this paragraph. So I was about to ask for a short executive session.

Mr. KING. Very well; I shall be glad to yield for that purpose.

RIVER AND HARBOR IMPROVEMENTS.

Mr. JONES of Washington. I desire to submit a report from the Committee on Commerce.

The PRESIDING OFFICER. Without objection, the report will be received.

Mr. JONES of Washington. From the Committee on Commerce I report back favorably with amendments the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, and I submit a report (No. 813) thereon.

I invite the attention of Senators to the measure. It does not appropriate any money; it simply adopts projects, making appropriations in order. There are two amendments which the committee have made to the bill, to which there will possibly be opposition. I know that we can not pass the measure unless it can be done without taking very much time. I could not ask the Senator from North Dakota [Mr. McCUMBER], in charge of the tariff bill, to lay aside that bill unless I could assure him that there would be very little discussion on the river and harbor measure. So I hope that Senators will examine the amendments which are made to the bill in order that we can probably ascertain some time in the near future about what length of time it will take to pass the bill. As I said, if I find we can pass it in probably an hour or such a matter, I shall confer with the Senator from North Dakota about it.

Mr. LENROOT. I should like to ask the Senator from Washington whether the report filed by the committee presents a comprehensive explanation of the two amendments to which he has referred?

Mr. JONES of Washington. It does not cover them extensively, but it brings out the salient facts, I think, with reference to each one.

The PRESIDING OFFICER. The bill will be placed on the calendar.

EXECUTIVE SESSION.

Mr. McCUMBER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 15 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Tuesday, July 11, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 10 (legislative day of April 20), 1922.

COLLECTOR OF CUSTOMS.

Fred A. Bradley, of Buffalo, N. Y., to be collector of customs for customs collection district No. 9, with headquarters at Buffalo, N. Y., in place of George G. Davidson, jr., whose term of office will expire July 15, 1922.

NAVAL OFFICER OF CUSTOMS.

Joseph W. Pascoe, of Easton, Pa., to be naval officer of customs in collection district No. 11, with headquarters at Philadelphia, Pa., to fill an existing vacancy.

REGISTERS OF THE LAND OFFICE.

Edwin E. Winters, of Alabama, to be register of the land office at Montgomery, Ala.

Louis W. Burford, of Colorado, to be register of the land office at Del Norte, Colo.
